The potato grower, may, however, be adversely affected by the operation of the growing and marketing quotas under the pending legislation by which the soil-depleting acreage allotted to any farmer may not be used for the production of the crops in which the control program is operating without a severe penalty but may be used in any other soil-depleting crop—among which potatoes would be included—unless the Department of Agriculture exercises its powers under existing law to prevent such a transfer.

DAIRY FARMER

The problem is different from that of the dairy farmer who may find himself under the unfair competition of dairy products coming from cattle fed on soil-building crops as they are technically termed. The adoption of the Boileau amendment to protect the dairy farmer in the House need not blind us to the entire probability of its elimination in conference.

Under the A. A. A. when land was eliminated from certain crops, the released acreage together with the Federal contributions of cash might be used for the production of any other than basic commodities and under this program potatoes faced the worst crisis in their history which culminated in millions of bushels being dumped on the ground and a nominal price of a cent a peck being paid for potatoes in some of the growing areas.

EVER-NORMAL GRANARY

Throughout history the impact of a surplus has been visited upon the producers of the crop. The ever-normal granary of Bible times was not designed for the relief of the producer but in order that the consumer should not starve. There is nothing to indicate that the producer was rewarded for the crisis he had created.

Imposing the penalty of surplus production upon the commodity clings most closely to the law of Nature and assures most quickly the return to normal times.

This was the purpose of the McNary-Haugen bill, and its fundamental philosophy and simple and concrete application is as sound today as when it was first proposed.

The problem of the export surplus is both faced and solved and domestic producers and consumers are meanwhile left to find their own adjustment under adequate protection from the incursion of foreign crops.

REPRESENTATIVE WARREN

The words of Representative LINDSAY WARREN, of North Carolina, in condemnation of all phases of the pending bill, other than the tobacco provisions, must be a warning to all those who recognize his intense devotion to the interests of the farmer and his long-time study of the problems that are involved.

From time to time we are told that one-third of this Nation is underclothed and undernourished. Is it not an amazing commentary that the purpose of this pending measure is to reduce the production of the necessities of life—the very things which nourish and clothe the population with whose welfare we are presumably concerned?

There has been brought to my attention by several of my constituents an editorial dealing with this problem of the restriction of production, and under the authority granted I am happy to insert it in the RECORD at this point:

[From the Townsend National Weekly, December 13, 1937]

IN DEFIANCE OF LAW

As was to be expected, much bitter controversy has developed in Congress over the proposed crop-control measure. Much of the opposition is inspired by sectional and political prejudice, and this expresses itself in many interesting ways. For instance, there is the ringing charge that crop control as now proposed is a deliberate inauguration of Hitlerism and fascism in America. Although there is abundant ground for this charge, this criticism still does not approach the fundamental objection to the proposal. It does not lay bare the economic fallacy of the present trend toward limitation of production.

There exists one stubborn fact, recognized early in the history of man's attempt at civilization, that when the consumer lacks sufficient money with which to buy another's products, the price for that product falls. This is a fundamental law, and it will continue to be a fundamental law as long as any civilization, based on the present economic system, endures. When the consumers of any nation have money with which to buy, and when demand is therefore brisk, prices rise, and it has always been noted that the resultant prosperity of the producer contributes substantially to the prosperity of the rank and file of the people—the consumers.

Seizing only upon the latter manifestations of this economic law, the administration has determined upon a program of control of production in order to create an artificial scarcity. This will, indeed, result in higher prices, as scarcity always does. But it is not a scarcity induced by a demand for commodities on the part of a prosperous consumer who has purchasing power.

It is an attempt to curtail production to fit a seriously limited purchasing power, and in the very process of doing this destructive thing it further limits that purchasing power by processing taxes

and other levies which are paid to the producer in return for limiting his production. Thus the consumer pays for the privilege of paying higher prices. In so doing he finds himself with his normal purchasing power arbitrarily curtailed.

Production control ignores the millions who have no work. Worse than this, it will send hundreds of thousands of recruits to join their helpless and hopeless ranks, for labor is not needed in fields which lie fallow nor in cotton mills which have been forced to curtail their production. Soon this loss will be felt by all industry, for when the purchasing power of 1 man is lessened, the income of 10 other men is inevitably affected.

Medical history contains no single case history of the successful treatment of anemia by limiting the food intake. The only reason the people of America cannot absorb the products of industry is found in their lack of buying power. Instead of still further curtailing this by an ill-advised limitation of production, with its resulting higher prices which will limit consumption further, it seems much more logical and rational to go to the root of the difficulty and concern ourselves immediately with the problem of a genuine and enduring restoration of purchasing power. If we do this, we need not worry further about the producer nor the profitable prices he will receive for the thing which he produces.

Limitation of production is neither new in theory nor in practice. It ruined Brazil's coffee market; it cost Great Britain untold millions when that Government applied it to the production of rubber; the disastrous results of Government control as applied to our own cotton industry are appalling. But apparently we have not learned our lesson.

"And amid the noise of the political and sectional battle which now rages around the crop-control measure, the voice of the Townsend movement is raised, and will be raised in increasing volume until the dreamers of dreams, those in mad pursuit of dangerous economic fallacies, must heed, ere we all go down in complete destruction as the result of our own selfish folly."

EQUALITY IS EQUITY

The pending bill invites opposition not only because of its questionable economics but also because of its discrimination against all the other agricultural crops of the country and its sectional application.

Yet those responsible for its formulation must recognize that it will almost inevitably have its impact upon farmers everywhere and may well force every other producer to demand similar consideration from an increasingly all-powerful state. Perhaps this is the intent of some among its sponsors. At any rate a tremendous force is being set in motion. Whether it will be centrifugal or centripetal only time can tell.

CONFLICT OF PHILOSOPHIES

The fundamental philosophies which come in conflict in this situation present, on one hand, the ultimate regimentation of all our economic and social life and, on the other hand, the viewpoint that would constantly increase consumption and thus absorb the surplus that distresses the farmer and yet is so urgently needed to satisfy whatever portion of our population are under supplied with the good things of this life.

Ultimately this issue will come to be recognized. Regimentation with all it implies of totalitarian government will give way to the stimulation of production and consumption by the social exercise of the taxing power and the resultant and continuing increase of our national wealth and its more nearly equitable distribution.

United States Supreme Court Again Recognizes Puerto Rico a Territory of the United States

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, December 10, 1937

STATEMENT OF HON. SANTIAGO IGLESIAS AND DECISION OF THE UNITED STATES SUPREME COURT

Mr. IGLESIAS. Mr. Speaker, with unanimous consent of the House, I desire to extend my remarks and to include therein a statement which I made at the recent convention of the American Federation of Labor, and also a decision of the Supreme Court of the United States, rendered last Monday, again recognizing Puerto Rico as a Territory of the United States.

PUERTO RICO—UNITED STATES TERRITORY

Resolution No. 88, by Delegate SANTIAGO IGLESIAS, Puerto Rico Free Federation of Workingmen.

Whereas by treaty of peace between the United States of America and the Kingdom of Spain duly signed December 10, 1898, and thereafter duly ratified by said contracting powers, the Kingdom of Spain ceded to the United States the island of Puerto Rico and other islands then under Spanish sovereignty in the West Indies lying east of the seventy-fourth meridian of longitude, together with the waters of said islands;

Whereas by the Organic Act of March 2, 1917, providing a civil government for Puerto Rico, United States citizenship was extended to the citizens of Puerto Rico and the people of Puerto Rico, thereby incorporated into the United States: Now, therefore, be it

Resolved by this Fifty-seventh Annual Convention of the American Federation of Labor assembled to urge the President, the Senate, and House of Representatives of the United States of America in Congress, That said islands so acquired and designated under the name of Puerto Rico and as an organized Territory are hereby declared to be a part of the territory of the United States of America and subject to the Nation thereof; and be it further

Resolved, That the present Organic Act and other Federal laws now in force in Puerto Rico and all local laws enacted by the Legislature of Puerto Rico and now in force are hereby continued with full force and effect until otherwise provided, to comply with the duties and obligations of the people of Puerto Rico toward the United States.

This resolution has for its purpose urging the President, the Senate, and House of Representatives in Congress that the island of Puerto Rico be made part of the territory of the United States and subject to the dominion thereof.

Your committee believes this subject should receive careful attention by the executive council, and recommends it be referred to it for investigation and such action as this inquiry may warrant.

A motion was made and seconded to adopt the committee's report.

Delegate IGLESIAS, Puerto Rico Free Federation of Working Men: Mr. Chairman and fellow delegates, Puerto Rico is a part of the United States from 1898 up to date. We have been made citizens of the United States by action of Congress of 1917. Were it not for the actions and the help and cooperation of the American Federation of Labor the workingmen of Puerto Rico could never have had freedom, respect, and the consideration of a democratic form of government. We have had the pleasure of having now an organized government, with all of the rights of freedom of association, freedom of speech, freedom of the press, and the protection of the laws of the United States. The influence of the people of the United States in Puerto Rico has been of tremendous help to us, and we want to keep and maintain those guaranties of freedom for the masses of the workers of the islands.

Of course, you may ask why Puerto Rico needs any declaration by Congress to the effect that she is either an integral part of the territory of the United States or a part of the United States. Her inhabitants have been incorporated into the United States as were the inhabitants of Alaska and Louisiana. She is an organized Territory under a liberal form of government with all necessary constitutional guaranties. In a financial sense she has been favored above any other governmental division of the United States, with the possible exception of the Virgin Islands.

The answer is, I believe, that the doubt as to our exact political status has caused a feeling of uncertainty, unrest, and at times even of dissatisfaction. Groups of men who are against the liberty and the promotion of the rights of the working classes in Puerto Rico are continuously starting propaganda against the workingmen and the labor unions over there. We want, we desire, we are begging that those guaranties that have been granted to the people of Puerto Rico be maintained forever.

The Free Federation of Working Men of Puerto Rico was organized after the American Nation went over there, and it has proclaimed that the only salvation for the future is the permanent union of the people of Puerto Rico and the United States. It has not been generally understood by many of our brothers over here that the uncertainties of our political status have been brought about largely by the policy of Congress of favoring us by special legislation considered as possibly inconsistent with a declaration of incorporation. Puerto Rico wants to be a part of the United States forever. Notwithstanding the fact that the Supreme Court of the United States has declared that Puerto Rico is an organized Territory, we are treated yet as a possession. We want to be part of the family and to obtain this it is absolutely necessary that the Congress of the United States make the declaration that Puerto Rico, after 40 years of education, has created institutions already very much similar to those that prevail in the Nation. We want those institutions to be kept forever. It is believed by a substantial part of our citizens that such a declaration by Congress will completely and finally put to rest those feelings of uncertainty of what Puerto Rico is going to be in the future.

The masses of the people, the producers, the men who work, the women and the children in the generations to come want to be sure that these institutions of freedom that we have shall

remain with us, so that we may build up a better condition and a better life.

Puerto Rico, in a period of 40 years, has popularized in the Spanish language all the institutions of the American Federation of Labor through the Pan American Republic, and those countries which speak Spanish.

The resolution asks for that declaration, and I ask this convention, the president of the American Federation of Labor, and the executive council to recommend sincerely this matter of chartering forever the statutes of the island, in behalf and in favor of 1,700,000 people of the island of Puerto Rico.

President Green: I think it might be of interest if I would report to this convention that our good friend, Santiago Iglesias, is the Commissioner from Puerto Rico to the Congress of the United States. He was elected by the people of Puerto Rico to serve in that honorable position. He is filling it with dignity, honor, and faithful service, as you have noted just now.

The motion to adopt the committee's report was carried by unanimous vote.

Supreme Court of the United States. *The People of Puerto Rico*, Petitioner, v. *The Shell Co. (P. R.), Limited, et al.* On writ of certiorari to the United States Circuit Court of Appeals for the First Circuit. No. 18.—October Term, 1937

[December 6, 1937]

Mr. Justice Sutherland delivered the opinion of the Court.

This is a criminal proceeding brought by petitioner against the respondents in the insular district court of San Juan, P. R. An information filed by the district attorney charged respondents with entering into a conspiracy in restraint of trade in violation of the local antitrust act, passed by the Legislature of Puerto Rico March 14, 1907. Demurrers to the information were sustained by the district court on the ground that the Sherman Antitrust Act of 1890, supplemented by the Clayton Act of 1914, covered the entire field embraced by the local antitrust act, and the latter, therefore, was void. The Supreme Court of Puerto Rico accepted that view and dismissed the appeal; and its judgment was affirmed on appeal by the court below (86 F. (2d) 577). The single question which we have to decide is whether the existence of section 3 of the Sherman Act precluded the adoption of the local act by the insular legislature.

The pertinent provisions of the Sherman Act and the local act are set forth in the margin.[1] Section 3 of the Sherman Act and section 1 of the local act, so far as the question here involved is concerned, are substantially identical. Section 4 of the Sherman Act confers jurisdiction in respect of violations of the act upon the several district courts of the United States. Section 3 of the local act confers jurisdiction upon the district courts of Puerto Rico in respect of violations of that act.

First. Section 3 of the Sherman Act extends to "any Territory of the United States." But it is urged that Puerto Rico cannot be brought within the intent of this phrase, and, therefore, the section does not apply to that dependency. The point is not well made. When the Sherman Act was passed (1890), we had no insular dependencies; and, necessarily the application of section 3 did not extend beyond our continental domain; and, undoubtedly, it was this domain which was in the immediate contemplation of Congress. Certainly, Congress at that time did not have Puerto Rico in mind. But that is not enough. It is necessary to go further and to say that if the acquisition of that insular dependency had been foreseen, Congress would have so varied its comprehensive language as to exclude it from the operation of the act (*Dartmouth College* v. *Woodward*, 4 Wheat. 518, 644; *Ozawa* v. *United States*, 260 U. S. 178, 195–196; *United States* v. *Thind*, 261 U. S. 204, 207–208). The only question, therefore, is whether the word "territory," as used in section 3 of the Sherman Act, properly can be applied to a dependency now bearing the relation to the United States which is borne by Puerto Rico.

In *Balzac* v. *Puerto Rico* (258 U. S. 298, 304–305) it was held that, although the sixth amendment of the Constitution, with respect to the right of trial by jury, applied to the Territories of the United States, it did not apply to territory belonging to the United States which had not been incorporated into the Union; and that neither the Philippines nor Puerto Rico was territory which had been so incorporated or had become a part of the United States as distinguished from merely belonging to it. But it is evident from a consideration of the pertinent acts of Congress and the decisions of this Court with respect to these acts that whether Puerto Rico comes within a given congressional act applicable in terms to a "Territory" depends upon the character and aim of the act. Words generally have different shades of meaning, and are to be construed, if reasonably possible, to effectuate the intent of the lawmakers; and this meaning in particular instances is to be arrived at not only by a consideration of the words themselves, but by considering as well the context, the purposes of the law, and the circumstances under which the words were employed (*Atlantic Cleaners & Dyers* v. *United States*, 286 U. S. 427, 433; *Helvering* v. *Stockholms, Etc., Bank*, 293 U. S. 84, 86, 87–88). Thus, although Puerto Rico is not a Territory within the reach of the sixth and seventh amendments and may not be a "Territory" within the meaning of the word as used in some statutes, we held in *Kopel* v. *Bingham* (211 U. S. 468, 474, 475, 476) that Puerto Rico was a "Territory" within the meaning of section 5278 of the Revised Statutes, which provides for the demand and surrender of fugitive criminals by Governors of Territories as well as of States. The Court said that it was impossible to hold that Puerto Rico was not intended to have power to reclaim fugitives from its justice or that it was intended that it should be an asylum for fugitives from the United States. The word "Territory" as used in that statute was defined as meaning "a portion of the country not included within the limits of any State and not yet admitted as a State into the Union, but organized under the laws of Congress, with a separate legislature under a Territorial governor and other officers appointed by the President and Senate of the United States." And the Court concluded, "It may be justly asserted that Puerto Rico is a completely organized Territory, although not a Territory incorporated into the United States, and that there is no reason why Puerto Rico should not be held to be such a Territory as is comprised in section 5278." See *Porto Rico* v. *Rosaly* (227 U. S. 270, 274). Compare *Talbott* v. *Silver Bow County* (139 U. S. 438, 444–445).

With equal force it may be said here that there is no reason why Puerto Rico should not be held to be a "Territory" within the meaning of section 3 of the Sherman Act. We pointed out in the Atlantic Cleaners & Dyers case, supra, page 435, that in the light of the applicable history and circumstances, it was apparent that Congress meant to deal comprehensively with the subject of contracts, combinations, and conspiracies in restraint of trade, "and to that end to exercise all the power it possessed"; that while Congress in passing section 1 exercised only the power conferred by the commerce clause, in passing section 3 it exercised a general power, unlimited by that clause. We therefore concluded that the word "trade" as used in section 3 should be given a more extended meaning than the same word as used in section 1.

If, as we there determined, Congress intended by the Sherman Act to exert all the power it possessed in respect of the subject matter—trade and commerce—it is equally reasonable to conclude that Congress intended to include all Territories to which its powers might extend. The same reason which requires the utmost liberality of construction in respect of the word "trade" also requires the same degree of liberality of construction in respect of the word "Territory"; and we hold, accordingly, that the word "Territory" was used in its most comprehensive sense, as embracing all organized Territories, whether incorporated into the United States or not, including Puerto Rico.

Second. The court below held that although section 1 of the local act contained some words not to be found in section 3 of the

---

[1] Sherman Act (July 2, 1890, c. 647, 26 Stat. 209):

SEC. 3. Every contract, combination in form of trust or otherwise, or conspiracy, in restraint of trade or commerce in any Territory of the United States or of the District of Columbia, or in restraint of trade or commerce between any such Territory and another, or between any such Territory or Territories and any State or States or the District of Columbia, or with foreign nations, or between the District of Columbia and any State or States or foreign nations, is hereby declared illegal. Every person who shall make any such contract or engage in any such combination or conspiracy, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000 or by imprisonment not exceeding 1 year, or by both said punishments, in the discretion of the court.

SEC. 4. The several district courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney General, to institute proceedings in equity to prevent and restrain such violations. * * *

By section 24 (2) of the Judicial Code (28 U. S. C., sec. 41 (2)), the district courts of the United States are given jurisdiction "Of all crimes and offenses cognizable under the authority of the United States."

The Puerto Rico Act of March 14, 1907 (Laws 1907, p. 328):

SECTION 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade, commerce, business transactions, and lawful and free competition in a town, or among the several towns of Puerto Rico is hereby declared to be illegal. Every person who shall make any such contract or engage in any such conspiracy, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by fine not exceeding $5,000 or by imprisonment not exceeding 1 year, or by both such punishments in the discretion of the court.

SEC. 3. The district courts of the island are hereby vested with jurisdiction to prevent, prohibit, enjoin, and punish violations of this law; and it shall be the duty of the attorneys of the district courts of the island to institute proceedings of injunction or any other civil proceeding to prevent, prohibit, enjoin, and restrain such violations. * * *

Sherman Act, the pertinent provisions were in substance the same; that the act charged in the information as a crime under the local statute was the same as that denounced as a crime in the Sherman Act; and that in each instance the offense was a crime against the sovereignty of the United States. With that view we agree. But that court concluded that the act of Congress preempted the ground occupied by the local act and superseded it; and consequently the local district court was without jurisdiction of the offense. With that conclusion we are unable to agree.

1. Section 14 of the Foraker Act, passed April 12, 1900 (ch. 191, 31 Stat. 77, 80) provided that the statutory laws of the United States, not locally inapplicable, should have the same force and effect in Puerto Rico as in the United States, with certain exceptions not material here. Section 27 (p. 82) provided "That all local legislative powers hereby granted shall be vested in a legislative assembly * * *." And by section 32 (pp. 83–84), it was provided that the legislative authority "shall extend to all matters of a legislative character not locally inapplicable * * *." These various provisions are continued in force by sections 9, 25, and 37 of the Organic Act of March 2, 1917 (ch. 145, 39 Stat. 951). These provisions do not differ in substance from the various provisions relating to the powers of the organized and incorporated continental Territories of the United States, in respect of which this court said in *Clinton* v. *Englebrecht* (13 Wall. 434, 441) that the theory upon which these Territories have been organized "has ever been that of leaving to the inhabitants all the powers of self-government consistent with the supremacy and supervision of national authority, and with certain fundamental principles established by Congress"; and in *Hornbuckle* v. *Toombs* (18 Wall. 648, 655–656) we said: "The powers thus exercised by the Territorial legislatures are nearly as extensive as those exercised by any State legislature." See also *Cope* v. *Cope* (137 U. S. 682, 684) where this court, speaking of this typical general provision contained in the Utah Organic Act, said that, with the exceptions noted in the provision itself, "the power of the Territorial legislature was apparently as plenary as that of the legislature of a State." In *Maynard* v. *Hill* (125 U. S. 190, 204) the essential similarity of the various provisions in respect of the powers of Territorial legislatures was pointed out, and it was said that what were "rightful subjects of legislation" was to be determined "by an examination of the subjects upon which legislatures had been in the practice of acting with the consent and approval of the people they represented."

The grant of legislative power in respect of local matters, contained in section 32 of the Foraker Act, and continued in force by section 37 of the Organic Act of 1917, is as broad and comprehensive as language could make it. The primary question posed by the challenge to the validity of the act under consideration is whether the matter covered by the act is one "of a legislative character not locally inapplicable." It requires no argument to demonstrate that a conspiracy in restraint of trade within the borders of Puerto Rico is clearly a local matter, and that it falls within the precise terms of the power granted by sections 32 and 37 of the respective acts in which the grant is found. The power being given without express limitation, a conclusion that the present exercise of the power is precluded by the existence of section 3 of the Sherman Act must rest upon the assumption that a congressional statute penalizing specific local behavior and a statute of Puerto Rico to the same effect cannot coexist. With due regard to the status of the Territory, the character of its established government, the positive terms of the congressional grant of power, and the lack of conflict between the two acts, that assumption must be rejected.

2. The aim of the Foraker Act and the Organic Act was to give Puerto Rico full power of local self-determination, with an autonomy similar to that of the States and incorporated Territories (*Gromer* v. *Standard Dredging Co.*, 224 U. S. 362, 370; *Porto Rico* v. *Rosaly*, supra, p. 274). The effect was to confer upon the Territory many of the attributes of quasi sovereignty possessed by the States—as, for example, immunity from suit without their consent (*Porto Rico* v. *Rosaly*, supra). By those acts the typical American governmental structure, consisting of the three independent departments—legislative, executive, and judicial—was erected. "A body politic"—a commonwealth—was created (31 Stat. 79, sec. 7, ch. 191). The power of taxation, the power to enact and enforce laws, and other characteristically governmental powers were vested. And so far as local matters are concerned, as we have already shown in respect of the continental territories, legislative powers were conferred nearly, if not quite, as extensive as those exercised by the State legislatures.

This comprehensive grant of legislative power made by Congress plainly recognizes the great desirability of devolving upon the local government the responsibility of searching out local offenses and prosecuting them in the local tribunals. The insular supreme court in this case declared in emphatic terms the wisdom of such local control in respect of the matter dealt with by the act in question. Although striking down, with evident reluctance, the act as invalid, that court said: "The right of the insular legislature and officers to prosecute and punish such monopolies as may be set up within our jurisdiction is really inestimable. It was so understood by our legislature when it took upon itself to legislate on the subject. This is a wholesome and necessary legislation that should be enforced through the insular courts. It must be admitted that the people of Puerto Rico have a special interest in prosecuting before the courts those citizens who violate its own laws. No matter how interested the National Government may be in prosecuting such offenses, instances might occur where the latter would pass unnoticed by the Federal officers, or where, for some reason or other, such officers might not display the same activity and interest that is to be expected from the local officials."

3. In the light of the foregoing considerations, including the sweeping character of the congressional grant of power contained in the Foraker Act and the Organic Act of 1917, the general purpose of Congress to confer power upon the government of Puerto Rico to legislate in respect of all local matters is made manifest. In this connection it is significant that the only express limitation upon the power is, that in certain of its aspects, it shall be exercised consistently with the provisions of the respective acts. See sections 37 and 57 of the Organic Act, and section 32 of the Foraker Act. Nothing is expressed in these acts or, so far as we are advised, in any other Federal act which suggests a congressional intent to limit the exercise of the power of local legislation to those subjects in respect of which there is an absence of explicit legislation by Congress; and we find nothing in the nature of the power or in the consequences likely to ensue from the duplicate exercise of it which requires an implication to that effect.

Our attention is called to certain differences of language in the two acts and it is urged that these differences create a "risk" of conflict of interpretation between the local courts and the Federal district courts. The fear of conflicting decisions is more fanciful than real, since we agree with the court below that there is in fact no substantial conflict between the pertinent provisions of the two statutes. But in the unlikely event that, in spite of this conclusion, a conflict of decisions shall arise the power of the Federal appellate courts to resolve that conflict is clear (secs. 128 (a) and 240, Judicial Code, as amended by the act of Feb. 13, 1925, c. 229, 43 Stat. 936; U. S. C., secs. 225, 347).

It likewise is clear that the legislative duplication gives rise to no danger of a second prosecution and conviction, or of double punishment for the same offense. The risk of double jeopardy[1] does not exist. Both the Territorial and Federal laws and the courts, whether exercising Federal or local jurisdiction, are creations emanating from the same sovereignty. (See *Balzac* v. *Porto Rico*, supra, p. 312.) Prosecution under one of the laws in the appropriate court necessarily will bar a prosecution under the other law in another court (*Grafton* v. *United States*, 206 U. S. 333). In that case Grafton, a soldier in the Army, had been acquitted by a general court martial convened in the Philippine Islands of a crime not capital, alleged to have been committed in violation of the sixty-second article of war. Subsequently, a criminal information in the name of the United States was filed in a Philippine court of first instance, charging him with the same offense committed in violation of a local law. This court held that the acquittal of the accused by the court martial precluded his being again tried for the same offense in the civil courts, for the reason that he would thus be put twice in jeopardy of punishment. The sixty-second article of war[2] was a Federal statute (Rev. Stat., sec. 1342). The general court martial was a Federal tribunal. The Philippine act was a local law; and the court of first instance was a local court. But both of the laws and both of the courts owed their existence to the same supreme authority. The situation presented there was, in all essentials, the same as that presented here. The decision of the court in that case rested upon the ground that the accused, having been acquitted by the Federal tribunal, could not be subjected to prosecution in another court, civil or military, of the same sovereignty. We held that although the same act might constitute distinct offenses against a State and against the United States, for both of which the accused might be prosecuted, that rule had no application to acts committed in the Philippine Islands. We said (pp. 354–355): "The Government of a State does not derive its powers from the United States, while the Government of the Philippines owes its existence wholly to the United States, and its judicial tribunals exert all their powers by authority of the United States. The jurisdiction and authority of the United States over that territory and its inhabitants, for all legitimate purposes of government, is paramount. So that the cases holding that the same acts committed in a State of the Union may constitute an offense against the United States and also a distinct offense against the State, do not apply here, where the two tribunals that tried the accused exert all their powers under and by authority of the same Government—that of the United States."

An attempt is made to distinguish the Grafton case on the ground that but one statute was there involved—namely, the statute of the Philippine Islands—and that both the general court martial and the Philippine court undertook to enforce that

[1] The fifth amendment to the Constitution provides "nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb." Section 2 (the Bill of Rights) of the Puerto Rico Organic Act of 1917 (39 Stat. 951) provides that "no person for the same offense shall be twice put in jeopardy of punishment."

[2] "All crimes not capital * * * which officers and soldiers may be guilty of * * * are to be taken cognizance of by a general * * * court [martial], * * * and punished at the discretion of such court."

statute. Obviously that view is incorrect. The court-martial proceeding was not to enforce the Philippine legislation, but to enforce the sixty-second article of war; and that article was nonetheless a Federal law, distinct from the local law, because it might be necessary to refer to the local law to determine whether the act charged against the soldier was embraced by the term "crimes" in the sixty-second article. This is well illustrated by section 289 of the Criminal Code (18 U. S. C., sec. 468), which, in respect of offenses committed upon places subject to the exclusive jurisdiction of the United States within the limits of a State or organized Territory or District, makes applicable the laws of such State, Territory, or District in respect of such offenses. Prosecutions under that section, however, are not to enforce the laws of the State, Territory, or District, but to enforce the Federal law, the details of which, instead of being recited, are adopted by reference. See *United States* v. *Press Publishing Co.* (219 U. S. 1).

4. The decisions of the supreme courts of four States, rendered when the States were newly created from former Territories, are, except in one particular, of which we shall speak later, in harmony with the views we have expressed. Those decisions, though not conclusive, are entitled to great weight, because they dealt with Territorial powers in operation at a time so shortly before the rendition of the decisions that the judges who rendered them well may be credited with such knowledge of the purpose of these powers and their history and application as to make these judges peculiarly competent to decide questions relating thereto.

The Supreme Court of Wyoming, in a very full and carefully drawn opinion, reached the conclusion that a statute of that Territory defining and punishing the crime of bigamy was valid and enforceable, notwithstanding the fact that an act of Congress defined and prescribed punishment for the same crime when committed in any of the Territories (*In re Murphy*, 5 Wyo. 297). Following its discussion in respect of the relations between the National and Territorial Governments, and the extensive powers which had been conferred upon the latter, that court (p. 315) concluded: "* * * the crime of bigamy as defined and punishable by act of Congress is a crime against the sovereignty of the United States. The act of Congress embraces no express limitation upon the right of the Territory to also punish the same act as an offense against it and its local laws, nor upon the local legislature to enact a law defining and providing a punishment therefor as an offense against the Territorial sovereignty. As there are in practical and legal effect two governments, although the one emanates from the other, we are unable to perceive why the legislature of the Territory under the general grant of power with which it was invested may not have enacted a valid law assuming to punish as a Territorial offense the crime of bigamy. It does not conflict with the United States statute. It could not and did not assume to destroy the force or effect of the congressional provision. It could not have assumed to offer immunity to those desiring to contract polygamous marriages. By silence it could only have refused to punish it as a Territorial crime. To avoid this possibility Congress undertook to punish it as a crime against the Federal Government." That decision was followed by the Supreme Court of Utah in *State* v. *Norman* (16 Utah 457).

The Wyoming and the Utah courts thought that prosecution and punishment could be had under both statutes and attempted to justify that view by invoking the rule applicable to State and Federal statutes denouncing the same criminal acts. This, of course, in the light of our later decision in the Grafton case, is now seen to be erroneous; but the error does not affect the accuracy of the reasoning and conclusion of these courts upon the main point—that the local statute was a valid exercise of Territorial power, notwithstanding the identical legislation by Congress.

In Territory v. *Guyott* (9 Mont. 46), a territorial statute making it a felony to sell, barter, or give intoxicating liquor to an Indian, was sustained against the contention that the authority of the Territory to pass the statute had been foreclosed by section 2139, United States Revised Statutes, which defines and punishes the same offense.

Territory v. *Long Bell Lumber Co.* (22 Okla. 890) involved the validity of the Antitrust Act passed by the former territorial legislature. Suits were brought against the defendants, charging violations of the territorial act, which were also violations of the Sherman Act. The court sustained the validity of the territorial act, holding that it was not repugnant to or in conflict with the Federal act. In doing so, it followed the reasoning of, and relied upon, the Wyoming, Montana, and Utah decisions, above cited.

The Supreme Court of the Territory of Arizona, in *Territory* v. *Alexander* (11 Ariz. 172), had before it for consideration a bigamy statute like that involved in the Wyoming case, and erroneously held it to be invalid. In reaching that conclusion, it expressly rejected the Wyoming, Utah, and Montana decisions upon the authority of *Davis* v. *Beason* (133 U. S. 333), a case which we shall presently consider.

5. There is some general language in *El Paso & Northeastern Railway Co.* v. *Gutierrez* (215 U. S. 87) and *Davis* v. *Beason*, supra, which, considered apart from the question which was involved and apart from the opinions in their entirety, seems to support the decisions of the court below in the present case. The opinion of the court below and the argument of respondents here rest in the main upon these cases. An examination of them, however, will show that they have been misunderstood. The Gutierrez case involved the validity of a statute of the Territory of New Mexico, which provided that no action for injuries inflicting death caused by and person or corporation in the Territory should be maintained unless the person claiming damages should, within 90 days after the infliction of the injuries complained of and 30 days before commencing suit, serve upon the defendant an affidavit covering certain specified particulars. The statute also required that suit must be brought within a year and in a specified district court of the Territory. The statute is set forth in full in the margin of the opinion of this court in *Atchison, Topeka & Santa Fe Railway* v. *Sowers* (213 U. S. 55, 59–63). An action was brought in Texas by Enedina Gutierrez against the railway company to recover damages for the death of her intestate. The accident causing the death happened in New Mexico, and the railway company set up the New Mexico statute by way of special plea and answer. A writ of error brought here for review the judgment of the Supreme Court of Texas holding that the case was controlled by the Federal Employers' Liability Act (34 Stat. 232) and refusing to give effect to the New Mexico statute—a statute which was plainly an attempted restriction upon the right of action conferred in unlimited terms by the Federal Employers' Liability Act, and, therefore, in direct conflict with that act. In deciding the question, this court said that there could be no doubt that the act of Congress "would necessarily supersede the Territorial law regulating the same subject." This is broad language; but it must be construed in the light of the question presented which was whether a Territorial act, in plain conflict with the Federal act, was valid. In that situation the applicable rule is that formulated by Chief Justice Marshall in *Cohens* v. *Virginia* (6 Wheat. 264, 399), where, speaking for this court, he said: "It is a maxim, not to be disregarded, that general expressions, in every opinion, are to be taken in connection with the case in which those expressions are used. If they go beyond the case, they may be respected, but ought not to control the judgment in a subsequent suit, when the very point is presented for decision." See, also, *Humphrey's Executor* v. *United States* (295 U. S. 602, 627) and cases cited.

In the course of the opinion rendered by this court in *Davis* v. *Beason*, supra (p. 348), it was said: "The cases in which the legislation of Congress will supersede the legislation of a State or Territory, without specific provisions to that effect, are those in which the same matter is the subject of legislation by both. There the action of Congress may well be considered as covering the entire ground." This generalization was not necessary to the decision of the case, and, taken literally, cannot stand, because, as in the Gutierrez case, it omits the element of actual conflict between the two acts of legislation. The decision itself sustained the validity of a statute penalizing any person who teaches, advises, counsels, or encourages the practice of bigamy or polygamy, notwithstanding there was a general act of Congress which had for its object the suppression of bigamy and polygamy in the Territories. And the court said in its opinion (p. 341) that bigamy and polygamy are "crimes by the laws of the United States, and they are crimes by the laws of Idaho"; and further (p. 348), that the act of Congress was a general law applicable to all Territories and "does not purport to restrict the legislation of the Territories over kindred offenses or over the means for their ascertainment and prevention." Each of the two observations which we have last quoted, may have gone beyond the necessities of the case and may fall within the rule announced by Chief Justice Marshall in the Cohens case. In any event, however, they indicate that the general statement first quoted is not to be given the sweeping effect which a categorical reading of the words might at first suggest.

Only a word need be said about *Domenech* v. *National City Bank* (294 U. S. 199), which the court below thought lent support to its judgment. That case involved the validity of a tax sought to be imposed by Puerto Rico upon a branch of a national bank organized under the laws of the United States. We held that section 5219 of the Revised Statutes was in force in Puerto Rico and that that section forbade the tax. The grant to the territory of the general power to tax did not constitute consent on the part of Congress that a tax not authorized by section 5219 could be laid; and it is upon that ground that our decision rests. The conflict between the tax and the Federal law we regarded as plain.

6. Finally, it is contended that, if the local antitrust act and the Sherman Act both stand, a conflict of jurisdiction between the Federal courts and the local courts may result. But clearly there is slight, if any, ground for the apprehension. The local act simply confers jurisdiction upon the local courts to enforce that act. No attempt, of course, is made to confer jurisdiction upon those courts to enforce the Sherman Act, or upon the Federal courts to enforce the local act. It is hard to see why a conflict as to which law shall be enforced and which jurisdiction shall be invoked should ever arise, since the officers charged with the administration and enforcement of both acts are, in the last analysis, under the control of the same sovereignty and, it well may be assumed, will work in harmony.

We conclude that the antitrust act of Puerto Rico is valid and enforceable; and, accordingly, the judgment below is reversed.

A true copy.

CLERK, *Supreme Court, United States.*

The United States Customs Court

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Saturday, December 11 (legislative day of Tuesday, November 16), 1937

ARTICLE BY HON. GEORGE STEWART BROWN, JUDGE OF THE UNITED STATES CUSTOMS COURT

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Hon. George Stewart Brown, judge of the United States Customs Court, entitled "The United States Customs Court."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TERRITORIAL JURISDICTION—CASES COMING BEFORE COURT SOMETIMES INVOLVE IMPORTANT QUESTIONS OF INTERNATIONAL LAW AND THE CONSTRUCTION OF TREATIES—SERIOUS CONSTITUTIONAL ISSUES OCCASIONALLY ARISE—VALUATION OR APPRAISEMENT CASES—MOST IMPORTANT PHASE OF COURT'S JURISDICTION IS DECISION OF CASES ARISING FROM RULINGS OF COLLECTOR OF CUSTOMS FIXING RATE AND AMOUNT OF DUTY TAKEN AT CUSTOMHOUSE—SITUATION OF CUSTOMS TAXES, ETC.

(By Hon. George Stewart Brown, judge of the United States Customs Court)

The United States Customs Court was created to hear and decide controversies arising between the Government and the citizens who import foreign merchandise.

The court's jurisdiction covers the entire continental United States in addition to Alaska, Hawaii, and Puerto Rico. The cases coming before the court often involve claims for refund running into millions of dollars and sometimes, as did the wood-pulp and American-bottoms cases, involve interesting and important questions of international law and the construction of treaties, and occasionally serious constitutional questions. Although the court is in the Department of Justice, its decisions appear in the semiannual publication known as Treasury Decisions.

The principal trial rooms and the clerk's offices are located at 201 Varick Street, New York City, for the reason that a large percentage of the total importations are made at that port. Regular dockets are held at stated terms each year at all the important cities in the country, and upon request a hearing can be had at practically any place which may be convenient to the importer. In addition to the seaboard cities, such as New York, Boston, Philadelphia, Baltimore, Newport News, Tampa, New Orleans, and Galveston, and on the Pacific coast, Seattle, Portland, San Francisco, and Los Angeles, regular terms are held and dockets heard at such inland cities as Buffalo, Cleveland, Cincinnati, St. Louis, Chicago, St. Paul, Minneapolis, etc.

Under the American system an importer at an inland city like Cincinnati may actually import merchandise at Baltimore, Boston, or Galveston, and instead of making entry at the seaboard, he may place the merchandise in a bonded carrier and formally make entry in the customs district where he resides. At the latter place the decisions of the collector and the local appraising officer take place, complaint in the form of protest or appeal is made, and the trial of the appraisement or classification case is had nearby.

Thus every importer, no matter where he resides, may have a hearing near where he lives, and where his expert or trade witnesses are readily accessible. The full nisi prius function is performed by the Customs Court, the jurisdiction of the Court of Customs and Patent Appeals being appellate only.

Tariff classification has always seemed to lend itself to litigation. There are a multitude of tariff cases reported in the Supreme Court Reports, Federal Reporter, and Federal Cases, running back to the beginning of the Government. Under what taxing provision an importation will fall frequently depends upon the application of such legal rules as commercial designation (borrowed from the law merchant), i. e., by what name an article is bought and sold in the trade (this rule is expounded in a long line of Supreme Court decisions collected in *Lamont, Corliss & Co.* v. *United States*, T. D. 44083, 57 T. D. 906), its component material, its chief value, the way it is manufactured, its chemical composition, its use or chief use, its similarity to a taxed group of articles, which of two provisions more particularly cover it, etc., etc. The application of these rules cover a wide field of business law involving the customs and practice of traders as well as matters elucidated by scientific expert and trade testimony. Almost all phases of the rules of statutory construction as well as many other rules of law are dealt with in the application of customs law to particular instances and situations.

In *Ehrhardt* v. *Schroeder* (155 U. S. 124, p. 129), the Supreme Court, after discussing the very limited judicial review, which frequently exists, of the acts of ordinary tax assessors, says:

"In the case of customs duties, however, a party dissatisfied with the classification of imports may apply to the courts to have examined and reviewed everything involving the legality of the demand which has been made upon him by the collector * * *. The unlawful demand of the duty does not conclude his rights, but, at the most, merely lays upon him, the inconvenience of going before a tribunal in which those rights will be declared."

JUDGMENT MAY WIPE OUT ALL PROFIT

Valuation or appraisement cases frequently involve large sums of money and with the penalties incident thereto the judgment may wipe out for the importer the profit from the sale of the goods whose value under an ad valorem rate is in contest.

Moreover, if the advance over the entered value is sustained at more than 75 percent, the decision may involve the goods in forfeiture proceedings and perhaps lead up to criminal action against the merchant himself. Penalties for undervaluation may be remitted upon timely petition with a showing that there was no intention to defraud, or deceive, *United States* v. *Fish* (268 U. S. 607). In valuation cases the appeal may be either by the Government or by the importer from the action of the administrative official who appraises the value in the first instance. This appeal goes to a single judge with a further appeal to a division of three, and on questions of law only to the Court of Customs and Patent Appeals at Washington, D. C. (Sec. 501, pt. III, Tariff Act of 1930.)

THE REMEDY IS ALL-INCLUSIVE

The most important phase of the customs court's jurisdiction consists in deciding cases arising from the decisions of the collector of customs, in fixing the rate and amount of duty which is taken at the customhouse. This is called the classification side, but it covers many other matters where administrative action, not dealing with classification per se, fixes the rate and amount of duty as assessed by the collector in his liquidation, and from which, therefore, protest also lies.

For instance, if the collector's decision came about by reason of a regulation passed by the Secretary of the Treasury under his general authority to pass reasonable regulations to carry out the law, the legality of such regulations can be tested on protest of the collector's decision which starts the case before the Customs Court. (*Conkey's case*, G. A. 7668, 28 T. D. 82, Affd. 6 C. A. R. 487. *Goodsell's case*, G. A. 3880, T. D. 18078, Affd. 91 Fed. 519. *United States* v. *R. H. C. B. Co.*, 16 C. C. A. 248.) Or, again, if an appraisement by a local appraiser or a reappraisement by the appraising court is illegal for any jurisdictional defect, its legality may be attacked before the classification division of the customs court by protesting the decision of the collector who must adopt such appraised value in his liquidation. (*United States* v. *Passavant*, 169 U. S. 16; *Kean* v. *United States*, T. D. 46186, 20 C. C. P. A.)

The amount of duty fixed by the collector's liquidation is often affected by legal questions growing out of the weight, the packing, or marking of the goods, the size of the package, their short shipment, the allowance for tare and draft, whether goods put together must be treated as entireties, clerical errors in entering, interpretation of words fixing the tax upon "clean content" comparison with standard strength or other characteristics or forms, and questions of residence and citizenship as affecting Americans returning from abroad. These and similar questions may be litigated and refunds recovered when the paragraph under which the article should be taxed, i. e., the classification proper—is not in dispute. Other such instances are as follows:

Marriott v. *Brune* (9 How. 619) was a leading case on nonimportation, preventing the application of the customs tax to the part of the shipment which did not actually arrive in this country.

American Sugar Refining Co. v. *United States* (181 U. S. 610) declared the effect upon the duty of the evaporation from sugar during the voyage.

Lawder v. *Stone* (187 U. S. 281) made an equitable allowance for duty upon certain decayed and damaged goods.

United States v. *Falk* (204 U. S. 143) decided when the weight of goods entered for warehouse should be calculated.

Schoenfeld v. *Hendricks* (152 U. S. 691) deals with the broad scope of the jurisdiction and its exclusive character.

Charges for storage under Pure Food Law were held illegal in *United States* v. *Acker*, etc. (133 Fed. 842).

Jurisdiction was sustained in declaring illegal a fee on packed package on merchandise not entered. *United States* v. *American Express* (154 Fed. 996).

In *United States* v. *Ranlett*, etc. (172 U. S. 133), where American goods returned were mingled with others, the Supreme Court made a fair approximation of those held to be exempt from duty.

In *Hoeninghaus* v. *United States* (172 U. S. 622) penalties for undervaluation were held to attach to entry of specific duty goods where the amount must not be less than a specified ad valorem. (For other examples see Customs Duties, 17 Corpus Juris, p. 528, by Charles E. McNabb and Frank L. Lawrence, and the Digest of Customs cases prepared by Thomas J. Doherty, published by the Treasury Department as Compilation of Customs Laws, 1908, and a

supplemental Digest by John J. Mulvaney, published by the Treasury Department in two volumes in 1918, and Judicial Review in Customs Taxation, Forum Magazine, July 1918.)

THE CITIZEN AND THE STATE

Among the ancient conventional legal fictions is the fiction that the state cannot be sued. If the state commits a wrong for which there would be legal redress between private parties there is no legal redress against the state itself except by its own voluntary permission. This idea comes from the doctrine of the infallibility of the monarch.

While the Supreme Court (*Langford* v. *United States*, 101 U. S. 341) has held that the maxim "The king can do no wrong" has no place in our system of government, nevertheless, the state itself cannot be sued directly without the authority of a statute authorizing such remedy.

In other words, if all the people acting collectively through the state retain or take money or property to which they are not entitled from one of their number, he has no redress at law to recover it unless by special permission of the state. Perhaps because, as applied to tax matters where the necessity of a remedy is so apparent, it would in effect be dishonest for the state to withhold such judicial remedy, and in such circumstances illegally keep the citizen's money, an indirect remedy was evolved by the courts by judicial construction without any statutory authority therefor.

Thus it was early held that there was a remedy at common law against the tax collector for assessing an erroneous amount or rate of tax, on the theory that the collector, when he made a mistake, went outside the law and became personally liable for the excess paid by the citizen under protest (*Elliott* v. *Swartwout*, 10 Peters, 137; *Bend* v. *Hoyt*, 13 Peters, 263).

SITUATION OF CUSTOMS TAXPAYER

As the Government was bound to protect its collector and reimburse him for any judgment which might thus be recovered against him, the effect of this rule of law was in reality to allow a suit against the Government under another name.

While this rule applies to all forms of taxation, it is peculiarly applicable to customs taxation in view of the commercial circumstances under which goods are imported. In many forms of taxation the citizen can obtain a judicial review of administrative action increasing the rate or amount of his assessment without paying the tax in advance. In the case of tariff taxation he must pay his tax in advance, and if he does not thereafter obtain a judicial review he is left to the mercy of the administrative officials and their interpretation of the law and facts. In effect, this amounts to a government of men and not of law.

Imported merchandise is either sold in advance or contracted for in advance, or brought in to satisfy the demand of an existing market for the particular class of goods, and must be promptly delivered or promptly sold. The exigencies of the Government revenue require that duty must be paid in the first instance at whatever rate and amount the administrative officials demand. These administrative officials, acting with proper caution (as they should) so as to avoid any erroneous construction of law or mistake of fact, which might result in a loss of revenue, must necessarily resolve every doubt in favor of the Government and demand the highest rate and amount of duty. That is not only their justification and their right, but their duty as well. This the citizen must, perforce, pay in order to get his goods to market and any question of law or disputed fact of necessity be postponed for subsequent judicial inquiry to determine whether or not there should be a refund of excess payment. As Mr. Justice Lamar says in *United States* v. *Sherman* (237 U. S. 146), page 152: "The Government will not allow foreign goods to be brought into this country and then litigate with the importer as to the amount of duty. Neither bond, nor security, nor retention of the goods during litigation, will dispense with the necessity of payment. * * * When that has been done, Congress, in order to prevent injustice, has given the importer, who thus pays and protests, the right to bring the goods into the United States, has granted him the opportunity to review the finding of the collector, and has also given him the promise of a refund in case the collector is found to have made an overcharge)."

Of all the many varieties of governmental action committed to the executive branches of the Government, taxation is the one as to which little or no discretion is or ought to be confided to the judgment of the administrative officials. Our tax laws should never direct the executive authority to levy or not to levy a particular sum of money or to determine the individuals or classes, or the property or classes of property, or activities upon which the burden shall fall. The delegation of such discretion is obnoxious as destructive of individual freedom under any form of constitutional government.

Yet if, under a particular tax act the executive official administering the same, without judicial review of his findings of fact or law, determines what the tax object is, he in effect fixes such taxable object, and what rate it shall pay, instead of the legislature.

JUDICIAL REVIEW NECESSARY

Again, the legislature decrees that a house or an imported article shall pay a proportion of its value in taxes, or a business a certain percentage of an excess profit, or an inheritance a fixed proportion thereof in descending to certain relations. If an executive officer, vigilant to aid the Treasury, acting upon the most efficient and best qualified expert advice, conclusively determined the value of the house or imported article, fixed the method of calculating the excess profit, or ruled upon the legitimacy of a disputed relationship thus determining the inheritance rate, without any right on the part of the citizen to test the accuracy of such findings by presenting affirmative evidence and by rigid cross-examination of the Government witnesses—under the sanctions and protections of a judicial hearing, before a tribunal independent of executive control—autocracy of the worst form would inevitably result.

Whatever arguments may be presented upon the claim that executive efficiency may occasionally be advanced by bestowing an absolute discretion upon some officer in making administrative decisions of a certain character—for instance, concerning the health, morals, or police of a community—such arguments can never apply to the official act of administering a tax law; that is, in collecting the taxes from those persons upon whom the legislature, by general rule, has imposed the obligation of financially supporting the state. It may be occasionally considered necessary to commit to a health officer's discretion the compliance with a sanitary regulation concerning, say, the construction of a cow stable in order to prevent infection in milk or for the combat of disease, or to a building inspector to determine whether the owner has made his building safe for use, or safe against fire danger. However, even in matters of this kind, such discretion, if not subject to judicial review, may be greatly abused. But after the legislature has fixed the class of taxable persons or taxable objects and prescribed the rate and amount of tax to be collected therefrom or thereon, it is plain that the existence of the facts which bring the person or object within the class, and the interpretation of the language used by the lawmakers in describing the class, can never be safely left to the fiat or discretion of any executive officer.

A judicial review of such administrative action must of necessity be provided.

INDEPENDENCE OF THE JUDICIARY

To be effective, such judicial review must be before a tribunal independent of executive control.

Dr. Frank J. Goodnow, in his Principles of Constitutional Government (summarizes the chapter on the courts in Europe as follows:

"We may say, then, that one of the fundamental principles of constitutional government, as seen in the law of modern European states, is:

"First. The existence of judicial bodies independent in tenure of the executive; which shall,

"Second. Apply the law regulating the relations of individuals one with another—usually called the private law—by deciding the cases brought before them; and,

"Third. Shall apply in the same manner the law regulating the relations between officers of the government and private individuals—usually called the public or administrative law.

"Whether a formal distinction is made between the private and the administrative law, and whether these two functions are discharged by the same courts, are matters of comparatively little importance. The important thing is that the courts which have these powers shall be independent of the executive. Without such independence it may be said that constitutional government is impossible."

The sole function of the court in a tax case is to decide whether the tax has really been levied or not, whether the legislature has said that the citizen before the court has been taxed at all or by the correct amount. To deprive the citizen of the right to have that issue sifted and tested before an independent judicial body either by giving him no appeal or by technicalities and expensive procedure rendering such appeal, if nominally given, impracticable in use, is to deprive him of a right so fundamental that without it constitutional liberty is indeed impossible.

Without such remedy, or if by technicality it becomes too expensive to invoke, no matter how small his claim, the citizen will go away disgruntled, believing that his government has not dealt go away disgruntled, believing that his Government has not dealt honestly by him, which is the first step toward making him a bad citizen and ultimately a Bolshevik.

Perhaps the best statement of the fundamental principles upon which this jurisdiction is based appears in an opinion by Judge Story in the case of *Cary* v. *Curtis* (3 How. 236), from which I quote as follows:

"I know of no power, indeed, of which a free people ought to be more jealous, than of that of levying taxes and duties; and yet if it is to rest with a mere executive functionary of the Government absolutely and finally to decide what taxes and duties are leviable under a particular act, without any power of appeal to any judicial tribunal, it seems to me that we have no security whatsoever for the rights of the citizens. And if Congress possess a constitutional authority to vest such summary and final power of interpretation in an executive functionary, I know of no other subject within the reach of legislation which may not be exclusively confided in the same way to an executive functionary; nay, to the Executive himself . . . what ground is there to suppose that Congress could intend to take away so important and valuable a remedy and leave our citizens utterly without any adequate protection?

"Where then is the remedy which is supposed to exist? It is an appeal to the Secretary of the Treasury for a return of the money, if in his opinion it ought to be returned, and not otherwise. No court, no jury, nay, not even the ordinary rules of evidence, are to pass between that officer and the injured claimant, to try his rights or to secure him adequate redress.

Assuming that the Secretary of the Treasury will always be disposed to do what he deems to be right in the exercise of his discretion, and that he possesses all the qualifications requisite to perform this duty among the other complicated duties of his office—a presumption which I am in no manner disposed to question—still it removes not a single objection. It is, after all, a substitution of executive authority and discretion for judicial remedies. Nor should it be disguised that upon so complicated a subject as the nature and character of articles made subject to duties, grave controversies must always exist (as they have always hitherto existed) as to the category within which particular fabrics and articles are to be classed. The line of discrimination between fabrics and articles approaching near to each other in quality, or component materials, or commercial denominations, is often very nice and difficult, and sometimes exceedingly obscure. It is the very case, therefore, which is fit for judicial inquiry and decision. * * *

"Besides, we all know that, in all revenue cases, it is the constant practice of the Secretary of the Treasury to give written instructions to the various collectors of the customs as to what duties are to be collected under particular revenue laws, and what, in his judgment, is the proper interpretation of those laws. I will venture to assert that in 19 cases out of 20 of doubtful interpretation of any such laws, the collector never acts without the express instructions of the Secretary of the Treasury. So that in most, if not in all cases where a controversy arises, the Secretary of the Treasury has already pronounced his own judgment. Of what use then, practically speaking, is the appeal to him, since he has already given his decision? Further, it is well known, and the annals of this court as well as those of the other courts of the United States establish in the fullest manner, that the interpretations so given by the Secretary of the Treasury have, in many instances, differed widely from those of the courts. The Constitution looks to the courts as the final interpreters of the laws. Yet the opinion maintained by my brethren does, in effect, vest such interpretation exclusively in that officer.

"These considerations have led me to the conclusion that it never could be the intention of Congress to pass any statute, by which the courts of the United States, as well as the State courts, should be excluded from all judicial power in the interpretation of the revenue laws, and that it should be exclusively confided to an executive functionary finally to interpret and execute them—a power which must press severely upon the citizen, however discreetly exercised, and which deeply involves their constitutional rights, privileges, and liberties. The same considerations force me, in all cases of doubtful or ambiguous language admitting of different interpretations, to cling to that which should least trench upon those rights, privileges, and liberties and a fortiori to adopt that which would be in general harmony with our whole system of government."

While this was a dissenting opinion, the majority of the Court having held that a rider in an appropriation bill requiring collectors to turn over to the Treasury money received on protested classifications, had destroyed the common-law remedy, the Congress immediately by a special declaratory statute signed 36 days thereafter made Judge Story's opinion the law of the land, before the ink was dry on his pen, expressly enacting therein that nothing in the appropriation rider should be construed to destroy the common-law remedy by suit against the collector (act of February 26, 1845 (5 Stat. L., ch. XXII)).

As late as 1901, in a case where the merchandise upon which duties were levied was not technically imported and where, therefore, under the Customs Administrative Act, as it then stood, no protest lay to the Customs Court, the Supreme Court reaffirmed and reasserted the right to sue the collector at common law, citing *Elliott* v. *Swartwout*, and referring to the act of Congress where by "legislative construction of the act of 1839," following *Cary* v. *Curtis*, the common-law remedy was restored (*DeLima* v. *Bidwell*, 182 U. S. 1, pp. 177–8).

Except for the few weeks following *Cary* v. *Curtis* until the act of February 26, 1845, was passed, the customs taxpayer has always enjoyed a full and complete judicial remedy against illegal customs taxation. As Mr. Justice Lurton expressed it in *Louisiana* v. *McAdoo* (234 U. S. 627):

"There have always been remedies by which an importer may recover an excess rate of duty exacted from him by a customs collector, either by common-law action against the collector, as in *Elliott* v. *Swartwout* (10 Peters 137), or by statute, section 2931, Revised Statutes; act of June 10, 1890; act of August 5, 1909."

The act of June 30, 1864, required the importer to first appeal from the collector's decision to the Secretary of the Treasury. If the Secretary affirmed the collector's ruling, a suit against the collector to test the legality of the official action could then be instituted.

PRESIDENT M'KINLEY'S CONTRIBUTION TO THE SCIENCE OF LAW

Forty-three years ago, June 10, 1890 (*United States* v. *Ranlett*, 172 U. S., p. 145. "The remedies provided by the act of June 10, 1890, furnish the equivalent for the action against the collector, which was originally the remedy for an illegal exaction of duties"), the so-called Customs Administrative Act was passed; it is William McKinley's contribution to the science of the law.

The act was, in the first place, an administrative act, that is, it codified and coordinated the rules of law for guiding the administrative management of the customs, and secondly, established a new judicial remedy for the litigation and customs cases.

It was thus at one and the same time a customs administrative act and a customs practice act. It enlarged the remedy, abolished court costs at nisi prius, dispensed with a jury trial and the necessity for common-law pleadings, and simplified and expedited the procedure, so that the suitor with a few dollars at issue could obtain relief as easily as the large importer, by means of a hearing at or near his home port where the facts and law upon which he based his claim could be presented.

The classification jurisdiction under this statute is judicial in every respect and always has been. (*In re Blankensteyn*, 56 Fed. 474; *Marine* v. *Lyon*, 65 Fed. 992; *Stone* v. *Whitridge*, 129 Fed. 33; *United States* v. *Schwartz*, 3 C. A. R. 24, 32; *United States* v. *Kurtz*, 5 C. A. R. 144.) By a series of statutory enactments, reappraisement hearings also gradually evolved into a judicial procedure, with parties, subject matter, and the form of a court trial. (Sec. 501, pt. III, Tariff Act of 1930.)

The law provides that the customs court shall have and possess all the powers of a district court of the United States in preserving order, compelling the attendance of witnesses and the production of evidence, and in punishing for contempt. The tenure of the judges is for life subject, of course, to impeachment by Congress.

As originally established by McKinley in the Customs Administrative Act of June 10, 1890, the appeal under the customs remedy ran from the customs court (then called the Board of General Appraisers) to the district (then circuit) court and further to the circuit court of appeals of the appropriate circuit, with certiorari to the Supreme Court.

In the Tariff Act of August 5, 1909, the Court of Customs Appeals (now called the Court of Customs and Patent Appeals) was created to hear all the customs appeals previously heard by the various United States circuit courts of appeal.

The same act completely bestowed upon the Board of General Appraisers the performance of the full nisi prius function in customs suits previously performed in part by the United States district courts upon a de novo hearing in the form of an appeal from the Board, thus fully establishing the Board as an inferior court of the United States, performing a function within the judicial power of the United States, previously committed to the district and circuit courts. The title remained a misnomer until the act of May 28, 1926, wherein the Congress changed the name of the Board of General Appraisers to the United States Customs Court, without affecting in any way its status, powers, duties, or jurisdiction This is the form of enactment known as a legislative recognition of an existing fact, merely recognizing the previously existing judicial status.

An appeal in classification cases now lies to the United States Court of Customs and Patent Appeals, consisting of five members sitting at the National Capital. Certiorari lies to the Supreme Court. (Pleading, similitude, *United States* v. *Rice*, 257 U. S. 536; classification of mixed acids, *United States* v. *Aetna*, 256 U. S. 402; clothing, wool, *Stone & Downer* v. *United States*, 274 U. S. 225; constitutionality of the flexible tariff, *J. W. Hampton, Jr.*, v. *United States*, 276 U. S. 394; hearing before Tariff Commission, *Norwegian Nitrogen Products Co.* v. *United States*, 288 U. S. 294, February 6, 1933; exemption of State universities, *Trustees University of Illinois* v. *United States*, 288 U. S. ——, Mar. 20, 1933.)

THE CONTINENTAL VERSUS THE AMERICAN MIND

The continental mind works differently from the Anglo-Saxon mind. The development of their respective systems of public law is a good illustration of the difference.

The continental mind worked out logically on principle the necessity of a judicial review of administrative action to protect the liberty of the citizen, while the Englishman and the American merely invented remedies in piecemeal, and more or less imperfectly, as the necessity or the popular demand for some particular remedy arose.

So we find in France and some of the smaller continental countries a well-defined plan with a logically developed system—sometimes through special administrative courts created for the purpose, a special forum having a wide and comprehensive jurisdiction for the remedy of individual wrongs arising from executive action.

In England and America the ordinary courts have been given, in a limited class of subjects, a special jurisdiction to meet the particular public demand for such reform, along some particular line where the abuse from the absence of the remedy was flagrant, or where the courts themselves have from sheer necessity, without statutory authority, sustained the right to sue the tax collector at common law, or have applied the original common-law writs of mandamus and prohibition.

Where special tribunals like the United States Customs Court or the Court of Customs and Patent Appeals, or the Court of Claims, have been created their jurisdiction has usually been of a special and limited character to cover some particular class of subjects.

Under the common-law writs—mandamus, prohibition, and the writ of right—all of which were invented or adopted by the English courts to give some judicial review of the legality of the acts of public officers, as a rule, the remedy is limited to the correction of errors of law and does not include errors of fact. Moreover, if a discretion is expressly confided by the terms of the law to the official, such discretion cannot be reviewed by the court on such writs, but the court can only correct an abuse of discretion. Further, as a rule, such writs lie not as a matter of absolute right but issue in the sound discretion of the court.

Consequently, a judicial review by means of such writs, and the kindred writ of injunction, is not always fully effective. To procure a full, adequate, and complete remedy, an appeal covering all questions of law and fact involved in the decision complained of must be provided by statute, of which, I suppose, the appeal provided by the Customs Administrative Act is probably the best particular example.

FRENCH ADMINISTRATIVE LAW

LaFerrière, in his Traité de la Jurisdiction Administrative et des Recours Contentieux, states the general principle upon which the jurisdiction of the French courts over certain administrative contests is founded, as follows (vol. 1, p. 6, par. 2) (free translation):

"It results that with resistance set up in opposition to the acts of the administration or an act of public authority founded on a right which the administration may have disregarded, upon an error of fact or of law which it may have committed in its relation with the citizen, * * * and which may have resulted in the violation or erroneous application of the law or of an existing right. If the injured party thinks himself justified in opposing his individual right to the right invoked by the administration, there is a subject matter for contest, for litigation; an administrative contest is immediately created by the conflicting claims; judicial action is necessary to resolve the difficulty. In other words, the offended interest involves only the idea of utility, of expediency, of policy, whereas the disregarded right involves the idea of justice, of legal sanction, of a judicial determination. In the first case, the injured party can only beg and complain; in the second, he can require verification of his right and demand that it be respected."

It is upon the basis of such theoretical definitions as this that the continental jurisdiction appears to have been worked out. Speaking of the French system, in Principles of Constitutional Government, Dr. Goodnow says (p. 240):

"The French system has proved itself to be more effective in the protection of the individual, not only because of the law which the administrative courts have developed, but also because of the more simple and less expensive remedies which have been provided. Much of the procedure in the Anglo-American courts is extremely technical, and on that account expensive, because the litigant must retain the services of a highly paid lawyer. Most of the remedies provided by the French law are simple and a lawyer's services are often not required."

In England the common-law action against the collector is distinctly recognized (39 and 40 Victoria, ch. 36, sec. 34). Decisions of customs cases brought to procure a refund of excessive duties appear in many of the law reports in the British Colonies.

Our own statutes relating to the Philippine Islands provide for a court review there, and a number of customs cases have been decided by the Philippine Supreme Court.

In the preservation of "equality before the law" the right to go before a judicial tribunal independent of the executive and there obtain relief from the illegal levy of a tax by the administrative official is fundamental.

NATURE OF THE CUSTOMS CLASSIFICATION REMEDY

The executive officials take the duty. The importer, whose goods have gone into consumption, has paid it. He must sue to get back the whole or any portion which he claims to have been illegally taken. The suit is instituted by filing a protest against the collector's liquidation. This protest constitutes the initial and only pleading in the case. It must definitely and specifically state the classification claimed to be correct and the error in the collector of customs' classification or liquidation. It may be amended upon written motion in the discretion of the court at any time before the case is called for trial (rule 38). No answer by the Government is required because the plaintiff, in order to recover, must affirmatively prove his case, i. e., he must show (1) that the classification or liquidation made is erroneous, and (2) he must show that the classification, weight, or other matter affecting the liquidation, upon which he relies is correct. A motion to dismiss often serves as a demurrer to the protest, as in other Federal courts.

The testimony of the witnesses produced must conform to the strict rules of legal evidence with all the sanctions and protection of other judicial trials. In every respect it is identical with the common law action for money had and received, which it succeeded, brought in a State court for the return of duties claimed to have been illegally exacted, except that the division of three judges decides all questions of fact as well as law, the common-law jury having been dispensed with. If the decision is in favor of the Government the judgment of the court overrules the protest. The judgment, if for the plaintiff, results in the return of money held to be illegally exacted as duty, that being the purpose of bringing the suit. No execution, of course, is necessary, as all such judgments are paid out of a continuing appropriation for the purpose in the same way many of the money judgments of the Court of Claims are satisfied, as referred to in *United States* v. *Klein* (13 Wallace 128), and held to constitute a binding judgment. In a real sense therefore the custom court's judgment executes itself. The absence of conventional execution does not affect the validity and binding force of the judgment. In *Mills* v. *Duryee* (7 Cr. 480–485), Mr. Justice Story said:

"The right of a court to issue execution depends upon its own powers and organization. Its judgments may be complete and perfect and have full effect independent of the right to issue execution."

In *Fidelity National Bank* v. *Swope* (274 U. S. 123) Mr. Justice Stone said:

"While ordinarily a case or judicial controversy results in a judgment requiring award of process of execution to carry it into effect, such relief is not an indispensable adjunct to the exercise of the judicial function."

This principle is affirmed and the authorities reviewed in *Nashville, Chattanooga & St. Louis Railway* v. *Wallace* decided by the Supreme Court February 6, 1933 (288 U. S. 249). There Mr. Justice Stone specifically referred to the Supreme Court's power to review the money judgments of the Court of Claims "although no process issues against the Government" (p. 263). While for convenience the judgment of the Customs Court often takes the form of a direction to the collector to refund the money decided to be due the plaintiff, it can and does sometimes take the conventional direct money form (*Fox River Butter Co.* v. *United States* (T. R. 44667, 59 T. D. 485); *Marine* v. *Lyon* (62 Fed. 153)), Such form was attacked and sustained in *United States* v. *Davis* (54 Fed. 147) per Shiras, Caldwell, and Sanborn, judges.

The subject matter of the suit is a case at law "arising * * * under the laws of the United States" and is also one of the "controversies to which the United States shall be a party," as the United States is always defendant. These are two of the categories specifically mentioned in article III of the Constitution to which the judicial power of the United States shall extend (*United States* v. *Hopewell* (51 Fed. 798) per Gray, circuit judge, where the judgment below was a money judgment. See also *Anglo-Cal.-Bank* v. *United States* (175 U. S. 37). In *United States* v. *Rice* (257 U. S. 536) Chief Justice Taft says:

"This case involves the sufficiency of a protest necessary to justify a suit against the United States for duties illegally exacted."

The United States is defendant in every classification case. In *United States* v. *Jahn* (155 U. S. 109) Chief Justice Fuller said: "This case was docketed here under the title: 'In the matter of the application of Gustave A. Jahn & Co. upon certain merchandise entered by the "Alps," August 15, 1890,' but the correct title is *United States* v. *Gustave A. Jahn et al.*, for the reasons given by Mr. Justice Gray in *United States* v. *Hopewell* (5 U. S. App. 137, 51 Fed. 798)" including petitions for remission of penalties and the so-called manufacturers' protest. The manufacturers' protest protests the rate collected as too low and of course does not ask for a money judgment. The United States has consented to be sued under it (sec. 516, Tariff Act of 1930). Its nature is explained in the similar suit of *Louisiana* v. *McAdoo* (234 U. S. 627) where Mr. Justice Lurton described all customs suits as suits against the United States. Its scope is being litigated in *Dutchess Hat Works* v. *United States* (T. D. 45974) motion for retrial (T. D. 46124) decided by division 1 of the Customs Court on January 17, 1933, now on appeal to the Court of Customs and Patent Appeals. The case instituted by the manufacturers' protest is perhaps the only instance in the law where a citizen, not paying the tax, may litigate concerning the application of a tax law to his tax-paying rival in business and if successful thus increase the tax collected by the Government officials from such rival.

BROAD SCOPE OF CUSTOMS COURT'S JURISDICTION

The jurisdiction of the United States Customs Court being coextensive with, and the equivalent of, the original common law action in a State court against the collector of customs, covers a very wide scope including almost every possible legal controversy which may arise between the importing taxpayer and his government concerning the rate or amount of duty paid. It not only includes the rulings of the collector himself in liquidating the duty, but also "the legality of all orders and findings entering into the same" (sec. 514, Tariff Act of 1930).

The citizens' right which this remedy protects is a fundamental necessity for the protection of property under a government of law constitutional in form, and must be all inclusive of every kind of legal dispute in order to be effective. When the citizen's money is illegally taken in customs taxes, the necessity for a judicial remedy to compel its return is equally great, no matter what official, from the Secretary of the Treasury down, performs the act of taking it. That is why the courts give the remedy a wide scope, and liberally construe it.

The collector of customs is selected as the official with whom to lodge the protest which starts the suit. First, because he is accessible to the importer at his home port where the trial is to take place, often a great distance from Washington, D. C. Second, because in his liquidation or decision the collector communicates to the importer at his home the entire departmental action, by whomsoever performed, in making the administrative rulings which take duty from the importer or refuse him relief from a refund demanded. The collector was thus chosen for the purpose of making the remedy all inclusive of everything everyone had done, or refused to do, which could be made the subject of a legal contest.

The constitutionality of the action of the President in putting a retaliatory duty into effect by proclamation under the so-called reciprocity clauses of the act of October 1, 1890, was determined in *Field* v. *Clark* (143 U. S. 649), affirming T. D. 10553. Similarly the constitutionality of the flexible tariff proclaimed by the President was determined in *Hampton* v. *United States* (276 U. S. 394), affirming T. D. 41478. Rights, under the famous 5-percent rebate cases, to favored nations under treaty stipulations, involving many millions, were determined in *United States* v. *Pulaski* (243 U. S.

97), reversing T. D. 34246 and T. D. 35508. A reciprocity treaty with Cuba was construed in *Faber* v. *United States* (221 U. S. 649), affirming T. D. 27847. Construction of a commercial treaty with France was had in *Altman* v. *United States* (224 U. S. 583), affirming T. D. 29279. The legal effect of nonaction by the Secretary of the Treasury, who was described by the Supreme Court as the chief administrative officer in the collection of duties, was determined in *United States* v. *Ballin* (144 U. S. 1), affirming T. D. 10336. That the burden of proof was upon the Government and not upon the importer upon reliquidation of the collector for fraud after a year, was decided in *Vitelli* v. *United States* (250 U. S. 355). The hearing before the Tariff Commission in the process of executive fixing of a new rate of duty was held to be legislative and not judicial in character, in *Norwegian Nitrogen Products Co.* v. *United States*, decided by the Supreme Court February 6, 1933 (288 U. S. 294), affirming T. D. 44824. That a tariff rate could be imposed upon goods imported by a State university was decided by the Supreme Court on March 20, 1933, in *Trustees of the University of Illinois* v. *United States*, affirming T. D. 44758 (288 U. S. —). In *United States* v. *Lies* (170 U. S. 628), it was held that if an importer appellant abandons his appeal the Government, which had not appealed, may not insist upon review and reclassification. A Russian sugar bounty was held to be a legal basis for the levy of countervailing duty by the Secretary of the Treasury in *Downs* v. *United States* (187 U. S. 496), affirming T. D. 22984, although all Russian sugar producers, whether exporters or not, received the bounty. Similarly a countervailing duty to offset a British spirits rebate was sustained as legal in *Nicholas* v. *United States* (249 U. S. 34), affirming T. D. 35595. Jurisdiction over the question of the legality of charges incident to a customs draw-back was sustained in *United States* v. *Jahn* (155 U. S. 109), long before jurisdiction over illegally withheld draw-backs was transferred from the Court of Claims to the Customs Court by the Tariff Act of 1922.

A very intricate and important case was recently decided by Division III of the Customs Court in *Porto Rico Brokerage Co. (Inc.) et al.* v. *United States* (T. D. 46199), which arose at San Juan, Puerto Rico, involving the constitutionality of a tariff tax levied by the insular government upon coffee shipped from New York to Puerto Rico. At the time of the famous *Insular Cases* in 1901 a suit of this character would have had to be brought in the Insular Court of Puerto Rico, as *DeLima* v. *Bidwell* (182 U. S. 1) was brought by a common-law assumpsit for money had and received in the Supreme Court of the State of New York. Now, however, such cases are within the customs administrative act, as amended, by paragraph N, section III, of the Tariff Act of 1913 and subsequent acts, and must be brought in this customs jurisdiction. (*United States* v. *Porto Rico Coal Co.* (17 Ct. Cust. Patent Appeals, 288). Sec. 514, pt. III, act of June 17, 1930.)

In *Gsell* v. *Insular Collector of Customs* (239 U. S. 93) the Supreme Court held that a writ of error was not applicable under the statutes to a customs case where for full review the facts as well as the law must be considered. Mr. Justice Day said:

"Such was the uniform method and purpose of review, under all the statutes and procedure, which, so far as applicable, are to be read into the Philippine Act, and such is still the policy of the Federal statutes in permitting review of the decisions of the boards of general appraisers in the United States by appeal to the court of customs appeal. By writ of error the review is limited to questions of law—a method of procedure inapplicable to customs cases, where the facts must be considered in order to determine the proper classification of the merchandise and the duty to which it is subject."

Numerous classifications passed upon by the Supreme Court in cases arising in this jurisdiction since the passage of the act of 1890 in addition to those previously mentioned are cited in a note below. Stained or painted glass windows, *United States* v. *Perry*, 146 U. S. 71; Finished gunstocks with locks and mountings, not guns, *United States* v. *Schoverling*, 146 U. S. 76; Knit woolen underclothes as wearing apparel rather than knit fabrics, *Arnold* v. *United States*, 147 U. S. 494; Manufactures of woolens including worsted goods, *United States* v. *Klumpp*, 169 U. S. 209; Muriate of cocaine as a medical preparation rather than a chemical salt, *Fink* v. *United States*, 170 U. S. 584; Natural gas as a crude bitumen, *United States* v. *Buffalo Natural Gas & Fuel Co.*, 172 U. S. 339; Boards planed one side and tongued and grooved as dressed lumber, *United States* v. *Dudley*, 174 U. S. 670; Tapioca flour as tapioca rather than starch, *Lung* v. *Wise*, 176 U. S. 156; Taxation of wrapper tobacco in filler bale, *Rothschild* v. *United States*, 179 U. S. 463; Certain glass beads as manufactures of glass rather than imitations of precious stones, *United States* v. *Morrison*, 179 U. S. 456; Glass bottles not coverings, *United States* v. *Nichols*, 186 U. S. 298; Plaster casts for religious society, *Benziger* v. *United States*, 192 U. S. 38; Carbon sticks unfinished are carbons for electric lighting by similitude, *United States* v. *Downing*, 201 U. S. 354; Additional duty on figured cotton cloth, *United States* v. *Riggs*, 203 U. S. 136; The growth on Mocha sheep not commercially wool but hair, *Goat & Sheepskin Imp. Co.* v. *United States*, 206 U. S. 194; Metal beads temporarily strung as metal articles, decorated, not beads, *Frankenberg* v. *United States*, 206 U. S. 224; Construction of wine paragraph following old departmental practice, *United States* v. *Cerecedo*, 209 U. S. 337; Japanese Sake wine by similitude, *Komada* v. *United States*, 215 U. S. 392; Imitation horsehair, cotton yarn by similitude, *United States* v. *Eckstein*, 222 U. S. 130; Tobacco sweepings and scrap used in manufacturing cigarettes, not waste, *Latimer* v. *United States*, 223 U. S. 501; Loose drilled pearls unset and unstrung, carefully matched for a necklace, are pearls in their natural state, *United States* v. *Citroen*, 223 U. S. 407; Featherstitch braids as braids and not binding or tapes, *United States* v. *Baruch*, 223 U. S. 191; Definition of statuary under reciprocal agreement with France, *Altman* v. *United States*, 224 U. S. 583; Commercial mixture of sulphuric acid and nitric acid held free of duty as nitric acid, *United States* v. *Etna Exp.*, 256 U. S. 402. More recent cases cited supra p. 337 Amer. Bar. Assoc. Jour., June 1933. See also Drawback, *National Lead Co.* v. *United States*, 252 U. S. 140 and *Ex Parte Park and Tilford*, 245 U. S. 62, and *Cooper* v. *Dobson*, hair of alpaca, goat, and other like animals in 157 U. S. 148.)

An application for certiorari was filed before the Supreme Court on May 24 in Sears, Roebuck & Co. against United States which challenges the constitutionality of the changed language of the flexible tariff as embodied into section 336 of the Tariff Act of June 17, 1930. That case was decided in favor of the Government by the Court of Customs and Patent Appeals in T. D. 46086, reversing a judgment by Division II of the Customs Court holding the section unconstitutional and distinguishing the case of *Hampton* v. *United States* (276 U. S. 394), 61 Treasury Decisions 679, Baltimore Daily Record of April 7, 1932.

On June 3, 1933, Division III of the Customs Court decided the cases of Domestic Fuel Corporation against United States and George E. Warren Corporation against United States, of great international importance, involving the application of the favored-nation clauses in our commercial treaties with Great Britain and Germany as applied to the tax on importations of coal in the Revenue Act of June 6, 1932.

It has often been a subject of surprise to the writer that so few lawyers or laymen are familiar with the simple and reasonable pleading and practice of the customs jurisdiction, or why those studying and seeking improvements in judicial practice and procedure have not made themselves familiar with this customs judicial remedy and the machinery of its operation.

The Challenge of the Drought

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, December 11 (legislative day of Tuesday, November 16), 1937

ARTICLE BY JOHN C. PAGE IN THE "RECLAMATION ERA" FOR NOVEMBER 1937

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by John C. Page, Commissioner of Reclamation, published in the Reclamation Era for November 1937, entitled "The Challenge of the Drought."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Reclamation Era, November 1937]

(By John C. Page, Commissioner of Reclamation. Address delivered October 1, 1937, in Lincoln, Nebr., before the Nebraska State Historical Society)

In times of drought, with the heartbreaking lesson of disaster before us, we turn more thoughtfully to consideration of our water problems. Memory is short, however, and a general break in the weather often intercedes before solutions are found and executed.

From the Rio Grande to the Missouri River, the whole Great Plains area is suffering from a severe and extended drought at this time. The people of the many States affected are acutely aware of the fact that they are confronted with a situation requiring drastic action and readjustments. The time to press forward toward some permanent and effective solution is now.

Fortunately, the whole Nation is awakening to the appalling magnitude and diversity of its problems connected with conservation and control of its waters. Floods in the Ohio Valley and dust storms arising in the West have given spectacular illustrations of the far-reaching effect of failure to take nature into consideration in our anxiety to build America. The conviction is growing that we must rebuild sanely and on a national front.

Conservation has powerful friends. Recently, President Franklin Delano Roosevelt said in his Constitution Day address, "In our generation a new idea has come to dominate thought about government—the idea that the resources of the Nation can be made to produce a far higher standard of living for the masses if only government is intelligent and energetic in giving the right direction to economic life."

Secretary of Interior Harold L. Ickes also has been in the forefront of the conservation movement, and to his watchfulness and

unfailing energy much of the credit for the present advances is due.

These principles are reflected in a strong movement toward adoption of conservation as a major and continuing national policy, and to dignify it with representation through an executive department in the Cabinet of the President as a positive declaration of our national intention in this regard.

Water is a major resource, in some localities the most important, and its conservation must have a high place in our new national program.

There is no section free from some problem connected with water, whether it be flood, navigation, domestic or irrigation supply, pollution, wildlife, or power. Some are faced with a complexity of them, each important. Too long expediency has governed our treatment of these problems. Each community has tried to solve, on a local and sometimes a temporary basis, water problems which overran county and State lines. The result has been, in many instances, aggravation in another nearby locality of the very condition for which a correction was sought.

Under the direction of the water-resources division of the National Resources Committee much progress has been made recently toward introduction of broader planning into these efforts.

INTELLIGENT USE OF WATER

Generally speaking, the West has taken a broader view. States which were carved out of territory which was frankly admitted to be arid or semiarid had no illusions concerning their water. From the beginning they realized that their growth and development in the end would be limited by the water within their boundaries and the intelligence with which they conserved and used it.

In the East the problem is not now and probably never will be one of parceling for wise use the water Nature provides, but rather it is and it will continue to be one of controlling the water to make it a less damaging and a more serviceable tool.

But what of the area which lies between the humid East and the arid West? The Great Plains are neither humid nor arid continuously but, alternately, are either humid or arid as Nature decrees. The one hundredth meridian which splits Nebraska in two, running down between Grand Island and North Platte, is the line which divides the humid from the arid.

If the weather were steadfast and each year the rain fell in the same amounts and on the same days, like water from a gigantic spigot controlled by a time clock, the peculiar problem of the Great Plains would not exist. Then a farmer would know in advance whether he were to receive enough rainfall for his crops and could make his plans accordingly. If the rainfall did not vary from year to year and seemingly run in cycles, either wet or dry, it is probable that little or no land west of the one hundredth meridian would have been plowed except that which could have been provided in advance with a reliable irrigation water supply.

But the rain is beyond human control and Nature is inconsistent. She sends her clouds where and when she pleases. We can say definitely about her methods that, over a long period of years, the average rainfall will not be different from that received over any other long period of years. It is safe also to say that where a flood has occurred another flood will come and where a drought has occurred another may be expected.

NORTH DAKOTA WATER SUPPLY

Reliable records show that the average annual rainfall, generally, west of the one hundredth meridian is below 20 inches a year, insufficient for safe farming, and, generally, east of the one hundredth meridian it is in excess of this amount. There have been decades in the past which belied this statement. There will be such years in the future, but the present drought in western Nebraska and in the other sections of the Great Plains is not without precedent. When it is broken, the wet years will be simply an interlude preceding another drought.

In 1889 Maj. John Wesley Powell, Director of the United States Geological Survey, stood before the North Dakota constitutional convention, earnestly pleading that title to the flowing waters of the State be retained for the people. He pointed to the curious geographical position of the State in relation to agriculture, saying the eastern part would have water for crops, the western part would soon learn to depend on irrigation, and that in the central part "they will have a series of years when they will have abundant crops; then for 2 or 3 years they will have less rainfall and there will be failure of crops and disaster will come on thousands of people who will become discouraged and will leave. Up and down the temperature of agriculture will rise and fall with the seasons in this manner and the only practical thing to do is to look this thing squarely in the face and remember that in middle Dakota agriculture will always be liable to meet with failure unless you provide against it. This is the history of all those who lived on the border between humid and arid lands. Years will come of abundance and years will come of disaster and, between the two, the people will be prosperous and unprosperous. * * * There are waters rolling by you which are quite ample to redeem your land and you must save these waters. I say it from the standpoint of the history of all such land."

It was difficult to make the early settlers realize that the conditions described by Major Powell were insurmountable. There was a natural resentment against conceding that this border area should be classified with the arid lands to the west.

NEBRASKA'S WATER PROBLEM

I was interested in reviewing recently an article published early this century. It said, in part: "The drought of 1890 made Nebraska one of the important irrigation States of the West. Canals had been built on the North Platte River near the Wyoming border several years earlier, but the irrigation industry had won no general recognition. Thousands of farmers were persisting in the delusive hope of rainfall farming, and popular sentiment was distinctly opposed to those who sought to include Nebraska in the arid region."

That great drought had many of the same effects as this of the present time. A notable exception was that the population was less and there were fewer to suffer.

But it rained again and even more lands were broken, even more homes were established, and even more communities built, so that this, the next great drought, brought even greater disaster.

Will this same cycle of more rain and increasing enthusiasm, less rain and mounting human misery be allowed to repeat itself again?

The answer will come from the people of this region, but the whole country is interested as never before. More sympathy and understanding, more encouragement, and more help can be relied upon from other sources.

This problem should be approached with courage. The challenge of droughts must be met.

Nebraska is my native State. Since the "cornhuskers" are my home folk, I would like to see you show the way. The people of this progressive State have given many proofs that they are unafraid of experimentation with new methods when they hold the promise of betterment. The adoption of a unicameral legislature by Nebraska has taught the country to look this way.

All cities have used the zoning method to protect valuable property and to assure that growth will follow an intelligent plan. This method of restricting unwise expansion and of maintaining the integrity of a well-laid plan for agriculture on a State-wide basis might prove effective if intelligently applied here.

Rural zoning in the Great Plains might give the firm control which must be exercised if at some future time another drought is not again to upset the economy and demoralize the population of these States to even a greater extent.

Do not mistake me. I am not hinting that Nebraska or any other of the Great Plains States has reached the zenith of development and must now retrogress. This drought is a temporary set-back and, if proper readjustments and full utilization of the water resources are made, a much brighter and safer future lies ahead.

Each State would like to feel that all of its lands could be used for farmsteads. In the arid West this patently is impossible. The States out there have accepted this obvious fact with a determination to do the best they can with what they have. They have done very well. They have studied their water resources; planned diligently for their conservation; and generally managed to apply the limited water available to them so that it brings the greatest possible benefits. They have a security in their agriculture which is their compensation, and none of them has exhausted its possibilities.

A State which is one-third arid, one-third humid, and one-third in the twilight zone between the two can find no permanent security within itself if it is constantly expanding or painfully contracting in accordance with the whims of nature.

The Bureau of Reclamation now provides, and has provided for nearly 30 years, a regulated irrigation water supply from Pathfinder Reservoir for 250,000 acres along the North Platte River in western Nebraska. Here live in security nearly 25,000 people on more than 2,000 farms and in about a dozen towns. Despite the drought, these people have not been unprosperous. The value of their crops last year, during the worst of the drought, was about $9,000,000. The even tenor of their production has exerted a powerful stabilizing influence on a vast surrounding area, and it has been felt throughout the State of Nebraska. Omaha, one of the principal meat-packing cities, has been markedly affected.

At this time there are under construction by groups of your own citizens several projects to provide a use of your waters for power and irrigation on the Platte and Loup Rivers. These were financed by funds from the Public Works Administration.

In the history of reclamation there has been almost no great project started to conserve and use our waters that was not attacked as "visionary," "impractical," or "foolish." There were many who said Boulder Dam could not be built and that, if it were, it would serve no useful purpose. But it was built and in record time, and it is doing all and more than was claimed for it.

Virtually from the time of Noah, when the ark was built as protection against the future amid jibes and wisecracks, such efforts have been the targets of doubting Thomases. Now we hear some of the echoes in Nebraska.

While I will not undertake to pass judgment on any irrigation project outside my jurisdiction, I am convinced that projects which wisely use the water resources of this region will redound to the benefit of the people of the States and of the Nation. Nebraska cannot afford to let her waters waste.

Of the thousands of families, uprooted by the drought and now wandering west from the Great Plains, some came from Nebraska. If by proper planning now, another generation of homeless can be prevented from developing in the future, should not the necessary steps be taken at once?

In Nebraska, or over the larger part of the State, at the least, the most important use of water is for domestic and irrigation purposes. Each project should include, in addition, as many other purposes as can feasibly be worked into the picture. Power generation should not be overlooked in the engineering of these

projects, for power, if it can be produced cheaply, will improve the standard of living and provide a revenue which in some instances will mean the difference between an infeasible and a feasible irrigation or conservation dam.

Skeletons of old irrigation works dot the twilight zone of the Great Plains. Some of these have failed, among them two small projects undertaken by the Bureau of Reclamation in its early days, because the farmers who were to have been served forgot that drought recurs and refused to keep their water systems in operating condition during wet years. When they were needed, the canals could not be used. Since this drought set in back in 1929, these abandoned works, if they could have been used, generally would have saved many times their original cost.

There are undoubtedly in Nebraska underground water resources which safely could be tapped to supplement the natural rainfall in deficient years. The Bureau of Reclamation has never constructed a project which relied solely on pumping from wells. Properly regulated by State legislation or perhaps through the rural zoning method so as to prevent overdevelopment and eventual exhaustion of the so-called underground reservoirs, pumping for irrigation of comparatively small plots on the farms in the area most in need of a steadying influence might prove very effective. Your State engineer and the Geological Survey can be relied upon for reliable advice.

The Great Plains committee, on which I had the honor to serve, last year made a report to the President which contains much information which should be useful in formulation of a plan for State action. I will not review this report here for want of time and because it has been widely distributed.

Whatever is done must be initiated by the people affected and done with their cooperation. A candid understanding of the situation must precede permanent solution of the problem.

If the Great Plains are ready, if Nebraska is ready, honestly to face the facts and earnestly to work for a permanent remedy, then I believe the whole country will pitch in, like farmers at an old-fashioned husking bee, and help get the job done.

Senator Wheeler

EXTENSION OF REMARKS

OF

HON. FREDERICK STEIWER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, December 11 (legislative day of Tuesday, November 16), 1937

ARTICLE IN THE NEW YORK TIMES MAGAZINE

Mr. STEIWER. Mr. President, in the New York Times Magazine of August 8, 1937, appeared an interesting article about a very influential and prominent Member of this body, the senior Senator from Montana [Mr. WHEELER]. I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine, August 8, 1937]

THE LIBERAL WHO FIGHTS NEW DEAL LIBERALISM—SENATOR WHEELER, RISEN TO NEW PROMINENCE IN COURT BATTLE, TELLS WHAT HE DRIVES AT

(By Turner Catledge)

WASHINGTON.—One morning not long ago Vice President Garner got off the elevator on the fourth floor of the Senate Office Building and walked briskly down the hall. Halfway along the corridor he turned quickly in at a door, to face a tall, rather handsome man, with thinning reddish brown hair, seated at a desk piled high with papers. Over the man's shoulder and through the window, Mr. Garner could see a panorama of downtown Washington with the Washington Monument, Lincoln Memorial, and Arlington Mansion spreading out in the background. In a corner of the office was a copy of the Declaration of Independence, fastened to an easel and draped half over with an American flag.

The Vice President was quick to his business. Seating himself as he passed the usual pleasantries with one whom he had scarcely seen for 5 weeks, he looked across the desk into a pair of kindly blue eyes squinting at him through octagonal glasses. Taking one more puff at his cigar, the Vice President said:

"Burt, write your own ticket."

At that moment and with those words the administration leadership in Congress surrendered President Roosevelt's most cherished yet most controversial measure of the year, the plan to reorganize the Supreme Court. The Vice President was making the capitulation to the leader of the successful opposition, Senator BURTON KENDALL WHEELER, of Montana. Furthermore, he was making more formal and more complete a conclusion already reached in Washington, that this man WHEELER, this veteran of more political warfare than usually comes in the lives of three average public men, had reached a new position of importance in American affairs.

The Vice President waited a moment for his answer. He glanced across to the wall on the right, to an area covered with pictures of Senator WHEELER, most of them group scenes and several showing the Senator in the company of President Roosevelt. He looked toward the ceiling, his glance sweeping over a collection of campaign cartoons reminiscent of the time when the Montana Senator himself ran for Vice President on a ticket with the elder La Follette.

He then looked back at the kindly blue eyes and the thin mouth cut in the shape of a perpetual smile. The Senator was really smiling this time, however, for his lip was hiked up over the eye tooth at the left.

"All right, Jack," snapped the Montanan, and with that the Senator accepted the part he was to play in the immediate peace negotiations settling the bitter Court bill fight, and the role he can hardly escape during the coming months as one of chief antagonists of the administrative methods of President Roosevelt.

To this writer it would seem poor prophecy to say that Senator WHEELER and President Roosevelt will be very far apart on general objectives in the near future. They are both definitely cast in the "liberal" mold. Some of the men who followed and prodded Senator WHEELER in his fight on the Court bill may soon return to calling him the names they used to apply to him, and he and the President probably will be allies in many a fight to come. But it is a truth beyond dispute that the Senator and the President have definitely fallen out over method, they have become acutely suspicious of each other's motives, and each is thoroughly disgusted with the company the other now keeps.

Few men in the public life of the United States have worn the "liberal" label with more consistency and more pride than Senator WHEELER. In fact, he is extremely jealous of the badge and openly resents the camp followers who have been flaunting it in Washington since the Roosevelt administration came in—men and women who, he believes, were attracted by no more than the spoils of office and will return to the caves of Wall Street in due season. And he seems to resent as well the "professors," as he calls them, who would change the whole form of the American Government in the name of liberalism.

"My views of democracy and liberalism are best expressed in our present form of government," Senator WHEELER says. "I firmly believe that we must have reforms from time to time but that they should come within the framework we already have set up, until the people themselves determine to change that framework. Congress hasn't any right to change it. The President hasn't any right to change it. Only the people have that right. They can destroy the Government if they want to, regardless of the wisdom of such a course. But the people alone have the right, not the President or Congress."

Senator WHEELER based his objection to the Court bill on this line of reasoning. He charged that the President was trying to induce Congress to change the essential framework of the Government by making the Court dependent upon him and Congress, and without submitting the question to the people in a constitutional amendment.

"The whole Court bill fight was one of reform versus control," he says. "What the proponents wanted was control. What the sincere liberals wanted was reform."

And fight it was. Observers in the galleries of Congress can remember few legislative campaigns that were planned with more diligence and carried out with more cleverness. Senator WHEELER was early named chairman of the unofficial steering committee that conducted the battle. He marshaled his speakers, he planned with them when each would take the floor and, in general terms, what each would say. He went on the floor himself with the first opposition speech. He is known for his biting remarks and few have been more biting than those he uttered in condemnation of the measure and the men whom he thought responsible for it.

The Senate seemed aware that his fight on the bill was being construed in some circles as a switch over to the conservative side of the political fence. He insisted always that the Court bill was illiberal in its very essence, and the most illiberal part of it, in his estimation, was the power over the courts which it gave the President. He believes "it can happen here." He thinks passage of the Court bill would have been one of the first steps toward making it happen.

"If you had a President who had a subservient Congress and a subservient Supreme Court, you could easily set up a dictatorship in this country," says the Senator. "The temptation to a President to make himself a dictator both in form and in fact would be very great. I think I am a liberal, but I hope I am not crazy. Liberalism a few years ago in Europe meant democracy as we know it. Today in many parts of Europe it means dictatorships."

Senator WHEELER sees two kinds of radicals in the United States—the ultraconservatives who want to take the law into their own hands and rule by the might of money, and the other extreme group "who would destroy all of our existing Government and give the power solely to a few individuals, those who have never made a success for themselves but feel they can solve all the problems of our complicated economic life in a few minutes." "Each is equally dangerous to our peace and happiness," the Senator says, though at times he would give a slight edge to the ultraconservative when it comes to a threat against our system.

The Court bill fight has taken from Mr. WHEELER none of his zeal for legislation to rid the country of railroad and utility holding companies or for other measures of this character. He does

not feel that his joining with the ultraconservatives to kill the Supreme Court enlargement plan has given this element any cause to expect quarter from him on other things. In fact, he may think it necessary to check them a bit more abruptly. Neither does he feel that he has given his old "liberal" crowd in Montana, made up chiefly of workingmen and farmers, any cause to doubt his sincere liberalism.

"The Court plan was not liberal, and I have told them so," he says.

He has no thought of leaving the Democratic Party as a result of his fight, nor does he believe the bitter battle will have any lasting ill effect upon the party. Indeed, he is of the opinion that the outcome was wholesome. The party learned a valuable lesson, he says: 'It was educated to the will of the people and its leaders will consider for a long time before they take it off on any other such mission.'

"The Democratic Party has a great future if it will only keep its feet on the ground and its ear attuned to the people's needs," he says. "Of course, it has got to be progressive; that is the very nature of a popular party. But it has got to remain sane as well.

"All in all, the court bill fight has been a wonderful thing. The agitation brought the people to a study of the fundamentals of their Government, gave them a veritable lesson in elemental civics. The fight has done the judiciary good, too. Courts had become arrogant, and sometimes disrespectful of the rights of the public—particularly the Federal courts. Can anyone look at the record already available and say that what has happened recently has not been beneficial to the courts themselves?"

This Montanan reaches his own conclusions about things, measures, and men coming before him. Experience has made him highly incredulous. Whether he faces a deck of cards, a bill before the Senate Interstate Commerce Committee of which he is chairman, or a garrulous witness in one of the many investigations he has conducted either in the Senate or during his earlier days as United States district attorney, his eye is questioning.

It all goes back to an incident in his early manhood, soon after he had arrived in Butte, Mont., at the end of a series of stages across the country from his birthplace in Massachusetts. Young WHEELER, a recent law graduate from the University of Michigan, was about fed up with Butte and determined to push on to Portland, Oreg., before his small savings were gone.

Loitering around the vicinity of the railroad, waiting for his train, the young man was taken into the confidence of four likely fellows who wanted to buy him a drink, which he refused; to give him a cigar, which he accepted; and to pass the time away with a little poker game. Well, by the time the train for Portland arrived young WHEELER had been "cleaned." He had no money left, so he had to swallow his pride, go back to town, and accept a job in a law office which he had rather haughtily refused a few hours before.

Senator WHEELER will tell you today that had it not been for that poker game he probably would have left Montana for good, but he probably will also tell you that he learned a lesson which later helped him to ferret out the evidence which drove Attorney General Daugherty from office and opened up the involved scandals of the Harding regime. He learned to look below the surface intentions of men and things. He thinks he looked beyond the enacting clause and the good intentions of the President's Supreme Court enlargement bill right into its prime motives and possibilities. At least to him they were not good.

BURTON WHEELER first saw the light of day in a humble Quaker home in Hudson, Mass., on February 27, 1882. His father was a poor man, who supported his family on a small farm at the edge of the town by working in a shoe shop. The family traced its descent from the Pilgrims. Probably the least of his expectations when he was a boy was that some day he would pull up in Montana.

After completing high school and a course in shorthand and bookkeeping, young WHEELER went to work in an optical factory at stenographer and bookkeeper. This was not the goal of his ambition, however, for he had a hankering for the law. A relative in Michigan, to whom he had confided his hopes, suggested that he might work his way through the university there. So after a short time in the business world—just long enough to save a few dollars—he set out for Ann Arbor.

His relative was correct—WHEELER was able to work his way through. What with waiting on tables in the dining room and vacation flings at selling books, he finished his law course and in 1904 set out for the West. He spent a few months in a law office in Colorado and then pushed on to Butte.

After his "cleaning" at the hands of the gamblers, young WHEELER worked a few weeks in the law office which gave him his job and then hung out his shingle as a practicing attorney. On one of his summer selling trips in Illinois he had met a young woman by the name of Lulu White, and he sought her out 2 years after landing in Butte and took her home with him as his wife. There are eight Wheelers now—the Senator, Mrs. Wheeler, and six children.

The young lawyer was quickly in politics. Montana in those days was a mixture of extremes—extreme conservatism on the one hand, dominated by the copper interests; and extreme radicalism on the other, the natural reaction to the "interests."

Strangely enough, WHEELER's first affiliations were with the conservatives, who sent him to the State legislature. It should be added, however, that he thought then that he was running on a reform ticket. It was further food for his acquired suspicious nature to find later what he believed to be conclusive evidence that the reform wave had been cleverly manipulated by the business interests.

It was here that Senator WHEELER's independent side began to take on substantial form. Feeling himself tricked, he took the first opportunity to throw off the yoke of the "interests." The chance came when the name of Thomas F. Walsh was presented to the legislature as a candidate for the Senate. WHEELER voted for Walsh. Walsh was defeated at that time and WHEELER soon suffered the same fate.

The young legislator then began running for office and was defeated with almost consistent regularity. For attorney general of the State he lost by a close margin. He was overwhelmed when he ran for Governor. Although he was a Democrat by title, he teamed up with the Non-Partisan League and both parties cried him down. He was more successful in his profession, however; his list of clients began to grow.

When Woodrow Wilson was elected President, Mr. WHEELER got his chance. Recommended by Senator Walsh, he was appointed United States district attorney for Montana. He made a reputation as a relentless prosecutor. When in 1921 he was turned out along with most of the other Wilson appointees, he started his campaign for the Senate which swept him into office in 1922 by the largest majority ever given a Democrat in his State.

Senator WHEELER is a quiet, unobtrusive man in the main, despite his reputation as a relentless fighter. He went practically unnoticed in the Senate until one bright morning he let it be known that he had been following his suspecting nose and that it had led down to the Department of Justice. He thought, he said, that the Daugherty office needed a bit of cleaning. He was not encouraged much, but he started that relentless, almost merciless work for which he has become known, and he never quit until Attorney General Daugherty was out of office.

It was not long after he started the Department of Justice investigation that he found himself indicted, charged with improper acceptance of fees and use of his position in connection with a lottery. Senator Walsh defended him and he was acquitted. Soon he joined with the elder La Follette in the unsuccessful Progressive campaign in 1924. From that time he has remained a Democratic Senator from Montana.

In his operations in the Senate he has all the attributes of the prosecutor. He is at his best in such a fight as he waged in behalf of the utilities holding company bill. Kindly and informal of manner, urbane in appearance, and reliable in his own promises, he can, in one of his battles, use the cutting phrase with telling effect.

Personally, he is an easy man to approach and to deal with. He has a gentility amounting at times almost to softness. He has never lost his New England accent. One may hear him sling out a biting remark to a colleague in debate and see him laughing and talking to the same person a few moments later. He seldom changes his remarks in the RECORD, however.

Such is the man thrown into new prominence in recent months—a man risen from among that group who nominated Franklin D. Roosevelt in 1932 to challenge him at the start of his second administration.

Government Purchase of American-Produced Silver

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, December 13 (legislative day of Tuesday, November 16), 1937

ADDRESS BY HON. ALVA B. ADAMS, OF COLORADO, ON DECEMBER 10, 1937

Mr. JOHNSON of Colorado. Mr. President, on Friday, December 10, 1937, my colleague the able senior Senator from Colorado [Mr. ADAMS] delivered a very sensible address on the subject of Government Purchase of American-Produced Silver. The address is timely, since the President is just now considering the question. I therefore ask that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For many years the Congress, through tariff legislation, has endeavored to protect American products from the destructive competition of cheaper products from overseas. This policy has received the approval of the vast majority of the American people, though thereby they were compelled to pay more for American goods than for equivalent goods of foreign production.

The present administration has expended many millions in earnest efforts along many lines to relieve the depression by increasing employment and increasing the purchasing capacity of the American people.

Hundreds of millions of dollars have been spent to raise the prices of farm products. Congress is at this hour considering a farm bill with this object in view which will cost the United States annually from one-half to one billion dollars.

Congress has spent several billion in public-works programs to provide employment.

The preceding session of this Congress passed a bill to eliminate slums in the great cities which will involve an annual appropriation of about $26,000,000 and contingent obligations of a half billion.

Congress appropriated $150,000,000 toward a fund to guarantee deposits in banks.

Congress has appropriated hundreds of millions to aid those who have suffered from drought and flood.

In the past 4 years there has been appropriated over fourteen billions for relief purposes.

While some may disapprove of details of these programs, there are few who do not approve of the underlying principle and purposes of each of them.

As a result of the depression, the metal-mining industry of America was in a most distressed condition. The price of silver, lead, zinc, and copper reached such low points that a majority of the mines were closed. Smelters and mills were largely idle. Unemployment became the almost universal situation of the miners.

It was practically impossible for the Government in any direct way to raise the price of lead, zinc, and copper, but as to silver a different situation existed. The administration determined to make a genuine effort to help this great mining industry.

The President, acting under the authority of an act of Congress of May 12, 1933, issued a proclamation on December 21, 1933, by which he directed the Director of the Mint to "receive for coinage into standard silver dollars any silver" newly mined in the United States. He further directed that of such silver the Mint should retain 40 percent "as seigniorage and for services performed" * * * "relative to the coinage and delivery of silver dollars" and that the balance of 60 percent should be coined into standard silver dollars and delivered to the depositor of such silver.

Under this proclamation the United States has received 151,834,000 ounces of American silver and has returned to the owner or depositor 112,705,000 silver dollars, or its equivalent in silver certificates.

The depositor of the silver in this way received 77.57 cents per ounce. The world price of silver at this time is about 45 cents, so the producer of silver has been receiving 32 cents per ounce more than he could get in the world market. On the other hand, the United States has been retaining 51 cents of the coin value of every ounce. As a result, the United States Mint showed a profit of $83,160,860 on June 30, 1937, from receiving and handling this silver, none of which would have come to the Government if the miner had been compelled to sell his silver in the world market.

The purchase of silver mined in the United States under the proclamation of the President should not be confused with the purchase of silver in the world market under the authority of the Pittman Silver Purchase Act, which is a permanent law and has no period of expiration.

The President's proclamation expires December 31, 1937. Objections have recently been raised against the extension of the President's proclamation for another year, as is authorized by the act of Congress.

The American miner, in view of these facts and policies, wonders why there should be objections to paying a small additional price for American silver in order to encourage and develop the mining industry, and secure the many and important incidental benefits to the general welfare of the Nation.

However, let us see what the purchase of this American silver has really cost the United States.

In the 3½ years the policy has been in effect, from December 21, 1933, to June 30, 1937, the United States has purchased 151,834,000 ounces of American silver at a cost of $112,705,000.

The payments to the miners are not like benefit or soil-conservation or parity payments which go to the landowner or farmer, and for which the United States gets no specific property, but is only benefited by promoting the general welfare. In the silver purchases the United States receives the silver purchased. The silver purchased at 77.57 per ounce has a coinage value of $1.29 per ounce. The silver purchased for $112,705,000 has a coinage value of $195,865,860 and, in fact after coining from this American silver 112,705,000 silver dollars to be given the producer of the silver, the United States has in its vaults as seigniorage or profit on the transaction silver of a coinage value of $83,160,860.

The miner has no access to the mints except upon such terms as Congress may fix. He can only sell his silver as a commodity, but the United States, with its constitutional right to coin money and regulate the value thereof, takes the ounce of silver for which it pays the miner 77½ cents and mints it into coin of a legal tender value of $1.29. Uncle Sam thus makes 51 cents from every ounce of silver purchased from the American miner.

What has been the economic and social results of this policy, and what will be the consequences if these purchases are stopped? The cost of the American silver purchased during the 3½ years exceeded the price on the world markets of an equal amount of silver by $44,760,000 or slightly more than $12,500,000 annually.

Even if we disregard the factors which have been pointed out as making the transaction in itself a profitable one for the United States, and regard it as giving the silver miners, at the expense of the United States, a bonus of twelve and one-half million dollars per year, the Government will search in vain for any expenditure in aid of relief or recovery producing a proportionate benefit to the people of the United States.

Prior to the inauguration of the silver-purchase program, silver had sold as low as 25 cents per ounce. The result of this low price was the closing not only of most of the silver mines, but also two-thirds of the zinc, lead, and copper mines in the United States, and those in operation were running at but a small percent of their capacity. At that time lead and zinc were selling below 4 cents a pound and copper below 7 cents a pound. Very few, if any, mines could operate with metals at such prices. However, the lead, zinc, and copper ores carry a percentage of silver. With silver at 77 cents an ounce, the added value contributed by the silver makes it possible for many of these mines to operate, when they could not operate with silver at 25 cents an ounce.

As a direct result of the Presidential proclamation providing for the purchase of American-produced silver at a price above the world silver price, many mines were opened and work was expanded in operating mines. These revived and stimulated mining operations gave employment to some 400,000 people. In a very practical way the silver-purchase policy reduced by 400,000 the relief rolls of the United States. Many incidental benefits also followed. The mines consume great quantities of coal, electric power, powder, machinery, and other supplies. The opening of these mines, therefore, gave profitable employment to many thousands throughout the Nation and provided needed markets for vast amounts of American products. Their employees work at good wages and are liberal purchasers of the products of the farms and factories.

The Government has collected large income taxes from the mines and industries whose operations were made possible by the purchase of this metal. States and counties received large amounts in taxes, also, which would otherwise have been lost. Schools, churches, and public institutions were opened or kept open which would otherwise have been compelled to close. It has cost the Government approximately $800 per annum for each person on relief. If the silver-purchase policy has taken 400,000 people off the relief rolls—as was stated on the floor of the Senate by Senator PITTMAN, probably the greatest authority in the United States on the silver question—it will be readily seen that by the expenditure of a relatively small amount a saving of $320,000,000 a year was made in relief expenditures, or a total during the 3½ years during which the silver purchases have been continued of well over $1,000,000,000.

When all of these benefits, direct and indirect, received by the people of the United States from this policy of purchasing American silver are considered, and when the consequences of the closing of the American mines, which would result from the abandonment of this policy, are considered, it will clearly appear that in this period of decline in our industrial and financial condition in the Nation, it would be most unfortunate if not most disastrous to abandon this wholesome and beneficial policy.

Our great Government will surely not take the position that there is a national obligation to protect all American products except metals and all producers of wealth except miners.

It would seem entirely reasonable, therefore, to expect that the President, who is genuinely interested in the welfare and prosperity of all sections and elements in our great country, who is fully conscious of the dangers inherent in the present business recession and of the necessity of resisting any further decline, and of turning our national course again into the channels of prosperity, and who has been a student of the silver question, will not hesitate to renew for another year the policy of purchasing American-mined silver.

Consumer Protection by Government

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, December 13 (legislative day of Tuesday, November 16), 1937

ADDRESS BY ASSISTANT ATTORNEY GENERAL ROBERT H. JACKSON BEFORE THE CONSUMERS' NATIONAL FEDERATION, DECEMBER 11, 1937

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address on the

subject of Consumer Protection by Government, delivered by Assistant Attorney General Robert H. Jackson before the Consumers' National Federation, in New York City, December 11, 1937.

I may say that the address seems to be a powerful argument in favor of the principle of Federal licenses and charters for corporations engaging in commerce among the States.

The Assistant Attorney General points out that the antitrust laws have failed to stop what he calls "obvious raids upon the consuming classes." The reason why the antitrust laws have failed to stop these raids is that the raiders are always able to use State incorporations laws to escape from Federal authority.

I should also add, however, that interstate business should not fear the principle of Federal incorporation. It does not mean more regulation in the sense of more discretionary interference by government. It means less. My own conviction is that we shall not lay a permanent basis for prosperity until we devise a national incorporation law.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Abraham Lincoln used to have a formula for trying times: "If we could first know where we are and whither we are tending, we would better know what to do and how to do it."

These are not difficult days, measured by what we have gone through and what other parts of the world are going through. But they are uncomfortable days, and they are days in which a portion of the population which needs protection as consumers, may equally need protection as holders of jobs. It seems unrealistic, therefore, to think of the interests of the consumer today except in relation to our whole economic situation.

Applying Lincoln's formula, where are we right now, both as consumers and as workers?

The President has been called a demagogue for saying that one-third of the Nation is ill-clad, ill-nourished, and ill-housed. Certainly the Brookings Institution is not a propaganda agency of the Roosevelt administration. But the figures of the Brookings Institution, even before the depression of 1929, show that the President understated our difficulty by 100 percent.

Many of you will remember this finding of the Institution: "At 1929 prices a family income of $2,000 may perhaps be regarded as sufficient to supply only basic necessities * * *. It is significant to note that more than 1,600 families, or practically 60 percent of the total number, were below the standard of expenditure. * * * Of the nonfarm families as a whole, 16,000,000, or 74 percent, did not have sufficient income in 1929 to provide an adequate diet at moderate cost."

The same study showed: 71 percent of the population, nearly 20,000,000 families, with less than $2,500 of annual family income; 60 percent, or 16,000,000 families, with less than $2,000 annual family income; 42 percent, or 12,000,000 families, with less than $1,500 annual income; and 21 percent, or 6,000,000 families, with less than $1,000 annual income.

These families are not only the greater part of America today; they are pretty nearly all of America tomorrow. They alone are reproducing themselves on a survival basis; their children are probably 90 percent of the children of America.

Dr. Lubin, Commissioner of Labor Statistics, has strikingly set forth the reality of what it means to live on one of these lower-bracket incomes. Some of you may know his study of a year or two ago of consumption in a typical city dweller's family with a single wage earner. The typical American wage-earning family such as we have in New York, lives on an income of from $1,200 to $1,500 a year.

How do they live on it? What can such a family do with that income of a hundred or a hundred and twenty-five dollars a month?

Ill-clad?

For clothing such families can spend only about 12 cents of every dollar of income. In a family of four less than $4 per month per person is available for clothes. The father of the family must make a suit last 3 years. He can buy a new overcoat only every 4 or 5 years. The mother can buy only $5 or $6 dresses and has one winter hat and one summer hat a year. (But she does have silk stockings.)

FOOD AND HOUSING CONSUMES OVER HALF FAMILY INCOME

Ill-nourished?

Food expenditures take one-third of the employed worker's income on the average, but for the employed worker's income in the lowest brackets it is a larger proportion. It amounts to about $8 per week or $2 per week each for a family of four. The diet is weighted heavily with flour, potatoes, bread, and pork. The market basket has little space for fresh fruits and vegetables, and despite the importance of milk to the health of youngsters, 4 out of every 10 families consumed less than 2 quarts of milk per person per week.

Ill-housed?

For $20 a month such a family gets a flat or half a double house or a four- or five-room frame house for the shelter of its four or five members. Rent claims about 15 to 20 percent of the average employed worker's income.

The house is not steam heated nor does it have an oil burner or other central heating.

Go to the movies, read advertisements, listen to orations about the American standard of living and you would expect to find electric lights, gas or electricity for cooking, running water, and a flush toilet inside the home as normal elements in the wage earner's standard of living. Yet this survey shows that in many large cities a large proportion of employed wage earners' families did not have some or all of these elementary living conveniences.

What of the luxuries that have become necessities?

If a family in this income bracket has a car at all it is not likely to be a new one. In 1 year in a middle western city it was found that for every 100 employed wage earners' families 3 bought new cars and 12 bought used cars during the year. In a large eastern city one out of a hundred bought a new car during the year and three bought used cars.

"It is only at the highest economic levels," says Dr. Lubin, "that the wage earners' families can afford frequent movies, a second-hand car, and clothing which meets the needs of winter and at the same time has some style. Even at these higher levels, after taking care of the family's needs for food, clothing, and housing, it is only infrequent that the amount left over for other purposes is equal to one-third of the family income."

To this type of family, life is a matter of bare shelter, food, and clothing. Health is accidental, for such families can afford little medical, dental, or hospital care. Justice is luck, for the victims of unjust dealing cannot afford an advocate. Entertainment, except the lowest, is free or nonexistent.

ANTITRUST LAWS FAIL TO CONTROL

What can government do for this cradle of tomorrow's America?

It can use antitrust laws to stop obvious raids upon the consuming classes.

There are definite limitations upon the usefulness of these laws. No corporation ever really loses an antitrust case, because it is always longer than any other proceeding in the time-consuming processes of law. The Government lawyer who begins a case seldom manages to survive in government long enough to see the case through the Supreme Court. The antitrust laws themselves are full of loopholes, because the courts have treated them most unkindly and there has been no conscious effort in the last 15 years to keep them as modern as the ways of the transgressor. No Congress will ever realize the size of the appropriation necessary to fight a comprehensive battle against monopolies through many and prolonged trials and successive appeals.

Nevertheless, even during a necessary process of revision, the antitrust laws can be employed in strategic sectors as really effective weapons in a battle against high prices if private enterprise as a whole is wise enough to see that what the Government is after is not to wreck business but to keep prices reasonable so that the consumer can buy and business can keep going, and the worker can have a job.

For the first time in our history an appreciable number of business leaders are beginning to believe that the only way private enterprise can keep our present economic system going indefinitely is to organize itself on a low-price, high-volume basis which will make buyers producers and producers buyers on a scale we have never before known in this country.

CONSUMER MUST NOT BE GOUGED

Nothing has done more to create a hope that we may have this new conception of its interests by private enterprise generally than the present recession, depression, or whatever we choose to call it. Most economists who are not special pleaders, are convinced that the attempt last spring to taper off the Government expenditures was spoiled by the failure of private enterprise to realize that the consumer could not be gouged without serious effect upon the survival of private enterprise itself.

You will remember how in his last fireside talk the President quoted Professor Sprague of Harvard and the Bank of England to the effect that the future of American business depended far more on the price policies of our business leaders than on anything done or not done in Washington. Out of this recession private enterprise is learning the ancient truth that competition is the life of trade and that when monopolists run prices to the sky, they can't keep volume from falling through the cellar.

We are not running into a major depression today for good and sufficient reasons. The first reason is that the Government not only knows it must step in, if necessary, if private enterprise cannot adjust to conditions, but the Government is organized to do so in time, as it was not organized in the emergency days of 1933.

The second reason is that fundamental conditions today are not those of 1929. In 1929 to 1933 our financial-economic situation was never in such shape that we could make the downward readjustment of prices necessary to resume normal business activities on a normal competitive basis, without upsetting the private-debt structure and the banking structure of private enterprise.

Today we find an absence of those difficulties and of those conditions which produced the last depression. We have not scat-

tered through the country a flood of wildcat securities. We have not been exporting billions of dollars to foreign borrowers. We do not find such excess plant capacity or such overproduction of goods as in 1929.

Our financial institutions by and large are on secure foundations. They are loaded with an excess of cash instead of an excess of questionable securities and frozen assets. Unemployment compensation systems are for the first time in our history soon to begin disbursements that will help combat deflation.

We can have no prolonged recession if we do not exclude by unemployment a large part of our labor resources from production and thereby exclude the unemployed workers from our exchange system. We need more goods, and business has shown an extraordinary measure of ability to produce more goods with a given amount of labor. We have not learned to turn this greater productivity fully to the advantage of living standards. We seem to have converted a large part of our labor savings into unemployment. The biggest task facing American business is how to restore the unemployed to our exchange system by accepting their services—the only thing they can use for money—in exchange for the product of industry.

How can American business bring all American workers and consumers into an exchange relationship?

BIG BUSINESS BOOSTS PRICES

Big business jerked prices up as soon as volume began to go up. It acted on the theory that under the competitive system business had the right to charge what the markets could bear. Results show that big business misjudged the market and charged more than the traffic could bear. It's now up to those lines of business, which did boost prices, to play the competitive game according to the only rules under which private enterprise can function, and to restore prices to a level demanded by the market, to reduce prices until buyers begin to buy and our exchange economy begins to work.

The exchange economy based upon a free market demands producers produce as much goods as consumers can consume. We don't ask the farmer or the manufacturer to produce more than the consumers need. But a free market presupposes the willingness of businessmen to supply the normal demands of the market at the market price, at a price buyers are willing to pay for normal volume.

If business is going to do its part to bring about revival, business must boldly reduce prices to the point necessary to cause a normal flow of goods to the consumer. Big business is not today permitting the competitive system to work. Fortified by high corporate surpluses big business refuses to supply the normal requirements of the consumer, but will sell only to those few who are willing to pay the prices fixed last spring when business was booming. Although the consumer's income is about a third less than it was in 1929, big business is asking the consumer to pay more for their goods than they did in 1929. If a consumer wants to build a home, he must pay 11 percent more for cement, 5 percent more for steel, 4 percent more for lumber than he did in 1929. For some building materials he must pay even 100 percent more than he did in 1929. How can we have a housing program under such conditions?

If we want to preserve our competitive system, all of us must take some risks. Businessmen must venture, confident in the belief that the market will absorb an increasing volume of goods if prices are sufficiently reduced. Businessmen know that substantial profits can be realized with substantially lower prices if volume production is maintained.

Who is going to take the risks in this policy of price reductions? The only people who can take it—business. Business now has the risk in any event. The risks of failing to venture are greater than the risks of the venture.

If big business holds back from production and unemployment grows, an irresistible demand will arise which no responsible democratic government can ignore, for more rather than less Government expenditures. Increased Government expenditures will mean increased taxation, and big business, which already controls half of the corporate wealth of the country, will have to bear the major part of that burden.

MUST STIMULATE CONSUMPTION

It is time that business take a leaf from the book of one of its most successful captains. During the depression of the early twenties when other manufacturers were waiting for people to grow rich enough to buy automobiles, Henry Ford built a car which a man could buy without waiting to grow rich. What I may think of Mr. Ford's labor policy and many other of his policies is beside the point. His price policy still stands out as the most intelligent and imaginative business strategy in this generation. There is an even greater opportunity in the housing field for the suppliers of steel, lumber, cement, and gypsum if they only had a tithe of the enterprising spirit which Henry Ford had when Wall Street was gloomily predicting that the bankers had Henry on the run.

Henry Ford is not the only businessman who knows this lesson. The group headed by Mr. Gerard Swope and Mr. Owen Young have developed a business philosophy of "more goods for more people at less cost." One does not have to agree that all of their proposals are acceptable to find in this formula a practical objective toward which reasonable-minded men can work.

Mr. Lammot du Pont this week said to the manufacturers, "The bulk of responsibility for future social betterment should be placed on industry's shoulders. It belongs there. And industry accepts that responsibility." Every right-thinking citizen will agree. Industry must produce what the people consume. It must also provide the purchasing power either through wages or through taxes. Many have assumed there would be a way to evade the burden. Facing the responsibility is the first step in discharging the responsibility.

Again he said: "All forward-looking industrial activity is planned. It is based on what the planners believe will be the needs and conditions of 1, 5, 10, or even 20 years hence." Of course that is true. It would be just as true if it were said of government. Yet for some years business and its press have persistently denounced and ridiculed efforts at governmental planning. There can be no teamwork with unplanned plays by government and planned plays by business. The implications of Mr. du Pont's statement are that business must withdraw its opposition and that government must engage in planning parallel with that of business.

Mr. du Pont is also quoted as saying that it will take at least a few years of planned development to create the 3,000,000 industrial jobs that do not now exist but which are necessary to provide for the problem of unemployment.

If this is true, as I believe it is, then it means that government cannot now withdraw from the field of relief and public works, and that any sudden effort to do so would produce disaster. This frank and realistic statement of Mr. du Pont opens the door to consideration of what measures government should take in the interval.

Mr. du Pont asked two things of government as conditions under which private enterprise would go to work to keep the country in economic balance. He asked government to stabilize, over a long period of time, first, taxes, and, secondly, the legal rules under which industry operates.

INDUSTRY MUST PROVIDE EMPLOYMENT

Much as I appreciate Mr. du Pont's imaginative perception of industry's responsibility and of the low-price, high-volume policy through which alone it can meet that responsibility, I wonder if he was not putting the cart before the horse in stating his expectations of Government. For so long as the bulk of our economic enterprise is private, Government can stabilize neither taxes nor the rules of the game unless managers of private enterprise move first.

Take taxes, for instance. The yield of a tax rate depends substantially on the volume of business done by private enterprise. Likewise, the amount of revenue Government needs depends upon the volume of employment which private enterprise creates. For many years now, the highest cost of Government—the chief need for taxes—has been the necessity of caring for those toward whom private enterprise has not performed the responsibilities which Mr. du Pont recognizes. There can be no stability either in the rate or the amount of taxation until there is stability of employment.

Now, take Mr. du Pont's second requirement—that the legal rules of the business game be stabilized—in other words, that we should have no more reforms affecting business. If that can be done, I am sure it cannot be done until private enterprise first makes up its mind that it will not evade or disobey old laws so that it is constantly necessary to make new ones. The reason we are proposing additional antitrust laws is that the old ones have been evaded.

What are the kinds of laws of which business is complaining today? They are laws regulating the capital markets, laws relating to great public-utility companies, laws regulating banking, laws relating to discrimination between big purchasers and little purchasers, laws trying to force the distribution of corporation surpluses so that capital for new enterprises may be found free in the hands of the stockholders of old enterprises rather than be locked up in the treasuries of those old enterprises where they can be used only for the expansion of those old enterprises.

ECONOMIC POWER IN FEW HANDS

Fundamentally every one of those laws is an expression of the most basic political instincts of the American people—a fear of concentrated economic power in the hands of a few and a determination to break up that concentration. Every law of this kind is on the statute books because business refused to comply with standards a majority of people had accepted. From my experience with the antitrust laws I am convinced, for instance, that if ambitious leaders of business had been willing to adjust to public opinion rather than flout it at the time those laws were put on the statute books, hundreds of new regulations of business in the last 5 years would never have been necessary.

If private enterprise in America will do business in a way the American people will not fear rather than the way a few men bent on private power insist on doing it, there would be fewer laws regulating business in this country and fewer complaints of business against Government or Government against business. But with the present attitude of big business toward the effort

of the American people to protect themselves against bigger business, the only hope for an end of new rules to the game is for big business to adapt itself to and accept the present rules of the game.

What should Government do in the present situation?

In my personal opinion, Government should do the commonsense thing. It should give private enterprise all the assistance and encouragement that can be given without sacrificing the progress toward the preservation of American democracy which we have made in the last 6 years. It can give financial assistance by way of insurance and underwriting to help private enterprise break into new fields like housing, where the ground has never been thoroughly explored. It can correct specific inequities in the application of tax laws without, however, abandoning our American doctrine that taxes shall be paid in proportion to ability to pay.

But it does not need to surrender what it has gained for the protection of the many merely because the few with the greatest stake to protect insist on trading the last ounce of concession out of Government as the price of willingness to use capital which they may later have to contribute to Government in taxes if they do not use it now.

MORE COOPERATION NEEDED

In the meantime that leaves upon Government an obligation to resume the economic initiative. That obligation will last until such time as private enterprise has really learned how to provide the millions of new jobs Mr. du Pont predicts. It will last until there is more knowledge of modern economic conditions and more willingness to cooperate with democracy on the part of our great business leaders so that we can taper off from Government spending to private spending without having to surrender the liberties of the American people as the price.

I am confident for the future of the average American these days because I am confident that the President and the Congress of the United States will not fail to keep faith with the people, and because I am hopeful that there is growing up in private enterprise a new group of leaders who understand the responsibilities of private enterprise and its risks in a modern economy, and are not afraid of their own competence to play the game in the modern way.

Hourly Entrance Rates of Common Unskilled Laborers in 20 Industries, July 1937

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

BULLETIN FROM THE UNITED STATES DEPARTMENT OF LABOR STATISTICS

Mr. RANDOLPH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following bulletin from the United States Department of Labor Statistics:

The average hourly entrance rate of common unskilled laborers in 20 industries was 51.2 cents in July 1937, according to an announcement made today (Saturday) by Commissioner Lubin, of the United States Bureau of Labor Statistics.

"There was a considerable differential in the average entrance rate per hour between different geographical regions," Mr. Lubin said. "The northern average amounted to 55.3 cents, as compared with 38.9 cents for the southern region.

"For the country as a whole, 14.7 percent of the common laborers in the industries surveyed received less than 40 cents per hour. In the South, 48.4 percent of these workers were paid under 40 cents. In the North, 3.5 percent averaged under 40 cents per hour.

"The number of common laborers paid 70 cents and over constituted 4.9 percent of the total. Nearly all of the common laborers receiving 70 cents and over were found in the northern region, the actual percentages being 6.3 in the North and 0.7 in the South."

The above figures are taken from the twelfth annual common-labor survey of the Bureau of Labor Statistics which will shortly be released. They cover 5,238 establishments in 20 industries with 222,555 common unskilled laborers on their pay rolls at entrance rates.

The 20 industries included in this survey were selected because they employ relatively large numbers of common laborers. Furthermore they represent a cross section of the various industries in the country. They include 16 manufacturing industries, 3 public utilities, and building construction.

Every State and the District of Columbia are represented in this survey. The southern region includes the South Atlantic, East South Central, and West South Central States, while the northern region embraces the remainder of the country. (See table 1.)

TABLE 1.—*Geographic classification of average hourly entrance rates of adult male common laborers, in 20 industries, July 1937*

REGION, GEOGRAPHIC DIVISION, AND STATE

Louisiana	.332
Oklahoma	.419
Texas	.434

The petroleum-refining industry showed the highest average hourly entrance rate, with an average of 61.1 cents for the country as a whole. Five industries (iron and steel, slaughtering and meat packing, automobile parts, building construction, and paints and varnishes) averaged between 55 and 60 cents. Three other industries (chemicals, cement, and glass) had averages of 50 and under 55 cents.

TABLE 2.—*Hourly entrance rates of adult male common laborers, by industry and region, July 1937*

Industry	Average hourly entrance rate			Percentage of common laborers receiving less than 40 cents per hour		
	United States	North	South	United States	North	South
All 20 industries	$0.512	$0.553	$0.389	14.7	3.5	48.4
Manufacturing industries:						
Automobile parts	.554	.554	.....	2.9	2.9	.....
Brick, tile, and terra cotta	.457	.484	.319	20.4	10.0	74.3
Cement	.514	.553	.414	13.1	.....	46.8
Chemicals	.524	.590	.439	23.7	.1	53.6
Fertilizers	.364	.539	.279	62.2	7.2	89.0
Foundry and machine-shop products	.496	.507	.351	5.3	1.2	47.1

TABLE 2.—*Hourly entrance rates of adult male common laborers, by industry and region, July 1937*—Continued

Industry	Average hourly entrance rate			Percentage of common laborers receiving less than 40 cents per hour		
	United States	North	South	United States	North	South
Manufacturing industries—Con.						
Glass	$0.504	$0.509	$0.485	3.5	0.7	14.2
Iron and steel	.585	.595	.534	.9	.4	3.4
Leather	.477	.504	.387	10.3	2.0	39.0
Lumber (sawmills)	.437	.546	.245	44.9	15.1	97.4
Paints and varnishes	.552	.560	.412	2.3	.7	32.3
Paper and pulp	.477	.511	.396	14.5	1.7	44.8
Petroleum refining	.611	.642	.563	.9	----	2.2
Rubber tires and inner tubes	.481	.482	(1)	.8	(2)	(2)
Slaughtering and meat packing	.567	.582	.474	3.6	.4	23.4
Soap	.489	.490	(1)	28.1	(2)	(1)
Public utilities:						
Electric light and power	.459	.497	.381	15.5	4.4	38.3
Electric street railways and city motor bus operation and maintenance	.475	.500	.325	23.3	13.6	83.1
Manufactured and natural gas	.473	.494	.406	6.5	.4	25.6
Building construction	.553	.636	.382	14.9	1.8	42.3

[1] Less than 50 employees; no average computed.
[2] In order not to reveal plant identity, district figures are not given.

The industries with averages ranging from 45 to 50 cents were foundries and machine-shop products, soap, rubber tires and inner tubes, leather, paper and pulp, electric street railways and city motorbus operation and maintenance, manufactured and natural gas, electric light and power, and brick and tile and terra cotta. The lumber industry averaged 43.7 cents. The average in the fertilizer industry was 36.4 cents.

In each case where the figures are available for both regions, the averages in the North were considerably higher than those in the South. The smallest differential per hour appeared in glass, 2.4 cents; iron and steel, 6.1 cents; petroleum refining, 7.9 cents; and manufactured and natural gas, 8.8 cents. The highest differentials were found in lumber, 30.1 cents; fertilizers, 26 cents; and building construction, 25.4 cents. In the remaining industries the differentials varied from 10 to 20 cents.

In the northern region only three industries, namely, lumber, electric street railways and city motorbus operation and maintenance, and brick, tile, and terra cotta, had any appreciable number of employees paid less than 40 cents per hour.

The southern industries with the highest percentages of common laborers receiving less than 40 cents per hour were, lumber, 97.4 percent; fertilizers, 89 percent; electric street railways and city motorbus operation and maintenance, 83.1 percent; brick, tile, and terra cotta, 74.3 percent; and chemicals, 53.6 percent.

Neutrality

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

Mr. EBERHARTER. Mr. Speaker, the subject of war is an important one in Congress, and consequently much talk of a new neutrality law will be heard. In the House an appeal for an amendment to the Constitution to provide for a popular referendum preceding any declaration of war was started. The Senate likewise has discussed the subject. During the special session already two war referendum proposals have been made to the Senate.

It is my firm belief that it is a most important duty of a present-day Congressman to lend his best efforts toward securing for the people of this country continued peace. While we should all be concerned with the subject of the maintenance of peace among our fellow human beings in other nations and among other peoples, nevertheless our first duty as Members of the Congress is to do those things which will establish and forever preserve the internal peace, safety, and comfort of our own people, our own citizenship.

Since the start of the Roosevelt administration to the present day, Congress has busied itself with the formulation of laws to correct abuses in the field of finance, to increase business, to alleviate some of the bad conditions in industry, and to find a correct method of solving the problems of the farmers. I shall not recount the many Federal statutes that have been enacted during this administration, in an attempt to correct the errors and mistakes of the past, and to encourage and reestablish on a sound footing these most important phases of American life.

But what will it profit us if business and finance again finds itself in a prosperous condition, if the free flow of commerce, international and internal, is again resumed to its full capacity, if the relationship of employer and employee resumes a peaceful course, and the farmer again finds a full and profitable market at home and abroad, if in the end our country should again, for some reason or other, be plunged into another world conflict?

Continued peace, so far as our own people are concerned, is something most devoutly to be wished for. For these reasons I repeat that it is one of the foremost duties of a Congressman to study this phase of human relationship and to do all things which will help keep our country at peace.

The Treasury of the United States no more than finds itself almost relieved of the heavy burden of paying pensions, veterans' benefits, and the cost of hospitalization of a previous war, than again it finds itself faced with another war. The Treasury records show that we are still paying pensions to widows of the soldiers of the War of 1812, and we are still paying pensions and giving benefits to the veterans of the Mexican War, the Civil War, the Spanish-American War, the Philippine Insurrection, the Boxer Rebellion in China, and, of course, the last war—to such an extent that in this fiscal year there was appropriated to the Veterans' Administration almost $1,000,000,000 for these purposes, representing almost one-quarter of the ordinary expenditures of Government during normal years.

Congress has not been entirely indolent or unmindful of its duty to further the cause of peace. Recently there have been enacted into law several neutrality acts, and from experience each one improving upon the other. The last Neutrality Act voted for by myself and a majority of Congress is generally known as the Neutrality Act of 1937. It prohibits the export of arms, ammunition, and implements of war to belligerent countries; the transportation of these items by vessels of the United States for the use of belligerent states; it makes mandatory the registration and licensing of persons engaged in the business of manufacturing, exporting, or importing arms or munitions, and also restricts travel by American citizens on belligerent ships.

In other words, this act attempts by statute to establish and maintain absolute neutrality on the part of American manufacturing interests, on the part of commercial interests, and on the part of each and every individual citizen of the United States.

I was never more happy in the performance of my duties as a Congressman than I was to support this act, which I think all citizens will agree is a distinct improvement on previous neutrality acts.

By this measure we also have changed the course and direction of old-established international law on the subject of neutrality. Heretofore it has been contended by nations not belligerents that they had the right and privilege of using their neutral ships to transport arms, munitions, and other basic materials of belligerent nations. By this act we have declared it to be a national policy that we do not wish to any longer exercise this right, and give notice to the nations of the world that no belligerent need expect from this country any help whatsoever so long as it is engaged in warfare.

We have left it to the discretion of our President, whosoever he may be, by proclamation, to declare that a state of war exists; and from that moment on the full force and effect of the Neutrality Act will come into play.

It is my firm belief that no world conflict can be sustained for any great length of time without the aid of American money or unless they procure the products of American manufacturers or the products of American farmers, and we hope that since we have taken this position other nations will think twice and pause before they engage in any warfare, or at least in any protracted warfare.

There is now before the Committee on Military Affairs of both the House and the Senate a bill which would give to the President, or any special board that he might select on the occasion of our becoming embroiled in any conflict, the power to draft not only the manpower but the commercial, manufacturing, and farming interests of the Nation, all to the end of effectuating a speedy conclusion of any such engagement.

It is the common belief, which I share most strongly, that one of the most important factors which impelled our entrance into the last war was the fact that our international bankers had loaned hundreds of millions of dollars to the allied powers, of manufacturers having extended credit and delivered hundreds of millions of dollars' worth of goods and implements of war, and also of our farmers having extended credit to the extent of delivering wheat, corn, and foodstuffs to the belligerent nations. From the fund of this and other experiences Congress has successfully drafted several neutrality acts and eventually concluded the enactment of the act of 1937, just explained.

In addition to the measures referred to, there is pending in Congress a joint resolution, commonly known as the peace amendment to the Constitution.

If this amendment is adopted, its effect will be that Congress, when it deems a national crisis exists, may, by concurrent resolution, leave the decision to the citizens of our country, the question to be voted on being, "Shall the United States declare war on ———?" naming the nation. Whenever war is so declared the President shall immediately conscript and take over for use by the Government all public and private war properties, yards, factories, and supplies, and fix the compensation for private properties temporarily employed for war purposes. This proposed peace amendment has one exception which is, in the event of an invasion of the United States or its Territorial possessions, Congress shall retain the authority to declare war, but only in that emergency.

I believe it might be a blessing in disguise that the several billion dollars owing to this Nation, representing money loaned to the allied belligerents to conduct the World War, have not been paid. I do not mean to be understood as saying that these debts should not be paid, because I feel that these nations hired this money and should pay it back, and that it is a just debt. But since these hard-earned American dollars have not been repaid by the Allied Powers, saving and excepting the annual payments of principal and interest on the part of little Finland, Congress has passed the statute commonly known as the Johnson Act, which in effect forbids the lending of any money on the part of private or public interests in this country during peacetime or wartime to any country that is in default on its wartime debts.

After all, a people cannot conduct war without the wherewithal to buy the things necessary to prosecute that war, and since the United States stands in the very happy position of owning almost one-half of the monetary world's gold, and of owning and possessing such great natural deposits of coal, of copper, of iron, and of oil, and the things that are so essential to the conduct of warfare, I repeat again, that I cannot see how any nation can conduct a protracted war without the aid of the United States. Since we forbid that aid by law, those foreign countries would have to go it alone.

Of course, it must be thoroughly understood on the part of every American that in order for this country to assert its neutrality policy, it is necessary, more than ever before, that we must have the show of force behind our policy so declared. How effective do you suppose a country could be in its assertion that it will not sell vital materials for war, if it were not able to defend itself against the usurpation, or the deliberate taking of such materials by belligerents? Therefore, it has been necessary during this administration, while it inaugurated and approved new bills for the purpose of keeping peace in the family of nations, also to amplify and supplement our Army and Navy and our air forces, if for no other reason than to stand ready to assert and defend our policy of neutrality.

All of us are witnessing the tragedies that are passing across the stage of human life at this moment, the tragedy of the aggression of the Imperial Government of Japan upon an ineffective and impotent China; the tragedies of the imposition of dictatorships upon other helpless peoples; the regeneration of old racial hatreds between nations of continental Europe; the upbuilding of war machines, which the leaders of these countries openly declare are being built up for a world conflict.

Never before have your Congressmen been more impressed with the importance of doing those things, in peacetime, which will conserve the peace of our Nation and the tranquility of our people. Every American is entitled to assurances of security. I, as a Member of Congress, shall bend every effort to the end that they shall have a firm feeling of security, and I can say frankly that I believe most of my colleagues entertain the same point of view as I do on this most important question.

I conclude by congratulating the Roosevelt administration, its leaders, and the Congress, for their untiring efforts in doing the things which we believe will set up this country as an examplar for the cause of peace. In the meantime, we must exert eternal vigilance. We must participate as best we can in all conferences the object of which is to serve the holy cause of peace, and I want the people of my district and my State and the Nation to know that I stand ready and willing at all times to aid in this cause and to fight the fight for peace

---

The Business Recession—Is There a Quick Way Out?

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

Mr. EBERHARTER. Mr. Speaker, the Congress of the United States, the Nation's supreme lawmaking body, has just completed the fourth week of its extraordinary session.

The President called this special session to have the Congress deal with four important problems which it failed to solve with suitable laws at the regular session which adjourned in August. His four-point program embraced:

First. Regulation of wages and hours in industry.

Second. A farm bill.

Third. Regional planning.

Fourth. Governmental reorganization.

When Congress convened, everyone realized a serious decline in business was under way. Naturally, a corresponding decrease in private employment accompanied the decline. This downward spiral has continued through the recent weeks to a point where it now is alarming. A great portion of our cities' mills and factories operate in the district which I represent in Congress, and I need no charts or graphs to realize how large a number of workmen in them have been laid off recently. I believe that the situation should be faced calmly and with requisite realism. And I intend to do all in my power to have it met promptly by all concerned.

When Congress convened, no part of the program called for tax reduction. A loud hue and cry went up from organized business demanding relief from certain taxes and Members of Congress, generally, I believe, lent an attentive ear.

For example, I had heretofore favored the enactment of the law which taxes undistributed corporate profits. After

observing the effect of this law and listening to objections to it from businessmen, I came to the conclusion that a more effective revenue-raising measure could be substituted, and so publicly declared myself. Business, I think, can expect such reasonable cooperation from the average Member of Congress.

Unless I am seriously mistaken, Congress, as a whole, is in a mood to grant every necessary concession to industry and business to the end that production and trade may increase and unemployment diminish.

The only limit that I, personally, find Congressmen putting on these adjustments are those which surround our enlightened concepts of social justice, which, I am sure, no true American wants to abandon, when he looks back on the general good they wrought from 1933 to 1937.

So much for the attitude of Congress in this crisis. Now, what about business?

Is business on a sit-down strike?

Well, it is hard to say, but that eminent economist, Roger W. Babson, tells a Philadelphia audience that an "investors' and buyers' sit-down strike" exists.

Then, too, I read in one of those letters gotten out for businessmen at a nice price by usually self-ordained, so-called expert observers in Washington that "Corporations should now consider the advisability of refraining until January 1 from capital expenditures for improvement, replacement, expansion, and so forth."

The United States Chamber of Commerce issues a blast against the wage and hour bill, scheduled to come before the House on Monday, opposing not only this particular bill but the general idea of fixing maximum hours and minimum wages in industry.

The National Association of Manufacturers holds a 3-day session in New York City and hears Mr. du Pont, one of the Nation's foremost tycoons of industry and finance, proclaim the availability of a $25,000,000,000 plan of expenditure and development on the part of industry, which would eventually eliminate poverty and unemployment. Mr. du Pont's proposal involves: First, the planned development of new products; second, widening the market for existing products through lowering costs; and, third, the maintenance of a "rule of fair return" for all effort, not excepting capital effort.

To put this plan into effect he asks a threefold pledge from Government: First, stabilization of taxes over a definite period; second, stabilization of fair laboring conditions over a definite period; and, third, immediate stabilization of the "legal rules" under which business must operate, subject only to "unmistakable demand" for amendment.

Mr. du Pont most significantly adds that "the actual rate of taxes or the actual wage rates together are not as important as stabilization."

His plan is encouraging, but is lessened in apparent effect when, adjourning 2 days later, the manufacturers adopt resolutions calling for sweeping revision of the Wagner Labor Relations Act and vigorous opposition to the pending Federal wage and hour bill.

Now, surely every industrialist at this conference is aware that the Wagner Act was enacted in fulfillment of a pledge which a President and a majority of Congressmen and Senators made definite in the platform on which they were voted into office. If, here and there, there have been errors of administration or mistakes on the part of individuals, they can be ascribed to lack of precedent, and they occur every time an entirely new law is put into operation. The Wagner law may stand improvement but certainly not "sweeping revision."

With respect to the wage and hour bill, the manufacturers are similarly asking the President to deny the people something he promised them in the campaign of last year. His overwhelming reelection demonstrated clearly that the citizenry of this country wants a maximum set for hours of work in industry and a minimum hourly wage rate established. The electorate never expressed itself more distinctly than in November of 1936.

My attitude in public office always has been to recognize the necessity of fairness to the employer as well as the worker. I assure my listeners that all Allegheny County Congressmen are extremely anxious to render the fullest assistance to the industry of Pittsburgh and Allegheny County. When our aid is asked, it is available.

On the other hand, for any organized group to ask an elected public official to fail to vote in favor of legislation after he has promised his constituency he will do so is unethical.

Business and industry, I submit, rather than opposing a wage and hour bill, as such, more appropriately should be seeking to get the best bill possible. No fault might be found with the organized forces of industry if they merely sought specific changes in the particular bill now in the House.

I, myself, oppose certain of this bill's features. I feel that Congress, industry, and labor huddled around a conference table in mutual confidence, can produce a bill which will wipe out more evils from American mills and factories than any single law ever has done heretofore.

I commend to industry a slightly different attitude than I have sensed on its part of late. The idea may exist that the current recession has the Chief Executive on the run. I think this is far from the case and believe that the President can still take the issues to the people and crystallize sentiment in his favor. This seems particularly true because of the vital principles of social and economic justice which have been woven into the very laws which industry finds itself most desirous of amending, and those proposed laws which it finds itself anxious to block.

It is, I feel, for industry to approach the coming conferences on Capitol Hill in a spirit of cooperation.

With cooperation much can be accomplished to restimulate recovery and much more can be accomplished for the relief of industry in its own private operations.

Take the Du Pont plan, for example. Then couple it with other available opportunities for accelerating the flow of business and the rate of private employment. Add housing, which performs such a happy twofold purpose in government participation, namely, that of giving work and business to a hundred trades and industries and at the same time providing modern sanitary and healthful living quarters for the worker in the lower income brackets.

I believe that if the whole part of the Du Pont $25,000,000,000 plan cannot be launched immediately, then a portion certainly can be under way, as Congress goes through its program in the regular session, which begins in January. I still have enough faith in the American businessman to expect him to join the movement and participate to the extent to which Congress gives business relief as it produces the laws.

I say that it is the duty of business to do this to the fullest extent possible, and that its good faith will be estimated in proportion to its willingness to organize the program which Mr. du Pont so glowingly and ably expounded.

As far as our city and county are concerned, housing offers a great hope of unemployment relief.

Heaven knows we need better housing.

Ten millions of dollars have been earmarked tentatively for the city of Pittsburgh by National Housing Administrator Nathan Strauss. Allegheny County has organized its housing authority and is in a fine position financially to start promptly a wide and effective housing program.

I have had discussions of the county's intentions with chairman of the board of county commissioners, John J. Kane, and knowing him to be a man of action, I feel certain that the county commissioners will have a sizable project of housing under way next summer.

It appears that it is the county commissioners' intention to build new low-cost houses on sites now vacant, notably, within close proximity of two great new industrial plants in the county, the Irvin Works of the Carnegie-Illinois Steel Co., now under construction in Mifflin township, and the Hayes Auto Wheel Works to be built on Neville Island.

In addition to these proposed housing projects, our city and county should be in the very happy state of being the scene of great public improvements when the weather breaks in the spring. At that time the county government, it is

estimated, will have about $10,000,000 worth of public construction under way and the city a considerable amount, in addition to numerous W. P. A. projects. This activity will contribute greatly to the work for men in mills, mines, and foundries which supply the materials for roads, bridges, buildings, and so forth.

Before my election to Congress I was disposed to deplore the relatively meager Federal assistance which our local governmental bodies had up to that time received. In retrospect, perhaps this was good fortune. Naturally when Federal grants are obtained they involve larger expenditures by the local communities. Every dollar still unspent represents a carry-over of strength to fight the plight we are in now.

Thus housing and public works, within the next 6 months, can reasonably be expected to get public dollars into action.

Accompanying this should be a willingness on the part of private business to put private dollars to work. I can find nothing in the program of the President or the state of mind of Congress to scare the man of affairs from proceeding with confidence.

One of the four points in the proposal for this special session is one which private industry and its observers on Capitol Hill have sought for decades—namely, governmental reorganization. That, it would seem, is within grasp in the coming regular session, and business should put its large shoulder to the wheel, for this reorganization is something which only the old line professional politician would attempt to thwart.

Let us all—businessmen, workingmen, professional men, public officers, and plain Mr. John Q. Public—turn our collective mind to a grave problem.

Let us return to the amiability, the cooperation, and the wholehearted and general eagerness to rise and go ahead that marked the early part of 1933 when we were prostrate from an economic calamity.

Let us all just remember that we are Americans and that we must and can go forward.

And we will.

Freedom of Press—Statement of J. Warren Madden, Chairman of National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. MAURY MAVERICK

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

STATEMENT BY J. WARREN MADDEN, CHAIRMAN OF THE NATIONAL LABOR RELATIONS BOARD

Mr. MAVERICK. Mr. Speaker, under leave to extend my remarks, I include the following statement by J. Warren Madden, Chairman of the National Labor Relations Board:

The action of the National Labor Relations Board in issuing a subpena to an editor of a trade magazine has been the subject of some discussion. Much of the comment has related the Board's action to the constitutional guaranty of freedom of the press. There seems to me to be no such relation. The proceeding in which the editor was called to testify and produce evidence is one in which the Board has charged a manufacturer of steel with violation of the National Labor Relations Act by interfering with the right of his employees to join a union of their own choice. The editor is thought to have information and papers which would tend to prove or disprove that charge. The Board's subpena is merely the legal way of calling upon him to produce such information and papers. If a merchant or a teacher or a farmer had such evidence, everyone would expect him to respond to such a call and assist his Government in the enforcement of its laws. How does the fact that the witness is an editor change the situation?

The freedom of the press, which is guaranteed by the Constitution, is, broadly, the right to gather and print information and opinion without submitting to censorship in advance of printing and without being penalized for publication unless the matter published is obscene, libelous, or otherwise in violation of some valid law or regulation. This does not mean that if a newsgatherer or an opinion seeker, in the course of his work, observes a violation of law, he may not be asked by public authority to give evidence of that violation. And it certainly does not mean that if the publisher himself, either knowingly or unwittingly, permits the writing and printing to be used as a part of a course of conduct which is in violation of the law, he may not be asked to give evidence as to what he knows about that course of conduct.

I have observed over a period of years a number of cases of this type. A story is written in a newspaper about the criminal activities of gangsters or other habitual lawbreakers. The story indicates that the writer must know a good deal in detail about who the criminals are and what their part is in the violation of the law. The grand jury or other investigating body calls upon the reporter to give evidence as to what he apparently knows. The reporter takes the position that he has worked hard in his profession to obtain the story, that if he discloses the source of his information it will hamper him in getting a story the next time because people will be unwilling to confide in him, and that the law-enforcement authorities ought to get out and gather their own evidence and not make use of the skill and diligence which he has exercised in his profession.

In his claim of exemption from the duty which the ordinary citizen has of assisting in the enforcement of law by giving evidence of its violation the reporter can point to legal rules which exempt the lawyer, the doctor, and the priest from testifying as to professional confidences. These are exemptions which have developed in the common law over many years and are regarded as useful social devices. No one has ever, so far as I know, supposed that there is any constitutional barrier to changing these rules if the courts or the legislatures should conclude that they are no longer useful.

But as to the reporter or editor, no court that I have observed has ever permitted the exemption. Some reporters have gone to jail or paid fines for contempt of court when they persisted in refusing to disclose their sources of information, but it has not been charged in such instances that the judge was violating any constitutional right of freedom of the press. The point is that there is not only no constitutional immunity for editors and reporters from disclosing what they know of violations of law but not even any day-to-day legal immunity from the same obligation which applies to other citizens.

The constitutional fathers used the concise expression, "Freedom * * * of the press." Some editors are interpreting this concise expression substantially as follows: "No publisher or editor shall be required by any public authority to appear and give testimony in any trial or hearing as to violations of law of which he has knowledge or in which he has participated if his knowledge was gained or his participation occurred in the course of gathering, writing, printing, or distributing matter which was to pass or had passed through a printing press." I cannot believe that the makers of the Constitution had any such intention.

Criticism of the National Labor Relations Act, or the Board, or its work has no relation to the problem. That right has been and must be conceded to writers, and I may observe, has been generously exercised by them.

Discharge of Rules Committee of Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

Mr. WOLVERTON. Mr. Speaker, while the immediate question before the House relates to whether the Rules Committee shall be discharged from further consideration of the wage and hour bill, yet the underlying and more fundamental question is whether the House shall consider the bill, or whether a few members of the Rules Committee shall be permitted to prevent such consideration.

It seems to me that the whole purpose of representative government is destroyed if a mere majority of a committee, comprising a very small part of the full membership of the House, is to be permitted to withhold a subject of legislation from the consideration of the entire membership. To do so is, in effect, to legislate for the House. There is no justification to permit the few Members who hold membership on the Rules Committee to deny to all other Members the right, duty, or responsibility of passing upon legislation as important as the wage and hour bill, nor any other legislation that has had the approval of the appropriate committee of Congress.

With reference to this particular measure the RECORD will show that it was passed by the Senate, approved by the House Committee on Labor, and reported to the House by almost the unanimous vote of the committee. For a long period of time there has been a strong and insistent demand for legislation that would eliminate subnormal working conditions. The Rules Committee, notwithstanding a widespread demand that such legislation should be given consideration, and the apparent desire of the House membership to do so, has nevertheless used its prerogatives to prevent the House from taking any action either for or against. The only alternative that remained to the membership of the House under these circumstances was for 218 of them, a majority of the whole House, to sign a petition that the Rules Committee be discharged from further consideration of the bill. The necessary number signed the petition, and, consequently, the question is now before the House to discharge the Rules Committee of further consideration of the bill.

Thus it will be seen that the immediate question does not go to the merits of the bill, but solely and entirely whether it shall be considered by the whole House. If this motion prevails, and thereby consideration of the bill by the House is ordered, then it will be appropriate to consider the provisions of the bill, suggest amendments, and vote for or against the bill.

It is my intention to vote in favor of the motion to discharge the committee in order that the question of wage and hour legislation may be decided upon the floor of the House, and, by a direct vote of the entire membership of the House instead of by a vote of a few Members of the House constituting the Rules Committee.

Many times during my membership in this House I have been faced with a similar issue. In each instance I have taken the same position that I do now, namely, that the times in which we are living, with the unusual conditions that confront us, and the vital character of the problems that call for solution, demand and require not only clear thinking and honesty of purpose, but, in addition, a willingness to meet every question relating to our national welfare, especially when it affects any considerable number of our people, in an open and frank manner upon the floor of the House rather than behind the closed doors of a committee room.

I am strongly of the opinion that public questions of national concern and public interest which are subjects of legislation should not be stifled or smothered by parliamentary procedure without full, free, and frank discussion and vote of the House.

Therefore, Mr. Speaker, my vote will be cast in favor of the motion to discharge, because I firmly believe that the public good is best served when the Members of the House have the opportunity to express by direct vote their convictions on any important subject of legislation.

Milk Testing

EXTENSION OF REMARKS
OF
HON. JOHN LUECKE
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, December 13, 1937

LETTER FROM W. A. AYRES, CHAIRMAN OF THE FEDERAL TRADE COMMISSION, IN REPLY TO A LETTER FROM HON. JOHN LUECKE, OF MICHIGAN, ON THE SUBJECT OF MILK TESTING

Mr. LUECKE of Michigan. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from Mr. Ayres, chairman of the Federal Trade Commission, in reply to a letter of mine on the subject of milk testing:

FEDERAL TRADE COMMISSION,
Washington, December 11, 1937.

Hon. JOHN LUECKE,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: This is in reply to your letter of December 8, 1937, relative to certain alleged irregular practices on the part of condenseries and cheese plants in the State of Michigan and elsewhere in the testing of milk for butterfat content, with respect to which you request an investigation by the Commission.

It would not appear, from the Commission's knowledge of the marketing methods involved in the buying and shipping of milk and/or cream, that the practices to which you call attention are such as would come within its jurisdiction or would lend themselves to corrective action under the laws it administers. While some milk from direct shippers moves across State lines and is tested after reaching the plant of the buyer, the buying and testing of milk and/or cream is primarily an intrastate transaction. In view of this fact, any irregularities with respect to testing would appear to be a matter to which the State should give consideration.

It is our understanding that several States have already enacted laws for the purpose of preventing the practices set out in your letter. Possibly the first State to enact such legislation was Indiana. This act is entitled the "Creamery license law." I am also informed that States with an identical or similar law are Kentucky, Illinois, Iowa, and Nebraska. It also appears that your own State of Michigan has such a law. The particular law in question may be found in Public and Local Acts, Michigan, Regular Session of 1935 (No. 212, p. 344). For your ready reference we are enclosing herewith a copy of the particular section of the law covering the situation.

With best wishes,
Very truly yours,

W. A. AYRES, *Chairman.*

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. CLAUDE A. FULLER
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, December 13, 1937

LETTER FROM THE PRESIDENT OF THE AMERICAN FEDERATION OF LABOR, WITH AN ANALYSIS OF THE PRESENT WAGE AND HOUR BILL

Mr. FULLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the President of the American Federation of Labor, together with the analysis of the present wage-hour bill referred to therein:

WASHINGTON, D. C., *December 10, 1937.*

Hon. CLAUDE A. FULLER,
House Office Building, Washington, D. C.

DEAR SIR: I enclose a copy of an analysis of the provisions of the amended Fair Labor Standards Act which, I have been advised, will be reported by the House Committee on Labor for consideration and action.

This is an accurate analysis of the power which will be vested in a single Government administrator by the provisions of the proposed legislation. It is inconceivable that Congress would vote to confer upon a single Government administrator such broad, definite, and comprehensive power. Under this amended act the power of the board, as provided for in the original measure (to consist of five members), would be vested in a single administrator.

The opposition of the American Federation of Labor is based upon this analysis of the amended Fair Labor Standards Act. We hope you will agree with this position assumed by the American Federation of Labor.

Respectfully submitted,

WM. GREEN,
President, American Federation of Labor.

ANALYSIS OF FAIR LABOR STANDARDS BILL, AS AMENDED BY HOUSE LABOR COMMITTEE

PART I—PROCEDURE

The only difference between the set-up for the Administrator and for the Labor Standards Board occurs in the power of the Government agency in one case only, that is, in the power of the

Government agency to modify the recommendations of the committee as to what are proper minimum wages or maximum hours in a given industry, when the committee has been called into action, and after a public hearing has been had on the committee's recommendations.

In the case of the board, it can issue an order embodying conclusions which are different from the recommendations. In the case of the Administrator, if his conclusions are different than the recommendations, he cannot issue an order adopting them, but can only reject the recommendations and refer the matter back to the same or to a new committee for new recommendations.

But this difference is more apparent than real, for the Board would have to have new evidence adduced at the public hearings to justify its changed conclusions, or those changed conclusions would be arbitrary and subject to judicial reversal if different than the committee's conclusions based on adequate evidence.

But the same evidence adduced at the public hearing before the Administrator would invalidate the order of the Administrator adopting the committee's recommendations, which are not based thereon, and would require the same or a new committee to whom the matter was resubmitted by the Administrator to come to the same conclusions to which the Board would come on the same record, where the Administrator disagrees with the recommendations of the original committee.

Except for this power to modify the committee's recommendations, the powers of the Board and the Administrator are identical in respect to orders on minimum wages and maximum hours, thus:

(a) Both the Board and the Administrator alone decide when a committee should be appointed to determine the proper wages and hours in a given case.

(b) Both the Board and the Administrator alone determine what occupation, what employers, and what employees shall be considered by the committee.

(c) Both the Board and the Administrator alone determine what locality should be covered by the committee's recommendations.

(d) Both the Board and the Administrator alone determine whether collective bargaining is ineffective or inadequate in a given occupation to warrant investigation by the committee.

(e) Both the Board and the Administrator alone determine whether collective bargaining does or does not cover a substantial number of employees in a given occupation, to warrant the committee making an investigation.

(f) Both the Board and the Administrator alone determine the classification of employees to be covered by the investigation of the committee and the order, whether by craft or by industrial unit; and if so, how extensive in each case.

(g) Both the Board and the Administrator may issue an order adopting the recommendations of the committee as to hours and wages.

(h) Both the Board and the Administrator may reject the committee's recommendations and may resubmit the same to that committee or to a new committee.

(i) Only in the case where the recommendations of the committee are rejected, and the Government agent desires to issue an order without resubmitting the same to another committee, does the difference in procedure exist.

PART II. POWERS

The powers of the Board and the Administrator are the same in every respect other than that above stated in the administration of the act; thus:

1. The Administrator alone defines and limits who are executive, administrative, professional, or outside salesmen for the purpose of determining whether they are employees and come under the law (p. 4, sec. 7).

2. The Administrator alone appoints all employees he may deem necessary to carry on the work, without requiring confirmation by the Senate (p. 11 (c)).

3. The Administrator alone appoints all attorneys to represent him, unless he designates the Attorney General to represent him in a particular case (p. 12 (d)).

4. The Administrator alone determines whether the conditions exist to justify investigation such as—

(a) Whether substantial number of employees in any occupation are employed at wages and hours inconsistent with the policy established by Congress.

(b) Whether the investigation will interfere with, impede, or diminish in any way the right of the employees to bargain collectively (p. 19 (b)).

5. The Administrator alone appoints the wage and hour committee to investigate a particular occupation or case, and in so doing—

(a) Picks particular persons to represent the employers and the particular persons to represent the employees from the list of nominations submitted by employers and employees.

(b) Nominates the particular persons to represent the public, including the chairman of the committee.

(c) Determines the reasonable compensation for the members of the committee (p. 20 (c)).

6. The Administrator may bring before the wage and hour committee any witness whom he deems material (p. 20).

7. The Administrator alone determines whether the standards recommended by the wage and hour committee have been made with due consideration to the policy established by Congress, and if he finds that it has not, he may reject its findings.

8. The Administrator alone determines whether a hearing shall be had, and at what time and place the same shall be had, to consider the standards recommended by the wage and hour committee (p. 22 (h)).

9. The Administrator alone determines whether the standards proposed by a wage and hour committee, after a hearing, are in conformity with the policy established by Congress; and if so, whether an order should be issued covering the same (p. 23 (h)).

10. The Administrator alone determines the length of time within which a committee should submit its recommendations, and determines when to discharge the committee for failure to act within such period.

11. The Administrator alone determines whether to submit a matter to the same committee, or to a new committee, whenever the administrator has rejected, before or after hearing, the recommendations of the committee (p. 25 (i)).

12. The Administrator alone determines whether collective-bargaining agreements do or do not cover a substantial portion of employees in any occupation (p. 24 (b)).

13. The Administrator alone determines whether existing facilities for collective bargaining in any occupation are inadequate or ineffective to accomplish the purposes of the act (p. 24 (b)).

14. The Administrator alone determines, with respect to overtime—

(a) When overtime is or is not oppressive.

(b) The extent to which overtime should be permitted in any occupation.

(c) When overtimes does or does not circumvent the act.

(d) The terms and conditions relating to overtime employment.

(e) Wage rates to be paid in overtime employment.

(f) Maximum number of hours of employment and the maximum number of days per week for overtime employment.

15. The administrator alone determines, with respect to exceptions to hours and wage orders—

(a) When employment is of a special character.

(b) When qualifications of employees are limited.

(c) What wages, terms, and conditions of employment should exist for learners and apprentices.

(d) When substandard wages, how much, and for what period of time, and to whom they should be paid in any employment on account of the employees having impaired earning capacity through age or physical or mental deficiency or injury (p. 27 (b)).

16. The administrator alone determines whether to issue an order against intrastate producers to eliminate certain practices, and for that purpose he alone determines whether conditions exist, including—

(a) Whether the production intrastate is under substandard labor conditions.

(b) Whether the goods produced under such substandard labor conditions compete to a substantial extent in that State with other goods produced in other States under proper conditions (p. 28, sec. 8).

17. The Administrator alone determines in connection with every labor standard order:

(a) Employers to be covered by a labor-standard order.

(b) The classification of employees to be covered by a labor-standard order, whether by craft or industrial or plant basis.

(c) The classification of employments within an occupation to be covered by a labor-standard order.

18. The Administrator alone determines the terms and conditions for the restriction or prohibition of industrial home work (p. 34).

19. The Administrator alone determines with respect to the holding of hearings:

(a) The time and place for any hearing.

(b) He may call a meeting on his own motion.

(c) When a person other than a labor organization has a bona fide interest to entitle him to file a complaint for a hearing.

(d) Whether the hearing shall be before him or before a particular officer or employee of his division, designated by him (p. 35).

20. The Administrator alone determines with respect to investigations:

(a) When to investigate, and what to investigate, regarding wages, hours, conditions, and practices of employment in any occupation.

(b) May inspect any place or records and make transcripts.

(c) May investigate to see if any person has violated or is about to violate the act or any order or to aid in the enforcement of the act.

21. The Administrator alone, with respect to any investigation or proceedings, may administer oaths, subpena witnesses, take evidence, require the production of books, papers, correspondence, or any papers of any employer deemed relevant or material to the inquiry.

22. The Administrator alone may determine whether a person is or is about to violate the act or an order, and on the basis of which he may bring action in the courts to enjoin such violation or prospective violation (p. 39, sec. 12).

23. The Administrator alone may determine what records every employer shall keep as to persons employed, the wages, hours, conditions, and practices of employment, the period of time during which the record shall be preserved, what reports therefrom shall be made to the administrator (p. 40, sec. 13).

24. The Administrator alone may determine when an order to make, issue, amend, or rescind any regulation or any order necessary or appropriate to carry out the provisions of the act.

25. The Administrator alone defines the technical and trade terms used in the act.

26. The Administrator alone determines the form and manner in which complaints may be filed and proceedings instituted; and determines the procedure to be followed in any hearing or proceedings before the Administrator or committee (p. 43, sec. 15).

27. The Administrator alone may classify persons and matters and prescribe different requirements for different classes of persons or matters.

28. The Administrator alone determines the effective date for any regulation or order.

29. The Administrator alone determines when he should exempt any goods from the prohibition in the act covering the sale and transportation of goods in interstate commerce, and whether the conditions exist warranting such exemption, including—

(a) Whether the persons having an interest in the goods had reason to believe that any substandard labor conditions existed with respect to these goods;

(b) Whether the exemption is necessary to prevent undue hardship;

(c) Whether the exemption is necessary to prevent economic waste;

(d) Whether the exemption is detrimental to the public interest;

(e) The terms and conditions under which the exemption shall take place;

(f) Whether adequate provision has been made for employees operating under substandard conditions and the reparation to which such employees are entitled under the act (46 (c)).

30. The findings of fact by the Administrator, when supported by evidence, shall be conclusive in a court of law, unless the court finds that the findings are arbitrary and capricious.

PART III. CONCLUSION

All the objections which exist against the administration of the act by a board and all the dangers inherent therein exist in aggravated form under the set-up of the Administrator; this for the reason that in the case of the Board there are five minds functioning of persons selected from different localities and with a representative of labor thereon. The principle of checks and balances therefore may apply in the case of the Board, but not in the case of one administrator. If the Board is dangerous, even under such circumstances, and unacceptable, certainly the Administrator is even more dangerous and should be rejected.

In the proposed set-up of the Administrator, moreover, there is a special provision that—

"The Administrator is authorized to administer all of the provisions of this act as otherwise specifically provided, and his determinations and labor-standard orders shall not be subject to review by any other person or agency in the executive branch of the Government."

This provision should be considered with the provision—

"The review by the court shall be limited to questions of law; and findings of fact by the Administrator, when supported by evidence, shall be conclusive unless it shall appear that the findings of the Administrator are arbitrary or capricious."

These provisions apparently were intended to create an independence in the Administrator to reinforce his power and to make him immune from any reorganization bill or any other influence from the President, or otherwise, and to make him subject to judicial review only under circumscribed conditions not involving his discretion. He therefore would have in his control the power to destroy entirely industrial organizations, communities, labor unions, collective-bargaining agencies, and determine the conditions under which these respective communities, organizations, and agencies shall function or shall live.

Guns and Gangsters

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

A DISCUSSION BY HON. EMANUEL CELLER, OF NEW YORK, AND HON. BRIEN McMAHON, ASSISTANT ATTORNEY GENERAL OF THE UNITED STATES

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following discussion by myself and Hon. Brien McMahon, Assistant Attorney General of the United States, broadcast over the Columbia Broadcasting System, New York, December 11, 1937:

Congressman CELLER. I am glad of this opportunity to discuss with an official of the Department of Justice the problem of the traffic in firearms, something of real concern not only to your Department, Mr. McMahon, but to the Members of Congress. The American public was shocked a few weeks ago by the incident which occurred at Bangor, Maine, and which revealed a fact which is not generally known—that under the laws of many of our States all that a desperate gangster has to do if he wants to replenish his arsenal is to walk into a hardware store, put his money down on the counter, and walk off with an instrument of death.

Mr. McMAHON. Yes, Mr. Celler; it was a vivid illustration of the laxity of our firearms laws. Here were Brady, Dalhover, and Shaffer, three of the most notorious gangsters in the country. They were wanted for numerous crimes, including the murder of two police officers and a private citizen, bank robberies, and violation of the National Stolen Property Act and the National Motor Vehicle Theft Act.

In their haste in fleeing from Baltimore some months previous they were forced to abandon an arsenal. They then set about to get more guns. Bangor was one of the stops. They walked into the hardware store, purchased two revolvers, and promised to return at a later date. The point that I would stress is that they got those two revolvers without any more trouble than the asking and the purchase price.

Congressman CELLER. What can we up on the Hill do about it? In 1934, at the request of the Attorney General, we enacted the National Firearms Act. It was generally understood, I believe, at that time that the passage of the measure would deal a pretty heavy blow to the traffic in firearms. Certainly that's what we wanted to do.

Mr. McMAHON. Yes; the Firearms Act helped. But you remember, Congressman CELLER, that as that measure passed it applied only to certain kinds of firearms. As the Attorney General drafted the act, it applied to pistols and revolvers as well as to machine guns and other weapons. When it was enacted pistols and revolvers were stricken from the measure, and it was left applicable only to machine guns, submachine guns, sawed-off shotguns, and silencers. On these weapons we have made real headway. There is no question about it. You see, it requires everyone possessing such a gun to register it. If he doesn't register it, and we catch him with it, he is liable to fine and imprisonment. Furthermore, when a man purchases such a gun he must give his fingerprints. That is something the honest man is willing to do. It is something the crook won't do.

Congressman CELLER. Well, let's get back to this Brady case. Do you mean that what the Attorney General recommends—and I understand, by the way, that he plans to renew his recommendation to this Congress—is that when a man goes in to buy his firearm he must give his fingerprints and other identification information? In other words, if I understand you, the Attorney General would make it impossible for a hardware dealer to sell a weapon to a Shaffer or a Brady or a Dalhover until the person had furnished his fingerprints and those fingerprints had been placed on file in Washington?

Mr. McMAHON. Exactly. And we feel that the pistol is just as dangerous an instrument as many of the guns covered by the present act.

Congressman CELLER. Yes; and I have noticed an interesting fact, Mr. McMahon, that in the ganster's arsenal today you don't find as many machine guns as you did before 1934. We have been able to deal a real blow at the machine-gun traffic. From what I have observed, the ganster's arsenal today is filled with shotguns, rifles, pistols, and revolvers. Am I correct?

Mr. McMAHON. That is entirely correct, and a recent check of seizures of gangsters' arsenals proves it. The Brady gang had two rifles, two automatic pistols, and four revolvers at the time that they were apprehended on October 12, 1937. The arsenal of a recent gang of bank robbers revealed eight pistols, six revolvers, eight shotguns, and five rifles. During the course of the investigation of Clyde Barrow and his associates the Government recovered 7 automatic rifles, 4 revolvers, and 38 pistols. In other words, the machine gun which characterized certain of the major gang wars of a few years ago is not as readily available, and the modern gangster is turning to the smaller weapons which are not now covered by the Firearms Act.

Congressman CELLER. Yes; I guess we can agree that there are too many pistols in the underworld and that anything we can do to keep the traffic steered into legitimate channels is worth the best efforts that we can put forth. Of course, one of the questions which comes up is whether or not this should be done through State or Federal legislation. Personally, I feel that the States could pass much more restrictional laws than they have seen fit to do.

Mr. McMAHON. There is no question about it. The States, for the most part, have been reluctant to take any decisive steps which would smash the traffic. I remember a witness who testified before one of your committees in Congress, stating that he thought State legislation would be helpful and that he had been working for it for 15 years.

Congressman CELLER. Yes; and I remember the observation on the part of one of the committee when he said: "And are you advocating that we play along for 15 more years?"

Mr. McMAHON. Well, I think it is the answer. The States can do a lot, but we can't play along and let the traffic continue as it has been, taking a terrific toll each year in this country in human lives.

Congressman CELLER. Now I have heard the objection that the legislation disarms the honest citizen, but I have never been impressed with that one because under the proposed bill, which is a

tax and registration statute, no one is deprived of his weapon unless he violates the statute. He registers it as he would his automobile.

Mr. McMAHON. Yes; that objection doesn't hold water, but a few lawyers raised the question of the constitutionality of the bill under the second amendment.

Congressman CELLER. It has always been my opinion that the section of the Constitution providing that the right of the people to keep and bear arms shall not be infringed has no application to this kind of a statute. Certainly the Constitution does not grant the privilege to racketeers and desperadoes to carry weapons of the character dealt with in this act. I think it is clear that the provision refers to the militia, a protective force of Government; to the collective body and not individual rights, and I think the cases construing the provision will support that construction. A stronger argument against the bill, it seems to me, is that the taxes provided for in it are a little heavy.

Mr. McMAHON. I have assumed that the heavy tax that was levied on machine guns in the original bill would be reduced under this proposal, so that only a nominal tax would be levied. The only people we don't want to get these guns are the people who won't, for obvious reasons, give their fingerprints—and under the statute they won't get the guns.

Congressman CELLER. Have you had any particular sentiment in favor of a strict firearms law?

Mr. McMAHON. Yes; we have resolutions adopted by a number of important and representative groups, such as the American Bar Association, the General Federation of Women's Clubs, the International Association of Chiefs of Police, and others. Editorial comment has been virtually unanimous in favor of the measure.

Congressman CELLER. Yes; I have no doubt but that intelligent public opinion will be with us in this effort. Of course, as we both know, there are some groups that are opposed to the measure.

Mr. McMAHON. Yes, Mr. Congressman; but I'm sure you will agree that they constitute a small minority, and that most of the opposition arises from a misunderstanding of the purposes of the bill. Some people who want to possess weapons are under the impression that the statute sets up a permit system whereby some Government bureau can, in its discretion, grant or decline to issue a permit for the purchase of a weapon. This, of course, is not the case. Anyone, so far as the Federal bill is concerned, can buy the weapon if he will pay the nominal tax and give the fingerprints. No sportsman can intelligently oppose the bill, for it interferes in no manner with his hunting weapons and his sidearms. No householder can complain.

Congressman CELLER. I suppose, then, the only people who would complain would be the munitions manufacturers and dealers, for certainly if you stop the sale of guns to crooks the total number of sales is going to be reduced.

Mr. McMAHON. There is no doubt about that.

Congressman CELLER. Then the only other group that could complain would be the crooks themselves, and the great body of the American people are not interested in the complaints of the gangster.

The Completion of the Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

RADIO ADDRESS BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR DECEMBER 10, 1937

Mr. LEAVY. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following radio address delivered by the Honorable Harold L. Ickes, Secretary of the Interior, over the Mutual Broadcasting System on Friday, December 10, at the time the bids were opened for the completion of the great Grand Coulee Dam:

Today we are taking the second step in the building of the greatest dam in the world. The base of Grand Coulee Dam, already the most massive masonry structure built by man, is nearly finished in the bottom of the Columbia River Canyon west of Spokane. Now bids are being opened for the completion of this tremendous structure to its full height of 553 feet. The work already done and that covered by the new contract will involve the placement of three times as much masonry as went into the Great Pyramid of Cheops. Here is a job worthy of the best that science and engineering, that labor and industry have to offer. Grand Coulee Dam will endure for many thousands of years; testifying to the imagination, the ingenuity and the skill of this generation.

However, if I may be permitted to venture a prophecy, it is that in the distant years to come this project will have given us a more coveted title than simply that of "builders of great dams." In saying this I do not mean to detract from the honor due to the engineers and the workmen who are building Grand Coulee Dam. Even they, I think, will agree that the significance of the dam is not found alone in the magnitude of its dimensions nor in the workmanship that has gone into its construction. It lies rather in the ends which are to be served.

Grand Coulee Dam will minister to many useful purposes. It is destined to have a profound influence on the social and economic life of the Pacific Northwest which will be reflected throughout the country. It will serve to reduce flood peaks; to improve navigation; to store and to permit the diversion of sufficient water to irrigate a rich desert area one and one-half times as large as the State of Rhode Island; and to generate half again as much power as Boulder Dam. It will serve also, through regulation of the flow of the Columbia River, to improve markedly the power output of all downstream plants, including that at Bonneville Dam.

All of this will mean new homes and new opportunities for half a million or more Americans and new wealth for the Nation.

This is one of the most important conservation projects ever undertaken. It is not an experiment because it is cut on the same pattern as other projects that are now in successful operation which were built a generation ago by the Bureau of Reclamation of the Department of the Interior.

In the coming years, when this work shall have been completed and this desert shall have been made fruitful, men and women still will travel half around the world to gaze upon the dam itself, and they will see much more than a tremendous symmetrical pile of concrete in the great gorge of the Columbia River. They will see the homes and the villages and the cities, the farms and the factories, and the civilization that this dam will have created.

Grand Coulee Dam is not a State or a regional undertaking; it is a national development. The wealth it will produce will be part of our national assets. Even today, in constructing the dam, it is necessary to reach out to distant places for materials. Half of the money spent on it goes into the States east of the Mississippi River for materials ranging from tacks to turbines, thus providing employment for many men and women. Each of the 48 States will contribute something vital to the building of Grand Coulee Dam. When this project is finished families from every part of the Nation will participate in the new opportunities that it will offer.

When our grandchildren visit Grand Coulee Dam they will understand all of these things of which this great structure will be a pregnant symbol. And they and their children will think of this as an age of far-seeing planners and expert builders. They will be grateful for the foresight and the energy of a great President which have made fruitful and productive a great barren area.

The Agriculture Adjustment Act of 1937

EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 10, 1937

Mr. MOSER of Pennsylvania. Mr. Speaker, I spring from an ancestry of generations of husbandmen. With this background, my earliest emigrant ancestor came to America 230 years ago, within the month. This ancestor, Isaac DeTurk, took title to land in Pennsylvania (Penn's Woods) from William Penn, which title is recorded in Deed Book No. 1, Philadelphia County, Pennsylvania's County No. 1, in the subsequent Statehood set-up. A most interesting map of Pennsylvania in 1787, when the Constitution was adopted, has only this week been coincidently distributed by our distinguished colleague, SOL BLOOM, as a part of the splendid historical service he is rendering as Director General of the United States Constitution Sesquicentennial Commission.

This land is in Oley Township, Berks County, organized and erected in 1752, the county I have the honor of representing as Pennsylvania's Fourteenth District in this Congress. As an eighth generation descendant from this husbandman ancestor, grounded in the school of experience, to me has been entrusted a faithful representation of more than two centuries' background of experience in American agriculture.

These ancestors and their neighbors adopted a policy of rotation of crops and soil conservation as essential to the preservation of their important industry and livelihood—

agriculture. This class of husbandmen, Thomas Jefferson, may well have had in mind when, as Minister to France, he wrote:

> Those who labor in the earth are the chosen people of God, if ever He had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue * * *. Corruption of morals in the mass of cultivators is a phenomenon of which no age or nation has furnished an example * * *.

Or when, again in 1785, writing from his same important post in France, he added:

> Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous; and they are tied to their country and wedded to its liberty and interests by the most lasting bonds * * *.

This crop rotation has always been corn, oats, and wheat, back to grasses whose sod has ever been their basis of soil conservation. Where surface drainage developed, patches of sod were let stand to act as a stopgap to the drainage of surface soil pulverized in the cultivation for growing rotated crops.

For generations this area has not contributed to any surplus in agricultural products. The farmer long since learned to fertilize his soil to keep it productive. Every farmer learned he must put back something into his soil to compensate for what he extracted from it by the application of his brain and muscle. Corn, oats, and hay, while green cornstalks are used for silage, the dried cornstalks, as fodder, have been shredded and fed to the stock or used with straw and chaff as litter to be worked into manure for fertilizer. The wheat unconsumed on the farm is sold to the nearby miller for grinding and consumption by his customers of the area. These farmers of mine, whence I spring, might well have written the text for their more distant husbandmen brethren to follow.

For the same generations my district has been importers instead of exporters. Carloads of flour and bran and middlings, the byproducts of milling, and even corn have been imported into the area. Reminiscent of my earliest youth Pillsbury's might well have been regarded as a brand of underwear in competition with current day Munsing from the recognizable thrift and frugality of my late revered mother working these flour bags into undergarments.

The homespun philosophy of the Pennsylvania farmer is fully set forth in the exact words of one of them writing me as a constituent on the subject as follows:

> I ask you to use your vote and influence against the proposed farm bill and crop-control legislation now before Congress. There is approximately 100 or perhaps 500 small eastern farmers living on farms from 5 to 60 acres, who must buy from 20 to 100 percent of their grain they feed, to one big western farmer who grows nothing but grain alone, so why work a hardship on and penalize 100 or 500 small eastern farmers to profit one big western-grain farmer who is too lazy to diversify his farming operations as the small eastern farmer must do in order to make a living. No one understands his business better than the farmer himself if one crop does not pay a profit; he soon switches to another crop that pays better, and that will control production better than any set of lawyer legislators at Washington or Harrisburg who, I doubt, could tell you how many upper front teeth a cow has. For example, when wheat was low in price lots of farmers cut out wheat and sowed winter barley; then those who had silos would grow a crop of barley which they harvested in June, plow the ground, plant corn and put it in the silo there by growing two crops on the same ground that grew one crop of wheat.

Mr. Speaker, that is what my farmers want to know—why the Congress should enact crop-control legislation with penalties, knowing they have contributed nothing to surplus; that they have continued to help consume the surplus of the western wheat farmer; that they have mastered crop control, as this correspondent constituent illustrated, in the consumption of the silage but neglected to illustrate the barley was similarly consumed in barley meal, like oats chop, in stock feeding.

Mr. Speaker, the voluntary crop control of the original A. A. A. was decidedly unpopular and unwelcome among these people, except with the transient unscrupulous. Its administration was not without its merited criticism, when benefits were paid to the unscrupulous chiseler, who in turn brought additional uncultivated acres under the plough, thus contributing to the vaunted surplus, calculated and claimed to have been proportionately reduced but fated for disillusionment.

The bill under current consideration, the A. A. A. of 1937, with its compulsory features, is infinitely more unpopular among the farmers of my area. Their experienced knowledge of chiselers engenders no enthusiasm for elections to bring an area under crop control, knowing as they do their area of consumption is not contributing a surplus, and is yet an importing and not an exporting area. Under the pending bill, the controls are compulsory on five basic crops—cotton, wheat, corn, tobacco, and rice. If two-thirds of the farmers of any given area vote favorably, then, with minor exceptions, to the Secretary of Agriculture would be extended authority to impose regulation on all whether they approved it or not. Such areas divide counties and even congressional districts. With areas thus restricted and unrestricted, the opportunity for unscrupulous chiselers to become bootleggers of these controlled crops is immediately apparent and the purpose of this proposed legislative benefaction being defeated is imminent.

Mr. Speaker, when the first session of this Seventy-fifth Congress adjourned in August it was with the assurance of its leaders a farm bill would be made the first order of business in the next session. We are here in special session by the President's exercise of his constitutional authority for his stated purpose of having enacted farm and labor legislation. This bill is not a farm bill in the broader sense that farming implies. This is a crop-control bill. It does not apply to the farmer, that broader class of businessman extolled by Mr. Bryan at Chicago July 8, 1896, in these words:

> The farmer who goes forth in the morning and toils all day, who begins in the spring and toils all summer, and who by the application of brain and muscle to the natural resources of the country creates wealth, is as much a businessman as the man who goes upon the board of trade and bets upon the price of grain. * * * We come to speak for this broader class of businessmen.

The farmer is enough a businessman to know the importation of farm products into the domestic markets in competition with his own, under the reciprocal-trade agreements, on the vaunted theory increased export of manufactured goods increase employment, wages, and expand purchasing power to an extent of increasing his market price, is not working out, while his market price has fallen below the cost of production.

Mr. Speaker, a government that would really help the farmer should protect his market and give him cost of production, as we attempt to aid and protect the manufacturer against unfair competition. When the farmer must sell for less than production cost he plants his next crop in the hope of a better market. When the manufacturer cannot meet production cost in his market he closes his plant, lays off his help, and immediately purchasing power ebbs.

With the President of the United States as authority for the expression that one-third of the Nation is ill-fed, ill-clad, and undernourished, coincidentally today, the Philadelphia Record publishes, under the title "What's Wrong With This Picture?" a bust likeness of Uncle Sam with his whiskers of unusual growth into a beard long and wide, labeled "Farm Supplies" but the entire head is totally bald and labeled "one-third of a nation ill-fed." Yes; what is wrong with this picture?

Mr. Speaker, I hail from a community where harvest home services are still observed in its churches, where Thanksgiving Day in keeping with a time-honored custom since the Pilgrim Fathers launched it, and faithfully observed by a Christian nation through its President issuing an annual proclamation as a day of thanksgiving to God for His divine providence and bounties. You cannot convince this class of people that crops should be controlled and restricted. Neither can you convince them it has been sound governmental policy to launch vast irrigation projects in arid and desert areas never intended by this same God in His wisdom to produce crops.

The debate on this bill has adduced the testimony of a Representative of a desert area, testifying to the enormous

production of one of these five basic crops to be controlled, through the creation of one of these irrigation projects. The exemptions to small farmers under the terms of this pending bill are out of proportion. The Chairman of this Committee of the Whole House considers the tobacco provision, on which over 1 year's time has been expended, a good one. The exemption to the small cotton farmer appears in the main acceptable to their Representatives. The rice provision of a tariff differential by Cuba, in favor of the United States on no less than 100,000,000 pounds, as domestic allotment for rice, brings no protest from the Representatives of that area.

When the Representatives from the wheat and corn producing areas sought to liberate their farmers from the arbitrarily restrictive quotas under legislative authority, they were beaten back. The farmer of my district, who does not produce at least an average of 400 bushels of field corn per farm, or an average of at least 4 bushels of field corn per acre of farm land in my county, must be investigated. Contrasted to the more than a year spent working out the tobacco provision, obviously the care, study, and attention given the small wheat and corn growing farmer becomes apparent.

On the one hand the legislation proposed under this bill is privileged and earmarked for prompt and expeditious enactment, for application to the 1938 crop planting and keeping an administration pledge for farm legislation, yet on the other hand there is every earmarking tendency it is not to be applied until 1939. Secretary Wallace has sent another body an amendment to make it apply to 1939. It provides for soil conservation to continue; another year will materially deplete that reserve and lessen its availability for its stepbrother's nourishment, the A. A. A. of 1937, wholly, three-thirds ill-fed. It carries no provisions for an appropriation or method of replacement of the soil-conservation funds once depleted. Its administrative cost will be stupendous. Its enactment will entail a drain on the Treasury replenished with other taxes or a return for special taxation to meet its cost of operation. The processing taxes eliminated by the committee, are not forever abolished and are likely to loom up as a stepchild to support its top-heavy parent in a future Congress. It is as apt as not to require from three-quarters of a billion to over a billion dollars annually to administer once in its stride.

My farmers sincerely trusted me when they elected that I come here to represent them. They can quickly enough vote their approval or disapproval of my stewardship of their interests. They never calculated that I would come here and vote to give them a private election to ascertain whether two-thirds of them desired quota restriction in any given area and forcing such provision on the other one-third whether they liked it or not. I sincerely believed, as I told them in public addresses, based on the leadership's promise, that we would give them a farm bill. I can share no responsibility in their disillusionment. We will continue to consume our full measure of cotton, tobacco, and rice, of which we grow none. We will continue to consume our full share of the surplus contributed by the single-crop wheat and corn grower. We will consume as usual our entire wheat and corn crops in our own area. We are expected to continue on faith, in the hope that Congress will yet recognize we, too, are entitled to legislative protection against the iniquitous imposition of banditry and racketeering by the unrestrained dairy-products companies, mulcting our farmers of the product of their toil; a protection of the egg market from the competition of Chinese eggs; a better and more protected market for surplus potatoes and apples and what little parts of minor crops that find their way outside our own immediate area.

I shall vote, Mr. Speaker, to amend by substituting the Eicher-Massingale cost-of-production farm bill; to defeat all restrictive quotas; for the Boileau amendment to deny soil-conservation benefits to those utilizing the soil to enter a new competition into other domestic markets; for the recommittal of the bill for proper quota adjustments, contrasted to the mature deliberation given tobacco; and, failing in this, I shall vote against the passage of the bill. While the original A. A. A., with its voluntary crop control, may have been the first venture of a toddler, this compulsory crop-control endeavor is a giant stride toward regimentation of a free America into Hitlerism, as in Germany, where a farmer failing to comply with the Government's mandate to grow and produce as commanded, is forcibly taken from it and replaced by someone who complies. I am far too deeply grounded in the best traditions of a free America my early ancestors sought to establish to entertain the remotest respect for Hitlerism, fascism, communism, or any other than the sound traditions of Americanism. I will not take that giant stride.

The Roll of Drums

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

POEM BY MILTON KLONSKY, A STUDENT IN THE ABRAHAM LINCOLN HIGH SCHOOL, OF BROOKLYN

Mr. HOUSTON. Mr. Speaker, by unanimous consent of the House, I present for the RECORD a poem written by Milton Klonsky, a student in the Abraham Lincoln High School of Brooklyn, and brought to my attention by Miss Lee Kreiselman, Washington correspondent for the Wichita Beacon.

It is an indictment against war propaganda, points out the futility of war, and confirms my opinion the Ludlow peace amendment should be adopted. It demonstrates the deep concern of American youth at being turned into cannon fodder.

TRAGEDY IN FIVE ACTS

1. THE DRUMS

An ass's skin,
Stretched tightly
On a frame of wood,
Rumbles
An ugly song
That lures
Men to their slaughter.

2. THE BATTLE

Soft, purring voice
Beguiles
The heedless.
When sabres rattle,
Like milling cattle,
Wildly and eager,
They hasten
To death.

3. THE DEATH

The harsh bark
Of a rifle
Ruptures the quiet,
Ripping flesh
And piercing bone.
A billion cells
Surrender
Their lives.

4. THE DESPAIR

A dark,
So thick and heavy,
That it blacks
The sun.
A lonely voice
Cries out in the night,
But no one
Answers.

5. THE GOLD

A yellow metal
Shines unearthly dull.
Greedy fingers
Bathe
In its luxury.
Gold * * *
With which to buy
More drums.

Fair Labor Standards Bill

House child-labor provisions prevent employment of children; Senate (Wheeler-Johnson) provision has prosecution as remedy after illegal employment.

EXTENSION OF REMARKS

OF

HON. GEORGE J. SCHNEIDER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

All references are to S. 2475, Union Calendar, 535. The child-labor provisions of the committee print of this bill are similar, although the references may be slightly different.

Mr. SCHNEIDER of Wisconsin. Mr. Speaker, there is a vital difference between the child-labor provisions of the Black-Connery bill as passed by the Senate and as reported by the House Labor Committee. The House committee form aims primarily at prevention of the employment of children contrary to law, and the Senate form relies primarily upon prosecution after children are illegally employed. The actual provisions of the bill will illustrate this point.

PREVENTION VERSUS PROSECUTION

The House Labor Committee's form of the bill provides for an employment certificate system (p. 5, line 25, to p. 6, line 5) under a national uniform standard. Possession of a properly issued work permit for a minor employee exempts an employer from prosecution. The effect of this, as proved under the 1916 child-labor law, is largely to prevent employment of children and to reduce prosecution to a minimum. Under such a system, the States, cooperating with the Federal Government, see that children do not go to work illegally. Not only Federal prosecution but Federal inspections are reduced to a minimum.

The Senate form of the bill, on the other hand, did not authorize such an employment certificate system but relied for enforcement upon prosecution of employers after children were employed contrary to law (p. 48, line 19, to p. 49, line 9), and under conditions which would make effective prosecution extremely difficult, as described below.

EVIDENCE OF VIOLATION

The child-labor provisions of the House committee form are based upon the sound and tested principle of the 1916 Federal child-labor law, namely, prohibiting the shipment of goods from an establishment in which children have been employed within 30 days prior to such shipment (p. 45, line 20, to p. 46, line 6). The Senate form merely prohibited the shipment of goods made by child labor, with the proviso that the employment of children in an establishment should constitute prima facie evidence that child labor had been used on the goods in question. Prima facie evidence is easily rebutted and ultimately it would be necessary to produce proof that children had worked on a particular shipment of goods, perhaps in a distant State at a time much before the prosecution. This would be extremely difficult to prove.

The Senate form of the bill also incorporated the prison-made goods principle forbidding the shipment of child-made goods into a State which has forbidden their sale. It is based on the erroneous assumption that a method used for goods made by convicts in a quite limited number of penal institutions can be applied successfully to goods which may be made by children in many thousands of factories. To have any effect this prison-made goods plan would require supplementary legislation by each State. The 48 States all have different child-labor laws with wide variations as to ages, wages, and hours and types of work that are permissible. If laws should be passed by these States forbidding the sale of child-made goods from another State, they would almost certainly contain similar wide variations. To prove that a particular article had been made by a particular child in violation of the requirement of another and perhaps far distant State would be an extremely difficult task at best.

The Senate form contains a provision requiring that goods produced wholly or in part by child labor should be labeled by the original shipper and that subsequent use of child labor in relation to such goods shall be noted in labels by subsequent handlers. That such a labeling provision would be ineffective is indicated by the testimony of Grace Abbott at the hearings before the Senate Committee on Interstate Commerce, May 12, 18, and 20, 1937. (Report of hearings, p. 68, lines 6 to 16.)

It will be of interest to Members of the House to read the full testimony on this subject by Miss Grace Abbott referred to. Miss Abbott is an internationally recognized authority on all matters of child welfare. She very successfully administered the 1916 child-labor law, and later was for some years Chief of the United States Children's Bureau, and is now professor of public-welfare administration of the University of Chicago. Miss Abbott was emphatically opposed to the prison-goods method of dealing with child labor and in sympathy with the enactment of administrative provisions similar to those in the Black-Connery bill.

Below is a reprint of the 1916 child-labor law, which contains the principles which made its enforcement so successful; namely, the use of the employment certificate as a test of legal employment of minors and the provision that the employment of children below the legal age in a place of work within 30 days prior to shipment of goods therefrom made such shipment illegal.

[Public, No. 249, 64th Cong.]

An act to prevent interstate commerce in the products of child labor, and for other purposes

Be it enacted, etc., That no producer, manufacturer, or dealer shall ship or deliver for shipment in interstate or foreign commerce any article or commodity the product of any mine or quarry situated in the United States in which, within 30 days prior to the time of the removal of such product therefrom, children under the age of 16 years have been employed or permitted to work, or any article or commodity the product of any mill, cannery, workshop, factory, or manufacturing establishment situated in the United States in which, within 30 days prior to the removal of such product therefrom, children under the age of 14 years have been employed or permitted to work, or children between the ages of 14 years and 16 years have been employed or permitted to work more than 8 hours in any day, or more than 6 days in any week, or after the hour of 7 o'clock p. m., or before the hour of 6 o'clock a. m.: *Provided*, That a prosecution and conviction of a defendant for the shipment or delivery for shipment of any article or commodity under the conditions herein prohibited shall be a bar to any further prosecution against the same defendant for shipments or deliveries for shipment of any such article or commodity before the beginning of said prosecution.

SEC. 2. That the Attorney General, the Secretary of Commerce, and the Secretary of Labor shall constitute a board to make and publish from time to time uniform rules and regulations for carrying out the provisions of this act.

SEC. 3. That for the purpose of securing proper enforcement of this act the Secretary of Labor, or any person duly authorized by him, shall have authority to enter and inspect at any time mines, quarries, mills, canneries, workshops, factories, manufacturing establishments, and other places in which goods are produced or held for interstate commerce; and the Secretary of Labor shall have authority to employ such assistance for the purposes of this act as may from time to time be authorized by appropriation or other law.

SEC. 4. That it shall be the duty of each district attorney to whom the Secretary of Labor shall report any violation of this act, or to whom any State factory or mining or quarry inspector, commissioner of labor, State medical inspector, or school-attendance officer, or any other person shall present satisfactory evidence of any such violation to cause appropriate proceedings to be commenced and prosecuted in the proper courts of the United States without delay for the enforcement of the penalties in such cases herein provided: *Provided*, That nothing in this act shall be construed to apply to bona fide boys' and girls' canning clubs recognized by the Agricultural Department of the several States and of the United States.

SEC. 5. That any person who violates any of the provisions of section 1 of this act, or who refuses or obstructs entry or inspection authorized by section 3 of this act, shall for each offense prior to the first conviction of such person under the provisions of this act, be punished by a fine of not more than $200, and shall for each offense subsequent to such conviction be punished by a fine of not more than $1,000, nor less than $100, or by imprisonment for

not more than 3 months, or by both such fine and imprisonment, in the discretion of the court: *Provided*, That no dealer shall be prosecuted under the provisions of this act for a shipment, delivery for shipment, or transportation who establishes a guaranty issued by the person by whom the goods shipped or delivered for shipment or transportation were manufactured or produced resident in the United States to the effect that such goods were produced or manufactured in a mine or quarry in which within 30 days prior to their removal therefrom no children under the age of 16 years were employed or permitted to work or in a mill, cannery, workshop, factory, or manufacturing establishment, in which within 30 days prior to the removal of such goods therefrom no children under the age of 14 years were employed or permitted to work, nor children between the ages of 14 years and 16 years employed or permitted to work more than 8 hours in any day or more than 6 days in any week or after the hour of 7 o'clock postmeridian or before the hour of 6 o'clock antemeridian; and in such event, if the guaranty contains any false statement of a material fact, the guarantor shall be amenable to prosecution and to the fine or imprisonment provided by this section for violation of the provisions of this act. Said guaranty, to afford the protection above provided, shall contain the name and address of the person giving the same: *And provided further*, That no producer, manufacturer, or dealer shall be prosecuted under this act for the shipment, delivery for shipment, or transportation of a product of any mine, quarry, mill, cannery, workshop, factory, or manufacturing establishment, if the only employment therein, within 30 days prior to the removal of such product therefrom, of a child under the age of 16 years has been that of a child as to whom the producer or manufacturer has in good faith procured, at the time of employing such child, and has since in good faith relied upon and kept on file a certificate, issued in such form, under such conditions, and by such persons as may be prescribed by the board, showing the child to be of such an age that the shipment, delivery for shipment, or transportation was not prohibited by this act. Any person who knowingly makes a false statement or presents false evidence in or in relation to any such certificate or application therefor shall be amenable to prosecution and to the fine or imprisonment provided by this section for violations of this act. In any State designated by the board, an employment certificate or other similar paper as to the age of the child, issued under the laws of that State and not inconsistent with the provisions of this act, shall have the same force and effect as a certificate herein provided for.

SEC. 6. That the word "person" as used in this act shall be construed to include any individual or corporation or the members of any partnership or other unincorporated association. The term "ship or deliver for shipment in interstate or foreign commerce" as used in this act means to transport or to ship or deliver for shipment from any State or Territory or the District of Columbia to or through any other State or Territory or the District of Columbia or to any foreign country; and in the case of a dealer means only to transport or to ship or deliver for shipment from the State, Territory, or district of manufacture or production.

SEC. 7. That this act shall take effect from and after 1 year from the date of its passage.

Approved, September 1, 1916.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

TELEGRAM FROM ROBERT J. WATT, SECRETARY-TREASURER AND LEGISLATIVE AGENT OF MASSACHUSETTS STATE FEDERATION OF LABOR

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

BOSTON, MASS., *December 10, 1937.*

Congressman RICHARD D. WIGGLESWORTH,
Congressional Office Building:

The Massachusetts State Federation of Labor urges you to support the hour and wage legislation sponsored by the American Federation of Labor.

ROBERT J. WATT,
Secretary-Treasurer, Legislative Agent,
Massachusetts State Federation of Labor.

State Cigarette Tax Evaded—Assistance of Government Called For

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

Mr. PATMAN. Mr. Speaker, I have received a letter from the Honorable William McCraw, attorney general of Texas, and a letter from the Honorable George H. Sheppard, comptroller of public accounts of Texas, relative to the State losing $2,600,000 annually in taxes on cigarettes by an evasion of the law.

These letters, together with a copy of the bill referred to therein, are inserted herewith and are self-explanatory.

OFFICE OF THE ATTORNEY GENERAL,
Austin, Tex., December 10, 1937.

Hon. WRIGHT PATMAN,
House of Representatives, Washington, D. C.

DEAR MR. PATMAN: H. R. 8045, introduced by Mr. TARVER, of the Seventh Congressional District of Georgia, authorizing the Post Office Department to cooperate with the several States in the collection of State cigarette and tobacco taxes, I understand, is now pending before the Committee on the Post Office and Post Roads.

The Texas cigarette-tax law, levying a tax on the use of cigarettes as well as the sale thereof, requires that a tax be paid on cigarettes before they are consumed in Texas regardless of the source from which they are obtained. This tax has been upheld by the State supreme court and denied review by the United States Supreme Court.

The Postal Laws and Regulations, however, deny the States the right to inspect cigarettes shipped through parcel post, as well as access to postal records; and, consequently, many cigarette dealers have set up establishments just across our State boundary lines from where they solicit orders and ship cigarettes by mail in order to avoid inspection and payment of the tax. Statistics and records obtained by this department, working in conjunction with the comptroller's department, indicate that Texas is losing more than $500,000 annually in taxes and the legitimate merchants in Texas many times this amount in business because of such postal regulation.

The Tarver bill, therefore, is of vital importance to the State's revenue as well as to thousands of cigarette dealers in the State. I would therefore respectfully urge that you actively support this bill and use your influence in rushing its enactment.

Sincerely yours,

WM. MCCRAW, *Attorney General.*

COMPTROLLER OF PUBLIC ACCOUNTS,
STATE OF TEXAS,
Austin, December 9, 1937.

Hon. WRIGHT PATMAN,
House of Representatives, Washington, D. C.

DEAR MR. PATMAN: You are no doubt familiar with the fight Texas had to keep its cigarette-tax law—one of its most prolific revenue measures—from being destroyed by interstate bootleggers, whose agents by the hundreds worked the office buildings, industrial plants, and business houses in the cities of Texas soliciting and obtaining orders for cigarettes to be shipped into Texas by interstate commerce and thus free of the State's tax. Our statistics and records show that prior to the enactment of our present law levying the tax on the use, as well as the sale, of cigarettes these interstate peddlers were selling 40 percent of all the cigarettes sold in Texas. The State was losing $2,600,000 annually in taxes and our Texas dealers five times that amount in business.

Our present law, which has been upheld by the State supreme court in the cases of *Ex parte Kimberlin* (86 S. W. (2d) 717), and *Sheppard* v. *Musser* (92 S. W. (2d) 219), imposes the tax on the cigarettes before they are consumed in Texas, regardless of the source from which they are obtained.

The interstate bootleggers, however, have learned that postal laws and regulations prohibit postmasters and postal inspectors from furnishing State officials with post-office records or from permitting such officials to inspect cigarettes shipped through the mail; therefore, our mails are from time to time flooded with circulars soliciting orders for tax-free cigarettes to be shipped by mail free of inspection. One such dealer in Joplin, Mo., in a circular directs attention to the United States Official Postal Guide, using the following language:

"We want to point out paragraph 5. We quote, 'see section 703,' which prohibits access to mail matter in post offices by any persons,

except employees of the Postal Service. The United States Official Postal Guide can be found in any post office, should you doubt this statement; we ask that you go to the post office and verify it."

Mr. TARVER, of Georgia, has introduced H. R. 8045, which will authorize the Post Office Department to cooperate with the several States in the collection of State taxes, a copy of which is attached. I understand that President Roosevelt in a letter to the revenue commissioner of Georgia has stated that he would approve such legislation. This bill is of vital importance to approximately 35,000 cigarette dealers in Texas, as well as the school fund and old-age pension fund, to which the cigarette tax collections are allocated. May I respectfully urge your active support of this bill and that you use your influence to rush its enactment.

I understand the bill is now before the Committee on the Post Office and Post Roads. This department can furnish evidence of millions of cigarettes shipped into Texas in this manner, including the names of the shipper, the consignee and his address, and the quantity of each such shipment if such evidence is desired by the committee.

Thanking you, and with best wishes for the New Year, I am

Sincerely yours,

GEO. H. SHEPPARD,
Comptroller of Public Accounts.

H. R. 8045. A bill authorizing the Post Office Department to cooperate with the several States in the collection of State taxes

Be it enacted, etc., That to render necessary assistance to the several States in the collection of taxes levied by them upon merchandise or the sale of merchandise, the Postmaster General is authorized to permit postmasters to furnish to State officers the names and addresses appearing upon parcels containing such merchandise or to permit, under such regulations as he may deem advisable, State officials to examine in the post offices such parcels for the purpose of ascertaining the addresses thereof: *Provided*, That nothing in this act shall be construed as having any application to mail matter of the first class.

The Problem of Seagoing Personnel and Its Possible Solution

EXTENSION OF REMARKS

OF

HON. ROYAL S. COPELAND

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

ADDRESS BY JOSEPH B. WEAVER, MEMPHIS, TENN., OCTOBER 12, 1937

Mr. COPELAND. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address made by Mr. Joseph B. Weaver before the Propeller Club convention at Memphis, Tenn., October 12, 1937, on the Problem of Seagoing Personnel and Its Possible Solution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"We read from day to day of the conditions that exist throughout the world. To the west in China and to the east in Europe these clouds—and very dark clouds they are—change day by day. It almost seems that we are on the verge of a climax which may result in a great catastrophe. Before the World War we had no warnings. It may well be that today we are receiving warnings of such a catastrophe. I do not think we should close our eyes to this condition, and I think as a united nation we should submerge our various controversies and put our house in order."

I quote from my talk before the Commonwealth Club of San Francisco on August 21, 1936.

Does not the President's speech in Chicago, October 5, placing us on the side of right, bring us to the threshold of the very conditions described?

Over a year has passed, and where do we now stand as compared with conditions that existed at the time that speech was made?

Our vessels are a year older. No new tonnage, with the exception of tankers, has been constructed. The labor situation has progressed from bad to worse. Since that time the disastrous west-coast strike has occurred. Since that time discipline has ceased to exist on our ships. It is not necessary to deal in detail with the innumerable instances of insubordination, incipient mutiny, and violence; but in looking over various occurrences that daily are brought to the attention of all of us, one is forced to the conclusion that these are not "irresponsible acts" of Secretary Perkins' "bad boys," but that the combination of these instances can be called with good reason "organized disorder."

The unfortunate struggle between the C. I. O. and the American Federation of Labor for the domination of seagoing unions undoubtedly has played an important part in bringing about these conditions. There was a ripe field in some cases for justifiable dissatisfaction, but nothing in those circumstances can logically account for these continuing occurrences. There seems to be a sinister underlying influence over and above this struggle between the unions that may furnish the predominant motive for these unaccountable occurrences.

In the speech from which I quoted, the main purpose of the discussion was to secure the cooperation of all the various elements involved in our shipping problems in assisting the Government in working out the merchant marine program which was made possible by the numerous pieces of legislation passed in the summer of 1936.

The operators were willing to cooperate, in fact, they had to cooperate; but the radical labor leadership was not.

Patience and wise administration of the laws enacted would have worked out these problems. But what happened? First, the disastrous west coast strike. Second, the spread of disorder to the Gulf and to the east coast; and third, practically a complete breakdown in the enforcement of our maritime laws.

So that at the present day I would say, without fear of contradiction, that the discipline and morale on our vessels is the lowest it has ever been, probably lower than that on any vessels of other flags.

The merchant marine, which should play a most important part in the national defense, has become a liability rather than an asset.

It is not a pleasant picture to contemplate, particularly in view of the fact that we seem to be gravitating gradually toward a participation in world events which may demand all our resources.

If this catastrophe overtakes us soon, there will not be time to build up morale on our ships, because this collapse has been long in the making. It will be too late.

Troops must be transported without interruption, ammunition and supplies must move on scheduled time, fuel for the fleet must make its rendezvous in accordance with prearranged plans. This cannot be done if the total irresponsibility of the various labor leaders and their underlings, and the total lack of restraint and discipline on the part of the men themselves continues.

In the past we have seen labor leadership decide where and when our vessels shall sail; and what and to whom they shall carry. Is there any evidence that under present radical labor leadership these conditions will be changed? Is there any evidence that gentlemen's agreements and even contracts will not continually be broken?

Should war come now there is only one solution. That is, all workers in the loading, sailing, and repairing of our vessels be enlisted as part of the United States Military Establishment and be amenable to the resulting discipline. The people will demand it. The Government must enforce it.

What a contrast between this picture of chaos and the orderly, responsible record of the railroad unions. There we have collective bargaining and collective responsibility—there we have integrity, discipline, and efficiency. There is no fear that our railway transportation will collapse in such a national emergency.

And why should not the same condition obtain on our ships that exists on our railroads? There is no reason why there should be a difference. And there is no reason why, with sane, responsible labor leadership, the Government should be called upon to enforce the navigation laws which were designed and enacted and which give to the various governmental agencies all the necessary power and jurisdiction to cope with the present situation. Some restraining influence has prevented the enforcement of these laws, probably with the hope that the ordinary common sense of the American laboring man would result in a realinement and a reorganization of the unions into responsible bodies.

It would seem that the unions cannot extricate themselves from the present situation and that the time has arrived when the Government must exert its full force and authority. Otherwise the American merchant ship will disappear from the seas.

It is inconceivable that labor should adopt an attitude which, if carried on for an appreciable time, will kill the very industry in which that labor is employed.

If our water transportation was the only medium of transportation, there might be a logical reason for imposing on the industry such conditions. But, in foreign commerce, vessels of foreign flags stand ready and only too willing to take up this burden; and in our domestic transportation, railroads, trucks, and aeroplanes are always available; and, dealing specifically with tankers, there is nothing to prevent the extension of the already important pipeline systems so that the need for the majority of tankers will no longer exist.

The rank and file of our labor should be advised that continuation of what is now going on will ultimately mean the laying-up of vessels, the abandonment of services, and the loss of employment. They should know that those who must obtain their livelihood by going to sea will eventually have to seek employment under foreign flags, where the wages, living conditions, and all other circumstances under which work is performed are so far inferior to the conditions which exist in our American merchant

marine, not to mention the conditions which will be provided on new vessels, that there is absolutely no comparison.

The members of the Propeller Club of the United States are familiar with conditions on our ships, but, in the event this discussion reaches others who are not familiar with these conditions, I wish to list a few incidents, for the authenticity of which I can vouch, as typical of everyday occurrences on vessels flying the American flag.

Every day for the past year sit-down strikes, otherwise known as "quickies" in maritime parlance, have occurred in all ports of the country. Vessels cannot be scheduled with certainty as at the last moment any trivial excuse can be trumped up; such as, complaints about the food or coffee; the demand that an elaborate menu be served, in many cases much more extensive than anyone here present would expect or even desire; a nonunion man may have been shipped, or a member of an opposing union signed on. Any one of these excuses has been sufficient to stop the operation of our vessels, not only in home ports but abroad as well.

Drunkenness on the part of the crew has resulted in some of the most disgraceful episodes aboard our vessels. Obscenity, profanity, and even nudity have, on occasion, been thrust in the very faces of women and children passengers. Stewards have grossly insulted passengers at the dining tables, even to the extent of deliberately spilling soup over women, and other similar actions. One lady passenger, who had been seasick and not at her table for a day or two, came down to dinner and the steward refused to serve her and stated that "she had better go back and eat her meals where she had been eating them."

On some occasions it has been almost impossible to secure food on some vessels without currently tipping those who were serving.

A personal friend of mine, making a coastwise voyage, came out of his stateroom one night to go to dinner and saw a semidrunk steward attempting to manhandle a young woman passenger in the corridor. This gentleman, not being controlled by any unions or subject to any penalties, did just what you or I would do. He knocked the steward flat—and as this man weighs some 260 pounds, the steward was properly "flattened." Had a licensed officer done this, he would have been subject to fine and possibly imprisonment.

Intimidation, violence, and bloodshed are the orders of the day on our ships and on the water front. Our licensed officers are threatened and, on one occasion, tried by the crew. Retaliation for imaginary grievances on the part of the crew has, in one case, resulted in deliberate murder. This particular instance can more properly be called execution.

I quote from a consular report which is an official document and which sums up, I think, beyond any question of doubt, the lamentable conditions now existing on our ships.

AMERICAN CONSULATE GENERAL,
Far East, March 6, 1937.

Subject: Far East newspaper comments on disciplinary conditions on American ships.

The Honorable the SECRETARY OF STATE,
Washington.

SIR: I have the honor to refer to Consul General Hoover's despatch No. 405 of October 19, 1936, regarding the activities of union delegates on board American merchant vessels, and to transmit herewith, for the Department's information, two articles which have recently appeared in the Far East press regarding conditions on American ships and the prospect of further strikes on the Pacific coast.

While the statements regarding the deplorable lack of discipline on American ships plying in the far eastern waters are unfortunately true, they only tend to cause Far East shippers and travelers to use foreign vessels. During the recent strike many importers dealing in merchandise from the United States were unable to get their orders filled, and several stated bluntly that they never again intended to use American ships, since they could not be relied upon. The publication of such articles as these, in which additional strikes are forecast, cannot help but to deter Far East traders from shipping on American vessels.

"The shocking lack of discipline on board American vessels is common talk in the Far East, both among Americans and other nationals, and predictions are freely made that a marine disaster of the first magnitude will inevitably result if such conditions are allowed to continue.

"Respectfully yours,

"AMERICAN CONSUL."

And again I quote from another consular report, likewise an official public document.

"Repeated reports of strikes and difficulty with crews on American vessels plying the Pacific are causing much concern generally, particularly among passengers, who are more and more inclined to patronize ships under other flags because of the existing situation. I will say, frankly, from my observation in recent years of the crews of the American lines on the Pacific, I would prefer to have my family travel on other lines. I would feel a greater sense of security if they traveled on other lines. I have myself observed members of the crew of the American seagoing ships discussing their officers and their orders and union activities, using profane language in the presence of passengers and generally the impression of lack of discipline and of orderly conduct and ability and skill in their calling."

There does not seem much that I can add, except to state that there is no exaggeration in regard to any of the above; that every one of these instances and many more can be substantiated.

Do you ever see the Twentieth Century held up in the station because the crew does not like the kind of coffee served or because the brakeman does not like the conductor?

Do you ever see men continued in employment on the railroads who are habitual drunkards?

Do you ever see stewards or waiters continued in service on dining cars who are inefficient and discourteous?

Do you ever hear of these same stewards and waiters discussing with the passengers communism and other isms and insulting the passengers if they are not agreed with?

Do you ever hear of the grossest kind of insults inflicted on women passengers on Pullman cars?

No; you do not! As a former vice president of the Pullman Co. I know you do not.

The railroad unions themselves will not defend this kind of thing. The railroad unions themselves demand sobriety, efficiency, and dependability.

Let us debunk this whole situation.

Radical union leadership has failed. The union hiring halls have proven a menace. Discipline on our vessels is a joke. This leadership has had its opportunity.

We have all the necessary laws and authority vested in definite Government agencies to protect the traveling public, to protect the rights of the operators, and to protect the rights of labor. Let those agencies perform their duty promptly, fearlessly, and without passion or prejudice; but, in fairness to these agencies, interference from other Government departments must be eliminated.

Let the Government set up Government hiring halls and perform the duties which, according to law, are mandatory in this connection.

Numerous cases of insubordination, violence, and near mutiny are before the Government now for decision. Let us hope that all legal technicalities and maudlin sympathies will be brushed aside; and let us hope that these agencies, without quibbing, will get down to the fundamental question of whether or not these charges are right or wrong and will impose any penalties fearlessly.

Rid the ships of the undesirables. Stamp out communism on our vessels. Give the public, the operators, and decent labor a chance. Then we will see a prosperous industry out of which will grow responsible unions and more responsible associations of operators.

Let us save the American merchant marine.

The Present Business Situation

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, December 14 (legislative day of Tuesday, November 15), 1937

CLIPPING FROM THE CHARLOTTE (N. C.) DAILY OBSERVER, DECEMBER 12, 1937

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix a clipping from the Charlotte Daily Observer, of Charlotte, N. C., Sunday, December 12, 1937, being a dispatch from my home city of Asheville, N. C., the title of the article being, "Drive Seen Against New Deal. Spruill Charges Certain Interests Trying to Force Modification of F. R. Regime."

Mr. Spruill is president of the North Carolina Bankers' Association, a very eminent, well-thought-of, respected citizen of North Carolina.

Mr. SCHWELLENBACH. Mr. President, will the Senator yield?

Mr. REYNOLDS. I yield.

Mr. SCHWELLENBACH. The Senator referred to Asheville, N. C. Is that the same city which is sometimes known as the Gem City of the Mountains?

Mr. REYNOLDS. The Little Gem City of the Mountain; the most beautiful spot on the face of the earth, with the exception of other beautiful spots in North Carolina.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Charlotte (N. C.) Observer, December 12, 1937]

DRIVE AGAINST NEW DEAL SEEN—SPRUILL CHARGES CERTAIN INTERESTS TRYING TO FORCE MODIFICATION OF F. R. REGIME

ASHEVILLE, December 11.—Frank P. Spruill, of Rocky Mount, president of the North Carolina Bankers' Association, said in an

interview here today that the recession in business was the result of a "concerted effort on the part of certain groups of business interests and newspapers" to force modification of the New Deal.

Spruill, president of the People's Bank & Trust Co. at Rocky Mount, related what he said was the experience of a veneer plant in that neighborhood to support his contention.

The plant, he said, had orders on hand sufficient to keep it busy for several months when, almost simultaneously, from various parts of the country came telegraphic instructions to hold up the orders.

SEES COLLUSION

"The orders were not canceled," he added, "but were merely subjected to delay."

"Now, why," he asked, "did concerns all over the country with contracts calling for use of that veneer, simultaneously find out they couldn't use it"?

The banker predicted that the recession would wear itself out. "There are now signs," he said, "that the downward trend is slowing up in North Carolina."

"Business concerns, regardless of their attitude toward the administration, will realize that they might as well go ahead," he said.

At the outset of his interview, Spruill asserted that he did not consider himself an expert, that "nobody really knows anything about it," but that "It looks to me like a concerted movement—that is evident."

Reciprocity Information

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

SUGGESTIONS AS TO METHOD AND CHARACTER OF REPRESENTATIONS TO THE COMMITTEE FOR RECIPROCITY INFORMATION

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum issued by the Committee for Reciprocity Information which I think will be valuable to Members of the Senate and to the general public. It concerns information, and the method of its reception, in connection with trade agreements.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

The Committee for Reciprocity Information has announced at various times certain changes and additions to its procedure in connection with trade-agreement matters, the primary purpose of which has been to provide every opportunity for interested parties to inform the Government agencies concerned of their views in connection with each agreement before negotiations commence, and to take up with the Government problems that may arise after agreements have been concluded.

Representations to the committee with respect to recently announced negotiations led the committee to make additional suggestions as to the character of the data to be submitted in sworn statements and at hearings considered most useful to the committee and to others concerned with the negotiations. These suggestions should not be considered as mandatory but merely as a guide to assist industrial and other interests concerned in the presentation of their views.

CONSULTATION WITH COMMITTEE

The committee would like again to make clear that business and other interests are always entitled to consult with the committee or its staff with respect to any phase of trade-agreement matters, whether with reference to an agreement already concluded, to one concerning which announcement has been made but upon which actual negotiations have not yet commenced, or to the possibilities that may lie in commencing discussions with a country about which announcement has not been made. It is the Government's purpose to obtain from every possible source full and complete information prior to the negotiation of any trade agreement as well as to dissipate any misunderstandings which may exist with respect to the Government's purpose in making trade agreements or its methods of negotiation.

Opportunity is given to submit information with respect to contemplated or pending negotiations to the committee, first, by letter following the preliminary announcement that such negotiations are contemplated, then by sworn statement upon formal notice that negotiations will take place, and finally at public hearings conducted by the committee subsequent to the filing of sworn statements but prior to the conclusive negotiations. It should be stated here that all information submitted to the Government in such letters and sworn statements is confidential and for Government use only. Careful attention should be given to the text of the announcements above referred to in order that interested parties may determine the character of the data which they think may usefully be conveyed to the committee.

The above procedure is by no means intended, however, to preclude other correspondence or conferences with the committee either with a view to clearing up any questions which may occur to those concerned or for the purpose of presenting data to the committee upon particular matters not easily susceptible of explanation by letter or within the limited time available at open hearings.

Naturally, the whole Committee cannot be available with respect to each request for conference from groups or individuals whose interests may suggest such action on their part. Such inquiries or requests for a conference will be taken care of by the executive secretary of the Committee, old Land Office Building, Eighth and E Streets NW., Washington, D. C. Every effort will be made to have present at such meetings those representatives of the Government Departments most directly concerned with the matter in hand, and opportunity will thus be afforded for detailed consideration of the matters under discussion.

CHARACTER OF INFORMATION DESIRED

In supplementing herewith the regular announcements issued with respect to each trade agreement by the suggestions which follow with respect to the character of the information desired by the committee, it should be realized that this is put forward only as an indication of the type of data deemed most useful to the committee and should not be understood as intending to discourage the submission of such information as may be considered advisable or in such detail as may be considered necessary by the particular industry concerned in connection with trade agreement matters. The committee wishes, however, to discourage, so far as it can, the presentation of unnecessary and irrelevant data. In other words, interested parties should lay emphasis upon the presentation of tariff information and refrain from making general protests or all-inclusive requests. There is little point in making general objection to the purpose of the Trade Agreements Act or to the negotiation of any agreement whatsoever with the country under consideration for the simple reason that such matters are not relevant.

DATA USEFUL WITH RESPECT TO IMPORT ITEMS

If representations concern possible concessions on import items under consideration, it is suggested that attention be given to:

1. The precise interest which the writer or witness has in the proposed negotiations; the character of the industry or business concerned; its location, and the number and kind of employees, its annual production, its position in the industry or in the national business structure; comparative data on labor costs, if thought desirable, should be based upon the cost of labor per unit produced rather than wages per hour or week, though information on weekly or annual wages paid in an industry may, of course, be of interest to the committee.

2. The character of the competition to which the industry or business is or may be subjected by reason of the imports to which reference is made, indicating by description and by price bracket, if any, the precise difficulty encountered or foreseen, or, if on behalf of import interests, advantages to be gained.

3. Suggestions of special classifications, concessions upon which would be of interest to importers and to the foreign country under consideration, but which would cause the least disturbance, if any, to the domestic producer; in this connection, however, any classifications suggested should be natural and recognized in the trade, and should not require excessively fine distinctions, copyrighted trade names, or minutely detailed varieties, since the general adoption of such classification practice might well destroy the usefulness of the most-favored-nation clause.

4. Data on sources of existing or prospective imports of the product considered with relation to special classifications or price brackets of the imports and to price structure and brackets of the domestic product.

5. Details as to style trends, recent inventions, improved processes, descriptions of types, and other trade data available only to the industry.

EXPORT PROBLEMS

If representations concern concessions to be requested of the Government with which the trade agreement is being negotiated, attention should be directed to:

1. The interest of the company or business submitting the request with particular reference to the type and importance of the exports, the character of the industry, its locality, the type of labor employed, i. e., whether skilled or unskilled, etc., and like data.

2. Full information about the obstacles to trade of which complaint is made; for example—

(a) The ad valorem equivalent of the duties and other charges assessed upon the product, if considered excessive, and examples of the various types of product, if appropriate; tariff paragraph in schedules of the foreign country should be stated.

(b) Quota restrictions, if any, with special reference to method of administration of quotas, basis for claim of discriminatory treatment, if any, etc.

(c) Effects of clearing and compensation arrangements, import-license requirements, regulations with respect to exchange control, difficulties arising by reason of official monopolies, and like matters.

3. A precise description of the concessions desired in the foreign market with supporting data available to the trade. This should include such information as:

(a) The competitive situation in the foreign market, both with respect to competition with domestic production and with imports from sources other than the United States.

(b) Suggestions as to special classifications that might be established—natural and recognized by the trade—which would benefit the trade of the United States.

(c) Peculiar marketing or other exceptional conditions such as those involved in cartel organization, Government subsidy to domestic production, or other similar factors.

(d) Data with respect to the source and character of raw materials which enter into the manufacture of the product.

DUPLICATION SHOULD BE AVOIDED

Finally, though the committee welcomes relevant information from all sources, it is suggested that duplication in the presentation of views be avoided wherever possible. For example, in those cases where national labor unions, trade associations, and like institutions submit comprehensive statements, additional briefs from local branches or individual members of those organizations can properly be dispensed with unless they contribute some special facts not covered in the association's statement. Duplication of this sort is especially burdensome at hearings where presentation should be limited to data not adequately covered in the sworn statements already submitted and industry presentations consolidated at least by group, whether appearance is on behalf of laborer, manufacturer, or importer, unless conflicts of interest within such groups suggest separate appearance.

Figures and data compiled from publications of the Department of Commerce and other Government agencies are, of course, available to the committee, and their use in statements is of value only where they are employed to emphasize a special point and are not merely compilations or extracts taken from official publications.

Doped Money

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. H. STYLES BRIDGES, OF NEW HAMPSHIRE, DECEMBER 11, 1937

Mr. JOHNSON of California. Mr. President, I ask unanimous consent to have published in the RECORD, as a part thereof, an address by the junior Senator from New Hampshire [Mr. BRIDGES] entitled "Doped Money," which was delivered over the red network of the National Broadcasting Co. on December 11, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, it is my intention to speak briefly tonight on something that concerns all of us during our sleeping and waking and working hours, namely, United States money.

Schemes have been attempted ever since money has been used as a medium of exchange and a depository of purchasing power, whereby the quantity of money in circulation would take the place of production. The theories are many and varied but they have all had about the same success as Ponce de Leon when he attempted to find the fountain of youth and as the various ancient alchemists in their attempts to make gold out of lead or sea water or birchbark. In other worlds it just cannot be done. There is no short cut to sound money. One of the puzzles to me is that no matter how much experience we have had, no matter how much evidence of the failures of others, some of us are always prone to believe that while certain things may happen to other people they just cannot happen to us.

If we are sick or run down and the physician gives us a shot in the arm, we are perhaps granted temporary relief. The human body is so arranged that it can soon throw off the effect of a shot in the arm. When the economic body is ill, some of those who hope to get something for nothing prescribe an economic shot in the arm. In other words, they say, "Let us pay off a few of our debts by turning on the machinery in the Bureau of Engraving and Printing and print a few more million dollars of green-colored pieces of paper having the proper picture and the proper signature inscribed thereon, and we will soon be well again." Unfortunately, the economic body cannot throw off the effects of this shot in the arm, because not only is money a medium of exchange but is, as I have stated before, a depository of purchasing power, or, in the language of the common man, a dollar in money represents so many hours of labor, it does not particularly matter whose labor. When pieces of paper, representing so many hours of labor are offered in the food markets, they should buy so much bread, so much meat, so many potatoes, so many gallons of gasoline, or so many pairs of shoes for the children. When the electric money-making machines are turned on, however, the resulting dollars do not represent hours of labor but, instead, merely water the money already in circulation, so I have called this money which is the result of turning on the money machines "doped money." On this topic Dr. Edwin W. Kemmerer, professor of international finance at Princeton University, said: "For a nation to finance itself by inflation is like the resort of an individual to opium smoking. The first sensations are pleasant, but the more one takes the more one wants. The appetite grows by what it feeds upon, and the more one indulges the weaker become his powers of resistance."

In 1933, at a time when the present administration was doing things in its attempt to pull America from the depths of the depression, at the time of the N. R. A. and the C. W. A., the President was given the power by an act of Congress to issue $3,000,000,000 in greenbacks. This power has not as yet been exercised, but it is still a power; it is still hanging like the sword of Damocles over the delicately adjusted economic system of the country. If this power were to be exercised today, soon the price of everything that is on your table this evening would be affected. The prices would be higher. But your wages wouldn't be higher. The amount of money in your savings bank wouldn't be greater. The value of the bonds held by the insurance company which will some day pay your life insurance wouldn't be higher. Quite the contrary. Those things would be lower. Now you will ask the question, "If it is true that the national income is somewhere in the neighborhood of $67,000,000,000 a year and the public debt is around thirty-seven and one-half billion, why shouldn't the United States Government make use of this power to release $3,000,000,000 in greenbacks and thus increase the velocity of money in circulation without adverse effect? In fact, this shot in the arm might help us overcome this present recession." But the answer is, just like dope, one dose of greenback elixir would lead to another, and soon there would be much more than $3,000,000,000 of greenback doped money in circulation, and the purchasing power of the American dollar would be in the same category as the German mark in 1923 or as the French franc before the time of Napoleon. France on two occasions suffered ruin, riots, and revolution as the result of carrying out the policies of the greenbackers. The real truth of the matter is, the velocity of money does not depend so much upon the quantity of money in circulation as it does upon the confidence of the people in the money that is in circulation.

Is it not a sad commentary on the financial intelligence of this country that we can describe with deadly accuracy one of our many monetary policies by comparing it to the degrading and soul-destroying dope habit? Inflation helps nobody. Among the many desires of the inflationists one is to raise prices because they believe that high prices mean good times. As a matter of fact, at the present time we have about six and one-half billion dollars in circulation. If we were to add this three billion of inflated money we would have nine and one-half billion dollars in circulation. In 1920 we had only about $4,000,000,000 in circulation, but our price average today is only about 40 percent of what it was in 1920. In other words, high prices do not necessarily mean greater amount of money in circulation. True, inflation has a temporary beneficial effect on the debtor class who can wipe out their obligations in fiat doped money, but in the long run the destruction of the country and of decent government will far outweigh even that temporary advantage. Foolish and dangerous though the reasoning of the inflationists be, it has the power to win some converts. These wild-money people thrive upon disaster. There were enough converts in 1933 to put this Thomas inflation amendment to the Agricultural Adjustment Act upon our statute books; this power to issue $3,000,000,000 in printing-press products, irredeemable in anything of value and with no backing whatever. That law is still there. It is still a threat to our national welfare. It is still an influence in undermining business conditions. It is still entirely within the discretion of the President of the United States, whether this greenback doped money shall be poured into the channels of trade, and whether the President be Franklin D. Roosevelt or his successor, the power will remain on our statute books until the act is repealed.

When governments resort to the device of inflation they soon find out that they cannot fool the people. Certainly they cannot fool other nations with whom they trade. Foreign nations know the difference between worthless paper and sound money. Therefore, the next step of inflationary governments is to pass laws forcing people to accept worthless money or face fine or other punishment. In 1935, in a message to Congress, the present Chief Executive said, "Wealth is not created, nor is it more equitably distributed by this method. A government, like an individual, must ultimately meet legitimate obligations out of the production of wealth by the labor of human beings applied to the resources of Nature. Every country that has attempted the form of meeting its obligations which is here provided has suffered disastrous consequences.

"In the majority of cases printing-press money has not been retired through taxation. Because of increased costs caused by inflated prices new issue has followed new issue, ending in the ultimate wiping out of the currency of the afflicted country. * * *"

In view of this message it is fair to assume that the President would welcome the passage of a bill repealing this Inflation Act so that the power to regulate money would once more rest in Congress where it belongs. To say that the President believes in inflation is to say that he is merely giving lip service, in his above quoted statement, to sound money and sound economics.

Let us not forget that our wealth is not determined by the number of dollar bills we have in our pockets but rather by the purchasing power of these dollars. With this inflation measure unrepealed there is always temptation for the cheap money man, the economic tinkerer always on the job, who tried to attach the greenback rider to the soldiers' bonus bill, who did attach it to the A. A. A., and who is now attempting to attach it to the new farm bill. Let us not continue to live in a fool's paradise.

I have the honor to be the author of a Senate joint resolution calling for the repeal of the Thomas inflation amendment. My bill is Senate Joint Resolution No. 192. It is now in the hands of the Senate Committee on Banking and Currency, and in spite of the fact that a month ago I requested that an early date be set for public hearings on my bill, and in spite of the fact that this request has been supported by demands from all over the country, no date has been fixed for these hearings. But it is you, the people, who must make the demand. Let us realize that a mild increase in greenback circulation only whets the appetite of the inflationists. You must make your requests known. You must make your demands sufficiently strong. You must make it realized by all that never again is it your wish to commit the folly of trying to make people accept printer's ink on worthless paper as a thing of real value. There is no excuse on our part for having the Thomas greenback amendment on our statute books. Blind stupidity on the part of Congress and criminal neglect on the part of the people will explain it but that will not excuse it. If you wish that this vicious greenback statute be repealed, communicate your opinions to your own Congressmen and your own Senators and ask them to support Senate Joint Resolution No. 192.

Wage and Hour Bill Benefits Labor, Industry, and Agriculture

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. SMITH of Washington. Mr. Speaker, there are at least two sound arguments in favor of this legislation to establish minimum wages and maximum hours of work in industry which cannot be seriously questioned. First, it will better enable workers to attain a reasonably decent standard of living and more leisure time for rest and recreation and result in substantial social gains for the average citizen. Business is also certain to be thereby benefited, because the prosperity of business depends upon and is measured by the income, purchasing power, and steady employment of the wage earners and workers of the Nation. Second, this legislation will protect employers in industry from the unfair competition of other employers whose substandard conditions—low wages, long hours, and child labor—give them an unfair advantage. These, as I view it, are the two main objectives sought to be attained; and they are both meritorious and will contribute materially to the welfare and happiness of the American people.

BENEFITS TO AGRICULTURE AND THE FARMERS

Mr. Speaker and my colleagues, not only will industry and those employed in industry be benefited, but so will agriculture and the farmers of the Nation. In his speech at Omaha in the campaign of 1936, President Roosevelt pointed out the fact that one of the real answers to the problems of the farming population is to give the mass of city workers sufficient purchasing power to buy the products of the farm and thus to increase the cash income of the American farmer as well as the American laborer:

Increasing production alone in an unlimited way appeals to no person who thinks the problem through. Increasing consumption must go hand in hand with it. Here is a simple figure to mull over. If every family in the United States had enough money to live on what the doctors and dieticians call a Class-A diet, we would need foodstuffs from 45,000,000 acres more than we are using today. * * * I seek to increase purchasing power so that people can pay for more food and better food, and in turn provide larger and larger domestic markets for the farmer.

WAGES IN STATE OF WASHINGTON HIGHEST IN THE NATION

My colleagues, it is with pardonable pride that I call your attention to the fact that industry in the State of Washington, the southwest district of which I have the honor to represent, enjoys the distinction of paying the highest average wage rate in the entire country, according to the twelfth annual report of the Bureau of Labor Statistics recently released by Commissioner Isador Lubin. This common-labor survey covered 5,238 establishments throughout the United States in 20 industries with 222,555 common unskilled laborers on their pay rolls at entrance rates. The average hourly entrance rate in the State of Washington, I am proud to state, is 61.8 cents.

For the Nation as a whole, 14.7 percent of the common laborers in the industries surveyed received less than 40 cents per hour, the minimum fixed in the pending bill. In the South 48.4 percent of the workers were paid under 40 cents, while in the North only 3.5 percent averaged under 40 cents per hour.

LUMBER AND PULP AND PAPER INDUSTRIES

Mr. Speaker, the lumber and pulp and paper industries are the principal industries and source of the most employment in the State of Washington and the Pacific Northwest, and they are also very important industries in the Southern United States. It is therefore interesting to note the wide difference in the wages paid in these competing industries in the Northern and Southern States, as shown by the report of the Department of Labor, to which I have referred.

In the lumber industry—sawmills—in the North the average hourly wage is 54.6 cents and in the South it is 24.5 cents, and the percentage of common laborers receiving less than 40 cents per hour in the North is 15.1 percent and in the South it is 97.4 percent.

In the pulp and paper industry in the North the average hourly wage is 51.1 cents and in the South it is 39.6 cents, and the percentage of common laborers receiving less than 40 cents per hour in the North is 1.7 percent and in the South it is 44.8 percent.

Dr. Lubin, in the report, makes this significant comment:

In each case where the figures are available for both regions, the averages in the North were considerably higher than those in the South. The highest differential was found in lumber, amounting to 30.1 cents. The southern industry with the highest percentage of common laborers receiving less than 40 cents per hour was lumber, viz, 97.4 percent.

EFFECT UPON LABOR AND INDUSTRY IN SOUTHWEST WASHINGTON

Mr. Speaker, the most cursory analysis of the figures which I have quoted establish conclusively how much higher is the prevailing wage scale in the lumber and pulp and paper industries in the section of the country which I represent and the much lower wages being paid in the competing South, which is unfair to labor and industry in the West.

We harbor no ill-will toward our fellow Americans in the South and we wish them well. I have at all times viewed this matter impersonally and nationally. For the character, ability, and patriotism of our colleagues from the South, I have only the highest regard. They are lovable gentlemen and I have a real affection for them. There are no personalities involved here and no issue of sectionalism, and neither has any proper place in this debate. However, it is my solemn conviction that the welfare and happiness of all the people and our American society as a whole, North and South, East and West, absolutely depend upon the wages which are paid in industry as well as the hours of employment. The cash income of the millions of Americans who are employed in industry everywhere is the final determining factor in the prosperity of business and agriculture. As we have noted, we are suffering from a maldistribution of the earnings and profits in industry on account of low

wages, long hours, and child labor in some of our industries. When we raise these standards to a higher level, as we seek to do by this legislation, we thereby increase the consuming power and augment the market for all manufactured goods and products of the farm, first, in those immediate localities in which these industries are located, and secondly, throughout the Nation.

AS DEMOCRATS WE ARE UNQUALIFIEDLY COMMITTED TO THIS TYPE OF SOCIAL LEGISLATION

Mr. Speaker, it was my privilege and honor to serve as a delegate to the Democratic national convention held at Philadelphia in 1936, and I say to my fellow Democrats that we are unqualifiedly committed to this type of social legislation. I still remember the enthusiasm and fervor with which we in the convention adopted our platform, containing this plank:

> We know that * * * minimum wages, maximum hours, child labor, and working conditions in industry cannot be adequately handled by 48 separate State legislatures, 48 separate State administrations, and 48 separate State courts. * * * We have sought and will continue to seek to meet these problems through legislation within the Constitution.

Upon that platform we went before the electorate of the country, and in his closing campaign speech at Madison Square Garden, President Roosevelt said:

> Of course, we will continue to seek to improve working conditions for the workers of America—to reduce hours overlong, to increase wages that spell starvation, to end the labor of children, to wipe out sweatshops. * * * For all these things we have only just begun to fight.

WE ARE KEEPING FAITH WITH THE AMERICAN PEOPLE

President Roosevelt and the leaders of our party, and each of us, have since reiterated time and time again these promises and pledges to the American people. Now we are going to keep faith with the American people, carry out their mandate predicated upon their acceptance of the covenant set forth in our party platform, and redeem our campaign promises and subsequent pledges, and enact into law this legislation to increase wages, shorten hours, improve working conditions, abolish child labor, and raise the living standards of the workers of America.

Mr. Madden's Defense

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

EDITORIAL IN PITTSBURGH PRESS, DECEMBER 13, 1937

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Pittsburgh Press of Monday, December 13, 1937, entitled "Mr. Madden's Defense."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Pittsburgh (Pa.) Press of Monday, December 13, 1937]

Chairman J. Warren Madden, of the National Labor Relations Board, sees no infringement upon the constitutional guaranty of free speech and free press in the recent actions of his Bureau. His defense, outlined in a lengthy statement dealing with the summoning of a magazine editor to produce all papers, proofs, letters, memoranda, telegrams, etc., in connection with an article criticizing the Weirton Steel Co. hearing, is based on the premise that the editor knew something about a "violation of the law" and didn't want to tell where or how he learned it.

Said Mr. Madden: "Some editors are interpreting this concise expression (the first amendment of the Constitution) substantially as follows: 'No publisher or editor shall be required by any public authority to appear and give testimony in any trial or hearing as to violations of law of which he has knowledge or in which he has participated, if his knowledge was gained or his participation occurred in the course of gathering, writing, printing, or distributing matter which was to pass or had passed through a printing press.'"

In short, that editors claim they shall not be compelled to testify if they know about a "violation of the law."

All right, let's examine that premise. If it is true, Mr. Madden's defense of his Board's action is valid. If untrue, then his defense is unsound.

What could the editor in question know about in the nature of a "violation of the law?" There is only one answer, as admitted by the Labor Board. He knew about the origin and circumstances surrounding the publication of an article in his magazine. Therefore either the publication or the distribution of that article was a violation of the law. It was the only thing about which he was presumed to know.

But the first amendment to the Constitution of the United States declares: "Congress shall make no law * * * abridging the freedom of speech or of the press."

That amendment did not declare that it is a violation of law to attack the Wagner Act.

It did not declare that it is a violation of law to criticise the Labor Board.

It even did not declare that it is a violation of law to approve the labor theories of E. T. Weir, the head of Weirton.

It made no exceptions—for capitalist or labor leader, for union organizer or trade-paper publisher.

No publication—according to the first amendment of the Constitution—was in itself a violation of law. The only violations were for libel and for exciting to riot and rebellion, as defined by other laws.

Under Mr. Madden's definition of a "violation of law" the police at Dearborn, Mich., and the mayor at Jersey City were equally within the law when they arrested C. I. O. organizers for distributing union literature.

They, too, claimed to be upholding the law by calling union men to account for what they had printed or distributed.

If it is a "violation of the law" to print and distribute matter hostile to the Wagner Act about which the Constitution says nothing—then it can be claimed with equal validity that it is a "violation of the law" to print and distribute union arguments when the police at Jersey City and Dearborn want to say so.

If it is a "violation of the law" to print matter critical of an action under the Wagner Act, then why can't Congress make it illegal to print criticisms about the income-tax law or the interstate-commerce law or the pure-food law—or any other law it sees fit?

Mr. Madden's argument is good—up to the time where he forgets that the first clause of the Bill of Rights forgot to make an exception in the case of the National Labor Relations Board.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

ADDRESS DELIVERED BY HON. E. E. COX, OF GEORGIA, ON DECEMBER 10, 1937

Mr. COX. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered in Atlanta last Friday, December 10, 1937:

Mr. Chairman, were it not for the profound and fundamental changes—I might say revolution—now going on in our economic and social life, and, indeed, in the very structure and functioning of the Government itself, I would not subject myself to the criticism of too often resisting measures that are offered with the reported blessings of an administration of the party of which I am a humble member.

But so far reaching and so dangerous are these changes I am compelled by a sense of love for my country, love for my party, and concern for the posterity to which we of today must soon turn over this Government and this Nation, to speak out when I see steps being taken, encroachments being attempted, and legislation being enacted which point unerringly toward a government by men rather than by laws, the kind of government which burdens many of the Old World nations of today and which is utterly repugnant to every concept of free American democracy—the democracy of Jefferson, of Cleveland, and of the founding fathers, who fought for the establishment of personal liberty on our shores and who wrote into the Constitution the guaranties of those liberties.

I am not unaware of the criticism which has been voiced of my attitudes toward certain phases of the so-called New Deal. Nor have I been free of the mental travail, the unpleasantness, and the need for long and grave mental struggle attendant upon a position of disagreement with an administration that is struggling

so desperately to solve the innumerable vexing problems that press for attention.

My task of warning against some of these proposals and of opposing some of them has not been a happy one. But I have no regret, for nothing has been said or done in malice; it has been out of the deepest sense of duty to sustain our constitutional system and to defend the liberties of our people that I have sought to beat back every encroachment of despotism wherever and whenever it has raised its head, regardless of under what banner, whatever guise, or whatever circumstance. I must fight for a free America, for your personal liberties and mine, for an American concept of government, and against the creeping paralysis of fascism, nazi-ism, communism—dictatorship.

I do not accuse those who believe that circumstances of necessity or the exigencies of an emergency justify a temporary departure from the fundamental principles of free government of being the willing and knowing partisans of a totalitarian form of government. But I do say that once this camel gets its nose under the tent, it will mean in America what it has meant in those dictator-ridden nations of the Old World that shortly the camel will be entirely in the tent and the liberties and the personal freedom of American citizens will be trampled under foot and ground into the dust.

I have warned time after time—and I warn again now—that there is a snowball sort of effect to this constant encroachment of Government on the rights and liberties and activities of the citizens. Once let any government begin to control business, industry, labor, agriculture, church, or school, and unless that government is at some point willing to turn about in its course and release its control over these activities it must go on and on until complete control is exercised over all activities. And when government once assumes full control it must maintain itself by the device of terrorism. It can brook no criticism. It can risk no press and no voice and no collective action of the citizens against it. When that point is reached we will have in this country exactly the same sort of government—no matter by what name it is called—the same kind of government that today curses Germany, Italy, Russia, and Japan. No matter that the handcuffs and the leg irons are velvet-lined—they are handcuffs and leg irons nevertheless, and once they are clamped upon the citizenry of this Nation the chafing and finally the rebellion will come—and come sooner than we think. You cannot put the people of this country in a governmental strait jacket and keep them there. Our whole training is against it. It was easy enough to do this in Europe where the populace for generations was trained and conditioned to submission to authority. Those peoples were accustomed to bow to authority and to not question its right or power to control them. But that is not true of you—the sons and daughters of those pioneers who with faith in God, confidence in themselves, an irresistible determination to carve out their own destiny of freedom in the primeval forest by grace of strong bodies and keen axes, who threw off the yoke of absolutism and who made America what it is today. You cannot shackle such people by new instruments of power dangerous to the liberties of the people, even though such "new instruments" be placed in the hands of political puppets and self-serving bureaucrats intent upon perpetuating their own power at whatever cost to the people.

If absolutism ever comes to America it will not be through the desire of her people but through their lack of knowledge of what is being done. It will not come so much from design as from blindness. It will not come so much from determined direction as from thoughtless drift. And it is that blindness that I seek to prevent. It is that drift I seek to retard and to stop by warning against those measures and those trends which I see inevitably leading to that concentration of power that I know will not be accepted as a finality by our people. So, then, in short, you have the reason for my opposition to many of the administration measures, such as the wage-hour bill, and you have the reason for my criticisms of those measures which were so obviously in violation to the Constitution and to the whole American concept of government. I am not fighting men. I am fighting encroachment of dangerous ideologies. I am not criticizing men, I am criticizing the blindness, the indifference and the cowardice, that would make compromise with some form of absolutism, which, no matter how expedient it may seem for the moment, has within it the seeds of destruction for the liberties of America and the Constitution carved out of the blood and sacrifice of our forefathers who loved liberty and spiritual and intellectual freedom more than they loved this enigmatic struggle we call human life.

There has grown up in our national life all too much of the clamor that if a Member of the Congress does not submit supinely and on every occasion and on every proposal for legislation to the dictation of those in the executive branch of the Government, he has betrayed his party and has rebelled against his party's administration. That premise is false and that conclusion is obnoxious to every proper understanding of the constitutional duty of an elected legislator. A Congressman has his own constituency to serve. He has his own conscience to meet. He has, if he is worthy of his place in the councils of the Nation, a standard of courageous honesty and of honest courage which he cannot compromise without being faithless to the trust of his constituency, without being false to the liberties of his people, without being careless of our duty to our posterity to turn over to them a free Nation which we inherited from our forefathers.

Honest men differ in their views and their opinions—and such differences of opinions and the peaceful and reasonable adjustment of such divergence of views are the very essence and life and being of that structure—that great spiritual truth which we call constitutional democracy. That constitutional democracy is not a physical thing at all. It is truth, justice, good will, fairness, and cooperation aimed to attain the more abundant spiritual life and the more abundant physical well-being of our people. And when any man through cowardice or political expediency violates his concepts and his convictions of truth, justice, good will, fairness, and cooperation he has violated the very basis of constitutional democracy and of liberty among men. Many do it, as I have said, through blindness. They do not think these things through. Many do it through hope that by compromising for the moment they may turn back before it is too late and retrieve these elements of freedom. But there are some who give evidence of deliberately desiring to strangle the elements of constitutional democracy because they hope in the chaos which would follow to loot power and profit for themselves.

I perceive in the constant trend toward centralization in government, in the constant trend toward regimentation and regulation of all the activities of the people, this thoughtless drift and this blind and unthinking acquiescence to compromise with an alien political philosophy which spells the end of freedom in America.

Take, for instance, the pending wage and hour bill being considered by the Congress.

This measure is proposed in the name and under the guise of an economic and social necessity. The basic argument is that it is economically unsound for anybody in the United States to work for less than 40 cents an hour and that it is socially unsound for anybody to work more than 40 hours a week.

If that assertion be true, if that philosophy be sound, then it must be true and it must be sound in every case. It must be true and sound in the case of the agricultural worker as well as in the case of the industrial worker. It must be just as true and just as sound for the domestic worker, the white-collar worker, the clerk, the stenographer as it is for the lathe worker or the pick-and-shovel man or the man who follows the plow. So, therefore, if it is true for all of these, then there could be no exemptions granted by any all-powerful board or any all-powerful dictator at the head of wage-hour enforcement without violating in the case of every exemption those fundamental principles. But it is proposed to either set up a board, or a single administrator, or the Department of Justice, or the Department of Labor to violate in thousands of cases this alleged economically and socially necessary regulation. Discretionary power to an extent heretofore undreamed of is to be vested in the administrative agency chosen to enforce this proposed act, to exempt and to exclude from its provisions and operations some industries or some workers or some sections in which it is found that the fundamental theory won't work. So, then, we are to have the spectacle of an alleged fundamental economic and social necessity being set aside by edict of some enforcing administrative agency, so that in the cases of exemption the fundamental necessity will not apply while in others it will. Picture for yourselves the utter chaos and confusion that would result.

Now all this adds up to the establishment of a dictatorship over labor and over industry that will have to enforce its edicts upon all interests and activities coming within the zone of its jurisdiction or it will have to create a condition of emasculation and exemption that will render the act merely a meaningless series of exceptions and discriminations.

Let me say to you now that one of the underlying intentions of this wage-hour bill is to provide a board or some other administrative agency with the power to denude and deprive the South of certain climatic and raw-material advantages, certain labor and living advantages which are now bringing us to the forefront of industrial advancement, in order to provide competing northern industries with a weapon by which to retard our advancement and to deprive us of our markets which we can and do possess by reason of these natural and other economic advantages.

In other words, the purpose of the wage-hour bill is to put the industrial advancement of the South in a strait jacket so some administrator can sit in Washington and say when, how, and to what extent the South may utilize her industrial advantages to aid her own progress.

In utter violation of States' rights, local self-government, local self-determination of our own sociological and economic problems, this act is to be foisted upon us so that an administrator sitting in Washington can send a horde of regulators and field administrators down here to tell us the hours we shall work, the wages we shall pay, the industrial and labor and living standards to which our people and our industries shall conform, whether we like it or whether we don't, and whether we want it or whether we don't.

The very essence of the reason for State sovereignty is because the interests, the conditions, and the requirements of the various sections of the United States are so diverse and so widely divided as to render it economically and sociologically impossible to put America in a strait jacket of industrial and agricultural and social regulation made to apply to every section and to all industry and all labor alike.

It is contended that only a very small fraction of labor will be touched by the operations of this bill. If that is true, why outrage the Constitution and set up a dangerous and all-powerful board or single administrator in Washington to wield any such power if it is to touch such a small fraction of the laboring people as it is claimed?

Let me strip this whole question of the falsity of political argument and the mist of vague economic and sociological vaporings which becloud it, and stand it naked before you that you may see of what it is composed, what purposes actually enshroud it, so that you may for yourselves see the dangers to the South inherent in this dangerous and iniquitous proposal.

It has been said that this proposal grew out of the desire of the industrial East to stop the industrial development of the South, and to paralyze the industry we already have. But this is not true.

It has been said that organized labor, out of a desire to spread employment, to increase wages, and to shorten hours gave birth to the proposal. But this is not true.

It has also been said that the idea came out of a certain racial group interested in the elimination of all racial distinctions, who demand it as the price for continued political support. But this is not true.

This whole proposal grows out of the hearts and minds of those intellectual "reds" in America who actually are interested in achieving by stealth and by subterfuge and by usurpation a despotic form of government in place of our constitutional democracy, in order that they may be the ones to wield the power which, under free government and individual effort, they have neither the wits, the determination, the energy, nor the integrity to accomplish for themselves.

There are industrialists who are supporting this wage-hour proposal because if it is enforced it would tremendously handicap if not stop the present industry of the South and would paralyze our future efforts at industrial expansion. There are labor leaders who are supporting the measure because it will mean not only political organization of the industrial workers, but eventually and without doubt the political organization of farm workers and domestic workers as well, into a compact political force which could and would be manipulated and played upon as an organ by which these self-seeking labor leaders could acquire that despotic dominion over industry and over government for which they avidly thirst.

The organized Negro groups of the country are supporting it because it will, in destroying State sovereignty and local self-determination, render easier the elimination and disappearance of racial and social distinctions, and by the concentration of this vast and despotic power in a political board or administrator in Washington throw into the political field the determination of the standards and the customs which shall determine the relationship of our various groups of people in the South.

I say to you that these local problems cannot be so administered. It is not only impossible, but it is dangerous beyond conception to try to so adjust all of these intimate questions of daily life and associations by a political power sitting in Washington and determining these questions not from the standpoint of the best and wisest solution but from the standpoint of advantageous political determination of these questions. Along that way lies terrible trouble and dreadful social unrest and friction which, over the years, we have tried so hard to allay and to adjust.

These groups with their varying self-interests have all been consolidated into the common drive for this wage-hour bill. I think the President has been misled in this matter. I believe that if many of those who are now supporting this bill under the delusion that it will accomplish what it is purported to accomplish knew the real situation in the South they would withdraw their support and would denounce the measure.

It has been claimed by the friends of this measure that those who are struggling to make a living out of agricultural pursuits would escape its blighting effect, but this is not true.

It is impossible to put into effect the provisions of this proposed Wage-Hour Act without increasing the cost of all the things that the farmer has to buy. This is one effect. This act will increase the price that the farmer will have to pay for farm labor—or else your farm laborers will flock to the industrial centers for the 40 cents and 40 hours and fields will have to lie fallow and become buried under a growth of weeds because of lack of aid to keep them producing.

This act will operate, by increasing the cost of manufactured goods, to drain from the farmers' present markets a great portion of the purchasing power now spent for agricultural products, because it would be spent for manufactured products at increased prices.

There is pending before the Congress another bill, called the Agricultural Act of 1937. The administration is under commitment to farmers to secure for them parity of price, parity of income, and something more than the cost of production; and pending farm legislation is intended as a move in this direction. But can such parity be accomplished if the moment the farm bill is adopted you are to face, under this wage-hour bill, competition for your labor, higher prices for everything you buy, and a lowered purchasing power in your markets?

The ultimate effects of these two bills would be like infusing into agriculture a pint of blood through the Agricultural Act and at the same moment draining from agriculture a gallon of blood through the operation of the Wage-Hour Act.

I want such farm legislation as will achieve parity of prices, parity of income, and financial security for the farmers of America. The Nation cannot survive with the agricultural workers, comprising one-third of the population, drawing only a tenth of the national income. I am for intelligent farm legislation designed permanently to achieve for the farming population equality and parity of prices and of income. It is because of that necessity, and it is because of that desire which I have to actually secure such a condition of affairs for the farmers that I supported the agricultural bill while I oppose this wage-hour bill. I want such security and such parity for the farmers with the very least possible amount of regulation, regimentation, and interference with their individual liberty of action and self-determination. The American farmer is able. He is honest. He is of the best type of citizen we have in this Nation. What he wants and what he needs is a fair and equal chance with industry for the production and marketing of his products at prices on a parity with the prices of the things he must buy. But I say to you that the farmer cannot secure such parity if new and unpredictable competition, and new and unpredictable price burdens are to be created against him at the same time by such legislation as this wage-hour bill.

The great need of America today is intelligent cooperation between the Government and business and agriculture, not blind and arbitrary compulsion and regimentation.

We need between industry and agriculture intelligent cooperation, not blind competition and warfare.

We need between industry and labor intelligent cooperation, not blind force and hostility.

We need in America intelligent cooperation from a basis of enlightened self-interest, not class and racial hatreds and strife.

We need in America not to rob those who have to give to those who have not, but intelligent cooperation to enable the have-nots to acquire their own so they will not need that which others have.

The best form of relief known to mankind is that form which helps the needy to relieve his own condition of need.

Class hostilities and hatreds and wishful thinking never helped any nation to survive. We need a practical application of sound economics and sound sense and sound integrity to our problems in a concerted effort to eliminate the obstacles in the way of a renewed and continued prosperity.

Our Nation is again in a grave situation. It is essential that we all work together as good citizens and sensible citizens to preserve our democracy from destruction, to preserve our liberties from being wrested from us, and to preserve our defense from any assaults by other nations, while we hold in our hearts peace and good will toward all men.

I want my party to be dominant because it is worthy to be dominant through an enlightened and practical concept of government. The traditional policies and the traditional ideals of Jeffersonian democracy are the traditions of sound, enlightened, and fair American government in a constitutional way. We have, I think, wandered away, in some cases a long way, from those traditions and those ideals, but we are struggling to come back and will come back to those traditions and those ideals such as we know them here in the South, and hold them dear to our hearts because up to now they have resulted in establishing the greatest Nation under the greatest charter of liberty ever yet devised by the mind of man. [Applause.]

A Prophetic Utterance by Elihu Root

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

EDITORIAL BY DAVID LAWRENCE, DECEMBER 13, 1937

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the United States News of December 13, 1937, by David Lawrence, entitled "A Prophetic Utterance by Elihu Root."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROPHETIC UTTERANCE BY ELIHU ROOT

The other day I happened upon a quotation from a speech by Elihu Root delivered in 1916. By that time, Mr. Root had served as Secretary of War and then as Secretary of State by appointment of President Theodore Roosevelt. He had been elected to the United States Senate from the largest State in the Union and held a position of esteem in the councils of the Republican Party and business groups of America. Said Mr. Root:

"The real difficulty appears to be that the new conditions incident to the extraordinary industrial development of the last half century are continuously and progressively demanding the readjustment of the relations between great bodies of men and the establishment of new legal rights and obligations not contemplated when existing laws were passed or existing limitations upon the powers of government were prescribed in our Constitution.

"In place of the old individual independence of life in which every intelligent and healthy citizen was competent to take care of himself and his family we have come to a high degree of interdependence in which the greater part of our people have to rely for all the necessities of life upon the systematized cooperation of a vast number of other men working through complicated industrial and commercial machinery.

"Instead of the completeness of individual effort working out its own results in obtaining food and clothing and shelter we have specialization and division of labor, which leaves each individual unable to apply his industry and intelligence except in cooperation with a great number of others whose activity conjoined to his is necessary to produce any useful result.

"Instead of the give and take of free individual contract the tremendous power of organization has combined great aggregations of capital in enormous industrial establishments working through vast agencies of commerce and employing great masses of men in movements of production and transportation and trade so great in the mass that each individual concerned in them is quite helpless by himself.

"The relation between the employer and the employed, between the owners of aggregated capital and the units of organized labor, between the small producer, the small trader, the consumer, and the great transporting and manufacturing and distributing agencies all present new questions for the solution of which the old reliance upon the free action of individual wills appears quite inadequate.

"And in many directions the intervention of that organized control which we call government seems necessary to produce the same result of justice and right conduct which obtained through the attrition of individuals before the new conditions arose."

New Housing Act Will Be a Stimulant to Business and Labor

EXTENSION OF REMARKS

OF

HON. EDWARD W. CURLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

A DISCUSSION BY HON. EDWARD W. CURLEY, OF NEW YORK

Mr. CURLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by myself over the National Broadcasting System, Washington, D. C., Saturday evening, December 11, 1937.

Back in the summer of 1929 we were startled by a prediction that our Nation would be enmeshed in a panic in 6 months. That prediction was made by an internationally prominent statistician-economist. His name is Roger W. Babson. We know how accurate he was then when the uncanny truth dawned on the American people in the fall of that dark, history-making year of 1929. He was in a pessimistic mood at that time. Now he is back again in the limelight, taking the lead this time of the optimists in ridiculing the present-day pessimists who seem to be suffering from stage fright over the Nation taking time out to take inventory of the state of the Union. While this necessary economic step is in progress, a so-called recession took place, and the weak elements in the life of the Nation lost their nerves. Well, let us see what that great statistician-economist has to say now on this state of our affairs.

In an interview at his Wellesley Hills home, near Boston, upon his return from a 5-week visit to England, Roger W. Babson, statistician-economist, expressed every confidence that despite troubled waters in the sea of economics, business conditions in this country are basically sound. I quote:

"Babson predicts that business in 1938 will be better than it was in 1937. Our Nation today is swept by the epidemic of a new disease. It is the jitters. The English and other Europeans think this slump is only stage fright on our part."

Mr. Babson and I are in agreement as to the present and future state of the Union.

Tonight I wish to speak in reference to the Wagner-Steagall housing bill, which, in my humble opinion, is one of the most important pieces of major legislation yet introduced in Congress to convey to the minds of those engaged in finance the administration's effort to provide a basis for sound investment in an important major industry * * * an investment which carries with it the guaranteed security of Government insurance * * * another new milestone in our Nation's recovery program.

The first thought that President Roosevelt expressed back in 1933 was "all we have to fear is fear." With a heavy national deficit aggregating $7,000,000,000 as a legacy, and facing almost a complete paralysis of business in general * * * with banks closing in every State in the Union * * * with railroads badly crippled * * * and the whole economic structure in a tailspin heading for collapse, the body politic required a major operation to check and restore it to a normal condition. Over a million home owners faced bankruptcy and foreclosure. The nerves of the American people were shattered by misery and distress. Millions of farmers were crying for help. Captains of industry were on their knees begging for financial assistance from our Government. Railroads, insurance companies, and business in general pleaded for financial help from the Government, and it was granted.

The Government came to the rescue of the farmer, did it not? Over a million home owners all over the country were financed by Uncle Sam to the tune of $3,000,000,000, which went to liquidate the frozen assets of the mortgagees and lenders all over the land. All of this governmental relief expenditure primed the pump sufficiently to check the downward spiral of industry by means of this financial blood transfusion, which saved the day for the American people.

Now it is the private institution which must furnish the financial sinews of war against the existing recession we read so much about. No plan to restore prosperity will work if the people can't. The only remedy for the solution of the unemployment problem is the distribution of the wealth of the Nation in work and wages, and this is the basis of all prosperity. It is estimated that six and a half millions of American citizens are now unemployed. The only common-sense solution of this problem, therefore, is the initiation of a large-scale housing program of construction by private industry which will stimulate the dormant elements of that vital cog in the economic life of our country—the building industry.

The building industry was the first to be paralyzed by the depression, and it is the last to receive practical financial assistance. There are a million craftsmen in the building trades, and there are three to four million other workers indirectly affected by this proposed amendment to the National Housing Act.

President Roosevelt's housing program calls for reductions of one-half or three-quarters of 1 percent in the total charges on insured mortgages. At the present banks or others lending under the F. H. A. plan are permitted to charge a maximum of 5 percent interest plus one-half of 1 percent service charge. They also collect for the F. H. A. its insurance premium of one-half of 1 percent. That makes a total of 6 percent.

President Roosevelt proposed that the total of both interest and service charges be limited to 5 percent, in effect, wiping out the amount of the present service charge. On homes costing less than six thousand, he suggested that the insurance premium also be reduced to one quarter of 1 percent. Another but smaller saving would apply the premium rate to the unpaid balance of the mortgage instead of to the original amount of the loan, as at present. Thus, every time a home owner paid part of the principal on his mortgage he would reduce his insurance cost. Under the Wagner-Steagall Act the down payment will be reduced from 20 percent to 10 percent and the mortgage insurance increased from 80 percent to 90 percent—an important change for the better.

The paralyzing effect which the crisis of the depression produced between the years 1929–33, inclusive, on the building-trades department of the building industry is colossal, when a view of the statistics is placed before us, namely:

BUILDING CONSTRUCTION IN THE UNITED STATES

The number of families provided for in new dwellings in 257 identical cities are as follows:

In 1929: In one-family dwellings	98,164
In 1933: In one-family dwellings	14,437
In 1929: In two-family dwellings	27,813
In 1933: In two-family dwellings	2,124
In 1929: In multifamily dwellings	118,417
In 1933: In multifamily dwellings	9,318

Bradstreet's estimates of building expenditures in 120 cities of the United States were given as follows:

In 1929: $2,489,553,000 were spent.

In 1933: $262,942,000 were spent.

The foregoing statistics indicate expenditure of money in private industry for housing construction took a toboggan slide from a peak in 1929 and zigzagged to almost a zero point in 1933 because the financial institutions were on the verge of bankruptcy when the lifesaver, Uncle Sam, stepped in and rescued the very institutions which primarily brought on the business collapse. The builders of the Nation were handcuffed and could not obtain loans for private construction.

It is conceded by those who are experts on housing that approximately 750,000 dwellings per year for the next 10 years must be built to supply the essential human needs in this field of construction.

The rise in the Nation's jobless is put at 290,000 in a month. This unemployment in the United States in October 1937 advanced 293,000 over the September level to an estimated total of 6,350,000, according to the latest report of the National Industrial Conference Board, made public on November 31, 1937. This represents a resumption of the upward swing that took place from July to August after a succession of monthly declines since January 1937. The total employment in all fields of private enterprise and in permanent Government agencies, aggregating 46,836,000 persons in October, showed a decrease of 243,000 under the total for September 1937.

The housing problem in the city of New York, and throughout the Nation, is of more commanding importance just now to the public interests than any other subject requiring legislative action by the Congress. How can we hope to stamp out disease, insanity, and crime unless we take practical steps to remove the causes of

such a serious social maladjustment? The new proposed amendment to the National Housing Act, sponsored by Senator WAGNER, is the answer.

For the information of all concerned in this humane legislation, it might be interesting to know that there is a fertile field for new construction by private industry in the city of New York, which, under the terms of the Wagner-Steagall bill, investments will be secured by the Federal Government insurance feature.

Rents are now rising in the city of New York, especially among the tenement houses. There are five counties in the city of New York, in which are located the following old-law tenements:

First. New York County: There are 29,056 old-law tenements containing 335,042 flats.

Second. Kings County: There are 31,353 tenements containing 148,199 flats.

Third. Bronx County: There are 4,620 tenements containing 31,737 flats.

Fourth. Queens County: There are 1,632 tenements containing 7,044 flats.

Fifth. Richmond County: There are 291 tenements containing 1,164 flats.

This makes a total of 66,952 of these old-law tenements with a total number of 523,386 flats. These flats house approximately 1,500,000 people in the city of New York. If the social reformers really seek the fundamental cause of crime in all its ramifications, here is where it will be found, in all its vicious environment. The remedy lies in a drastic slum clearance and new housing program of new construction.

According to the statistics of the Federal Emergency Administration of Public Works "the total volume of all construction in 1929 in the United States amounted to $12,000,000,000. In 1932, before the establishment of the P. W. A., the pendulum had swung so far in the other direction, that the volume of total construction was less than $4,000,000,000.

To understand the importance of construction in our economic system it is necessary to recall that of 49,000,000 persons in gainful occupations before the depression, more than 3,000,000 worked at construction sites. In addition to these were millions of other workers whose employment depended directly on orders for material used in construction. The depression was ushered in by a let-down in building, from boom activities to a comparative standstill. The first of those to be laid off were the men engaged in the building trades, the masons, bricklayers, steelworkers, carpenters, plasterers, and plumbers. As construction slowed down, there was a gradual corresponding decrease in orders for materials and the employees of the mills and factories joined the ranks of the jobless. With mills and factories shut down there was obviously no call for raw materials to be fashioned into supplies for construction. Work ceased in the forests. The long lines of freight cars and trucks transporting raw materials from their source to the mills and factories which fabricated them and thence to construction sites became shorter and shorter.

The Wagner-Steagall bill is a humane constructive measure and deserves the whole-hearted support of the Congress. The sponsors of the bill are to be congratulated for their long, tiresome efforts to salvage the poverty stricken from the slum tenements and dwellings of the country and provide them with new decent housing besides cooperating for the revival of the building industry.

The Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

ADDRESS BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief address by Secretary Ickes, of the Department of the Interior, on the occasion of the opening of the bids for the completion of the Grand Coulee Dam, Wash.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today we are taking the second step in the building of the greatest dam in the world. The base of Grand Coulee Dam, already the most massive masonry structure built by man, is nearly finished in the bottom of the Columbia River canyon west of Spokane. Now bids are being opened for the completion of this tremendous structure to its full height of 553 feet. The work already done and that covered by the new contract will involve the placement of three times as much masonry as went into the Great Pyramid of Cheops. Here is a job worthy of the best that science and engineering, that labor and industry have to offer. Grand Coulee Dam will endure for many thousands of years; testifying to the imagination, the ingenuity, and the skill of this generation.

However, if I may be permitted to venture a prophecy, it is that in the distant years to come this project will have given us a more coveted title than simply that of "builders of great dams." In saying this I do not mean to detract from the honor due to the engineers and the workmen who are building Grand Coulee Dam. Even they, I think, will agree that the significance of the dam is not found alone in the magnitude of its dimensions nor in the workmanship that has gone into its construction. It lies rather in the ends which are to be served.

Grand Coulee Dam will minister to many useful purposes. It is destined to have a profound influence on the social and economic life of the Pacific Northwest, which will be reflected throughout the country. It will serve to reduce flood peaks, to improve navigation, to store and to permit the diversion of sufficient water to irrigate a rich desert area one and one-half times as large as the State of Rhode Island, and to generate half again as much power as Boulder Dam. It will serve also, through regulation of the flow of the Columbia River, to improve markedly the power output of all downstream plants, including that at Bonneville Dam.

All of this will mean new homes and new opportunities for half a million or more Americans and new wealth for the Nation.

This is one of the most important conservation projects ever undertaken. It is not an experiment because it is cut on the same pattern as other projects that are now in successful operation which were built a generation ago by the Bureau of Reclamation of the Department of the Interior.

In coming years, when this work shall have been completed and this desert shall have been made fruitful, men and women still will travel half around the world to gaze upon the dam itself, and they will see much more than a tremendous, symmetrical pile of concrete in the great gorge of the Columbia River. They will see the homes and the villages and the cities, the farms, and the factories, and the civilization that this dam will have created.

Grand Coulee Dam is not a State or a regional undertaking; it is a national development. The wealth it will produce will be part of our national assets. Even today, in constructing the dam, it is necessary to reach out to distant places for materials. Half of the money spent on it goes into the States east of the Mississippi River for materials ranging from tacks to turbines, thus providing employment for many men and women. Each of the 48 States will contribute something vital to the building of Grand Coulee Dam. When this project is finished families from every part of the Nation will participate in the new opportunities that it will offer.

When our grandchildren visit Grand Coulee Dam they will understand all of these things, of which this great structure will be a pregnant symbol. And they and their children will think of this as an age of far-seeing planners and expert builders. They will be grateful for the foresight and the energy of a great President, which have made fruitful and productive a great barren area.

The Romance of Alabama History

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

STATEMENT BY THOMAS M. OWEN, JR., CHIEF OF THE DIVISION OF ACCESSIONS OF THE NATIONAL ARCHIVES

Mr. BANKHEAD. Mr. President, this is the birthday of the State of Alabama. I request unanimous consent to have printed in the Appendix of the RECORD a statement by Thomas M. Owen, Jr., a native son of Alabama.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today, December 14, 1937, is being celebrated by Alabamians everywhere as the one hundred and eighteenth anniversary of the State's admission into the Federal Union. Alabamians are proud of their noble heritage and of the romantic history of their State. As one who loves its traditions and who has some familiarity with episodes in its history, I shall present for those who are interested some of the high points in Alabama's unusual career.

Alabama, first on the roll of States, is today inhabited by a thrifty and patriotic people. It has an area of 52,250 square miles, of which 710 is water surface and 51,540 land surface.

The first white man to set foot upon what is now Alabama soil composed an exploring party of Spaniards led by De Narvez. The expedition landed on the coast of Florida and visited Mobile Bay in

1528 shortly before being dispersed. The story of this expedition is recorded in a volume prepared by a member of the party, Cabaza de Vaca.

The second Spanish expedition to enter Alabama territory was led by Hernando De Soto. De Soto, in 1539–40, traversed our borders, engaged the Indian chief Tuscaloosa and his tribesmen in the great battle of Mauvilla, said to have been the most sanguinary of Alabama, both from the standpoint of agriculture and of manon to gain eternal fame as the discoverer of the Mississippi River.

Alabama history, therefore, from the invasion of De Soto to 1937, covers a period of approximately 400 years, each packed with many thrilling episodes in the lives of its inhabitants. During this time the Spanish, the French, the British, again the Spanish, the United States Government, the State of Georgia, the United States Government, the Confederate States Government, and again the United States has successively laid claim to its soil, either in whole or in part, Alabama being a portion of that immense territory over which the mighty powers of Europe so long contended in their vast schemes of conquest and lust of dominion.

The first permanent white settlement in the Gulf States was founded in January 1702 at 27-Mile Bluff, Mobile River, known as Fort Louis, the site of old Mobile. Removed to its present location in 1711, Mobile was until 1720 the capital of the Province of Louisiana.

Fort Toulouse, at the confluence of the Coosa and Tallapoosa Rivers, was established in 1714 as a remote outpost for Indian trade. In 1814 the name was changed to Fort Jackson, honoring Gen. Andrew Jackson, and it was there that William Weatherford, great Indian chief, surrendered. That surrender ended the Creek War, broke the backbone of the Creek Indian Confederacy, and made possible later the opening of the territory for settlement.

It is interesting to note that the first African slaves were landed at Mobile in 1721. The slaves played a large part as workmen in the early development of the agricultural resources of the State.

When the Mississippi Territory was formed by an act of Congress, April 7, 1798, the present States of Mississippi and Alabama comprised one Territory until 1817. In 1817 Mississippi became a State and the eastern half of the Teritory became the Alabama Territory. On March 3, 1819, Congress passed an enabling act and on December 14, following, the State was admitted into the Union.

Alabama has had five capitals. The Territorial seat of government was at St. Stephens, in Washington County. In 1818 Cahaba was selected as the State capital. Due to the fact that no State buildings had been completed, the sessions of the legislature were held in Huntsville. In that city the local legislation necessary for Alabama to become one of the sisterhood of States was enacted, hence Huntsville is designated as one of the capital cities. In 1826 the seat of government was removed from Cahaba to Tuscaloosa, where it remained for 20 years. Due to changing centers of population Montgomery became the capital in 1846 and has remained as such since that time.

On January 11, 1861, Alabama seceded from the Federal Union, and February 4, 1861, united in the formation of the provisional government of the Confederate States of America.

Lewis E. Parsons was appointed provisional Governor on June 21, 1865, and the State was admitted to full participation in the affairs of the Union in 1868.

From 1865 until the inauguration of George S. Houston on November 24, 1874, Alabama, like the other States of the South, was dominated by Negro, carpetbag, and scalawag rule.

Constitutional conventions have been held in Alabama in 1819, 1861, 1865, 1867, 1875, and in 1901. Recently a reunion of the members of the convention of 1901 was held in Montgomery, and some 30 former members participated.

Montgomery is known as the Cradle of the Confedcracy. In that city was formed the provisional government of the Confederate States of America. There was said by William L. Yancey, greatest orator of his age, when presenting President-elect Jefferson Davis, "the man and the hour have met." There was inaugurated Mr. Davis as President of the Confederate States. There "Dixie" was first played as a march by a band under the leadership of Edward Arnold, Arnold having composed the selection after hearing Dan Emmett play it in the old Montgomery Theater. In Montgomery today will be found the Bible used by President Davis. In Montgomery today stands the first White House of the Confederacy.

Alabama contributed 122,000 men of a total white population of 526,271 to the Army of the Confederate States. Alabama gave the Confederacy 1 lieutenant general, 2 major generals, 25 brigadier generals, 60 regiments of infantry, 3 regiments of mounted infantry, 13 of cavalry, 6 battalions and 20 batteries of artillery, besides a number of independent companies, while Alabamans in other States also served in the Confederate Army.

Alabama residents have participated in every war America has ever had. Early settlers had fought in the War of the Revolution, the War of 1812, the Texas War with Mexico, the Mexican War of 1845–46, the War between the States, Indian campaigns, the Spanish-American War, the Boxer Rebellion, the Philippine campaign, and the World War. Today Alabamians are found in the armed forces of the United States in far-flung quarters of the globe.

Outstanding events in the early history of the State may be mentioned as follows:

Within our borders resided the four great Indian tribes, namely, the Creeks, Cherokees, Chickasaws, and Choctaws.

In the campaign against the Creek Indians in the War of 1812 Andrew Jackson entered upon that long public career so notable in American history.

Alabama was visited in 1825 by General Lafayette on his last tour of the United States.

The Vine and Olive Colony, near Demopolis, was composed of the followers of Napoleon, who were forced to leave France after the emperor's exile.

In Alabama lived such great Indian chiefs as the McGillivarys; Gen. William McIntosh; Pushmataha; Timpoochie Barnard; Josiah Francis, the prophet; William Weatherford; and Sequoia, the Cherokee, who developed an alphabet for his people and whose name is perpetuated in the big trees of California, Sequoia Gigantea.

Alabama gave Sam Dale, hero of the canoe fight, to Mississippi.

Tennessee gave to Alabama Gen. John Coffee, right arm of Jackson, who became our State's first surveyor general. Virginia gave us, among early Governors, William Wyatt Bibb, Thomas Bibb, Samuel D. Moore, Clement Comer Clay, Arthur P. Bagley, Reuben Chapman, and Henry Watkins Collier. From North Carolina came Israel Pickens, John Murphy, and Gabriel Moore. John Gayle came from South Carolina. John Anthony Winston was the first native-born Governor of Alabama. He was a distinguished lawyer and soldier.

Among great Alabamians who were or are great Americans may be mentioned William Rufus King, long a Federal Senator and a Vice President of the United States; John McKinley, John Archibald Campbell, and Hugo L. Black, the Supreme Court of the United States; Drs. Josiah C. Nott, J. Marion Sims, Nathan Bozeman, Jerome Cochran, John A. Wyeth, Peter Bryce Searcy, and J. N. Baker. Gen. James Longstreet and John B. Gordon removed from Alabama to Georgia, where they made lasting reputations, the latter becoming Governor and later a United States Senator. Gen. Joseph Wheeler and J. L. M. Curry, our two representatives in the Hall of Fame. Gen. John T. Morgan, Senator and father of the interoceanic canal movement. John Hollis Bankhead, Sr., who will go down in history as father of Federal aid to good roads. The longest one-name highway in America, running from Washington, D. C., to San Diego, Calif., bears his name. Alabama is more than proud of the sons of this distinguished public servant, United States Senator JOHN H. BANKHEAD, 2d, and WILLIAM B. BANKHEAD, Speaker of the United States House of Representatives. Oscar W. Underwood, Congressman and Senator, and unsuccessful candidate for the Presidency, who will be known to history for his Underwood tariff law. Alabama gave the world William Crawford Gorgas, the world's greatest sanitarian. Alabama also gave America Gen. William L. Sibert, distinguished engineer and World War officer. We are proud of Lt. Gen. Robert Lee Bullard, of Spanish-American War and World War fame. Alabama gave the world one of its greatest women, Miss Helen Keller. Other distinguished World War officers were Gen. Robert E. Steiner, Col. (now Governor) Bibb Graves, and Col. William P. Screws, of the immortal One Hundred and Sixty-seventh United States Infantry of the Rainbow Division.

We Alabamians are also proud of the fact that at Mobile we have a $10,000,000 port. We are proud that in 1832 in Alabama was completed the first railway track west of the Allegheny Mountains. We glory in the fact that Alabama was the first of all the cotton States to establish a common-school system. In our State was granted the first diploma ever issued to a woman by any chartered educational institution authorized to confer degrees. Our State university was opened to students in 1831, while at the Alabama Polytechnic Institute Prof. R. F. McKissack constructed the first apparatus used in the United States for the demonstration of the X-ray. This school also was the first southern college to establish a separate chair for electrical engineering. Alabama was also the first State to establish a department of archives and history.

At Montgomery is situated the great Maxwell Field, one of the finest aviation ports in the world. Camp McClellan at Anniston and Camp Sheridan at Montgomery were training camps for thousands of heroic Americans during the World War.

Noted Alabama valleys are the Appalachian Valley Region, Tennessee Valley, Coosa Valley, Jones Valley, and Cahaba Valley.

Noted mountains are Sand, bordering the Tennessee Valley, Little Mountain, Red Mountain in Shades Valley, Round Mountain, a spur of the Lookout Range, and Indian Mountains in Cherokee County.

Famous among our streams are the Alabama River, the Tennessee River, the Coosa, Tallapoosa, Black Warrior, and Mobile Rivers. Mobile Bay and Harbor and known the world over in song and story.

Who does not know of the world famous Muscle Shoals and Wilson Dam, at Florence, Ala.?

Our forests abound in game. There have been found more than 300 types of birds in Alabama. Great fishing is enjoyed in our rivers, lakes, and Mobile Bay. We have a wonderful conservation department, for Alabama leads in forest conservation.

The mineral district comprises about one-third of the State, including 28 counties. Alabama ranks third in production of iron ore, and fourth in production of pig iron. There is enough coal in Alabama to cover the British Isles to a depth of 3 feet. Alabama soil yields phosphates, graphite, ochre, niter, mica, lead, while copper and pyrite have been mined in Cleburne and Clay Counties, as well as limestone and dolomite. Alabama marble compares favorably with any in the world. The State also abounds in mineral springs.

Our State ranks twenty-seventh in land area in the United States. Its soils are varied, ranging from dark mucky loam to sandy loam.

Alabama boasts between 2,500 to 3,000 plants without cultivation. The list includes all the adventive and fugitive forms. Of the six great cereals of the world—maize or Indian corn, oats, wheat, rye, rice, and barley are represented in Alabama in the order here given. Cotton is the most important factor in the economics of Alabama, both from the standpoint of agriculture and of manufactures. Alabama has several nationally known nurseries, shipping growing tree stocks, vines, ornamental shrubs, and flowering plants to many parts of the country. We have a fine climate and our State is one of the leaders in public health in the Nation.

Alabama is the only State to build a monument to the boll weevil, and in our State is the only bridge ever built from the sale of roosters.

Space is not available to discuss our transportation system, modern educational institutions, or the many smaller industries which abound. Birmingham, the magic city, has grown, however, from a village some 60 years ago to an industrial center of more than a quarter of a million people.

Our State song, Alabama, was composed by Miss Julia Tutwiler. Our flower is the goldenrod. Our State name is an Indian word. The name is first found in three of the narratives of De Soto's expedition of 1540. The flag of the State of Alabama is a crimson cross of St. Andrew on a field of white.

In closing this brief summary of romantic high points in Alabama history, it may be said that Alabamians have found honorable place in nearly every State of the Union. The list is too long to mention, but there are several native-born Alabamians now in the Congress of the United States and in the Senate, while one State has chosen a native-born Alabamian as its representative in the Hall of Fame.

Lastly, this year the "Crimson Tide" represents the East in the Rose Bowl football classic, and the "Tigers" of Auburn play in the Orange Bowl.

Each year the men and women of Alabama are aiding in the building of a stronger and greater America.

The Sinking of the U. S. Gunboat "Panay"

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM THE PHILADELPHIA RECORD, DECEMBER 14, 1937

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Children Playing on the Madhouse Lawn," published in the Philadelphia Record of December 14, 1937.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record]

CHILDREN PLAYING ON THE MADHOUSE LAWN

A lot of solemn theorizing about what we ought or ought not to do in the Far East situation collapses in the face of the grim fact that an American seaman is dead who might now be alive had we pulled out of China.

Five others are missing and 15 have been injured. An "international incident" has been created that would not have been created had we ended our silly minuet at the edge of the volcano.

The bombing of the *Panay* is Japan's fault, of course. Japan admits that and offers to make recompense. (That will be odd reading in the American seaman's home.) But we are not quite blameless. All we did was to send American sailors to and keep American gunboats on the Yangtze River, half a world away, in line of Japanese fire. The fact that we have been patrolling the Yangtze since 1858 under treaty rights is no excuse. When a blizzard starts, wise men go indoors, in spite of their "right" to the street.

"Ah, but we have to protect our nationals," say those brave souls who don't care how many Americans die or how near we come to war, so long as we "maintain our prestige."

We don't agree. The stories of the brave Americans, dancing in Shanghai night clubs on the tops of tall buildings, chuckling while shrapnel bursts about them, do not impress us as tales of heroism. Foolhardiness is the word, and we think those Americans ought to be yanked home by their collars or told to stay at their own risk. We don't admire their reckless courage, and we don't like the kind of patriotism that leads them to involve a nation of 130,000,000 in a potential war to preserve their stores and offices in Shanghai.

We want them to come home, and the American patrol forces with them. Americans who insist on remaining in China are children playing on the grounds of an insane asylum. In such circumstances, the thing to do is not to make speeches to the inmates about sacred rights but to drag the kids away.

It would be different if the United States were firmly embarked on some course of international cooperation to aid China, if the world were actually acting to "quarantine the aggressor," in the President's phrase. That game might possibly be worth the candle, in the interests of world peace and international order, though we doubt it.

But we are not doing that, and we are not insulating ourselves from danger either. Our State Department hangs around on the doorstep; it won't go in, and it won't go home. We used to talk about the clear choice between isolation and international cooperation; our State Department is mixing both in a way that makes little sense—and an American seaman is dead.

International cooperation is not in the cards. Brussels was a dismal failure. Under those circumstances, the United States ought to get out and stay out; slap the neutrality law on both combatants and come on home.

We have had a clear warning of what lies ahead in terms of trouble and debt and potential war. It is too late for theories. Let's get out.

Operations of National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

ADDRESS BY CHARLES FAHY, OF NEW YORK, ON DECEMBER 9, 1937

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. Charles Fahy, general counsel of the National Labor Relations Board, before the National Association of Manufacturers in New York, December 9, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The National Labor Relations Board could very properly report to the country that it is doing well. You will, perhaps, be somewhat surprised, unless you have kept informed pretty accurately of the work of the Board, to learn that it has handled some 9,600 matters which have been presented to it under the act. Over 6,000 of these have come to it since last April, when the Supreme Court settled the question of the validity of the act and gave it a very broad scope of operation. Of these 9,600 matters, 6,465 have been closed. They are finished business. Of these numerous closed matters, affecting many employers and hundreds of thousands of employees (most of which arose during a period of rising industrial activity conducive to labor disturbances and during a period of intense rivalry within the ranks of organized labor), we are able to state that 435 strikes were averted through the good offices of the Board, 842 strikes which occurred were settled and brought to an end, more than 800 cases were dismissed or withdrawn without formal proceedings as lacking in merit or as not within the jurisdiction of the Board under the commerce clause of the Constitution, 3,596 cases were settled in a manner satisfactory to all parties and in conformity with the provisions of the act, involving 643,000 employees. It seems to be working out that only about 10 percent of the cases brought to the Board require formal proceedings for enforcement by the issuance of a complaint, the holding of a hearing, and the making of a decision by the Board; and even after this stage of Board decision is reached in this small percentage of all cases handled, settlements continue to be made so that the number of cases which finally must be taken into court for the enforcement of Board order is still smaller. The volume of the whole work, however, is so great that these court proceedings, while small in percentage, are fairly large numerically.

Among the above cases which have been handled by the Board are included 800 elections, in which with the highest degree of skill and satisfaction controversies over who represents the majority of the employees for the purposes of collective bargaining have been solved in a peaceful and orderly manner. This enables the employees to meet with the employer and negotiate concerning problems which affect them, and it also enables the employer to know with certainty with whom he should deal as a representative of his employees.

This huge volume of work is carried on by the Board in a decentralized manner through 22 regional offices carefully placed throughout the country in large centers of industrial activity. As you will readily see, the great bulk of the work of the Board, consisting of the adjustment of cases without formal proceedings,

and the holding of elections, very often with the full cooperation of employers, has been a great contribution to industrial peace. It is not that part of the Board's work which you hear about most often, because it is the least dramatic and controversial part of our work. But the controversial phase of the work must also go on as long as violations of the law continue. Employers who violate the law, I think you will agree, are as much subject to it as those who voluntarily comply with it and it is not to be expected that because an increasingly great number of employers adjust their labor relations to the principles of the act those who refuse so to do may escape their lawful obligations and deny to their employees the rights which this act guarantees and which a large part of industry voluntarily accedes to. Indeed some of our greatest industries had accepted the principles of this act long before it was enacted as the just and salutary basis for their employment relations. Many of you are familiar with this. Since the enactment of the statute and particularly since the Supreme Court decision of last April sustaining it many other industries have in the finest spirit joined the ranks of those who adopted this principle prior to any legal obligation to do so. They have set an example of compliance with statutory obligations which should be the goal of all.

There still remains, however, as you are perhaps aware, strong opposition in some quarters. The opposition originally moved under the guise of legal arguments carried under the wings of injunction suits and other legal proceedings. This opposition on legal grounds finally waned in the cleansing air of the Supreme Court decisions of last April. If you have not done so I hope you will read those decisions because they answer not merely the constitutional arguments but they indicate a strong conviction of the justice of the provisions of the act. Among other things, the Supreme Court said:

"That is a fundamental right. Employees have as clear a right to organize and select their representatives for lawful purposes as the respondent has to organize its business and select its own officers and agents. Discrimination and coercion to prevent the free exercise of the right of employees to self-organization and representation is a proper subject for condemnation by competent legislative authority. Long ago we stated the reason for labor organizations. We said that they were organized out of the necessities of the situation; that a single employee was helpless in dealing with an employer; that he was dependent ordinarily on his daily wage for the maintenance of himself and family; that if the employer refused to pay him the wages that he thought fair, he was nevertheless unable to leave the employ and resist arbitrary and unfair treatment; that union was essential to give laborers opportunity to deal on an equality with their employer. *American Steel Foundries* v. *Tri-City Central Trades Council*, 257 U. S. 184, 209. We reiterated these views when we had under consideration the Railway Labor Act of 1926. Fully recognizing the legality of collective action on the part of employees in order to safeguard their proper interests, we said that Congress was not required to ignore this right but could safeguard it. Congress could seek to make appropriate collective action of employees an instrument of peace rather than of strife. We said that such collective action would be a mockery if representation were made futile by interference with freedom of choice. Hence the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, 'instead of being an invasion of the constitutional right of either, was based on the recognition of the rights of both.' *Texas & N. O. R. Co.* v. *Railway Clerks, supra.* We have reasserted the same principle in sustaining the application of the Railway Labor Act as amended in 1934."

Happily in our country certain fundamental rights have been so long established and we have become so accustomed to them that we seldom hear them questioned. Among these are freedom of worship, freedom of speech, trial by jury in common-law actions, freedom from unlawful searches and seizures, freedom of the press, and many other fundamental rights. There is now a new freedom that has joined these older ones and which the law now guarantees. It is the right of millions of employees to self-organization, free from employer coercion or interference, and the right of collective bargaining. This new freedom affects many millions of our fellow countrymen. As set forth a moment ago, this freedom has been recently said by the highest judicial authority of the country to be a fundamental right. The same authority has stated it to be not inconsistent with the rights of employers protected by the Constitution. It stands solidly on its own foundation within the Constitution. It is not incompatible with any constitutional right of anyone else. It is taking its important place, young though it is, among the older rights which exist in our constitutional democracy. These older rights, cherished as they are, will go along with this new freedom of employees, without the destruction or impairment of either, because all fundamental rights must and do adjust themselves, in a democracy such as ours, to their appropriate sphere of operation in relation to other rights. If the line of division between them is sometimes confused by protagonists of this right or that right, this freedom as opposed to that freedom, the issue is not left to be decided by the protagonists themselves, which would end either in anarchy or dictatorship. The proper realm for the operation of the respective rights is drawn, in the last analysis, by the courts as each case arises. The books are full of such decisions.

The freedom of employees to self-organization, as a freedom which is protected by legal processes, though it is new freedom in our national family, was gained over as long and difficult a route as any other. It was fought for, it was suffered for, it was died for. So essential was it that no opposition could end the struggle for it. I think that no opposition, however disguised, will now destroy it. Under the National Labor Relations Act it is the solemn responsibility of the National Labor Relations Board in the first instance, and of the courts in passing on the decisions of the Board in the second instance, to protect the rights of employees guaranteed by this statute whenever the machinery of the statute is invoked for that purpose. The Board must perform its duty without fear. It must do it without favoritism between rivals for advantage. The rights guaranteed by this statute belong to employees. The statute grants to employees themselves freedom in their own choice regarding the union to which they shall belong. The employer is expressly forbidden to interfere with or to influence that choice. The employers' coercion or interference with employee self-organization and choice of representatives is necessarily destructive of collective bargaining. Not only does reason tell us this, we know it from experience. You know as well as I, for example, the company-dominated union is not a means by which true collective bargaining may be had.

Collective bargaining is essential to the well-being of employees. It is essential to industrial peace under decent conditions. It is essential to the self respect of our industrial system. But collective bargaining cannot exist in the face of employer coercion of the individual employees in their choice of bargaining agents; it cannot exist if those practices forbidden by this statute are used by the employer. Those practices are therefore prevented by the Board and the courts under the mandate of the statute. This is done under as fair and as mild and as reasonable a method of procedure as ever devised for the administration and enforcement of any noncriminal statute.

I have said that it is the duty of the Board to administer and enforce this statute without fear or favoritism. But it is also your duty, the duty of every employer, to comply with it, frankly, openly, and without reserve.

Occasional criticism by labor itself of the administration of the statute which they fought so valiantly to obtain through long years of bitter strife and suffering must be viewed in its true perspective. This criticism by labor is a result of the division which now afflicts labor itself and from the fact that the Board is unable to suspend the operation of the statute because of that division. The Board is obliged to continue to decide cases which arise so that employees may obtain their rights to collective bargaining through representatives of their own free choice. In making these decisions it occurs that one side or the other of the rivals among labor organizations is not always pleased or satisfied; but it should be borne in mind that criticism resulting from difficult decisions between two earnest contestants should be viewed in its true perspective. Labor knows that the heart of the statute is freedom from employer coercion and the true collective bargaining that freedom makes possible. Labor knows that whether or not one or the other rival may secure temporary advantage from employer influence, the Board must and will prevent that influence from being used to interfere with the democratic processes of selection of representatives as prescribed by the act.

Capital and labor are being urged to cooperate. Obstacles to such cooperation should be removed so that industrial growth and industrial peace may go forward. It is a great obstacle to cooperation when one party or the other violates the rights of the other. It seems to me that healthy cooperation between capital and labor must take for granted that the provisions of the National Labor Relations Act are adhered to. There can be no trust in or respect for an employer who is unwilling to recognize the basic rights of labor as guaranteed by this act.

Those who adhere to the act and those who conform their labor relations to its principles are not found among its critics. They are amazed and often shocked by the difficulties of the employer who does not recognize the right of his employees to self-organization and collective bargaining, but who resorts to the weapon of discharge, discrimination, coercion, and domination as a means to destroy the civil liberties and the bargaining power of his employees.

The New York Southern Society

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, December 14 (legislative day of Tuesday, November 16), 1937

ADDRESS BY JESSE H. JONES BEFORE NEW YORK SOUTHERN SOCIETY, DECEMBER 3, 1937

Mr. MINTON. Mr. President, I ask unanimous consent, in the name and on behalf of the junior Senator from Texas

[Mr. CONNALLY], to have inserted in the Appendix of the RECORD an address by the Honorable Jesse H. Jones, Chairman of the Reconstruction Finance Corporation, at the fifty-second annual dinner of the New York Southern Society at the Waldorf-Astoria Hotel in New York City on Friday evening, December 3, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, honored guests, and members of the Southern Society of New York, it is an honor to be invited to address you, and I feel a particular inspiration when I contemplate the distinguished men of the South who are now and who have been members of this society, and those who have been privileged to address it in these 52 years.

Tradition and the love of homeland draw people together throughout the world. Those who come from other sections are no doubt equally proud of their heritage, but certainly none are more loyal to the land of their birth and youth than southerners. Indeed, it is said that we of the South cling more tenaciously to our traditions than people of any other section of the Nation, unless they be New Englanders.

It is true of the southerner that no matter where he goes, how much better balanced may become his understanding from his transplanting, how successful he may be, or how stanch a citizen of the great city of New York, or elsewhere, he remains always a southerner. If he comes from Virginia, South Carolina, or Georgia, he is apt to remind you of that fact. Some of the rest of us are guilty of this pardonable pride. I confess to a full share of it in my adopted State, Texas, and the State of my boyhood, Tennessee.

With you I take pride in all southerners who make creditable records in the social and business life of your great city. They are numbered among all the professions, as well as banking, business, railroading, and politics. In addition to some friends whose faces I see here this evening, when I think of southerners in New York, two names invariably come to mind, names of men whose friendship I enjoyed and for whom I have great respect, Judge Robert S. Lovett, from my home town, Houston, and Adolph S. Ochs, from the State of my birth, Tennessee. Few men had better conceptions of what constitutes true manhood and good citizenship than Adolph Ochs and Robert S. Lovett, two really great men in any generation.

As a matter of course we all have pride in the great characters of the South who played prominent roles in the political life of our Nation in its earlier days. These include many Presidents who are dear to the hearts of southerners and northerners alike, many who became prominent in the Congress of the United States and in other pursuits, and many who shed their blood for country and principle. It is hoped there will never be occasion for any such sacrifices again.

Those of us from Tennessee and Texas are particularly proud of Andrew Jackson and Sam Houston. We have other ideals, each and every one of us, many of them, but time will not allow even a faint effort at naming them. I should like, however, to refer to two of our contemporaries, Vice President Garner and Secretary Hull. They both go along in the even tenor of their ways, doing their jobs and setting an excellent example for the rest of us in Government service.

We are always proud when southerners acquit themselves creditably in whatever they undertake, wherever they go. And I make no apology for these expressions of pride and sentiment. In my view, these qualities of man are second only to humility, the greatest of all our virtues.

One could spend more than an evening talking about the South and southerners without doing justice to either, but in considering a subject for this address I concluded that you would probably be more interested in national problems that are occupying our thoughts—government and business—the relations of one to the other, as they appear to me from my experience in both business and government. And let me state most frankly that I do not feel adequate to analyze accurately the causes for the present state of business, or for the state of our minds, and I make no pretense to having the wisdom that can point unerringly to a solution.

As you may know, I went to Washington in January 1932 as a minority member of the bi-partisan Board of Directors of the Reconstruction Finance Corporation, almost 6 years ago. For more than a year the Hoover administration exerted great effort to stop the downward trend. With the coming of the new administration more extraordinary government procedure was put into operation than was ever known in a democratic government, and soon we started up the hill.

Time will not allow me to go into detail about the activities of the Reconstruction Finance Corporation and the approximately $9,000,000,000 credit which it has made available to agriculture, banking, and business. The five Government agencies, the R. F. C., Home Owners' Loan Corporation, Farm Credit Administration, Public Works Administration, and the Federal Housing Administration, have supplied the country with more than $15,000,000,000 necessary credit, and the ultimate cost to the taxpayer of all this will be very little.

I take pride in the fact that the integrity or honesty of administration of any of these agencies has not been challenged.

For more than 4 years now we have experienced marked and generally steady economic improvement. We have gradually but consistently experienced definite recovery; recovery in employment, in agriculture, industry, business, and banking—recovery in all pursuits. It has been general with respect to spheres and regions to little business and to big business.

But in recent weeks there has come a definite and marked recession in almost all lines. A feeling of uneasiness prevails. In many quarters we are beginning to hear the question debated as to whether or not the country is slipping into another depression.

There is no questioning the fact that there is a very marked slowing up in all business activity. Industrial production is down; car loadings are distinctly off; operations in the steel industry have dropped to a low level; production in the heavy goods and motor industries is on the decline; unemployment is increasing; and prices of farm commodities are substantially lower.

Notwithstanding the realities of these recessions, or the fears that have been multiplying in the minds of many people, we have not reached the stages of a depression.

It would be a sorry commentary if, with the greatest abundance of everything imaginable for a comfortable and pleasant existence, the American people were unable to compose their differences and avoid another depression.

I have too much faith in the inherent patriotism and good sense of the American people to believe that the ultimate answer will be another depression. I have too much faith in the patriotism and ability of our business, agricultural, and industrial leaders to believe this. I have too much faith in the integrity, the statesmanship, and the sound judgment of our public servants to believe it, and I refer particularly to the Congress and the President of the United States.

I know all is not well, and so do they. So do you. I know that effort is being made every day to ascertain the cause and to find a remedy.

I have stated publicly that I did not understand the reason for the fear, or the alarm, or whatever it is that is slowing up business, and I repeat that statement here. The reason we most often hear is fear of Washington—fear of government—but that is not a good reason. Our Government is what we make it.

We probably got out too soon after our recent illness. Maybe we overtaxed our strength, or put the machine in high when we should have tried it a little while in second speed. We were very low in '31 and '32; the country had been almost liquidated.

We started out under the leadership of President Roosevelt, all applauding his determination to bring the country back to a state of prosperity. There was just one way to get started, spend money, create credit, and charge the enemy on all fronts. This was done in a big way, and by 1935 we began feeling our wings again. We liked it.

Nineteen thirty-six was a fairly good year as business goes, and we started clamoring for a balanced Budget—very properly so. You can balance the Budget all right, personal or Government, if you can stand the pressure, but you will get hungry when there is no meat in the smokehouse nor meal in the barrel.

A few weeks ago it seemed that the Budget could be balanced by the next fiscal year, and if we can get business started again and people back to work, it probably can be, but not otherwise. Furthermore, we should not want the Budget balanced at the expense of hungry people, or if it endangers the welfare of our country. The Budget can never be definitely balanced until business and government come to a better understanding. Business and government must be partners, partners willing to share responsibilities and to cooperate honestly and confidently. Business and government are necessary to each other if either is to succeed.

In my opinion, the key to the situation confronting us today is intelligent, cordial, friendly, determined cooperation between Government and business—Government and all the people. It cannot be sectional; it cannot be class; it cannot be political. It cannot be achieved if we let ourselves believe that our Government is our enemy. Government must be the friend of business, but business must learn, and is rapidly learning, that Government is the umpire—the senior partner—and that it is the Government's responsibility to see to it that business plays the game squarely, and does not charge too much for its service. The Government must be fair, of course, as fair as a father to a family of children, and there should be no favorites.

When some of us here tonight were growing up, a rap on the knuckles or a slight box on the ear was sufficient to hold us in line. With others the rod or more severe methods were necessary. We all like to exceed the speed limit when the road is good, and without restraint are apt to endanger not only ourselves but others.

Too many of us feel that Government supervision is Government interference, and in the administration of our laws it sometimes appears that way. Every national administration must take the blame or the credit for its bureaus and bureau heads. Congress passes the laws but the bureaus administer them, and from my observation, the interpretation and administration of the law is of equal if not greater importance than the law itself.

Most business people are willing to cooperate with Government and to assume the full share of responsibility and tax burden that should properly go to business; but the taxes must be levied so as not to stifle business, and the regulation must be fair. Our trouble probably is that Government and business do not often enough sit around the same conference table. I know that committees are formed from time to time and conferences had, and I know that they have not produced satisfactory results, either to business or to Government.

Maybe these efforts would be more effective if we dealt direct with the President and with Congress. We elect these men to run our Government, and what we have to say about them and the Government should be said to them. There is not a man in Congress, either branch of it, who does not welcome suggestions from unselfish, patriotic constituents. One trouble is that many of us demand of our Representatives some special treatment or favor.

We are essentially a people of business, a working people. Every farmer, shopkeeper, or manufacturer, every bank, railroad, or insurance company, everyone, including labor and the professions, is a part of, or dependent upon business, and all are happy when they are making headway. All of these working together with Government, or substantially all, can successfully cope with any situation. Pulling in different directions will wreck the ship. No class should be allowed to advance at the expense of any other class, no group at the expense of any other group.

Strikes should never be necessary for labor to get fair treatment. Public opinion will support labor in all fair demands and will not support industry that is unfair to labor. The reverse is equally true.

One thing is certain—we all either go up together or we go down together. I prefer to believe it will be up.

President Roosevelt pointed the way in his message to Congress November 15. Let me read a paragraph from what he said:

"Obviously an immediate task is to try to increase the use of private capital to create employment. Private enterprise, with cooperation on the part of Government, can advance to higher levels of industrial activity than those reached earlier this year. Such advance will assure balanced budgets. But, obviously, also, Government cannot let Nature take its course without regard to consequences."

This succinct analysis points the way to a resumed advance that should carry us to permanent recovery. It has in it principles that will make for regular and increased employment of labor at reasonable wages, employment that will insure profits to business and industry from which necessary taxes can be collected, and that will afford a more satisfactory return to agriculture.

In the President's message to Congress the first item mentioned was a revision of the tax laws. He did not intend that this should take precedence over the legislation for which he called Congress to meet, but it showed clearly that he realizes some modifications are desirable. It would be very helpful if these changes could be brought about at this session of Congress, particularly with respect to corporations which need every dollar of their earnings after normal taxes for plant improvements or to pay debts. If this is not feasible, Congress might provide that the changes when made apply to this year's business. The principle of the undistributed surplus tax, insofar as preventing unnecessary accumulations, is a good public policy. But as now written it works a hardship on the great majority of corporations, those that need their earnings for expansion and for debt payment. Relief to these taxpayers is imperative.

We are advised that the Ways and Means Committee of the House will have its bill ready for consideration early in January, at the latest, and Senator HARRISON tells us that the Senate will act promptly. The President says he is ready when Congress is.

So we are assured of tax revisions within a very few months, including, so I am advised, modifications of the capital-gains tax. And of all our aching teeth the tax tooth seems to hurt the most.

The Treasury must have the revenue necessary to run the Government, but I have never had any doubt that the tax laws would be modified to provide this revenue without stifling business and industry.

If we are to avoid another unhappy period, everything must be done that can be done to create work, and everything must be removed that interferes with the growth and expansion of business and industry, building homes, business properties, improving and maintaining our transportation systems, or construction of any character. The President knows this and Congress knows it.

Railroads are still our most important single factor in employment and the heavy-goods industry. They are out of the market now almost entirely. Recent increases in wages and the cost of supplies, together with provisions for social security and railway pensions, have got the railroads up against a blank wall. Many of them have closed their shops and all of them are laying off men for the very good reason that they do not have sufficient earnings with which to hire and buy. Few of them have any appreciable amount of credit left.

The automobile industry is probably as great a factor in employment as the railroads, but it is well financed, and is not subject to governmental regulations that control its earnings.

Every other industry passes its increased costs of labor and supplies on to the customer, and our transportation companies, the railroads, the steamships, trucks and busses, and the airways, can do no less if they are to survive and continue to furnish safe and sufficient service without direct Government assistance, and we can't subsidize everything.

We should not require that any service be furnished at a loss any more than we require that commodities be produced and sold at a loss. All business is entitled to a fair profit, and people who work for a living a fair wage.

Congress is now at work on the agriculture problem, an effort to assure a sustained profit to the farmer.

Every phase of our economic system demands the sincere and sympathetic cooperation of business and Government, and between the various elements of business, if our problems are to be solved. And solved they must be.

We may be able to talk and think ourselves into a prolonged recession in business, but I repeat, there is no true basis for another depression.

In '31 and '32 our banks and financial institutions were in trouble. Now they are strong and bulging with loanable funds. So we can cross that one off. The average rate of wages is good. All we need is more hours of work. We have all manner of food supplies in the greatest abundance; and there is no lack of anything necessary to the general welfare, except confidence, mutual confidence.

So if we can't manage to get along, we should give the country back to the Indians.

Tradesmen's Fascism

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

LETTER TO HON. W. A. AYRES, CHAIRMAN, FEDERAL TRADE COMMISSION

Mr. CELLER. Mr. Speaker, under leave to extend my remarks I include a letter from me to Hon. W. A. Ayres, Chairman of the Federal Trade Commission.

The letter is as follows:

DECEMBER 14, 1937.

Hon. W. A. AYRES,

Chairman, Federal Trade Commission, Washington, D. C.

MY DEAR CHAIRMAN AYRES: Referring to your letter of November 30, replying to mine of November 29, I am attaching hereto a dossier, which contains, among other items:

Exhibit A: A list of the individuals, organizations, and corporations which have been mentioned to me in connection with alleged coercions possibly related to an alleged coercion of a manufacturer which has been stated to have resulted in $25,000 being paid over to the National Association of Retail Druggists.

Exhibit B: A photostat of a copy of a letter from the Curtis Publishing Co. refusing to run anti-price-maintenance advertising in its publication, the Saturday Evening Post.

Exhibit C: Copy of a letter from the executive vice president of the advertiser involved in the refusal referred to in exhibit B, above, asserting that the publication Time similarly declined publication of anti-price-maintenance advertising.

Exhibit D: A photostat of the reproduction of a portion of a check for the $25,000 referred to in exhibit A, above.

Exhibit E: A photostatic reproduction of a check for $25,000 drawn in favor of the National Association of Retail Druggists and apparently cashed by that organization. This is the check for the $25,000 referred to in exhibit A, above.

Exhibit F: A photostatic reproduction of page 1616 of the official journal of the National Association of Retail Druggists, which establishes as official objectives of that organization, under date of November 19, 1936, both minimum-profit margins throughout the country of 50 percent of the cost price of merchandise to the retailer (33⅓ percent of the sales price, that is) and uniform resale prices throughout the country on all items produced by manufacturers operating in interstate trade under price-maintenance legislation.

Exhibit G: A photostatic reproduction of page 1614 of the official journal of the National Association of Retail Druggists, showing that the objectives mentioned in F, above, were officially undertaken by the executive committee of the association, at a meeting held in the Rose Room of the Sherman Hotel, in Chicago, November 10 to 12, 1936.

Exhibit H: A photostatic reproduction of an excerpt from an editorial by the executive secretary of the National Association of Retail Druggists, which was printed in the association's official journal on February 4, 1937, in which he states "one price for all" should be stood for by those employing him as executive secretary, and that the "one price" should be at least 50 percent profit on the cost of merchandise—33⅓ percent on the selling price, that is—and suggests how to make those who think otherwise see "the light."

Exhibit I: In August of this year, following the enactment of the Miller-Tydings amendment as a rider to an appropriation bill, the executive secretary of the National Association of Retail Druggists issued to the "officers of each fair-trade State" a call for a meeting to be held the 30th of that month at the Sherman Hotel in Chicago. Exhibit I in the dossier is a photostatic copy of the last part of that call, showing the date as mentioned, and the signature of the executive secretary.

Exhibits J and K: At the meeting referred to in I, above, and established therein as officially called on behalf of the association

in question—the National Association of Retail Druggists—which had adopted as its objective, as shown in Exhibit G, above, national uniformity of prices at a minimum-profit margin of 50 percent on cost, although the association's Washington lobbyist warned (exhibit J) that he had swayed votes necessary to the passage of the Miller-Tydings amendment only by promising that illegal price activities would not be carried on under it, there was adopted a national price-enforcement plan so clearly illegal that I called it to your attention, and apparently Government officials decried it when consulted informally (exhibit K) regarding it.

Exhibits L and M: As I suggested more in detail in my letter to you of November 29, evidently in an attempt to circumvent the illegalities of the plan mentioned above, the association at its succeeding convention, which occurred in St. Louis during the following month (September 27 to October 1, 1937), adopted a "revised" plan and put on a "show" of legitimate price-maintenance objectives, several of the official speakers, including the association's general counsel, Herbert Levy, even going to the extent of practically admitting that current price activities of members were dangerously illegal (exhibits L and M). I presume on the strength of this, officers of the American Pharmaceutical Association of high repute, continued to hold office in connection with the plan—I refer to Dr. Robert L. Swain, of Baltimore, Md., and Dr. E. F. Kelly, of Washington, D. C.

Exhibits N and O: However, a meeting of the executive committee of the association which closely followed the convention, again announced, at the Sherman Hotel, in Chicago, on November 19, as the official objective of the association, actual Nation-wide price uniformity under price-maintenance legislation (exhibit N). This meeting was attended by the body which had been set up previously in connection with the August meeting referred to above, but Dr. Swain and Dr. Kelly of the American Pharmaceutical Association were evidently not present (exhibit O) this time, nor the association's general counsel, Herbert Levy, who had warned so strongly of the dangers of price illegalities at the preceding convention (exhibit M). I have been told that Dr. Swain and Dr. Kelly have resigned from the body, "under pressure of other obligations," and that Mr. Levy has stated he ceased to be the association's general counsel in the interval separating the September 27 to October 1 convention at which he made the speech shown in exhibit M, and the November 19 meeting referred to by exhibit O.

Exhibit P: The photostat (P) shows the surplus of the National Association of Retail Druggists to have been on August 31 of this year, on the authority of its auditing committee, $183,784.22.

Exhibit Q: Photostat (Q) describes the California Pharmaceutical Association's plan under which 3,500 posters, and a related bulletin service—as I called to your attention in my letter of November 29—may result in camouflaged boycott by a new variation of the venerable "white list" method.

Exhibit R: A copy of an article published in Collier's which is of indicative importance in connection with the matter under discussion, and as well of specific importance in connection with the remarks accompanying exhibit A.

Exhibit S: Exhibit S is my letter to you of March 2, 1937, which, together with the many substantiating exhibits that accompanied it, which I do not attach, as they are in the Commission's files, supplies much that supports the many indications contained in exhibits A to R, and as well in my letter of November 29, that the Commission may well bring to light important price-fixing illegalities in connection with the investigation you mention in your letter of November 30 is under way. I trust that those in charge of this investigation have available both my letter of March 2 and the accompanying exhibits, but if they are for any reason needed I can supply copies.

In connection with the names of organizations, individuals, and concerns involved in exhibit A, I wish to call the Commission's attention to what is apparently a new type of sinister censorship of customers' sources of information by organized groups of distributors that may amount to a tradesmen's fascism. While only the names first listed in exhibit A have to do with the specific instance of the $25,000 check to which I called attention in my letter of November 29, I know that the Commission will be interested in a general way in the other occurrences which are mentioned in that exhibit, and which have come to my attention since the letter I wrote on November 29 has been made public.

They seem indeed to indicate pressure important enough to affect the most powerful periodicals in the country. Proponents of the Miller-Tydings amendment and the Patman Act have repeatedly asserted "large interests" have influenced the printed page against them. While I have yet to learn of a specific instance of publications being put under pressure to oppose these laws, the mere publication of the allegation of a specific effort by those favoring these two laws to have articles of which they did not approve withdrawn from newsstands, has already brought to my attention the very indicative incidents of activity by those favoring these laws which I have included in exhibit A.

These incidents show that two periodicals of large circulation, Time and the Saturday Evening Post, have felt it necessary to refuse advertisements attacking price fixing and addressed to consumers. Another, Collier's, also an outstanding national weekly, I am told, has been subjected to exactly the same reaction that was involved in the allegation I called to the Commission's attention in my letter of November 29, and simply because its editors published an able article informing consumers about the price effects of the legislation in question. A third publication, one of the oldest monthlies, suddenly, if the information given me is correct, had felt it necessary to withdraw from publication an article on price fixing by an author who had previously written an excellent article for it on the same subject.

If these incidents are brought to light so quickly by the publication of the single report to which I called attention, how many more have occurred, how many more may occur? Is the consumer to be brought under a censorship exercised by a tradesmen's fascism interested in keeping him in the dark? Are editors and advertising managers going to have their hands tied by the same type of organized trade pressure which openly essays fixing profit margins for the entire country at a uniform and an arbitrary level? Is getting facts on legislation and distribution to the consumer to be subject to censorship by the very trade groups which directly live off the consumer?

Certainly these incidents urgently call for a representative consumer organization and for a national consumer mouthpiece. If the consumer is to be cut off from the facts he requires to protect his purchasing power intelligently, the country may well be headed for a tradesmen's fascism which would be as inimical to consumers as any one-man dictatorship or any big-business fascism.

It is obvious that in its investigation of the National Association of Retail Druggists the Commission faces the extremely difficult task of separating the chaff of protestations of righteous endeavors to outlaw predatory price cutting, and unfair discriminations in favor of large purchasers, from the wheat of collusive effort and vicious trade coercion having as its sinister objective the fixing of upset profit margins at the consumers' expense. Under such circumstances it is always difficult to brush aside the mask and disclose the sinister, masked, objectives.

It will be necessary for the Commission's representative to trace back over many years of trade history in order to search out those significant points at which the righteous endeavor to curb predatory practices have become smoke screens for endeavors to force manufacturers to fix prices at levels which provide arbitrary profit margins sought by distributors. These points may be found a number of years back, for the issue is not a new one, as is evidenced by the fact that the association in question is now under a consent decree having to do with price activities. But today the question is rather the dangers to the consumer in what distributors may force upon suppliers, instead of what suppliers and distributors may do to the consumer acting together, for the development of large volume outlets has changed the situation markedly.

The Commission will find that many sincerely and soundly interested in eliminating unsound trade practices have actually taken part in the recent agitation for price-maintenance legislation. Their very presence in the ranks of those favoring this sort of legislation lends a righteous companionship to those whose motives are in fact the fixing of a uniform minimum-profit margin nationally.

Actually, however, the taking of a uniform national price under a uniform minimum gross mark-up as an objective, of itself establishes that unsound motives are involved. For it is common knowledge that distributive costs are higher for certain lines, for certain localities, for certain sections of the country, than for others. For data on this subject, with references to sources, I refer the Commission to my letter of March 2, 1937.

To attempt to justify an over-all profit margin for all types of stores, for all types of locations, and for all types of geographical sections must, therefore, involve resorting to unsound reasoning, which disregards the legitimate interests of the consumer.

While it is entirely sound to hold that unfair trade practices, predatory loss-leader selling, and unjustified price discrimination should be banned, it is entirely unsound to contend that every sale in America of a product should cost the consumer at least 50 percent of the invoice price to the merchant. Certain fast-moving, nationally advertised products can be sold under minimum service conditions, in locations making a large volume possible, for as little as 10 percent of the sales dollar, and for well under 20 percent in many such locations even with attractive modern retail surroundings provided. In my letter to the Commission dated March 2, 1937, specific examples are cited.

Other localities, particularly those which can reach but a very small volume, may justifiably call for 30 to 40—even 50 or more—percent of the consumer's dollar.

Can a single price bridge such variations fairly? Can a minimum price be but a compromise at best, too low for some, too high for others?

If the manufacturer were left to his own price decisions freely made, can there be any doubt that he would fix a minimum price that would eliminate loss-leader selling or bait merchandising of his product, but which would also result in his items obtaining volume sales in areas where volume sales are possible? Is it conceivable he would fix a uniform price throughout the United States at 5 percent above the over-all cost of doing business of a few stores in a large city or the suburbs of that city?

The organized drive among druggists for 33⅓ percent on selling prices (50 percent on cost prices) is based on the St. Louis drug survey, published by the Department of Commerce and partly financed by contributions from a large manufacturer of a drug proprietory product. This survey actually had to do with figures from a few stores in the St. Louis area which happened to have an average over-all cost of doing business of 28 percent, which, plus 5⅓ percent "for net profit," is actually the source of the 33⅓ percent which the druggists contend to be at least their due from the consumer.

But this survey was intended to disclose costs by lines and, naturally enough, to show that the cost of selling nationally advertised, fast-moving items is far below any store's over-all cost of doing business; and that it did show, but the druggists are careful not to mention the costs it showed for handling the very fast-moving lines on which they ask an assurance of 33⅓ percent on sales prices.

My letter to the Commission dated March 2, 1937, on page 4, gives specific examples of the variations that exist between the actual cost of retailing the various lines handled in a drug store; and on the succeeding page the official United States Census of American Business is cited to show how widely the total cost of doing business actually varies between stores and types of stores instead of being the 28 percent referred to above, and arrived at in the totally nonrepresentative manner I disclose.

No; a manufacturer of a fast-moving nationally advertised product is not going to set a uniform price for all locations that allows the profit desired by the smallest volume outlet on the most pronouncedly off-location site, unless he is forced to do so by trade pressure.

And it is for evidence of the exertion of trade pressure, therefore, that the Commission's investigation must search, if the chaff is to be separated from the wheat. It is on the chance it may lead to significant information on that score that I call particular attention to the $25,000 check mentioned in the attached dossier.

It would be interesting to bring to light the entire history back of that check. It is hardly conceivable that a manufacturer would suddenly just hand over $25,000 in cash without some factor, very definite and very compelling, veing involved. The history of the incident is, I believe, readily available from data in the hands of members of Pacific coast educational institution faculties who specialize on marketing.

The Commission will render the consumers of the country an outstanding service if it is able, as a result of this investigation, to differentiate clearly the exploitation of the consumer by forced mark-ups from the protection of the consumer through the outlawing of unfair trade practices.

And it would also at the same time render an equally important service to the small dealer. For if prices are fixed at minimums unfair to the consumer, all retailing will be harmed, while if the minimum prices are fair to the dealer with a large volume, they will be unfair to the dealer unable to get a large volume.

I know that the Commission desires to assist the small dealer in every legitimate way, as I also do, but realizes that exploitation of the consumer can only in the end harm the small merchant, if for no other reason than that it increases the large units' opportunities. If the end of price maintenance is to be minimum prices too low for fairness to the dealer unable to get a large volume, but assuring the large units, say, 30 percent as against 18 percent, to the small merchant, how has the small man been helped? Or is he helped if the minimum prices are high enough for the small man to make only a fair return, while the large units make a tremendous profit?

I am hoping that the Commission's investigation will prove constructive, and successfully overcome the many unusual problems and difficulties which it will admittedly encounter.

Yours very sincerely,

EMANUEL CELLER.

How Shall We End Child Labor?

EXTENSION OF REMARKS

OF

HON. H. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. VOORHIS. Mr. Speaker, child labor is wrong. It is wrong because it dwarfs the mental development, the hope and the spirit of the future citizens of America. It is wrong because good education and child labor cannot go together. It is wrong because, if we are to prepare our children for life in this highly complex civilization, we must give them every chance for a full, carefully planned period of development. We will leave our children plenty of problems. The least we can do is to give them a happy childhood and an adequate preparation to meet those problems.

And child labor is wrong because it runs contrary to every natural impulse of life, because, therefore, it is contrary to the will of God.

Most people will agree with what I have said so far. But now we come to the question, How shall we end child labor?

In this so-called wage and hour bill now before us there are provisions for ending child labor in goods entering interstate commerce. This is one of the strongest arguments in favor of the bill.

PROVISIONS OF HOUSE BILL GOOD AND BETTER THAN SENATE BILL

On the whole, the child-labor provisions of the bill as drawn by the House committee are good. They are better than the provisions of the Senate bill.

The reasons they are better are these: First, the Senate bill prohibits the shipment of goods actually made by children, with the proviso that the employment of children in a mine or factory or other establishment constitutes prima facie evidence that child labor has been used on the goods. In the end this would put burden of proof on the Government to show that children had worked on a shipment of goods long after it had been shipped far away from the factory.

The House bill provides, on the other hand, that—

> No producer, manufacturer, or dealer shall ship or deliver for shipment in interstate commerce any goods produced in an establishment situated in the United States in or about which within 30 days prior to the removal of such goods any oppressive child labor has been employed.

The difference between making the law apply to goods actually made by children, as in the Senate bill, and making it apply to goods made in a factory where children are employed should be obvious to anyone and should clearly show that the House bill is far the stronger of the two.

ENFORCEMENT BEFORE OR AFTER VIOLATION?

The Senate bill provides, moreover, for enforcement of its provisions by prosecution after infringement of provisions of the law regarding employment of child labor and relies largely on an attempt to require the labeling of all goods made by child labor as a means of gaining compliance.

But the House bill provides that the chief of the Children's Bureau shall issue certificates to employers if it is found that the persons employed in his establishment are not children, under the terms of the act and such a certificate, therefore, is the employer's evidence that he is not violating the law. Thus employers, to avoid possible prosecution, would be inclined to enforce the law themselves by not having child labor and obtaining a Children's Bureau certificate.

In the House bill also, the Children's Bureau is empowered to carry out enforcement of the act and to bring prosecution in case of violation.

NECESSARY AMENDMENTS TO HOUSE BILL

The House bill, however, needs, in my opinion, certain amendments, which I understand will be offered from the floor at the proper time.

Briefly these amendments are as follows:

First. To provide that exemptions to the terms of the act applying to forestry, fishing, work on naval stores and the like shall not mean that the child-labor provisions do not apply to these industries.

Second. To take away from the Chief of the Children's Bureau the great power to make exceptions to the act now held by that official under the terms of the House bill. This can be accomplished by limiting this discretionary power so it could only be used for children over 14 years of age, and by providing that it can never be used to permit children to work in manufacturing and mining industries. As drawn at present, the bill gives the Chief of the Children's Bureau power to let almost any child work, if, in his opinion, such employment will not interfere with schooling or health. Pressure on the Chief of the Children's Bureau would be tremendous, and the whole act might break down at this point unless the amendment suggested above is adopted.

Third. To prevent the possibility of parents being compelled to have their own children work with them in manufacturing or mining or hazardous occupations. The purpose of this amendment will not be to interfere with rights of parents but to prevent parents in turn being compelled to use their children as workers—at least so far as manufacturing, mining, and hazardous occupations are concerned.

Fourth. The powers of enforcement of the Children's Bureau as defined in section 14 (b) are not as clear as they might be, and a clarifying and strengthening substitute for this section will be offered and should be adopted.

A GREAT STEP FORWARD

With these changes, passage of the House wage and hour bill will mark a great forward step in humanitarian legis-

lation in America. It will be fair and it will be effective as regards the prohibition of the labor of children under 16 in interstate commerce.

No one should fail to realize that all child-labor legislation implies that we are assuming obligation to see to it that widowed mothers with small children, now perhaps compelled to depend on income from some of their children's wages, must be given adequate aid by the Nation and the States for which they are rearing future citizens. As we consider our Social Security Act and the old-age pension question, we cannot forget these widowed mothers. Present provision for them cannot make anyone complacent. We have to do better.

What the New York Times, Roosevelt Supporter, Says of Wage and Hour Measure

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

EDITORIAL FROM THE NEW YORK TIMES DECEMBER 13, 1937

Mr. EATON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of December 13, 1937, on the subject of the wage and hour bill:

[From The New York Times, December 13, 1937]

RECOVERY VS. THE WAGE BILL

Nothing could more clearly illustrate the irresponsibility of the present leadership in Congress than its plans for going ahead with the Federal wage-hour bill. It may be doubted whether a proposed law of greater economic importance to the country has ever been considered. It will directly affect the fortunes of hundreds of thousands of employers and of millions of workers. Its bearing on the future course of business recovery may be crucial. Yet the leadership of the House, when the bill is brought before that body today, plans to allow just 4 hours for general debate upon it, just 4 hours to dispose of scores of problems of first-rank economic, political, and administrative importance. The Labor Committee, which framed this bill, has so drastically changed its own mind about it in the few months since the Rules Committee blocked action upon it that it will itself offer about 60 amendments to its own measure. The nature of these amendments has been revealed to the country and the membership of Congress only in the vaguest fashion. In spite of these amendments the leadership is planning to allow only 3 days for discussion of them. One can imagine how informed, intelligent, and thorough the ensuing debate is likely to be.

It may be mildly interesting, nonetheless, even to the present congressional leadership in Congress, to list some of the points that might be considered if there were any disposition to consider them:

1. Whether it is wise to concentrate Federal power still further—whether the Federal Government should assume this huge further extension of its functions at the expense of the individual States.

2. How many persons will be affected by this bill? How many workers, for example, are now receiving less than 40 cents an hour, and in what sections and what occupations are they mainly to be found? Such scattered figures as exist indicate that a full third of the workers of the country are getting less than the 40-cent figure set. The application of such a minimum implies a very drastic readjustment of industry and production.

3. To what extent will the bill increase unemployment? If no one is to be employed in industry for less than $16 for a 40-hour week, for example, no one who is not deemed worth that amount will be employed at all. We cannot make a man worth a certain wage by declaring that he shall not be offered or shall not accept any less. We deprive the community of what he could have earned, and we deprive the community of whatever services or goods he could have produced.

4. To what extent will this unemployment increase the Federal relief burden at a time when it is thought particularly important to return to a balanced Budget? What will be the Government's relief policy regarding persons forced into unemployment by the wage-hour bill? Will the Federal Government pay them less or more than they were previously getting?

5. To what extent will the wage-hour bill set up a tariff wall in the North against southern goods? A study by the National Industrial Conference Board, based on the census of manufactures for 1929, shows that the average cost of labor per man-hour in South Carolina was 23 cents, in New York, 60 cents. Department of Labor figures show that the average entrance rate of adult male white common labor in the summer of 1936 was 40 cents in California, 31 cents in Florida. Will an attempt be made to impose uniform minimum-wage rates throughout the country regardless of the great differences in the conditions of production that bring about the existing differentials? If differentials are to be allowed, how will the various labor advisory boards be expected to determine precisely what such differentials ought to be?

6. Will the provisions in the bill for raising tariffs and imposing import quotas be retained? To what extent will these provisions nullify the State Department's reciprocal trade agreement policy? To what extent will they drive us toward autarchy and toward an authoritarian economy? And how can they compensate our exporters for their injured position in foreign markets?

7. What will be the effect of the 40-hour week provisions? To what extent do these provisions rest on the fallacy that we can increase employment and get richer by working less? What study has been made by Congress of the effect of the 40-hour week in France in disrupting industry? Are we going to profit by the costly French experiment or are we going simply to ignore it?

8. The administrative provisions will probably be improved by the Labor Committee. But there is no evidence that the committee has made any careful study of existing State minimum-wage laws. The New York State law, for example, wisely provides that the industrial commissioner shall first make a "directory" order fixing minimums, and that this shall be in effect for 3 months without penalty except publicity before any attempt is made to fix a "mandatory" order. No similar evidence of caution exists in the Federal law.

9. The House ought to examine various penalty provisions that are far more punitive in spirit than those found in State minimum-wage laws.

Adequate consideration by Congress of even a few of these points would require considerably more than 4 days.

Why Labor Should Support the Deane Plan

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. ANDERSON of Missouri. Mr. Speaker, the following discussion should be considered not primarily from the standpoint of an individual worker, but from the standpoint of "labor," which term comprehends all classes engaged in skilled and unskilled work for which money compensation is received.

Labor, which numerically represents a high proportion of the total population of the Nation, has an inalienable right to its just share in the economic prosperity of the Nation. Of what does this right consist? What is its just share? How can it be assured of its rightful share?

Labor functions, as do almost all groups in our population, in a dual capacity—as producers and as consumers. In order to consume it must produce, and it is entitled to consume the equivalent of what it produces. In order for a worker to function as a consumer he must be possessed of adequate purchasing power, and, by and large, the amount of purchasing power available to him is dependent on his opportunity to utilize his intelligence and capacity in production. Therefore he is entitled to an opportunity to utilize his abilities and capacities to the maximum possible extent and to receive for his labor the maximum compensation he can demand in competition with the abilities and capacities of his fellow workers. There is no way to determine the amount of money wage which will represent proper compensation for a worker's contribution to the total production of the Nation, except in relation to the amount of wage received by other workers—that is, except on a competitive basis. It follows, therefore, that labor always will receive the highest economic compensation when there is the strongest demand for labor. Whenever there exists a labor surplus—unemployment—such surplus eventually lowers the bids that would otherwise be made for the services of those employed, so that the primary consideration of labor is to see that no labor surplus exists; in other words, that unemployment is eliminated.

But even if there is no labor surplus, it does not follow that the amount of compensation paid to labor will be

adequate to permit them to function economically as consumers. It is possible, economically speaking, that the total wage bill of the Nation will be insufficient to support the consumption that will sustain a high rate of production. And while it is impossible to determine whether the amount of dollar wage is economically just from the standpoint of the individual worker, it is possible to tell whether the total wage bill is adequate to sustain the consumption of the goods produced under the highest practicable rate of production.

All of which means that labor will benefit to the maximum possible extent under those conditions which permit of the continuance of the highest practicable rate of production, with no labor surplus overhanging the market. Under such conditions there will exist a consistent demand for labor of all types and kinds and each individual worker will be able to secure a just compensation for his services in relation to the value of the services of other workers.

It is not in the interest of labor to arbitrarily support a compensation for an individual worker beyond the compensation to which he is relatively entitled based on his ability and capacity to produce in relation to the ability and capacity of others. For example, if a handyman decides to become a carpenter and through arbitrary restrictions can secure the wages of a competent carpenter, it may benefit the handyman but it will penalize every competent carpenter. And the minute such an arbitrary wage standard is forced, it becomes necessary to set up other arbitrary standards to keep incompetent individuals from becoming carpenters; in other words, to arbitrarily restrict the number of carpenters.

The reason that organized labor has so often advocated arbitrary restrictions and the maintenance of an arbitrary wage standard is not because this was of maximum benefit to the efficient worker but because in the presence of a labor surplus there was no free competition, and it is perfectly natural that organized labor should have followed this means of capitalizing their organization to thus improve their group standard of living. But only under free competition can an individual secure the opportunity to rise in the economic scale as high as his abilities and capacities permit him to rise.

However, if a labor surplus is kept off the market so that there is a constant demand for labor of all types, the amount of compensation received will be a just compensation—always provided that the total compensation of labor is adequate to sustain a rate of consumption that will insure maximum production.

Under the Deane plan, these two factors are automatically assured:

First. A labor surplus would be kept off the market by providing jobs on public works for everyone willing to work but who was unable to secure jobs in private industry.

Second. A sensitive index would be provided which would promptly show whenever the purchasing power of the mass consumers of the Nation—largely labor—was inadequate to sustain the highest possible rate of production; and whenever this condition was shown the compensation of all workers would be supplemented, increased, immediately by an amount sufficient to assure the continuation of maximum production.

In other words, under the Deane plan, the total purchasing power of the mass consumers of the Nation would never be permitted to fall below the point that would sustain maximum production. Thus labor would have the definite assurance (1) that their total wage bill would always equal that proportion of the total production of the Nation necessary to permit of its constant consumption, and (2) free competition in selling their services against the services of other workers in a market with a sustained demand for all types of labor.

Under such conditions of strong demand for labor there would result a general improvement in all conditions that affect the welfare and satisfaction of the worker in his job, simply because where conditions were unsatisfactory, workers would quit and find jobs where conditions were satisfactory, making it necessary for employers to promote all those conditions that would induce self-respecting workers to remain in their employ. Thus labor could no longer be exploited, but would take its logical place as free and independent individuals reaping the full rewards of their intelligence and industry and for the first time, would gain the complete independence for which they have constantly striven.

Under the Deane plan, labor automatically would be assured the benefits for which they have fought so hard and long—(1) the security of a job at all times, and (2) the highest possible economic compensation. Thus class struggle would be automatically eliminated.

The Agricultural Section and the Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. HERRON PEARSON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

LETTER FROM JOHN H. PITTS RELATIVE TO THE AGRICULTURAL AND WAGE AND HOUR BILLS

Mr. PEARSON. Mr. Speaker, I am in receipt of a letter from a very prominent constituent and good friend residing in my district expressing very forcefully his views in regard to the agricultural situation and the application of the pending wage and hour bill; and pursuant to permission heretofore granted to extend my remarks and include this letter, I am submitting it herewith:

HARBOUR-PITTS CO., INC.,
Cerro Gordo, Tenn., December 6, 1937.

Hon. K. D. MCKELLAR, *Senator,*
Hon. HERRON PEARSON, *Congressman,*
Washington, D. C.:

MY DEAR SENATOR AND CONGRESSMAN: Relative to agriculture, under conditions such as exist today, when, seemingly, our most able and best informed in every walk of life are more or less divided in their opinions as to just what method or program, as a permanent plan, should be pursued to bring about the greatest good to the largest number, it is my opinion that it is the duty of every citizen, no matter how small, who has given this major undertaking long and serious consideration, to express his or her views to those with power to act.

I was once an uncompromising advocate of controlled production as a permanent remedy for agriculture, especially cotton, believing and understanding, as I did, that we could by such program control the world's prices of cotton, but after having seen this program in effect or operation for 4 or 5 years, with the major production reversed, as I understand, to the credit of foreign producers and the loss of much of our exports, and believing as I do that if we are to continue as a permanent plan such control of production, we are soon to find our country practically if not wholly without export demand for our cotton; and if so, then what are our cotton States to do with only our domestic demand or consumption of seven to eight million bales, or even if there could be found other uses and our domestic demand increased to ten or twelve million bales, and especially so when we know that our population is increasing and our country yet in its infancy in production, and that in all probability the State of Texas alone could supply such domestic demand? Therefore, I am now forced to the conclusion that controlled production furnishes or promises no satisfactory future and will not serve as a permanent plan and is only justified, if at all, as an emergency or temporary plan until some more permanent and better plan can be found. And

Having been disappointed in the results of the control plan, and realizing that some permanent supplement must be found, have tried to carefully and thoughtfully consider many other proposed or suggested plans, and am strongly of the opinion that our route of relief is to be found in some well-founded and fairly and properly administered self-supporting, domestic allotment plan, similar to if not that offered, as I remember, by the State of Texas in 1932, through its agricultural commissioner, J. E. McDonald, and which plan, probably, is on file in Washington, and which, as I further remember, provided for a subsidy on that amount or percent of such allotment as was domestically consumed and in such amount as would bring the same up to the parity price. And

Such a plan, as I reason, would be self-controlling for the reason that if a producer's lands were such, or his conditions were such, that he could not compete for the world market, then he could and would produce only such amount as on which he would be entitled to the parity price, leaving those with low cost of production free to raise all they wanted to and to compete for the world market; would turn production back to the producers, with full knowledge that they were to depend upon the world market for all of their production in excess of that percent of their allotted production domestically consumed; would give employment for thousands now out of employment; would give our cotton States a better chance to regain lost export business, and would seemingly place this field of agriculture on an equal footing with the manufacturing interests of our country, and which, if so, would be all that should be expected.

Now, such a plan or any plan to be self-supporting, and to me no permanent plan could be satisfactory which was not in the main self-supporting, a processing or other tax should be placed upon the finished article for the purpose of creating the fund from which to pay the subsidy. I am not unaware of the decision of our Supreme Court on the old processing tax, but if such plan was otherwise acceptable, and "if everything comes according to its time" as is contended, then surely there could be found a route around any hindrance to the welfare and interest of all of our people.

A processing tax, to my way of thinking, is the fairest and, in fact, the only proper route of supplementing the producer of any product, and more especially is this true with cotton, as the raw material accounts for but little in the price of most any article made from cotton, it being contended, in 1932, as I now remember, that the raw cotton in a $2 shirt, at 10 cents a pound, was less than 4 cents. And, where solely for the purpose of supplementing the cotton producers' income, thereby resulting favorably throughout our country, I can see no just cause for complaint. The processor, of course, hands the little increased cost on down to the consumer, whose business, regardless of its nature, is made safer if not more profitable when the agricultural interest of his or her section is in a reasonably prosperous condition. Those in cotton States couldn't complain, and those in the Wheat, Corn, and Dairying Belts should not complain, as the South's interest, in procuring a reasonable income from the production of cotton, is also their interests, for the reason that when the South can no longer find a satisfactory market for their cotton, then the cotton States will be forced to convert their cotton lands to the production of grains and dairying, and which would be seriously detrimental to the present wheat, corn, and dairying sections. In fact, it has been my observation, and so far as I remember, without exception, that when our cotton States get prosperous all other things right themselves, and I am, therefore, of the opinion that cotton is still king, and trust that a satisfactory and permanent program or plan can speedily be found.

I am also much interested in the outcome of this maximum-hour and minimum-wage legislation or proposed bill.

Established rural retail mercantile businesses, in sections well covered by good roads, and especially those of the larger types and with heavy taxes and other fixed expenses (due to the present multitude of practically, if not wholly, untaxed peddlers and catalog houses), are operating without profit, net profit, and in some instances at a loss, as I am generally informed, and I know that our business is and has operated at a small loss for 3 years or more, but yet holding on mainly, for the reason that a larger percent of their capital is invested in improvements and on which, though revenue producers for our counties and States) but a small amount could be realized in liquidation. Also, this large interest in our land and country is living in hopes that those with power to give relief (by and through such laws as will eliminate favoritism to such business as free-taxed peddlers, and, so far as I know, locally untaxed mail-order houses), will see the present threatened destruction of these thousands of established revenue-producing rural businesses and will create or pass such laws as will require the above-mentioned two favored businesses to contribute to the upkeep of all local governments in which they do business, and, thereby, place them upon the same footing as all others. It is my judgment that these two businesses—peddling and catalog houses (peddlers probably governable by the respective States, and catalog houses by the Federal Government)—are two fields for taxation, though yet untouched, as wide open as a boot jack, being favored as they are by our vast program of good roads and complete rural-delivery system and all to be paid by taxation or bond issue to later be paid by taxation upon the established properties of all of us.

Why should any interest be permitted to capitalize upon such improvements, without contributing largely to the cost and maintenance of such improvements—as their businesses are operated today, untaxed as it is, it is, to me, like unto the killing of a builder with his own hammer—why should any catalogue house be permitted to do business in any county in this United States without having first paid a privilege tax to said county. Is this not a discrimination in favor of an outside institution against all local and home organizations, and whose properties are under a fixed mortgage for the upkeep and maintenance as well as the bonded indebtedness of such local governments; and without which it would be impossible for such institutions as peddlers and catalog houses to operate? It is my judgment that our governments have been, already, too late looking after such businesses, and which are fast destroying all long-established and stationed retail mercantile interests in our rural districts and from which, as you gentlemen well know, much of the revenues of our country are received. Therefore this pending or proposed minimum labor bill, if applicable to rural business throughout our land and country—excepting agriculture—is of much interest or rather looked to with much interest by such rural interests as that to which I have referred.

There are, no doubt, thousands of just such rural institutions in our land and country, as that to which I have referred and all employing one or more girls, lady clerks, and in many instances a Negro or white boy or man to carry in wood, milk a cow, work a truck patch or garden, and other numerous little jobs about the stores and dwellings. This help, under such conditions as exist in these rural districts, cannot possibly be paid large salaries and they know this and do not expect it. In the case of lady clerks in these rural districts, practically all are the daughters of farmers who do not need them at home and their work is not hard, going when they wish and returning when they get ready; and while their salaries are small, $20 to $30 per month with board, room, and washing furnished free and being treated as one of the family, are perfectly satisfied and getting along much better than would be their condition at home.

We also, as is common by the larger concerns in rural districts where cotton is the money crop, own and operate a small steam cotton gin, running as a rule about 8 to 10 weeks each ginning season, using altogether rural farm laborers and working seven men. The usual and common prices paid for this class of labor, at these country gins, ranges from $1 per day for a wood roller to $3 per day for an engineer, though these employees seldom work half of the time, are waiting for cotton most of the time, as each of you gentlemen well know to be true at all country gins. Many days in each season our receipts from a day's ginning will not pay the labor bill and other fixed and unchangeable expenses, laborers being paid by the day, whether they work or play.

Now, it is my judgment, which is that of all with whom I have consulted, that any minimum-wage law which does not exclude such rural labor as that to which I have referred, will send 90 percent or more of these lady clerks back home and without any employment at all, and in the case of steam-power gins, will either close them down or cause the installation of automatic machinery and gas, oil, or electric power to take the place of labor—not for the reason that these employers would so desire, but solely to comply with the first law of nature, self-preservation. No sane man will willfully and knowingly long continue to operate any kind of a business which he knows can result only disastrously. Therefore if such a bill is to be passed and is to apply, as before stated, to all classes of labor and in all sections, except agriculture, then may I suggest that there be also an exception, as applicable to rural districts, embracing the same provisions and exceptions as that set out in Regulations 90, relating to the excise tax on employers under title IX (9) of the Social Security Act, and which provides, under section 907 (a), "The term 'employer' does not include any person [and I suggest that the term "person" be changed to read: "Any person, firm, or corporation operating solely in rural districts"], unless on each of some 20 days during the taxable year, each day being in a different calendar week, the total number of individuals who were in his [his, their, or its] employ for some portion of the day (whether or not at the same moment of time) was 8 or more."

I think that such an exception or exclusion from the provisions of such a bill would be a blessing in that but few, if any, little and unprofitable rural businesses, such as those to which I have referred, would come under the provisions of the bill. Of course, the intention of such a bill is to better the condition of labor, but, seemingly to me, it is almost as hard to apply a satisfactory uniform labor scale to all sections as it would be to successfully treat all diseases with the same medical treatment, as what might work satisfactory in one case might be disastrous in another. I can't see how we could satisfactorily apply a uniform labor scale to the business of farming, as simple as this is, for the reason that a laborer on a Tennessee poor hill farm where the averaged production was 300 pounds of seed cotton to the acre, could not possibly be worth to his employer as much as he would be worth to the same or other employer on a fertile west Tennessee farm where the yield, instead of 300 pounds, is as high as 3,000 pounds per acre. So, as for me, there can never be found a satisfactory uniform labor scale, except in manufacturing or other business where the job is piece work, or in other lines where the increased cost, through such increased cost of labor, can be handed on down to the final consumer, and this, positively, cannot be done in common rural mercantile or other business, and any attempt to better rural conditions, by and through such an undertaking, can only result in the reverse of the intent by creating more unemployment.

In thinking of all of these unpleasant happenings and conditions which have come up within the last 7 years and for which all have been and are yet striving and searching for a remedy to correct, I find my mind going back to the old adage, if it be an adage, which, in substance, was: "The application of a wrong remedy, persistently applied, may create the very condition we are striving to prevent."

Trusting that this long letter will not unduly burden, I beg to remain, as I have always been, your loyal friend.

JNO. H. PITTS.

The Unemployment Problem

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

ADDRESS OF HON. JAMES M. MEAD, OF NEW YORK, AT BUFFALO: TOWN HALL MEETING OF THE AIR, NOVEMBER 27, 1937

Mr. MEAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my address at the Buffalo town hall meeting of the air, November 27, 1937:

This is indeed a splendid undertaking, one that deserves to succeed. It presents a medium for the presentation of great national problems and likewise aids in the solution of these complex questions. I desire to commend the sponsors of this program, and to wish for their efforts, every full measure of success.

The unemployment question which I am permitted to discuss this evening is at the same time a social and economic question. Shall we study these questions and plan for their solution, or shall we leave them entirely alone to be led by natural economic forces which might or might not carry us in the desired direction?

Man is a planning animal. He plans when he sows or harvests or builds. Through the agency of Government, he plans for his national defense and likewise for his health and physical well-being. Why not plan for his economic and social well-being as well? Man's intelligent capacity to plan has made civilization and as it has protected our people from pestilence, famine, and invasion, it may give us access to the necessities, the comforts, even to the luxuries of life.

As our first objective in social and economic planning, let us seek the attainment of a standard of living that is broadly distributed among our people and free from the devastating fluctuations of the past. In order to obtain an adequate standard of living, our people need a vast increase in all kinds of goods and services. To furnish these, we must expand our capacity to consume and with it our ability to increase the production attained in 1929. To meet this standard, to reach this goal, millions of American families who are now in want must have sufficient money to buy at least all they need. Our greatest need therefore is for more purchasing power.

Experience indicates that we can never enjoy a lasting prosperity unless and until American business in general is reorganized to pay such higher wages as will enable our workers to buy our industrial production as well as to give our industries an adequate home market. Such a market is necessary if we are to maintain industry at a profitable rate of operation. What we need to plan for in America is a balance between labor, agriculture, and industry on a mounting scale. We need price and wage policies which will provide purchasing power to our people sufficient to consume the ever-increasing productivity of our machines.

Economic and social planning springs from a common responsibility for adequate markets, continuity of employment, and widespread economic security. Those objectives are necessary to safeguard the future well-being of our Republic. No citizen can avoid an obligation of that character.

What I believe labor and agriculture want of our great corporations is that they so arrange their affairs as to enable them to turn out from year to year a gradually increasing supply of goods to the end that we all may have more of the joys which go with better homes—automobiles, and labor-saving appliances useful on the farm and in the homes. This can be done when a larger share of the fruits of labor shall go into wages to create a necessary mass market for mass production.

As the rate of production increases with larger and larger power plants and more and more machinery, a greater number of purchasers must of necessity be found. Quantity production necessitates millions of buyers and millions of buyers are found only where purchasing power is increasingly expanded.

The failure of our economic system to operate at top capacity was not due to the fact that our people did not want to buy goods, but was the result of their inability to obtain sufficient money to purchase the things they needed and desired. In order to obtain a fair standard of living the American people need a vast increase in all kinds of goods and services. To me more purchasing power is the paramount need.

For a quick, efficient, and effective remedy I would suggest shorter hours and higher wages. Why have machines and idleness?

Private enterprise without social control if we read the record, not alone in America, but in every other industrial nation, will not work. Private enterprise operates primarily to make profits and therefore fails to realize the importance of providing adequate markets by increasing the purchasing power of its own workers. Our wage earners will not soon forget that nearly 15,000,000 workers in the last depression were forced into idleness, denied a chance to earn a living while the machines with which they could have produced a living accumulated rust.

Why even in 1929, our year of greatest prosperity, one-sixth of our population was forced to live below the minimum necessary for health. Now that we have discovered in recent years a number of ways in which economic forces can be guided, depressions can no longer be thought of as great calamities which, like earthquakes, cannot be escaped. Depressions are due in great part to man's failure to plan. Intelligent planning is therefore essential to the well-being of capital, labor, and government. Let us, therefore, plan to solve our unemployment problem. Government is the instrumentality through which the planning is consummated.

Unemployment, as a national problem, was comparatively unknown before the World War. Oh there were temporary periods of aggravated depression then, but for the most part local governments were able to cope with conditions resulting from those economic recessions.

The rapid growth of our population, together with the opening and development of new regions of territory gave constant stimulus to new enterprise and without the benefit or the knowledge of high-powered machinery, abundant opportunities for employment were available in those days. In that era of competition and geographical expansion, opportunities for advancement and promotion were numerous and the great army of contented workers, both immigrant and native, progressed happily and satisfactorily. It was indeed an age of opportunity in America. Trades and skilled vocations were at their height. The assembly line had not yet come into being. Trained mechanics and artisans enjoyed a high standard of living as well as a satisfactory measure of economic security. In those days business of every kind was naturally small and community owned as well as locally managed. The impersonal corporate employer had not arrived as yet, with the result that abundant opportunities existed in those days for a successful career even for the little fellow.

Comparatively poor men founded Buffalo's great newspapers, established our leading banks, and gave us our most successful mercantile establishments. Today in this complex age a fortune is required to enter most of our enterprises. Recent developments in the Nation's economic life has changed all of this. The natural growth of our population has slackened, the flow of immigration has necessarily been abated. Our frontiers of new farm lands and virgin forests have disappeared. Technological improvements in the nature of high-powered mass producing machines, enabling one man to do the work formerly done by 10, by 100, or by 1,000 men, are commonplace today. Power machinery, mass producing methods, labor-saving systems, together with giant corporate enterprises, present a new and difficult problem which confronts the leaders of every industrial nation of the earth. The complicated technique of the assembly line of labor-saving methods of mass volume output has overwhelmed us. Instead of a blessing in disguise, the machine has left millions hungry and jobless.

Much of the world's unrest can be traced to this very problem of unemployment. Everywhere political leaders are groping for a solution to this vexing question. Within recent years, 30 major changes have taken place in the systems of the governments of the Old World. Their political formula changes overnight; communism, fascism, nazi-ism accompanied by military and political dictatorship form the parade of oppressive governments of the Old World. Democracy has been stopped in its tracks. The capitalistic systems have yielded to rigid control or to government ownership except possibly where cooperative enterprise has proved successful. Here in these United States we are the last bulwark of representative democracy. Upon the success or failure attaind by us in the solution of our unemployment problem rests the success or the failure of the democratic parliamentary system.

While some people may pride themselves in our high standard of living, no doubt the highest in the world, one-third of our population is ill-nourished, ill-clad, and ill-housed. Over 42 percent of America's families have an annual income of less than $1,500 a year. Actually more than one-fifth of the families in well-to-do America are eking out a bare existence on less than a thousand dollars a year. Ill-nourished are such families whose budgets compel an unbalanced diet. The bare necessities of life, and not even those at times, is the standard they endure—with poor food, little clothing, and a hovel for a home. These folks, our neighbors, stand as an indictment against our unpardonable indifference of the past.

With our great industries and our capable population with a Nation so richly endowed as is the United States, we should, we must, devise a system whereby the able-bodied will be certain of a chance to work for a fair day's pay. Less than this cannot be tolerated by a self-respecting people. Less than this in a democracy worthy of the name would be cruel, if not evil. We therefore owe it to our underprivileged, we owe it to ourselves, to the friends of democratic institutions everywhere, to solve this unemployment riddle and to give our people economic justice.

Our social system must continue to enlarge the methods by which the products of labor are distributed. Government must provide the opportunity for our unemployed.

This depression has revolutionized the mental attitude of our people. Farsighted leaders of industry, representatives of government, chieftains of labor organizations are now looking for economic stability under the guidance of government. They are

seeking social control with the help of Federal agencies. They see the need of increasing and improving upon the economic well-being of the underprivileged of our population. The prudent employer of today recognizes in his employee a potential market for the output of his factory. This new leadership in the light of modern conditions recognizes the need for an economic balance without which the Nation's prosperity cannot be realized. This economic balance is not alone a balance in the Nation's Budget, which in itself is an achievement to be desired. It aims for a balance between jobs and available workers, between wages and the cost of living, between the production of the Nation's industries and the capacity of its people to consume. In the past, jobs and wages were neglected which resulted in an impaired capacity to consume, and this in turn led to the depression.

Our Nation's economic record since the beginning of the World War indicates very clearly the need for buoying up of our capacity to consume. Before our entry into the war the demands made upon our industries by the allied governments gave us a balance between our ability to produce and our capacity to consume. This situation continued throughout our participation in the World War. After the war was over, and during a period of readjustment, our purchasing power dropped violently and our Nation's economy went into a tailspin. Later on, and as a result of the financial help we extended in loans to the nations of the world, America again enjoyed a period of prosperity. But when the huge loans came due and our debtors failed to meet their obligations, our economy suffered another serious setback and remained in that condition until the huge Federal appropriations of 1933 and thereafter gave us buying power sufficient for our Nation's machines to feed upon.

In times of abnormal spending we enjoyed a fair measure of prosperity, but when spending ceased we slipped badly. Federal spending has been tapering off of late, so has our prosperity. Until private enterprise can employ our surplus workers, spending of some character is needed.

The tremendous productivity of our efficient machines overwhelms us and stagnates trade except when the Nation's power to consume has been stimulated by the demands created by war or resulting from huge public construction programs. From these economic gyrations, we recognized the great need for the expansion of America's power to consume and the simplest and yet the most effective remedies suggested by the Nation's authorities on economics are: shorter work periods and higher wage standards for the machine worker.

My remedy for existing economic conditions is, therefore, to be found in the philosophy of the shorter workday and the higher-wage scale. All other remedies have fallen short in the past. In this day of surpluses, even in the numbers of our workers, we must expand our social frontiers so as to utilize the wealth provided by the machine age in which we live. The cost of the National Youth Administration, and of Social Security program, must come out of our economic system. We must provide jobs for the surplus workers through the Civilian Conservation Corps, the Public Works Administration, and other like activities. By a reduction of work period, an increase in wage scales, by the extension of our Social Security program and by the continuation for the present of Federal work-creating activities, we should be able to effect a reasonable balance between the Nation's power to produce and its capacity to consume. This balance will insure a balanced budget.

It is the Nation's obligation to provide work opportunities for those who neither share in the wages paid by private employers or the profits produced by our Nation's business enterprises. They too should enjoy the right to work.

I am a staunch believer in the possibility of eventually eliminating poverty in America. To me it is stupid to believe that it is necessary for one-third of our population to remain in poverty in this, the richest nation on earth.

Shorter hours mean better prices for our farmers, bigger home markets for our manufacturers, and an end to relief and deficits.

If we don't control the machine, it might control us.

World Peace

EXTENSION OF REMARKS

OF

HON. ANDREW J. TRANSUE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. TRANSUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a poem entitled "Men Wanted," which was written by Thomas H. Howard, of 918 North Saginaw Street, Flint, Mich., and dedicated by the inspired author to world peace. It is in the interest of the universal peace, which we all are seeking, and most appropriately during this Yuletide season, which since the beginning of Christianity has been especially dedicated to peace on earth to men of good will, that I recommend this epic poem to the consideration of our Nation and to the people of every other nationality.

In the measured meter of poetry the author of this poem has encompassed and epitomized the aversion of humane nations against war. It is my hope in furthering the distribution of this poem that it will have a definitely stabilizing influence upon the delicate equilibrium of the world that is commensurate with the inspiration and effort of the author.

MEN WANTED

(Dedicated to world peace by Thomas H. Howard)

Wanted—men who are twenty-one,
Men who are able to shoulder a gun;
In the best of health and the prime of life,
To leave their homes and their kids and wife.
Peaceful men who are now content,
To settle the war lord's argument;
And go to foreign lands, perhaps,
That they never knew except for maps.

Wanted—men whose mothers cried,
For brothers the last war tore from their side;
Wanted—men whose mothers still mourn,
For their dads who were killed before they were born.
Wanted—men who can learn to hate,
And especially those who believe it's fate,
When a comrade falls beside them dead,
Full of the latest machine gun lead.

Men who can stick a bayonet through
Somebody's boy that they never knew;
Wanted—men who would like to fly,
And drop down death from out the sky,
On women and children young and old,
So a handful of men can have more gold;
Men from the East and West and North,
And men from the South to journey forth.

To leave the farms and crops behind,
So war lords' pockets can be relined,
With tainted gold from a bloody ditch,
So they and theirs can again be rich,
With the body and blood from the world of youth,
Who never will know the naked truth;
Medicine free and your doctor bills,
A crutch and a cane and lifelong ills.

Wanted—men content to wear,
A nation's tribute to those who dare;
A cross of gold with bars, perhaps,
To show they were in the last big scrap.
The jobs are open to all who care,
On land or sea or in the air;
Thirty a month and your clothes and chuck;
Apply—war lords—and the best of luck.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

TELEGRAM TO HON. NOAH M. MASON AND HIS REPLY

Mr. MASON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following telegram and my reply thereto:

SPRINGFIELD, ILL.

N. M. MASON,
House Office Building, Washington, D. C.:

First annual convention of Labor's Non-Partisan League of Illinois assembled in convention at Springfield, Ill., representing over 200,000 organized workers in this State, went on record to notify you that your action on the wage and hour bill in not voting to have the committee discharge and have bill brought on the floor of the House of Representatives for consideration, was strictly against the objectives of both organized and unorganized labor in the State of Illinois. We earnestly request that you vote favorably on this bill and support wage board instead of single administrator. We await the announcement of those who vote for this bill.

RAY EDMUNDSON,
President, Labor's Non-Partisan League of Illinois.

WASHINGTON, D. C., *December 14, 1937.*

Mr. RAY EDMUNDSON,
President, Labor's Non-Partisan League of Illinois,
Springfield, Ill.

Voted to have bill go back to committee to be rewritten in accordance with recommendation of William Green. Expect to vote for wage and hour bill favored by A. F. of L.

N. M. MASON, M. C.

Hon. James A. Farley's Kansas City Address

EXTENSION OF REMARKS
OF
HON. JOSEPH B. SHANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

INFORMAL ADDRESS OF THE HONORABLE JAMES A. FARLEY, POSTMASTER GENERAL, SEPTEMBER 8, 1937, AT 9 P. M.

Mr. SHANNON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a short talk made by Hon. James A. Farley, Postmaster General of the United States, at the national convention of the National Association of Letter Carriers, in Kansas City, Mo., on September 8, 1937:

It is pleasant to be in Kansas City tonight with my good friends, the letter carriers. It is an added pleasure in being presented to you by one of the most confirmed enthusiasts I have ever known. When Ed Gainor believes in you, he doesn't hesitate to say so. It is probably a good thing for Ed, and a good thing for the letter carriers, that you also have a mild-mannered, soft-spoken chap like Mike Finnan as your national secretary. Together they make a great combination.

We in Washington are fond of them. We can't always see eye to eye with them when they come into the Department to sell us on something new for the letter carriers. However, we never quarrel. Of course, they are disappointed when they do not meet with instant success. But they are never discouraged. We can always count on seeing them soon again, smiling and confident, with a new prospectus—or possibly one of the old ones colored up a bit to make it look new. Often they transfer their selling campaign to the Halls of Congress, for we have no authority to negotiate wage scales, hours, and other things that are fixed by law. We do make recommendations relative to such laws, but only when asked to do so by the President and the Congress. On such occasions we make our recommendations based upon the facts as we know them. Quite often our advice is accepted by the Executive and the Congress and our opinion prevails, contrary to the wishes of your genial officers and their associates, but they keep hammering away regardless.

Seriously, what I am glad to say is that you are well represented in Washington, and unquestionably the attitude of your officers reflects the temperament of the majority of your group. I have great admiration and respect for postal people generally, and I feel a deep sense of gratitude to all of them. My associates in the Department—the inspectors, the postmasters, the supervisors, the railway mail clerks, post-office clerks, and rural carriers—all have been fine. Their work is splendid and they have helped me in all my efforts to improve the Service. Like yourselves, they are loyal and eager to keep the post office where it rightfully belongs, as the number one agency of the Government. I most sincerely thank each and every one of them, and each and every one of you for your kindness to me and for your cooperation.

I must confess, however, and I say this with no reflection on any other group, that I have a very warm spot in my heart for letter carriers. There is something about you boys in gray that makes all Americans proud of you; that makes me proud to be your chief. To me it seems that a greater part of the good will we enjoy is brought to us by you. True, you have a greater opportunity to engender good will among the patrons than any other group in the Service.

There are many citizens who have no other contact with their Government except through you. They look to you for messages of good cheer from their loved ones. Likewise, they receive through you messages that bring bad news—tales of misfortune and illness—and they entrust to you their answers. Business depends upon you. Santa Claus depends upon you. In fact you are that old boy's staunchest ally. But whether you carry good news or bad, you are welcome in the busy marts of trade, in the mansions, and in the tenements. On front streets and back streets alike folks look forward to your coming.

The average citizen gives little or no thought to other agencies or other people in the Postal Service. He probably knows that clerks in post offices, in railway-mail cars, on steamships, and at air-mail fields, must perform a part of the Service; and he probably knows that every means of conveyance is used in transporting the mails. He knows too about the courageous men who fly the planes and those who drive the engines of the fast trains—but he knows you better. He sees you every day. He believes in you and trusts you implicitly. So, to the average citizen, you are the Postal Service.

You also are a great influence for good in the communities you serve. You are their ambassadors of good will. You, more than any other peacetime group, inspire confidence and patriotism among our people. By your daily visits, by your regularity, by your efficiency, and by your good disposition you give assurance that all is well; that a progressive Government is functioning in behalf of all its citizens.

And while I am congratulating the city carriers for their splendid part in our Federal service I want to take this occasion to say a brief word also in behalf of our great army of rural carriers. They, too, are a credit to the Postal Service and, like yourselves, I am proud of them.

In conclusion, then, may I congratulate you and give you the warmest personal greetings of President Roosevelt, who is doing so much to make all activities of Government function in the interest of all of the people.

May I also wish for each of you health and happiness, the best of luck, and a most entertaining and profitable convention.

Observance of Universal Bible Sunday

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

RADIO ADDRESS OF THE HONORABLE CORDELL HULL, SECRETARY OF STATE, ON THE OCCASION OF THE OBSERVANCE OF UNIVERSAL BIBLE SUNDAY, DECEMBER 12, 1937

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith the able, thoughtful, and very timely radio address delivered by the Honorable Cordell Hull, Secretary of State, on the occasion of the observance of Universal Bible Sunday, on December 12, 1937:

I am happy to accept the invitation of the American Bible Society to say a few words on this occasion of Universal Bible Sunday. There can be no more timely and appropriate observance. Seldom in the history of mankind has there been more need than today for the precepts contained in the greatest of books.

We are living at a time when the minds and hearts of men are baffled and confused. Ours is an age of unparalleled paradoxes. Human ingenuity and inventive genius have expanded enormously mankind's capacity to satisfy the material and cultural wants of man. Yet in the midst of this potential abundance poverty is still rampant and suffering and misery are still widespread. Yet the fruits of cultural advancement are still far from being universally accessible.

The evolution of political thought has created forms of democracy and representative government under which human liberty can flourish to ennoble and fructify the lives of individuals. Yet in many parts of the world there is a drift toward a reversion to a system of tyranny of man over man; toward an abridgement or destruction of human liberty; toward a shackling of speech and action, and even of individual thought and conscience.

Technical and economic developments have brought the world together into an interdependent whole. International peace has assumed the aspect of practical, immediate, and urgent concern to all nations and to all individuals within nations. The repercussions of war, wherever it may occur, are swiftly and devastatingly transmitted to the farthest corners of the earth and inevitably affect the lives of nations and of individuals.

Yet the attainment of durable peace is still a matter of desire and hope rather than a reality. Having created incredibly efficient means of destroying life and property in military action, humanity is still far from success in its frantic search for means of abolishing the scourge of war.

These are some of the problems which weigh upon is today. How shall we seek their solution? Where shall we look for the answer?

One thing is clear. Our problems and our difficulties, our sense of bafflement and confusion, do not spring from any material causes, nor from an inability to visualize our potentialities and our possibilities. The roots of our tragic shortcomings lie in the realm of the spirit.

Time and again we find ourselves defeated in efforts to improve conditions within and among nations solely because of the spirit

which animates human relationships. Our most earnest endeavors often flounder and founder because we fail to find reliable guideposts in the basic sphere of relations of man to man.

Yet such guideposts exist—plainly to be seen by those who wish to see them, easy to follow by those who realize their surpassing worth. They are embodied in a book, the book of the ages, the Holy Bible.

That book is, indeed, as Lincoln once said, "the best gift which God has ever given to man."

It is the revelation of God's will as to the relationship of man to God.

It is the most complete and satisfying compendium of moral and ethical principles. Its precepts have withstood attack and criticism, derision and doubt. They have emerged triumphant from the test of centuries as the most constructive basis of human relationships.

It is the high-water mark of literature. The sublime beauty of thought, feeling, and expression, enshrined in its simple but sonorous phrases, has shone undimmed through the centuries.

It is more widely loved and revered and read than any other book. Even so, our tragedy is that the Bible is not read enough, pondered enough, followed enough.

What we need today, above everything else, is a universal and firm conviction that only if the thought and action of every one of us are guided by the spirit of the Bible, can humanity win through to our ardently desired goal of happy and contented life for all; that if that spirit is cast aside or warped, disaster alone is in store for us. There should be engraved in the mind of each of us the words of the parable with which the Master concluded the Sermon on the Mount:

"Everyone, therefore, that heareth these words of Mine, and doeth them, shall be likened unto a wise man who built his house upon the rock; and the rain descended, and the floods came, and the winds blew and beat upon that house; and it fell not; for it was founded upon the rock. And everyone that heareth these words of Mine, and doeth them not, shall be likened unto a foolish man who built his house upon the sand; and the rain descended, and the floods came, and the winds blew and smote upon that house; and it fell, and great was the fall thereof." (Matthew 7:24–27.)

Today, too many human relationships, within and among nations, rest upon the shifting sands of selfish search for immediate advantage; of mistrust and enmity; of refusal to respect those rights of others, or to fulfill those obligations toward others, without which barbarism rather than civilized existence becomes the scheme of life. Inevitably all of us, the victors as well as the victims in this continuous and blind struggle, must become engulfed in the ruin of that social structure which we call civilization. History records too many instances of the downfall of civilizations consequent upon moral and spiritual decadence.

That is the fate which inexorably awaits us unless we resolutely build our social structure upon the rock of mutual confidence and friendliness; of clear-sighted differentiation between ephemeral and lasting attainments; of sincere and scrupulous respect for the rights of others and whole-hearted fulfillment of obligations toward others; of understanding and cooperative effort between individuals and nations.

Humanity desperately needs today a moral and spiritual rebirth, a revitalization of religion. There is no sure way to this supreme goal save through adherence to the teaching of the Bible.

Wage and Hour Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

Mr. BARRY. Mr. Speaker and Members of the House, I am for the wage and hour bill because I am convinced that its enactment will raise the wages and increase the purchasing power of a large group of the lowest-paid workers in our country.

It will do away with sweatshop hours that are undermining the health of this less-fortunate group of our citizens.

It will abolish child labor in industries that engage in interstate commerce.

The measure will create employment for many thousands of workers who are now unemployed, by compelling chiselers of industry to shorten hours and employ more people.

While helping the worker, it will also aid the legitimate employer by driving out the chiselers who compete with him unfairly.

The measure, while not perfect, is a progressive social and humane piece of legislation and deserves to pass this body by an overwhelming vote.

If time proves to us that some changes should be made, we can always amend the law accordingly.

Let us, however, get started in the right direction and pass this measure at the present session and prove to the people of the country that the Democratic Party keeps its platform pledges.

Amendments to the Federal Housing Act

EXTENSION OF REMARKS
OF
HON. PETER J. DeMUTH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

RADIO ADDRESS OF CONGRESSMAN PETER J. DeMUTH, OF PENNSYLVANIA, DECEMBER 11, 1937

Mr. DeMUTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit my radio address over stations WJAS and WWSW at Pittsburgh, Pa., December 11, 1937:

When President Roosevelt, in his recent message to the special session of the Congress, recommended certain amendments to the National Housing Act, he took one more step in a definite plan aimed to generate more activity in an industry which is the second largest employer of labor in the country.

Before we discuss these proposed amendments, let us consider the importance to the country's employment conditions of a healthy, progressive building industry. A study by the Bureau of Labor Statistics shows that for every hour a workman is employed on a residential construction job approximately 2½ hours are required for labor "behind the lines." By the latter is meant the total estimated time consumed by labor in processing the building materials and other necessary equipment and in transporting it. The Bureau of Labor Statistics is authority for the further estimate that, of the 2,000,000 more unemployed in this country now than in the year 1929, 800,000 are directly or indirectly concerned with the building industry and that were the industry to approach the home construction mark of 1929, when some 500,000 homes were built in this country, this additional 2,000,000 unemployment figure would virtually vanish.

There are two governmental agencies involved in housing—namely, the United States Housing Authority and the Federal Housing Administration. The United States Housing Authority was created by the Wagner-Steagall bill passed in this session of Congress to provide a method of financing the construction of municipal housing through properly accredited local housing authorities. Construction of housing under this act is intended to provide so-called low-cost or low-rent housing for those citizens who, by reason of low income, require assistance to obtain adequate and healthful housing. There is also involved the program of slum clearance, intended to assist cities in the rehabilitation and reclamation of blighted areas. The act provides that the United States Government may buy the bonds issued by local housing authorities properly secured by a mortgage on this project. The Government will pay a subsidy to the local housing authorities of 3½ percent annually on the entire cost of the project, provided the local government grants tax exemptions not less than one-fifth of this amount. Such bonds shall bear 3-percent interest. I am glad to report that the Administrator, Nathan Straus, has informed Congressman EBERHARTER and myself that he has earmarked $10,000,000 for housing to be constructed by the Housing Authority of the city of Pittsburgh. We propose to aid the removal of any obstacles and expedite the program so that men can be put to work as soon as possible.

The other governmental agency is the Federal Housing Administration which was created by the National Housing Act of 1934. The purpose of this act is to make possible the actual owning of a home, which is a natural and inherent desire of every one of us; to make loans for modernization and improvement of homes and other real estate; and to make available improved modern housing for rental purposes.

The current proposed legislation before the National Congress is concerned wholly with changes in this existing act which operates under the Federal Housing Administrator, Stewart McDonald. Certain imperfections or deterents have retarded the application of this act to its intended full force and effect. Nevertheless, much has been accomplished by the F. H. A. to stimulate building construction. In Allegheny County more than 2,600 homes were built or refinanced through this facility. Statistics reveal that this operation involved the placing of $13,169,810 in mortgages, of which $5,932,500 was for construction of new homes.

The act at present provides Federal insurance of a mortgage up to 80 percent of the value of the property. Thus the down payment by the owner now is 20 percent cash, or its equivalent in land, or both. The present interest rate, including service charges, mortgage insurance, and other charges amounts to approximately 6½ percent.

To speed up this building program by giving the potential home owner an additional incentive to embark on a sound home-buying program and at the same time give private capital further impetus in this field, the following changes in the National Housing Act have been proposed. The down payment required of the prospective home owner, represented by cash or land values, is to be reduced from 20 percent as it is now, to 10 percent on mortgages less than $5,400. Let us consider just what this means to you as one considering the purchase of a home. This means simply that for $600 under the proposed changes, instead of $1,200 under the present 20-percent down requirement, you can begin owning a home appraised at $6,000, under the F. H. A. insured-mortgage system. The indebtedness may be repaid over a period of 20 years. This means that the cash or equal necessary for the possession of a home valued at up to $6,000 is cut in half. The importance of this reduction is appreciated when one considers the fact that 80 percent of the country's citizens' annual income is less than $2,500. A further concession to the vast medium-income group is the reduction in both interest rates and mortgage insurance premiums on this class of home, from 6½ percent as it now stands, to 5¼ percent. The one-fourth percent insurance premium is to be computed on the outstanding balance of the mortgage instead of the original principal, as is now done.

The effect of the operation of the F. H. A. is that the lenders of the money are insured by the act while the home owner or home buyer themselves, because of the F. H. A. methods of risk-rating, property standards, constructions requirements, and locational ratings, own homes that will not unduly depreciate in value.

Yesterday morning I appeared as a witness before the Banking and Currency Committee and urged further amendments to H. R. 8520, which is a bill to amend titles 1, 2, and 3 of the present F. H. A. Act. I urged that the interest rate on new-home construction less than $6,000 be reduced to a flat 5 percent, which shall include mortgage-insurance premium and the elimination of the service charges and all other charges except the title-examination fee. That on present construction the service charge be eliminated and the rate of insurance premium be reduced to one-fourth percent on the diminishing principal. The present rate is one-half of 1 percent on the original obligation, which in fact is 1 percent on the full amount of the loan. Experience of the F. H. A. to date shows this reduction is justified.

I pointed out that 90 percent of the individual homes of the United States are built by small independent contractors who build not more than four or five homes at a time. That it would not be sound judgment for an individual of limited resources to undertake more houses than the market can absorb. The Administrator recommends construction loans on groups of not less than 25 houses. This is discrimination against the small builder in favor of the large corporation. I further state that the small builder, without any overhead expense, with the personal attention he gives to construction, can and does give more to the public for their dollar than the large building corporations on this type of work. Furthermore, better distribution of wealth and more good to a greater number of families is secured by this method. The committee was impressed with this point and it is hoped to secure this change also.

I also urge that only the net direct losses should be charged against the mutual-mortgage-insurance fund and that the Administrator should not be permitted to charge any overhead or indirect expense against this mutual-mortgage-insurance pool.

Before closing, let me state that the interest on mortgage money on new construction should not be over 5 percent, since the Government insures the mortgage after home builders provide a pool of money to take care of any losses the Government may experience. The banks now pay only 1½ to 2 percent to depositors. They used to pay 4 percent and loan at 6 percent including all charges. Therefore, the home builder and home owner is paying far in excess of a reasonable amount for the use of credit money. Labor is not receiving too much for its services, but capital is receiving an exorbitant profit. This has stalled our industrial system as far as the building industry is concerned.

Why the Dismay?

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. DIRKSEN. Mr. Speaker, may I in all sincerity inquire about the apparent dismay over the bombing of the *Panay* by the Japanese? Why the note of alarm in the editorials of today? Why the note of concern in the news stories on the front page? Why all this anxiety of the State Department? Why any agitated frame of mind at the White House?

Only a short while ago, I raised the question along with other Members of this House as to why the Neutrality Act had not been invoked because of the turbulent conditions of the Orient and I was reminded that the President had not yet found that a state of war exists between Japan and China. I was reminded that the act does not become operative until the President "finds that a state of war exists" and makes it operative. Since there has been no such finding, I assume we are to believe that the oriental fracas is but a local unpleasantness of little consequence. In the light of that fact, why this dismay about the *Panay*?

It is not a war. It is not even an incident of war. How can it be if no war exists? How can it have the slightest relation to war when there has been no finding of war and if it is not war or an incident of war, what is it? An accident? Maybe. A blunder? Perhaps. An untoward incident? It might be. But nations do not send each other protests because of accidents or blunders or untoward incidents. Those can happen in the best of national families. Since the President has not yet learned that a state of war exists in the Orient, all this manifest concern is but a slender bit of fancy. Or can it be that the State Department has suddenly discovered that what seemed to be an intriguing game of oriental ping pong with incidental casualties has turned out to be a war. And if so, what about the Neutrality Act?

Grand Coulee Dam and Irrigation

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

RADIO ADDRESS BY HON. JOHN C. PAGE, COMMISSIONER, BUREAU OF RECLAMATION, DEPARTMENT OF THE INTERIOR, FRIDAY, DECEMBER 10, 1937

Mr. LEAVY. Mr. Speaker, under leave heretofore granted to extend my remarks, I am including a radio address entitled "Also One-Third Is Ill-Watered," delivered by the Honorable John C. Page, Commissioner, Bureau of Reclamation, Department of the Interior on December 10, 1937, at the time the bids were opened for the completion of the Grand Coulee Dam.

Mr. Page, in a logical and unanswerable argument, points out the national need for carrying the reclamation program through until all western lands susceptible of reclamation through irrigation are brought into cultivation. One-third of the total area of the United States lies in the region where irrigation is essential to successful agriculture, and there, by reason of natural limitations of water supply, but a very small proportion of the whole area can ever be made productive. To those Members of Congress who have heretofore questioned the wisdom of developing to a maximum the arid lands of the West I commend this unanswerable argument of the Commissioner of Reclamation, which follows:

West of the one hundredth meridian in the United States there are 700,000,000 acres of arid or semiarid lands. Seventeen of the big Western States are included in whole or in part in this region, where generally agriculture cannot progress safely beyond the rudimentary pastoral stage without irrigation.

It is difficult to imagine that 700,000,000 acres of land in the one-hundredth meridian cannot be seen, although in some respects it is as important a feature of the country as the Continental Divide.

President Roosevelt has said that one-third of the Nation is ill-nourished, ill-clad, and ill-housed. Let us add, also, one-third is ill-watered. Seven hundred million acres—an astronomical sounding figure—represent one-third of all the land in the United States.

Normally crops are harvested each year from less than half that much land in the entire country. It takes all of Washington, Oregon, California, Idaho, Utah, Nevada, Arizona, Montana, Wyoming, Colorado, and New Mexico (all big States), and a good share of North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, and Texas to make up 700,000,000 acres.

To find the one hundredth meridian turn to the map of the United States in any handy atlas. You will see that it splits off the western third of the country, running down just east of Pierre, S. Dak.

East of the one hundredth meridian the lands normally receive sufficient rainfall for crops. West of it they do not. Except for high mountains and a narrow strip along the Pacific coast north of San Francisco, nowhere west of the one hundredth meridian can more than 20 inches of rain be expected in a year. Twenty inches is not sufficient for most tilled crops. Over vast areas of the West much less than 15 inches is the normal, and in some places only 3 inches are received annually. Three inches will not support life.

The United States came into possession of this vast domain in blocks, beginning with the Louisiana Purchase. The difference between the arid and semiarid lands and those of the humid regions, previously settled by the American people, was not reflected in national policy for many decades. It was recognized early that irrigation must play an important role in the agriculture of the West, but the homestead laws, which had served well in the humid regions, remained in effect. The Government for several generations followed its historic policy of encouraging and sponsoring settlement of its newly acquired territory, despite the aridity of the land, by making it easy for an individual to obtain a rectangular piece of it. What the homesteader could do with the dry land thus obtained was left to him.

It was not until 1902, when the Federal Reclamation Act was adopted, that the United States began to modify its policy to fit the conditions encountered in the West. The Taylor Grazing Act, 3 years ago, marked the final reversal of the old system by setting aside much of the remaining unappropriated public domain permanently for pastures.

It takes us a long time to learn. I find still that some who know nothing of the West apparently believe that irrigation is unnecessary out here. The prehistoric Indians and the early Spanish missionaries, who were not encumbered with preconceived notions, founded their settlements on irrigated lands centuries before the first American came. They did not try to dry-farm areas which received insufficient rainfall for tilled crops, as we did. We did it simply because somewhere to the east, perhaps 1,000 miles distant, crops could be grown without dams and canals to bring water to the land. The Indian knew little or nothing of the humid region to the east. The Spaniard came, by way of Mexican deserts, from the Mediterranean where irrigation is as old as civilization. The American, however, came overland through the tall prairie grasses from the lush fields of the east.

Out here in the West, it was realized early that irrigation would be necessary. The young Western States quickly passed laws authorizing and assisting the formation of irrigation districts and other agencies through which their agriculture could be developed. More than 50 years ago, agitation arose for Federal sponsorship of irrigation. The Nation has had a definite and firm policy with respect to irrigation for 35 years. It is embodied in the Federal reclamation laws. Without attempting to elaborate here, I will briefly sketch this policy. It is and has been from the outset, one of helping the West to help itself. Public funds gathered principally from western sources, such as the sale of public lands and the leasing of oil lands, have gone into a special revolving fund for use in constructing irrigation works. Settlers on the projects are required to repay to the reclamation fund without interest the cost of the structures and canals which serve them. The purpose of Federal reclamation is to strengthen the West and to provide opportunities for people to make homes for themselves and to earn decent livings from the land.

Not only do some people who are not acquainted with the West find it difficult to understand why irrigation is necessary, but many others have a misconception of its extent. Few realize that in all of the arid and semiarid region there are less than 20,000,000 acres of irrigated lands, and that this very small percentage of the total 700,000,000 acres provides the principal support for 12,000,000 or more people. Even fewer realize that the grand total of western lands which are now irrigated and which can be irrigated by the available water supply will be only about 30,000,000 acres. I have had men, frankly disturbed at our efforts to expand irrigation, ask me in all earnestness if the Federal Government would irrigate all of Nevada. Now, Nevada is a very large State. The agriculture of Nevada, like that of the remainder of the West, is limited by water, not by land. In Nevada it is so severely limited that the control and use of every drop of water in the State would permit the irrigation of an area no larger than one or two Iowa counties. If there were enough water in Nevada to irrigate all its lands, irrigation there probably would be required no more than it is in Iowa. Iowa is small in area when compared with any one of the States of the West. Yet if all the water of all these Western States were used in irrigation, it would irrigate an area no larger than Iowa.

Irrigation must stop when all the waters available in the West for use by feasible projects are utilized. It cannot be permitted to stop short of that time. This limit may be reached all too soon.

The Department of Agriculture tells us that soil erosion has impoverished or ruined 200,000,000 acres of once-productive farm lands. That is 10 times the amount of land now irrigated in the West. It tells us further that an additional 100,000,000 acres of useful farm land is actively affected by erosion and that its productivity is threatened. That is 10 times the amount of land which may in the future be irrigated in the West. The Nation is engaged in an earnest attempt to remove from cultivation a part of its submarginal lands: thus to free from a peonage wrought by Nature and misuse of the soil a section of our population. Recently a 7-year drought, as yet unbroken, has driven 100,000 farm families from the Great Plains. Where are these people to go?

Many of them go West looking for new opportunities, hoping to find homes on irrigated lands. If these people are to resume their lifework, many of them must find irrigated farms.

This brings us to one of the major functions of Federal reclamation in our national land-use program. Only about 3,000,000 acres now are irrigated by Federal projects. This land, however, supports directly approximately 900,000 people living on farms and in towns on the projects. The present construction program, though it may be considered large, will irrigate but an additional 2,500,000 acres when the projects are completed. This total includes the 1,200,000 acres of the Grand Coulee Dam-Columbia Basin project, a long-range development which will not be finished within, perhaps, 30 years. Our construction program cannot make new lands available fast enough to take care of the demand arising among those who have been driven from their homes in other areas. In October 65 new farms were opened for settlement on the Klamath project. More than 1,500 war veterans, who are given preference under the law, applied for them the first day. Many of these men were from the Great Plains. The Columbia Basin project, if it were finished at this time, would provide homes for less than half of the farm families already driven by drought from the Great Plains alone. I would that we were prepared now to start the pumps at Grand Coulee Dam and to turn the water into the canals which eventually will form a net over the fine land to the south of the dam. We would then be in a position to help at least a fraction of those who are in need.

Farmers in other areas need have no fear of irrigation. Irrigated agriculture has complementary relationships rather than competitive relationships with the agriculture of humid areas. The staple crops, of which there are exportable surpluses in other regions, are produced only in inconsequential amounts on the irrigated lands of the West. Two types of crops dominate on irrigated lands, and neither is competitive with those of other regions. First, from the standpoint of acreage, are the forage and fodder crops which provide half the feed for the livestock industry of the West; the most important industry of this region. First, from the standpoint of returns to the farmer are the specialty crops, sugar beets, vegetables, melons, and fruits. At the risk of seeming paradoxical, I will assert that these crops are not competitive generally with those of any other area in the United States.

The livestock industry of the West makes use of the vast pastures provided by nature here. Great expanses of these ranges could not be used except for the comparatively small irrigated patches scattered through them. These irrigated dots on the map of the West produce hay for winter feeding, without which the cattle and sheep could not be kept here at all. These western ranges and irrigated fields produce the larger part of all the feeder stock finished out in the feed lots of other areas. In the feed lots of the Midwest the farmer in that region who produces corn finds a major outlet for his crop. Obviously this segment of the agriculture of the irrigated lands of the West complements the agriculture of the humid States. Obviously there is no competition here.

The specialty crops—and nearly every irrigated area in the West has a different one—also complement the production of other areas. The sugar beets of irrigated fields in the Rocky Mountain region glut no market upon which the midwestern, eastern, or southern farmer relies. The lettuce and cantaloups, the tomatoes and pears of the irrigated fields in California, Arizona, Utah, or Colorado have served only to balance the winter diet of the great cities from New York and Boston westward. Introduction of these crops in the irrigated sections, which have long growing seasons, has been of distinct service in the improvement of the health of the Nation. Only those who could afford to pay for hothouse vegetables could eat salads the year around 30 years ago. Now it is difficult to find a market from Maine to California that does not carry fresh vegetables, priced reasonably enough for all, throughout the year. The irrigated West is responsible.

No one ships lettuce, or any other vegetable, from California to Chicago when it can be produced near at hand. The cost of transportation takes care of that. There is, therefore, no competition with the truck farmer of other areas. When they can fill the demand the freights hauling iced cars stop running out of the West.

What has been said of vegetables, is true in large part of the fruits grown on irrigated lands in the West. The citrus fruits of California and Arizona are known the world over. Every spring in Washington, D. C., before the frost is out of the ground, big red cherries appear in the markets. The label of a shipper from an irrigated section out here appears on every box. As the season progresses, these western cherries are displaced by those grown near at hand. So it is with every other fruit. Fresh fruits are now available at reasonable prices the year round, thanks to irrigation in these western valleys where a warm sun compensates in part for a deficient water supply. When the advancing season ripens the fruit on the trees of the east, the remainder of the

western crop is canned. Again we find the irrigated orchards complementing those of other regions.

I will only mention, without dwelling on the theme, that the Nation has a direct interest in the manner in which the irrigated districts bolster the local and State governments of the West. Mining once was the principal industry west of the one hundredth meridian. Now the West is sprinkled with ghost towns which were abandoned when the ore veins pinched out. Irrigation farming has served to substitute for the vanishing resources. It not only has supplanted mining as a source of income in the Western States but it has grown many times more productive of wealth. The irrigated districts support schools and churches. The Federal projects alone support 859 rural schools and 996 churches. These areas are pillars in the foundation of county, city, and State governments. The irrigated lands are carried on the tax rolls in most areas at valuations 10 or even 20 times as high as the valuations placed on dry-farmed lands. It must be remembered further that there are about 500,000,000 acres in these Western States that are federally owned and that therefore do not appear on the tax rolls at all.

Federal reclamation not only has an important place in the Nation's land-use program—it is essential. It is vital to those whom it nourishes in distant parts. It is vital to those with whom Nature has not dealt kindly elsewhere; those who seek security through new homes and new opportunities.

It is our responsibility to apply the knowledge that engineering and science now make available, for the benefit of all the people. Today we move forward in the construction of Grand Coulee Dam, the key structure of the greatest single irrigation project of history. To the limit of our ability, let us be worthy of our trust and meet the challenge of Nature on the third of our Nation which is ill-watered.

Harbors of Refuge for Small Craft

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

MEMORANDUM ON EASTERN LAKE ONTARIO FILED WITH COL. E. H. MARKS, UNITED STATES ENGINEER CORPS, AT A HEARING IN ROCHESTER, N. Y., DECEMBER 6, 1937

Mr. CULKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a memorandum relative to harbors of refuge for small craft, filed with the United States Engineer Corps at Rochester, N. Y., December 6, 1937:

The undersigned was active in introducing and passing a resolution in the 1937 Rivers and Harbors Act providing for a preliminary survey of the coasts of the Great Lakes with a view to the establishment of harbors for light-draft vessels.

During the 10 years of my service in Congress I have given particular consideration to the encouragement of recreational yachting and proper harbors for nontonnage craft.

LARGE INVESTMENT IN SMALL CRAFT

There are, at present, within the waters of the United States, 4,015 documented yachts with an approximate value of $140,000,000. The owners of these yachts spend about $30,000,000 yearly in upkeep—fuel, storage, equipment, insurance, and labor. This type of yacht is increasing annually at the rate of about 11 percent (figures furnished by Ira Hand, secretary of the National Association of Engine and Boat Manufacturers, 420 Lexington Ave., New York City). This classification does not include the small sailing yachts without power. I am advised no record is kept of them. It is safe to say, however, there are at least 500,000 of such craft in the United States and their value may be conservatively placed at $150,000,000. This type of boat is constantly on the increase. The fact is the average lover of the outdoors is now driven to the water by reason of the discomfort and sometimes danger attendant upon the operation of automobiles for recreational purposes.

I wish to call attention to the fact that the yachtsmen of America were formerly forced to pay a tonnage tax, and prior to the repeal of this statute they had paid into the Treasury in excess of $3,000,000, not one cent of which was ever used in benefits for their group.

Practically no attention has been given by either the Federal Government or the States to the vast army of people who go on the water. The Federal Government has spent a billion on good roads and the States infinitely more. Both the States and the Federal Government, as well as localities, have given heed to the demands of the golfer, the tennis player, and the camper, this on the correct theory that opportunity for outdoor recreation and exercise makes for good citizenship.

From the economic standpoint alone the small-craft owner is entitled to be considered. By reason of the taxes he has paid in the past he is entitled to some relief in the present situation. As heretofore stated, the investment in small craft nationally is, of course, very considerable, and all the labor and materials used are home products. The stimulation of the small-boat industry will give employment to a great number of citizens. It will use vast quantities of American materials and therefore is to be encouraged.

Harbors of refuge for small craft will usually cost but nominal sums. They enable the boat owner to get away from conventional havens with the usual collection of sewage and to be sheltered somewhere where the pollution menace does not exist. I wish to add that there are few tonnage harbors where small craft are obliged to take shelter where it is possible to swim in safety and without fear of typhoid or infantile paralysis. This is increasingly true of the whole Lakes area.

The reason I introduced the amendment was not only to provide small harbors of refuge for recreational craft, but also to provide shelter in out-of-the-way places.

EASTERN LAKE ONTARIO

The black-bass fishing in the eastern end of Lake Ontario is the best in the world, and thousands of persons each year go from the mainland to the islands for this fishing. They sometimes tarry too long, and a harbor of refuge of this character would be a very great service in such emergency.

The type of recreational cruiser which comes into the lake from all parts of the United States for the bass fishing would use these harbors for anchorage and the young and old people who go on the water would have an environment where they could be directly in touch with nature. This is the theory upon which the Federal Government and States maintain many parks at great expense for those who travel by automobile. The vitality of our people is notoriously better conserved by direct contact with nature, and the thousands of men, women, and children who are on these recreational craft, if they are allowed to get away from the pollution of the average harbor, will have a sanitary, decent environment.

In discussing the conditions as to small-boat harbors at the eastern end of Lake Ontario, I should call attention to Gill Harbor at the Coast Guard station on Galloo Island. This harbor was dredged out several years ago when the station was established but is now largely filled in and is difficult of entrance. This should be taken into consideration in connection with the needs of small-boat harbors in the eastern end of Ontario.

It should be remembered that all these harbors are difficult of approach in certain weather and that some are sheltered from northern and westerly winds and others are not. It is a fact also worthy of consideration that Stoney and Galloo Islands offer no or little lee for a westerly or southwesterly wind. This makes the creation of these small-boat harbors all the more imperative.

PROPOSED HARBORS

Lake Ontario presents several illustrations of this type of harbor where at nominal cost and with very little expenditure for maintenance, such harbors may be established.

They are as follows:

1. North Pond, on Gallo Island, at the easterly end of Lake Ontario. This body of water is approximately 1 mile in length and about a quarter of a mile in width. The depth of the water in the center is 5 feet. The channel entering from the lake proper is approximately 35 feet wide. The entrance to the pond could be dredged out and the pond itself dredged out to a depth of 9 feet at nominal cost. It would afford a haven for craft coming up the St. Lawrence River and also for small craft which encounter heavy weather from any direction. This pond, which is shown on chart 2 of maps prepared by the United States Engineers, would afford the passing small craft an opportunity for real shelter in a wholesome primeval environment.

2. Mr. Frank C. Herrick, secretary of the Crescent Yacht Club at Chaumont, N. Y., also calls attention to Dutch John Bay on Stoney Island, also in the eastern end of Lake Ontario, where a small amount of dredging would open up a small lake which practically cuts the island in two. It would furnish ample protection for a considerable fleet of small boats. He also calls attention to the fact that sudden storms frequently occur in this area during the summer season and that some shelter is needed in this quarter for small boats that are coming down the lake or have been caught in a sou'wester.

3. Selkirk, on the mainland at the eastern end of the lake: This is at the mouth of the Salmon River and should require but nominal disbursement in order to make it safe for small craft. There are a great many summer cottagers in this vicinity and they use a great number of small boats, the majority being power. Added draft for this area would make it a proper harbor of refuge for boats caught in a nor'wester in Mexico Bay. I will not go into detail on this as the district engineer has taken considerable evidence on this question and preferred to wait until the whole situation was surveyed.

4. Sandy Pond, also on the south shore, is another area much used by cottagers and is adjacent to a public park operated by the State of New York. The expense here would be likewise nominal. Both the Sandy Pond and Selkirk areas are used extensively by people from the eastern part of the country who are on tour by auto. The summer-colony phase is of considerable magnitude.

A SOUND PUBLIC DISBURSEMENT

In conclusion, I wish to emphasize the fact that this is not prodigal or wasteful spending. It makes for the health of the

American people who are going on the water more and more in sail and power. It should be reemphasized here also that this group who paid three millions into the Treasury for which they received absolutely no benefits, are just as much entitled to recreational opportunity as the automobilist, the golfer, and camper, for whom hundreds of millions have been expended by the Federal Government.

Respectfully submitted.

FRANCIS D. CULKIN,
Member of Congress, Thirty-second District, New York.

Tobacco Tax Amendment

EXTENSION OF REMARKS
OF
HON. W. D. McFARLANE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

CORRESPONDENCE BETWEEN HON. JAMES V. ALLRED, GOVERNOR, AND HON. W. D. McFARLANE, OF TEXAS

Mr. McFARLANE. Mr. Speaker, under permission given me I desire to extend my remarks and include the copy of a letter received from Hon. James V. Allred, Governor of Texas, and a copy of my reply thereto:

EXECUTIVE DEPARTMENT,
Austin, Tex., December 9, 1937.

Hon. W. D. McFARLANE,
House of Representatives, Washington, D. C.

DEAR MR. McFARLANE: The Honorable George H. Sheppard, comptroller of public accounts of this State, has estimated that Texas is losing approximately $500,000 annually through tax evasion on cigarettes shipped into Texas by parcel post because of a postal law or regulation which prohibits postal inspectors and postmasters from furnishing State tax officials with information regarding such shipments or from permitting such officials to inspect shipments by open mail for the purpose of obtaining the names of the consignees. Mr. Sheppard has informed me that great numbers of unscrupulous cigarette dealers have established places of business just over the border line in nearby States for the sole purpose of shipping cigarettes by mail in order that their customers may avoid paying the tax. Our cigarette law levying the tax on the use as well as the sale of cigarettes, which has been upheld by the State supreme court, makes the cigarettes taxable; but as long as the postal regulation denies the State the right to inspect the cigarettes for the names of the consignees or any post-office records of such shipments, their business will continue to flourish.

I understand that Mr. TARVER, of the Seventh Congressional District of Georgia, has introduced a bill (H. R. 8045) authorizing the Post Office Department to cooperate with States levying a tobacco tax in the collection of their State taxes, a copy of which is enclosed.

This bill is of vital importance to some 35,000 legitimate merchants handling cigarettes in Texas, who lose $5 in business for every dollar the State loses in taxes. The cigarette collections are allocated to the old-age pension fund and the school fund. Mr. Sheppard believes that the enactment of the Tarver bill will solve this problem for the State, and I am sure your support of the bill will be greatly appreciated by both the State and the legitimate cigarette dealers in Texas. The bill is now before the Committee on the Post Office and Post Roads.

Sincerely yours,

JAMES V. ALLRED,
Governor of Texas.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 14, 1937.

Hon. JAMES V. ALLRED, *Governor,*
Austin, Tex.

DEAR GOVERNOR: I have your letter of December 9 regarding H. R. 8045, authorizing the Post Office Department to cooperate with the States levying tobacco tax in connection with their State taxes. I am heartily in favor of the conditions sought to be corrected under the terms of this bill and have just talked with Mr. HAINES, chairman of the subcommittee considering same, and he tells me that his committee will hold hearings early next session and he believes that a satisfactory bill can be worked out and passed.

I will be glad to cooperate fully regarding same.

Sincerely yours,

W. D. McFARLANE.

The Deadly Parallel

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 14, 1937

1917

Mr. DIRKSEN. Mr. Speaker, January, and the nations of the world are at war. The United States protests the operations of German submarines. Preparations being made to float further British loans in this country. Bernstorf advises Lansing that the Imperial Government will meet Allied war measures by establishing a war zone around Britain, France, Italy, the eastern Mediterranean. Rising indignation at the activities of the Imperial Government of Germany. Comes February of that fateful year. President Wilson announces severance of diplomatic relations with Germany. Blundering U-boat commander sinks the *Laconia* with American citizens aboard. A blunder. Regrets. Apologies. Excuses. House of Representatives rushes measure to arm American ships. Enactment prevented by Senate filibuster. Mad March walks across the calendar. War Sunday. Sermons, speeches, rising temper. The President announces that naval guns and crews will be supplied to American ships without congressional authorization.

Another blunder—the *Algonquin* sunk without warning off Plymouth. Headlines: Martial ardor grows; dismay; anxiety. Just another blunder. President calls Congress into extraordinary session. April. The world awakens to the breath of spring. Congress meets. Parade of pacifists broken up by police. Troops come to the Capital. Resplendent Congress. Joint session in the House Chamber.

A solemn Supreme Court attends. A sober Cabinet is there. Dour Senators. Agitated Representatives. Colorful galleries filled to the last place. Diplomatic Corps in resplendent uniforms given places of honor. Tenseness. The President arrives. Solemn war message. Debate. War. It is April 6, 1917. Somewhere the hollow, mocking laughter of death.

1937

Saturday night, December 11: Ballroom of the Willard Hotel on historic Pennsylvania Avenue. The Gridiron Dinner. Four hundred distinguished guests in evening attire. Gay flags, colorful streamers, tasty table decorations. Vivacity, mirth, laughter. Senators and Representatives, important professional men, industrial tycoons, journalists, columnists. A gay speaker's table garlanded with flowers. The President, the Cabinet, the Ambassadors and Ministers and others are there. The Secretary of State, Cordell Hull, prim, solemn, severe. The Ambassador of Japan, Mr. Hirosi Saito, reticent, quiet, bland. The Ambassador of China, Mr. Chengting T. Wang, bland and self-effacing. All is warmth, quiet, joy, satisfaction.

Monday, December 13: Screaming headlines. The bombing of the *Panay*. News articles expressing concern. Tart editorials. Speeches in the House and Senate. A rising spirit of indignation. Ambassador Saito calls on Secretary Hull. Profuse regrets and apologies. Blunder! 'scuse it! White House memorandum to the State Department expressing concern and shock and that the Emperor be so advised. Sharp debate in the United States Senate. Joint resolution introduced in the House to invoke sanctions against Japan. Great Britain sends sharp protest note to Japan. Cab drivers, shopkeepers, Government employees, others discuss the prospect of war. Item in Washington press with caption, "Dislike Japan—United States Sailors Would Welcome Fight." Somewhere the hollow, mocking laughter of death.

Federal Control of Water Pollution

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, December 15 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY BOAKE CARTER, NOVEMBER 29, 1937

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on the 29th ultimo by Boake Carter, on the subject of river pollution and Federal control of such water pollution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This day a year ago, walking through the snow-clad Pocono Mountains of Pennsylvania, I learned as I never learned before, what fools we humans have been in destroying recklessly, wantonly, with no thought of the future, nature's gifts to us, in order that we might better chase the dollar and build therewith a civilization of stone, marble, steel, and iron. This day a year ago, I talked about that very crime we have committed in our avariciousness for material things; talked of denuded forests; of walking for miles without seeing a tree that would make a good 3-inch plank; of the manner in which, in our ruthlessness, we had shaved the hairs from the head of the earth in great patches, so that rains and melting snows raced down the mountain sides in the spring in swirling torrents, unhampered, unrestrained, to swell the flow of mighty rivers like the Allegheny, the Ohio, the Mississippi, the Columbia, and others and create the wild, raging floods that cost America millions upon millions of dollars annually.

Today, 1 year later, I came back to the same mountains, with that great army of deer hunters; returned to Skytop, Pa., the mecca of sportsmen and sport lovers from all parts of the United States, and I had another lesson brought home to me, in vivid, arresting fashion. A little adventure it was. In midafternoon today, I turned to Joe Mellon, the game warden of these parts, a mere boy of beyond 60, one of those souls of kindliness, honesty, sincerity, who numbers his friends in the millions, from Presidential candidates to mere newspapermen; whose speech is picturesque and the kind of character you read about in books—I turned to him and said: "Joe, where can I get a good drink of water." "Right there, m'boy," said he instantly and pointed with one hand toward a stream running from the mountain side into a pond, and with the other handed me a little folding canvas cup, creased with many seasons of wear.

And so I went to the stream, bent down, and thrust the canvas cup into the waters as they sang their lilting tune across the rocks and stones that lay upon its bed. And the rays of a red November sun tinted the waters of that little stream with crimson fire, and the deepening blue sky added that dash of color that delights the heart of any man who has even faintly and only occasionally communed with Nature and all her beauties. And as I drank I noted the transparency of the water, like the purest glass. It was a drink beyond compare—cold; invigorating; a freshness of taste free from taint—for which there are no words in the English language to provide adequate description.

And I wondered, as I gulped that water greedily, what fools we city people are; how little we know what we have done; how much would millions of people in the United States give to be able to go down and stand upon the banks of the rivers running through their towns and find water as clean by only even 50 percent of that which I drank this afternoon. We destroy our forests without order, without system, and promote great floods which cost us millions of dollars in damage and repair. Our rivers we have made industrial sewers filled with debris, with chemicals, with oil, and a permeating stench, and again add to our costs by having to filter the water from the rivers that we make filthy, so that we may drink the liquid we city people are pleased to call water so that we may not go thirsty.

In this one State of Pennsylvania alone we once possessed 100,000 miles of rivers that were clean enough to sustain fish life. Today, because of pollution, there are less than 7,000 miles of that 100,000 in which fish may survive. Ninety-three thousand miles of Pennsylvania streams and rivers have become so contaminated that fish life has died. In proportion, the story goes from many other States all over the Union. Most of us citizens read of conservation, hear of something about what is called stream pollution, and, because it has no dramatic appeal, we usually pass on to other affairs in the news, some uplifting murder, no doubt; some educational account of a kidnaping, or some such matter.

Yet consider the poor of the great cities of the Nation; would they not appreciate being able to go down to the river running through their town, with their children, on a hot summer night, and enjoy the comforts of cool breezes that come off water? They would, to be sure, but they don't because no one appreciates particularly the allure of sitting beside a stream or river whose pollution is such as to provide stench upon stench that is overpowering at times many blocks back from many rivers. Do not children, whose families cannot afford to take them to the seashore or the mountains on hot summer months, swim in our mighty rivers, oblivious of the muck and scum that floats by upon the surface?

Have you ever wondered why it is that most of our typhoid outbreaks occur in the hot summer months? Do you know in many instances the haphazard dumping by industrial plants of their waste matter into some of our rivers is responsible for as much as 14 feet of silt upon the bottoms of some of our major navigable rivers? Then the Army engineers have to come around with their dredges and dig it all out again every year.

Industry has dumped their waste matter into the rivers; the people have had to pay for doctors' fees, for filtration plants, and higher water rates to make the stuff drinkable, and pay to dredge out the rivers each year. It may amaze you as it did me when Judge Grover C. Ladner, one of the leading conservationists in America for the last 25 years, told me the astonishing fact that you may dump sewage into a river, but sewage never gets down to the sea, as you think it does.

It was Benjamin Franklin who said something more astonishing still—that rivers themselves never reach the sea. The Amazon is one of the few exceptions, the force of its outward flow thrusting a patch of fresh water out into the South Atlantic Ocean many miles beyond its mouth. But as rivers flow toward the sea, the rate of evaporation of water exceeds the supply of water from its tributaries. And so, you will find that sea water, or salt water comes in and extends for a considerable distance up a river from its mouth. Thus there is always a tidal barrier at the mouth of each river, which ebbs and flows all the time—and beyond which barrier no sewage can ever flow, although probably most of us have fondly believed for years that if we tossed something into the waters of the town rivers, eventually it would be carried down and out to sea.

Nature has provided certain methods of purification for the waters of our rivers under normal conditions. For instance, as only one example, dissolved oxygen. God gave us human beings lungs with which to breathe the oxygen in the air to keep us alive. He gave fish their gills, so that they may take the oxygen out of the water, and live. But when rivers are polluted with filth from factories, from tanneries, from coal mines, from oil, from chemical companies, from open sewers from cities, the river uses up its oxygen fighting this muck more quickly than it can keep taking it in from the air.

When you find oil and scum floating on the top of the water of a river, you can now realize, perhaps, how this acts as a blanket, and keeps out oxygen from the river. Therefore, decomposition sets in and you get your four stenches from our great rivers, bounded by great industrial plants upon either bank for many miles. Consider this amazing fact. In 40 years $450,000,000 worth of gold has been mined from Alaska. In the same period of time, 40 years, the canneries of Alaska have taken $500,000,000 worth of salmon from the Alaska waters. And year after year, this tremendous salmon business goes on and on—salmon come back year after year to spawn in the same waters—why? Because they know the waters are clean and not filthy, open sewers, menacing health, menacing life.

Why, then, don't we do something about this business of pollution, you say? Ah, but for years a comparatively small handful of people in America have tried. For years they have fought against staggering odds of propaganda, huge slush funds, powerful industrial lobbies in the halls of legislatures and in the halls of the Washington Congress, against bureaucracy in the Federal Government. Their progress has been slow. Set-backs were many, and often heartbreaking. Their battle was not spectacular, not the kind which provided political patronage—the public paid little heed, heard less about it. But by their doggedness, these conservationists and antipollutionists have persevered.

Today they stand upon the threshold of victory—a victory which would restore many of the great rivers and streams of America to a state of at least halfway respectable decency; a state where people would find it enjoyable to sit by them or row in a boat upon them of a summer eve without being nauseated by fumes of pollution; where the public health would be given greater safeguard and drinking water become cleaner and more pure and less synthetic than it is today in our great cities. But it is a victory that cannot be won without public support. And coming, as I do, from a city with two rivers, the condition of both of which still remains a thoroughgoing disgrace to not only Philadelphia but Pennsylvania, and contrasting these waters, contaminated solely by man and his industrial machine, with the undefiled waters you see among these mountains, flowing downward in their pureness and clarity, I frankly take the editorial view that the conservationists deserve all the support they can get. Briefly, the situation is this:

In the Congress is a bill known as the Vinson bill. In its original form it proposed, in effect, that the matter of pollution should be

a matter of State cooperation, with the Federal Government lending a helping hand to all. It proposed that a survey of the situation over the entire country be made for the guidance and comfort of States tackling the pollution problem within their own borders. The Senate, however, through the efforts of Senator LONERGAN, of Connecticut, adopted a series of amendments, which would establish a Federal control board, which, in turn, would deal with the national problem from the basis of each individual problem created by each individual watershed.

Now a full-fledged industrial campaign, headed by the United States Chamber of Commerce, is being fought to defeat these amendments and return this antipollution bill to its original form. The reason is simple. It is an admixture of industrial selfishness on the one hand and Government bureaucracy on the other. There are too many industrial companies who do not wish to spend a comparatively trivial investment in waste disposal plants of their own, as a sanitary means of getting rid of their refuse. They lobby in Washington for the privilege of still dumping their refuse on the national rivers, and obliging the public to pay the bill, put up with the stench and the menace to health.

On the matter of bureaucracy—that word health brings up the second phase of the drive to sabotage Senator LONERGAN'S efforts in the Senate. The bureaucrats seek to insist that the entire problem is one of public health, and that, therefore, the Federal Public Health Service should have full charge of dealing with pollution in America's navigable rivers. Actually, the Vinson bill, without the Senate amendments in it, becomes nothing more nor less than a proposal to have another survey. Another survey on a matter on which countless hundreds of surveys have already been made; countless surveys which have recommended many fine things; countless surveys for which the authorities have patted the experts doing the surveying on the back, sung their praises to high heaven, called them noble gentlemen and upstanding citizens, and then neatly and carefully stuffed the reports away in convenient pigeonholes, to gather dust, rot and decay like a million other surveys.

There is a million dollars involved—as a starter—and think what a bureau in Washington can do with a million dollars to start a nice new survey on an already supersurveyed subject! Consider the patronage involved; consider the job holders to be foisted on the public back. Thus too many industrialists seek to join hands with the Washington bureaucrats and together drive to emasculate the only sound bill that has ever been put forward to deal with stream pollution on a national basis.

Of course, the immediate counterclaim is that one points to the danger of bureaucracy, and then the bill, as amended today, proposes to set up a new Federal board, which would mean a new bureaucracy. Ah, yes; but to the unsuspecting, uninitiated citizen, that is bureaucratic and chamber of commerce sophistry. For which would you have, a bureaucracy eating the public revenue and giving nothing concrete, helpful, or worth while in return, or a bureaucracy that consumes public revenue, but by its work saves the public millions more than the public spends upon that bureau's upkeep? The answer is obvious.

It is clear also that pollution is a national problem and can only be dealt with successfully on that basis. For when it comes to a matter of State cooperation, there simply isn't any. That has been proven and demonstrated by bitter experience. Two States face opposite each other, divided by a river. Why should one State try to clean up that river if the politics of the other State don't care to join in that clean-up battle? But one does not begin to realize the overpowering, overwhelming importance of the story wrapped up in stream pollution in the United States until one leaves the cities and all their dirty stained waters and bathes one's face in the freshets in the hills and drinks the mountain water, which is crystal pure in its origin and should be pure as it runs into our great rivers. As Grover Ladner once wrote, "God made the rivers, but man made them sewers." Congressmen who will not be bluffed by the campaign to destroy the Lonergan amendments to the Vinson bill will be doing a service to their Nation, the import of which they may not realize. That is what I learned today while hunting for deer at Skytop.

Politics and Patriotism

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, December 15 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, NOVEMBER 8, 1937

Mr. HARRISON. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on November 8, 1937, on the Evening Star forum by Hon. James A. Farley, chairman of the Democratic National Committee, on the subject Politics and Patriotism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF CHAIRMAN JAMES A. FARLEY, OF THE DEMOCRATIC NATIONAL COMMITTEE, ON THE EVENING STAR FORUM, NOVEMBER 8, 1937

Human ingenuity manages to meet every situation that the shifting progress of mankind encounters. Sometimes and in some countries the powers in authority, for their own purposes, hinder the application of the new processes, but in this fortunate land of ours, where the people actually rule, we make the fullest use of them.

This is a time when it is particularly necessary that there should be communion between the Government and its citizens. So much is happening here and elsewhere that concerns the life and happiness of every individual that if it were not for this new agency of communication the public mind would inevitably be confused, and partisanship instead of logic would govern the thoughts of our countrymen.

I am referring to the radio, which enables me tonight to talk directly to I do not know how many millions of people. If I have any message, that message goes to my Nation-wide audience, unadulterated and unchanged. It is not subject to, for instance, the necessity of condensation which sometimes compels newspapers to pick out merely what they deem the high points of an address. It will be uncontaminated by coincident editorial comment which seeks to sway readers either toward or away from the subject matter of a speech.

Republican or Democrat, Socialist or Independent, a speaker is enabled to talk to the people, and the people are enabled to draw their own conclusions and make their own deductions and form their own opinions.

I have no fault to find with the newspapers. Indeed, if it were not for this forum of the Washington Star, I would not have the opportunity tonight of expressing certain thoughts that I hope may be of interest to my listeners. This forum is another manifestation of the fine spirit of loyalty to the freedom of speech that has made our country what it is. Every editor has, of course, a perfect right to his opinion and he would not be loyal to his trust if he did not endeavor to impress upon his readers the views that he considers correct and of service to his country. So here we have a newspaper opposed in a general way to the policies of the Roosevelt administration giving equal privilege to a supporter of the administration with those whose views perhaps coincide with the newspaper's own viewpoint.

It is, I believe, unfortunate that some newspapers because of the financial support of a particular group feel called upon to voice the sentiment of that group rather than the sincere opinion of the editor. But that is another story and, incidentally, is another example of where the radio affords a means of correcting a situation. I am not here tonight to complain of or assail what I deem a misuse of editorial opportunity. On the whole, the newspaper world has handled the side of the political controversy on which I am enlisted with reasonable fairness in its news columns. I have little right to find fault with what appears on the editorial page, provided that that editorial page represents an honest view and does not alter the facts to make them agree with the newspaper's policies.

The developments of the last 5 years have been helpful to popular government in more ways than one. I believe that the terms of the present administration at Washington have accomplished more for the preservation and extension of popular government than any similar period since the early days of the Republic. But there is another element of progress that is perhaps of even greater importance. The controversies that have arisen, the circumstance of legislation affecting directly the lives of every element, have stirred the political consciousness of this country. Actually, we are all in politics today. The great industrial magnate, the financial chieftains in Wall Street, the farmer, the mechanic, and even the hitherto forgotten man or woman without a job—they are all in politics, and to some extent they are all politicians. There is a curious delusion about politics—of lesser intensity today than in the past, but still prevailing to some extent—that there is something almost wicked about the processes through which we get our government. It is true that all politicians are not perfect, any more than that all bankers, or all merchants, or all workingmen are perfect. In every branch of the complex fabric of our social system there develops racketeers, chiselers, and even criminals. So it is with politics. Under a republican form of government no other means is provided for the establishment of national policies and the placing of individuals in the posts of authority and responsibility.

Politics may be as pure or impure as the people themselves determine. I don't know how often I have heard eminent and successful men announce that they are businessmen and not interested in politics. It has always seemed to me that that was a confession of neglected duty rather than a boast of superiority. If the wrong kind of politician gets control and uses his office for his own advantage, it is largely the fault of those people who conceive themselves too busy to be interested in their own government, except when that government adopts a policy that they deem hurtful to their particular interest or withholds a privilege that they have previously enjoyed.

Nowadays you do not hear that boast so often. That is a good thing, for a government cannot be better than the mass of the people who are governed. No administration can be successful

unless it represents the will and works for the welfare of the majority. No government can endure that disregards the rights of either majority or minority, for the day of reckoning must always come when the people themselves decide whether their governors have been faithful stewards of the Nation's welfare.

So the advent into politics of these gentlemen who have a mistaken idea that the sole purpose of government should be to see to it that they make all the money possible regardless of the prosperity of customers, consumers, or employees has its advantages. When they get close to their government it is to be hoped that some of them, at least, may be converted to the thought that a wholly prosperous community will give them more business and more consistent profits than one in which wages are so low as to make it impossible for the wheels of commerce to revolve freely. Then they may recognize the fallacy of their idea that they are singled out for persecution in the matter of taxes or such regulations as are contemplated in the wage and hour bill. They will come to understand that their government is just as much interested in their prosperity as their own chambers of commerce, of the manufacturers' associations, or like organizations. Their government is not so stupid as to believe that it could make a success of administration by starving business or by making it impossible for business to make reasonable profits.

As you know, I am around New York City a great deal, and I have listened to quite a number of important citizens who, for the moment, seem to feel that something terrible is happening to them. I wonder in which country these gentlemen would be more contented. They would have something to worry about in one of the nations governed by a dictator, who not only would tell them what hours and wages would be, but would levy on their personal fortunes as well as their business profits at his own sweet will. Or in one of those other nations whose necessities for armament compel a taxation rate that makes ours look trivial.

I wonder, furthermore, how these people figure out that in a world almost wholly disturbed they should somehow be permitted here to proceed in the manner of the old regime where they enjoyed a ducal immunity from the economic problems of the people generally. Now, mind you, I am talking of men who think they are good citizens, who regard themselves as the bulwark of national prosperity. It is difficult to get them to realize that the United States is today the happiest country in the world. No threat of socialism, communism, or dictatorship hangs over them. They are free to make what investments they please or to make no investments. The banks to which they entrust their money are safeguarded and bulwarked by more precautionary measures than the financial institutions anywhere else in the world.

It would seem that men so situated would be at pains to instill confidence instead of disseminating fear. If they think some of the taxes are too high, or some of the tax measures too drastic, the way is open to them to put their case before Congress. They ought to know that no Congress willingly imposes greater taxes than the necessity of the country demands. Under the legislation that has been put on the books in the last 5 years their businesses have climbed up from the dismal swamp of depression to a dividend-paying eminence. If any one of them would for a moment contrast the present position of his enterprises with what they were before those measures were put on the statute books, I would think that he would feel deeply grateful for those enactments rather than highly resentful.

I do not think any of them has a very clear idea of what he is afraid of. They talk about the wage and hour bill that is up for enactment at the special session of Congress. Nobody knows the form it will take ultimately. Our national legislators are still working on it. These Members of Congress are perhaps more acutely conscious of what is involved than any other group in the United States. They are responsible to their constituents and they know that unless the performance of their duties is satisfactory to their home people there will be new faces at the Capitol.

Perhaps the fault lies less with these trembling capitalists than with the amateur economists enlisted in the anti-New Deal campaign.

What people ought to understand is that such questions as are involved in the wage and hour bill and in farm legislation, for example, have really no place in partisan politics. I believe I am safe in asserting that if Franklin D. Roosevelt had been a reactionary our political adversaries would have been just as loud in their criticism and would themselves have espoused the liberal view. In other words, in partisan politics the fellow on the other side is never correct; no matter whether he goes to the right or the left, or sticks to the middle of the road.

It is a general impression, I know, that a dominant party feels it the occasion of rejoicing when the opposition party is reduced to helplessness and hopelessness. As a politician, I may entertain sentiments similar to these, but as an American citizen I can see many, many dangers in the too great dominance of one of our political organizations. No party is great enough to feel itself above criticism. I believe that a strong opposition minority is absolutely necessary under our system of government. I believe that good government is the only permanent guaranty of political success. I mean by that that political strategies cannot keep one party in power unless that party delivers the goods in making and keeping our country contented and prosperous to the extent that government can compass those ideal conditions. This is true not only of a national administration but of State and city governments as well.

Of course, there is a limit to the capacity of Government to control or direct every event. Convulsions of nature, floods and droughts, may disturb the progress of our prosperity. No government can stop these, but what it can do and what our Government is endeavoring to do is to take such steps as will mitigate the consequences of such disasters. That is what the soil-erosion projects and the flood-control enterprises and the forest-conservation work of the C. C. C., for instance, really mean. Economic measures should be as clear out of the field of politics as should our international relations. Nobody knows where conditions that exist in Europe and in Asia may lead the world. Nobody knows how the possible eventualities of these situations may hit our own peace and comfort. Nations engaged in desperate wars are seldom scrupulous in their observance of the rights of neutrals. Naturally our Government must avoid involvement in these struggles. Peace in a war-minded world is not something that can be attained automatically. It requires skill and patience and untiring watchfulness. It implies preparedness, for in the fury of war it is only the nation that the combatants know is capable of resisting that is immune from aggression.

What I am trying to convey is that there is an appalling responsibility in government beyond the mere levying of taxes and maintaining law and order among ourselves. And the only means I know of keeping a government on its toes so that it will exercise all its functions for the benefit of all our people is the existence of a minority party of such strength as will provide an alternative if the party in power falls down. Therefore it is with real regret that I view the present course of our opposition. If it objects to the Democratic policy it ought to have a policy of its own to offer as an alternative. It ought to have leadership in which its members have confidence. It ought to have a program; and it ought to have courage to announce that program. It can get nowhere by fuming at flyspecks on the fabric of the administration of public affairs. Intelligent criticism must be the province of a minority party if that minority party is to amount to anything. Whenever it points to a flaw it is incumbent upon it to propose at the same time a remedy. In that way alone can a minority party be of service to the country. Mere calling of names or explosive generalities conveying merely the thought that it could do better with the job of government than the fellow who has the responsibility can help neither the Republican Party nor the United States at large.

Perhaps I am not technically accurate in referring to my own political group as the dominant party. No party has a dictatorship over our country. The actual power that makes and unmakes administrations resides in that great army that is independent in politics, that votes for those things it deems best for our people regardless of the label on the ticket. The regular organizations, however strong and efficient, are not large enough numerically to win an election by themselves. What they do is to give expression to certain principles. After that, it is up to them to convince a sufficient number of the people outside of the organization to vote with them to effect those policies—which means to elect the candidates pledged to those policies.

The present administration came into power, and remains in power, because it offered a program that millions of Republicans, independents, people of every party and of no party, endorsed and therefore joined the rank and file of the Democrats on election day. So it is this aggregation of political and nonpolitical elements that is behind Franklin D. Roosevelt.

No government that ever existed, no government that could even be imagined, can please everybody. No President of the United States from Washington down has failed to incur criticism, having his motives impugned, his sincerity assailed, and his ability doubted. The greatest of these Presidents have generally come in for the most vicious and extravagant of these barrages of hostility. I suppose it will always be so. Strong men provoke resistance and hostility. It is only the weaklings that even partly escape.

But our good old country rolls on, ever greater, ever advancing, and the bitter controversies of today become only a casual footnote in the history books of tomorrow.

How much attention do any of us pay to the charge that George Washington aspired to a crown; that Thomas Jefferson ignored the Constitution and flouted the Supreme Court; that Andrew Jackson was a fire-eating duelist who consulted nothing but his own roughneck desires in making his decisions; or that Lincoln plunged the country into a terrible war because he would not heed the counsel of the conservatives of his day? Yet, who can say that in their time the bitter minorities that assailed and lampooned these great Presidents were not of use?

One political campaign parallels the history of another. We have the same violent convulsions of feeling, the same intemperate attacks, and out of it all we get a pretty fair average of efficiency in public office and a contribution to the general happiness of our people.

Democracy is not a perfect form of government, but it is the best that humanity has so far been able to devise. One demonstration of the comparative excellence of our system is the enviable position of the United States among the great nations of the world. We are almost the only people who can go to bed at night without dread that the specter of war, or revolution, or tyranny will confront us in the morning.

We are a country without fear—except the fear entertained by a comparatively few prosperous people that they may not make as much money as they would like to make and that somehow politics is to blame for that.

And, my friends, even those of you who have entertained the thought that politics is something evil, something unfashionable, and something to be avoided, permit me to tell you, as I say good-night to the Star Forum audience, that it is this same politics that has given you the blessings to which I have referred.

The Federal Budget and the National Welfare

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, December 15 (legislative day of Tuesday, November 16), 1937

ADDRESS BY WAYNE C. TAYLOR, ASSISTANT SECRETARY OF THE TREASURY, NEW YORK CITY, DECEMBER 7, 1937

Mr. MINTON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by Wayne C. Taylor, Fiscal Assistant Secretary of the Treasury, before the Economic Club, at the Hotel Astor, New York City, on Tuesday, December 7, 1937, on the subject of "The Federal Budget and the National Welfare."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The subject which the Economic Club has asked me to discuss tonight is the Federal Budget and the national welfare. The position of words as well as their fundamental meaning is of tremendous importance. Those of you who may have struggled with advertising copy know that merely changing the order of words may entirely change the emphasis and significance of a message. Therefore, I am going to transpose the words of the subject so that it now reads, "The National Welfare and the Federal Budget." I am making this transposition largely because I have listened to so many discussions about budgets and figures which never got beyond the mechanics of how a budget should be presented or how accurate a particular figure is. Most of you have been exposed to similar hardships in your homes, your business meetings, and in your welfare and civic activities. Almost equally trying experiences mar similar meetings when the combatants are unable to decide what they want to budget. On the whole I think that the arguments on mechanics and figures are the most painful and the least productive, so I am transposing the words of the subject as I have indicated in order, first, to discuss our national welfare. If we can agree on national welfare we won't have much trouble with how to present the Federal Budget, or how to work out a reasonable plan to pay for the amount of national welfare which we agree we need and can afford in any particular period.

We can make several convenient divisions of national welfare, but I think that if we can first break it down into two major groups, all further subdivisions will present few difficulties. The two divisions which I suggest are the present and future welfare of the natural resources which are contained within our borders and the present and future welfare of the men, women, and children who now compose our citizenry and that of their descendants. It must be obvious that unless we do a reasonably good job of developing, utilizing, and conserving our national resources, any steps that we may take toward improving the physical and mental well-being of our citizens will eventually be fruitless and will serve only to delay the inevitable day of reckoning. In fact, we already have strong evidence that urgent demands for payment for damages which we incurred during our exuberant earlier years are being presented to us now. It must be devoutly hoped that the size of the bill combined with our advancing years as a nation will have the necessary sobering effect.

In retrospect our treatment of our national resources is easy to understand but difficult to justify. Our ancestors were doubly blessed, first, by the extent of the resources themselves, and second, by the fact that the people who controlled them were few in number and ill equipped to defend their possessions against our aggressive and resourceful forbears, particularly after said forbears outnumbered them. Once in control our ancestors lost little time in developing these resources; in fact, they did an amazing job, but when we talk of the American system and the self-reliant, rugged individualist pioneers who carved an empire out of the wilderness, we should remember that they had some pretty good material to work on, that nobody was bothering them very much while they worked, and that practically every boat brought eager helpers who had heard about the land of honey and opportunity. When the helpers didn't come fast enough they turned to forcible recruiting methods which left trails of disaster in their wake which are even now far from obliterated. We can be proud of the speed with which the pioneers answered the knock of opportunity, but when we thank them for the heritage which they have passed on to our generation we might ask them why they left so much for us to clean up.

Various attempts have been made to estimate the damages, to check the practices which create these problems, and to establish a coordinated plan under which intelligent national and regional action can be carried out. We know much more about the problems than we have ever known before, but we still lack the authority and the means to establish a coordinated effort. If we had realized the full extent of these problems even as late as 25 years ago, and if we had drawn adequate plans for dealing with them, much of the deterioration which faces us now could have been avoided and we would have been in a position to budget the required expenditures on a reasonably intelligent flexible basis. If we had been in a position more fully to concentrate on national maintenance when we entered the depression, we would have much more for our money today. Expenditures of this character are necessities; they correspond to the maintenance account of a railroad or of an industrial plant; they can be deferred for short periods, but they cannot be evaded permanently.

There must be general agreement that proper maintenance of our national resources should be included in any program of national welfare.

Assuming that we can insure our supply of raw materials by adequate and intelligent national maintenance expenditures, we can carry the industrial analogy a step further and discuss plant improvements. It seems almost unnecessary to say that no well-managed industrial concern would go in for extensive plant additions and improvements if its management were not satisfied that its sources of raw material and its markets were reasonably assured.

Proper plant improvements must be designed with utility uppermost in our minds. If we can add beauty to utility, so much the better, but we must be constantly on guard against men with what you might describe as a monument complex. Our great cities are already sufficiently decorated with tributes of this character to the vision of some of our master builders. Incidentally somewhat unpleasant reminders of their visions decorate the portfolios of our closed banks.

While national or government plant improvement programs should adhere to the same rules, the character and purpose of many government plant additions present special circumstances which make a transition from necessity to utility, to beauty, to extravagant luxury almost imperceptible. Largely because we did not have a properly prepared plan for national maintenance we supplemented our scattered efforts in that field with a program of public construction which created employment in practically every industry. The work was well and honestly done, and our country can well afford occasional efforts of this type, but we cannot include anything beyond necessity construction in any fundamental program of national welfare.

It is the second major division of national welfare which presents the greatest challenge: The present and future welfare of the men, women, and children who live within our borders. What do we as a nation want for them? What do they as individuals want from their Government? Where do you start? Where do you stop?

History indicates no stopping places, nor should we search for them, but we can designate and strive to attain nearby objectives, goals which our own generation can hope to reach. It really doesn't make much difference where we start, as long as we start from the realities of today.

Just as our natural resources and the machines which we have created to make them serve us are proper subjects for national pride, so is the population itself. It is fine human material. These men and women and their ancestors came here because they didn't like things where they were or because they heard about the opportunities here. They brought with them their restlessness, but they also carried with them their desire for something better, their courage, their strength, their ingenuity, and their adaptability. They have transmitted these qualities to their descendants and we shall hand them on to our successors.

Each of these men and women has individual capabilities, tastes and talents; most of them can rise to great heights in emergencies—all that many of them need is the opportunity to be productive, they furnish their own incentives. Some unfortunates are so handicapped that they are unable to become truly productive, and others are later forced to curtail their productive efforts when they are stricken by physical or mental illness. We do not know how many of our fellow citizens are thus handicapped; we may find that a high percentage of the stranded sections of our population consists of these unfortunates who, for one reason or another, cannot take part in the productive efforts of their generation. But we do know that we have sufficient natural resources and more than enough fully equipped productive individuals to give these unfortunates the simple care and protection which they require during their comparatively short stay within our borders. We can unhesitatingly include their care and protection in any minimum program of national welfare.

For the capable, able-bodied, intelligent citizens we must be sure that they are given physical and mental preparation adequate for them to take full part in the productive activities of their contemporaries. When they enter the productive period of their lives they must be given every opportunity and incentive to be truly productive in the fields in which their individual capabilities and talents will be most effective. We cannot tell what individual incentives may hold the greatest appeals; for example, red ribbons, high sounding titles, the affection and respect of fellow citizens or of an individual, the warm feeling of satisfaction which a job well done instills, the desire to possess something which is considered to be particularly useful or especially beautiful, have all offered

effective incentives in various periods of world history. We can tell, however, when incentives and opportunities are lacking or appear to be lacking, and when we find such conditions we must hasten to correct them, for, in the last analysis, the efforts of the productive group must provide protection for the period of preparation, care for the unfortunates, and minimum comfort and security for those who have passed on into gentle twilight which should pervade the last hours of the lives of American citizens.

In making these adjustments we shall make mistakes; the factors are so complex and the balance is so delicate that no single adjustment can be counted on, but it is my strong conviction that we should err on the side of maximum opportunity rather than on the side of maximum individual incentive, particularly in the case of the incentives which we express in terms of dollars and cents.

Maximum opportunities and adequate incentives must certainly be added to our program of minimum national welfare.

It is impossible to think of our national welfare without thinking of government, whether local, State, or National, the powers and responsibilities which we have entrusted to its many subdivisions, its organization, and the men and women who attempt to make these subdivisions function. It is easy to describe an ideal democracy; it is easier still to say that the only thing wrong with our Government at any particular period is the selection, which we and our fellow citizens have helped to make, of the men and women who hold our elective or appointive offices. But it is not easy to make the effort, which we must make if we are to correct structural faults which become glaringly apparent to anyone who takes the trouble to examine our governmental organizations.

When you choose to undertake this essential and urgent examination you will find, as I have found, that most of the men and women who have chosen the Federal Government service as a career do an amazingly good job, but that despairing of any action which will remove their primary organization handicaps, they have worked out individual extralegal methods which permit them to carry on your business. I have less first-hand knowledge of State and local government personnel, but I believe that you will also find many willing and capable public servants in these smaller government organizations who are similarly handicapped.

One of your guests of honor this evening has recently completed an economic survey of American shipping and our important Government activities in this field. In his public report he has stated that not less than 50 separate Federal bureaus exercise some measure of jurisdiction over shipping. His problem is a comparatively simple one because he has only to deal with other Federal agencies, and he need not take into consideration the overlapping and indeterminate State and local jurisdictions and responsibilities, which complicate many other fields of Government activity. I can assure you that no private enterprise could survive if it were so handicapped unless it happened to completely control some essential raw material, and even then it would survive only until some one devised a substitute. In our search for monopolies which gouge the consumer, we can ill afford to pass by the Government monopoly which we and our fellow citizens have taken the trouble to create and apparently tolerate. By its very nature it is our own creation and only by our own positive decisions, expressed through our chosen representatives in our local, State, and National legislative assemblies can we correct its structural faults.

In reaching our decisions, we must clearly recognize that modern transportation and communication have broken down the lines, which now attempt to subdivide responsibilities, to such an extent that they have lost whatever economic significance they may have once possessed. We are citizens of a unified nation where sectional economic interests are strong, but not overpoweringly so, and as a unified nation we must reorganize our laws and our governmental machinery to enable our own Federal Government to deal intelligently with truly national problems and to assure that truly local problems are handled efficiently and willingly by local governments. It is my strong feeling that we must add to our list of urgent minimum national welfare requirements efficient simplified Government organization for our local communities, our States, and our National Government.

Practically all past and present actions of governments are reflected in governmental budgets, governmental tax structures, and the indebtedness of governments. They record the old and new activities and responsibilities which have been entrusted to governments; they show wars which have been waged, floods, droughts, and other visitations of Nature, and past depressions; they register the current policies of nations, whether they fear attack or are preparing to be aggressors, whether they are developing, conserving, or wasting their national resources; the current productive efforts of their population; the current condition of private and public credit and those intangible but all-important items, confidence or lack of confidence of their own citizens and of the citizens of other countries, in the future of a nation or in the current policies of those entrusted with the conduct of its affairs; all these and many more factors of importance eventually appear in these records of the past and present. They can only disappear if the records themselves are destroyed. History teaches us that this action only occurs when a nation loses its identity or when its people rise in revolt, overthrow its government, and completely repudiate its past.

Our own Federal records show vividly the remarkable development of our rich resources, the industry of our people, and the tragic mistakes which have marred our short history. The disgraceful Civil War which interrupted our internal development, our abortive experiment in conquest, our crusade to make the world safe for democracy, the new era, the depression which it helped to create, and the great progress which we have made in our efforts to emerge from it, and to guard against similar occurences are all clearly portrayed in the voluminous reports which our Government presents to its citizens.

The number of these reports and the manner in which they tabulate daily, monthly, and annual changes in the financial condition of our Federal Government offer us complete up-to-date information as soon as these changes can be recorded, but we must look to public statements of policy by responsible administration executives, to current discussions and actions of our representatives in Congress and to expressions of opinion by private citizens if we wish to understand or anticipate what these reports will show in the near or distant future.

The President, the Secretary of the Treasury, and other administration spokesmen have vigorously and repeatedly stated their convictions that untimely, uneconomic expenditures in the form of public works or excessive subsidies to areas, industries, and economic groups must stop. Many of our representatives in both houses of Congress have endorsed these statements, and polls of public sentiment have clearly indicated that the country realizes the necessity for a balanced Budget.

We can look at the future with renewed confidence as we see this evidence accumulate, but we can be a little discouraged when, in the face of these urgent demands in the national interest, we observe the reluctance of special areas, industries, and economic groups to remove as much as one foot from the trough or even to move over to make room for a really hungry fellow citizen and the expressions of those who apparently represent these special interests in Congress.

We must reluctantly agree that any representative in either House of Congress who is incapable of thinking and acting in the national interest when the national interest is so clear is not qualified to represent a section of this country in the House of Representatives, or one of our States in the United States Senate.

Without fear of contradiction, I add the elimination of untimely, uneconomic Federal expenditures and a balanced Federal Budget to our list of minimum national-welfare requirements.

I offer no further suggestions for immediate objectives. In our own thinking and in our approach to our national problems we must realize that this is a transition period in the world, and that peoples and thoughts are on the march. When this transition period started doesn't make much difference, nor is it important for us to know when the individual movements came into being. But we must recognize the fact that if we include constitutional monarchies under the general heading of democracies, all the recruits which the two major movements have been able to attract have come from the ranks of democracies, and that the movement in the Far East, though it is different in character, also represents the march of a state whose policies embody most of the totalitarian principles into the territory of a state which was working night and day toward an oriental adaptation of a strong democracy.

It is not necessary for us to envisage an ultimate conflict of these two marching columns, nor is it necessary for us to wonder if one of these columns might at some future time march actively against us. But we would be foolish indeed if we did not examine every aspect of our national life to satisfy ourselves that it still offers the vital appeal which brought our democratic form of government into being. If we do this seriously, and if we consciously devote to our national problems the effort and the intelligence which they deserve, we need have no fear of other political faiths or of new "isms" as yet unborn. But if we hesitate, looking first at one marching column and then at the other, we may find that we have neither a destination nor followers.

In striving for our solutions, it matters not where we come from or what we think; if we make the effort, we can find the solution. We must approach our problems with confidence in ourselves, with respect for our fellow citizens and their opinions, and without fear, distrust, or hate in our hearts. If we cannot meet these simple requirements, there will be no place for us at the council table, and we will have to abide by decisions in which we have taken no part.

The Equal Rights Amendment

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, December 15 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. EDWARD R. BURKE, OF NEBRASKA, DECEMBER 14, 1937

Mr. SCHWELLENBACH. Mr. President, last evening the junior Senator from Nebraska [Mr. BURKE] delivered a very

interesting address before the annual meeting of the National Woman's Party at Washington, D. C. The address was broadcast by the Columbia Broadcasting Co. The subject of the address was "The Equal Rights Amendment." I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the 3d day of next January the second regular session of the Seventy-fifth Congress will be called to order. It is now assured that one of the early matters to receive consideration will be the resolution submitting to the States the equal-rights amendment to the Constitution. What is that amendment? It is short. Its meaning cannot be misunderstood. It reads:

"Men and women shall have equal rights throughout the United States and every place subject to its jurisdiction."

That resolution is now pending before the Committee on the Judiciary of the Senate and of the House. More than that: In each case it has behind it the unanimous favorable report of a subcommittee. Anyone familiar with legislative procedure will realize how important a consideration is the favorable report of a subcommittee. If a majority of the 18 members of the Senate committee and of the 25 members of the House group can be convinced of the wisdom and fairness of the proposal, the resolution will move out and take its place on the calendar of each House. In due course it will be reached for consideration. There will then rest on the proponents the very heavy burden of securing approval by a two-thirds majority in the Senate and in the House. There is at least reasonable ground to hope that such a number may be persuaded that this is a question of so great importance that the voters of the 48 States should have the right to pass judgment thereon. Favorable action must then be obtained, and within 7 years from the date of submission, in 36 States. This, in short, is the legislative status of the proposed amendment. Ways and means of securing, first, favorable committee action, then approval by Congress, and finally ratification by the country are engaging, I have no doubt, the serious attention of the host of forceful and intelligent women who have for so long, and with such marked ability and persistence, been directing this movement.

May we at this time briefly enumerate and weigh some of the considerations that will move certain people to vigorously oppose, others to heartily support, this proposed amendment? I cannot do better, it seems to me, than to recite my own experience with the problem.

Upon the first suggestion of an amendment of any kind to the Constitution I remind myself that in that document the deliberate will of the people is expressed. So imbued with wisdom and vision were the able men who drafted it that for 150 years it has well served its purpose with but very few changes. Amending the Constitution is a serious matter, not to be lightly undertaken. My first reaction to this proposal was that there would be extreme difficulty in demonstrating the necessity of now writing into our fundamental law a provision that men and women shall have equal rights. I venture the assertion that this will be the immediate response of most citizens who have not had occasion to examine the question with care. So far as rights are concerned, they will ask, is there not already equality between men and women? The average citizen will go on to say that in the matter of duties and obligations the law may indeed somewhat favor women, and he sees no objection to that. But that there really exist any discriminations against women, so far as their rights are concerned, will be questioned, if not flatly denied. It becomes necessary, therefore, at the outset to convince the doubting ones that men and women do not have equal rights. Furthermore, proof should be offered that the best interests of women, and of society as a whole, will be advanced if there be an end to attempted discriminations and exemptions in favor of women.

Now, it does not seem to me a matter of particular difficulty to maintain the burden of proof on both of these propositions. Do men and women have equal rights under the law? It is only necessary to suggest to the open-minded person that he take the time to examine the laws of the 48 States. As to be expected, he will find a great diversity. In some States there has been reached an approach to equality. In others very serious inequality exists. I shall merely suggest a few instances of unequal treatment that such an examination will disclose.

(a) The right to hold public office: There are still some States in which women are declared by law to be ineligible to hold certain offices. Now there may well be certain public offices which women ought not to fill. If such be the case, those who are charged with the duty of electing or appointing the officeholder can very well be trusted to place a man in the position. So far as the law is concerned, equality requires that the opportunity shall be open to women to demonstrate that they have the necessary qualifications.

(b) The right of jury service: In more than a score of States, either by constitutional or statutory provision, women are barred from rendering the important service of sitting in the jury box. In a number of other States, the permission is grudgingly granted, but not made mandatory as in the case of man. The effect is much the same as if the lawmakers were to say to women: "We don't want you to serve on juries in this State. But if you insist, we will have to bear with you as well as we can."

(c) The right to work: In more than half of the States women are prohibited by law from engaging in certain occupations. Again I say, there may be jobs that women ought not to try to fill. But the same is true of many men. This is a matter for individual agreement, and not a proper subject for legal prohibition.

(d) Wages, hours, and conditions of work: The wages and hours of work of women in certain occupations, are regulated, and work of women under specified conditions is prohibited, even though men engaged in the same calling are free from restrictions.

(e) There are numerous other examples where, by law, men and women are not placed on an equality—in the establishment of a legal domicile, in the management and disposition of property, in the right to contract, in the rights and obligations of mothers respecting their children, etc.

May we now consider the second point? Is it for the ultimate good of womankind, and of organized society, that discrimination, supposedly for the protection of women, should be written into the law? Take the question of jury service. Why should there be objection that in some jurisdictions women are relieved altogether of jury service, and in others are subject to call only at their own pleasure? I would answer, that as long as this inequality exists there will be pinned upon womanhood the badge of inferiority. It will not do to claim that the sole basis for this exemption is that the household and motherhood duties of women entitle them to special treatment. Back of that is the feeling of those who oppose removal of this type of inequality that women do not have the intelligence to render satisfactory jury service, that they are too subject to be carried away by emotional pleas, too apt to be influenced by superficial impressions rather than by the material evidence. Experience in Great Britain and elsewhere abroad, as well as in a number of States, completely refutes this contention.

It may be said further that it is not fair, either to women or to society, to make available only to men the value of jury service as a training school for citizenship. With the duty of suffrage resting on women, they need the experience in the solution of problems to be obtained in no other way so well as requiring them to sit as triers of the facts in courts of law.

Consider next the protective legislation enacted for women only, who engage in industrial work. A persuasive argument can be presented in support of this type of legislation on the grounds of humanitarianism and in recognition of the inexperience of women in bargaining for their own rights as workers. Close study of the question has convinced me that in the end it will be better for all workers if protection is thrown, not around any special group or class or sex, but around the job itself. Labor should be encouraged in its insistence, and society should demand, that all work, no matter by whom performed, shall be under decent conditions, at a fair wage, and for reasonable hours.

We may be further assured of the correctness of this conclusion when we consider that many of those who most vehemently support restrictions on women workers at heart do not want women in industry at all. They believe that each woman who is permitted to hold down a job means the displacement of a man. Make the restrictions strong enough, they think, and fewer women will be employed. In a period of widespread unemployment there is force to this argument. Yet it is essentially short-sighted. There ought to be, if we but had the sense to so arrange it, worthwhile work under proper conditions for all, women and men alike. We do but obstruct and delay a real solution of the problem of employment, if we give heed to those who would restrict women workers in order to make more jobs for men.

If, then, inequality does exist between men and women, if this unequal treatment, however worthy the motives that occasioned it, has outlived its usefulness and deprives society of the full measure of the contribution that might be made by womankind, why should it be longer tolerated? There is only one answer. It has been so; therefore it must be right and should continue. Practically the same arguments that were used against the grant of full suffrage to women are now directed against this amendment, the purpose of which is to fully liberate women from man-made restrictions.

It is worth while to repeat the wise words of Abigail Adams to her husband, John Adams, while he was serving as a Member of the Continental Congress. She wrote to her distinguished husband:

"I long to hear that you have declared an independency, and, by the way, in the new code of laws, which I suppose it will be necessary for you to make, I desire you would remember the ladies and be more generous and favorable to them than were your ancestors. Do not put such unlimited power into the hands of husbands. Remember all men would be tyrants if they could."

Women have progressed a long way since those words were penned. In the face of the most stringent opposition they have demanded and received some degree of recognition of their right to be educated, to participate in government, to enter the professions, to work—in a word, to live their lives in their own way as free human beings. There remains only the adoption of this simple amendment to the Constitution and women will stand upon an equal footing with men. You ask no special privileges. You crave no favors because you are women. You are willing to match your strength and your intelligence with your brothers. Write into the Constitution this amendment and women will be free to make their fullest possible contribution to the building of a better America.

Lakes-to-the-Gulf Waterway

EXTENSION OF REMARKS

OF

HON. CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

ADDRESS BY HON. WILLIAM H. DIETERICH, SENATOR FROM ILLINOIS, DECEMBER 3, 1937

Mr. PARSONS. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following address delivered by Hon. WILLIAM H. DIETERICH, United States Senator from Illinois, at a banquet held in the gold room of the Congress Hotel, Chicago, Ill., December 3, 1937, in the interest of the Lakes-to-the-Gulf waterway:

I am appreciative of the privilege of discussing for a brief time the bill introduced in the House of Representatives by Congressman PARSONS, authorizing the flow of a sufficient quantity of water from Lake Michigan for the purpose of making possible a commercially useful waterway from the Lakes to the Gulf.

I am in full sympathy with the object sought to be accomplished by this measure, and I am conscious of its importance not only to the city of Chicago and the State of Illinois but, also, to the States lying within the Mississippi Valley, as well as the Nation as a whole.

The movement to construct a commercially useful waterway connecting the Great Lakes with the Gulf of Mexico dates back far beyond the memory of any living man. The conception of this project is older than the Republic itself. The fight to accomplish it is an important part of the history of the development of the great Central West.

The interference and obstructions which now threaten to strangle and destroy its usefulness are not only shameful and selfish but constitute the most unjust denial of the legal rights of a people ever recorded in an opinion of a court.

The natural advantages which the people of any locality have a right to enjoy in the matter of transportation and communication are too sacred to be bartered away or surrendered. In the present instance, Illinois and the States of the valley do not purpose to surrender their right to construct and maintain this waterway from the Lakes to the Gulf.

This waterway is essential to our prosperity in times of peace and indispensable for the national defense in times of war.

Let me ask your indulgence while I recall to your minds the history of the development of this great artery of our national commerce.

The science of geology, with every precision with which man can read the physical changes of the earth's surface, points with unmistakable accuracy to the fact that, at no remote time, the Mississippi Valley and the Great Lakes were within the same watershed, and that the waters of Lake Michigan found their outlet through the Des Plaines, the Illinois, and the Mississippi Rivers to the Gulf of Mexico.

At the time when the first explorers visited this region these waters were separated by only a shallow portage, if separated at all.

When the early explorers, Marquette and Joliet, penetrated the wilderness in 1673, the geography of the country was not known other than that there was a chain of inland lakes lying in the north central part of the continent and a great river finding its source in the Lakes region which flowed into the Gulf of Mexico.

It must be remembered that during this early period of our country's history—reaching into the early years of our Republic—water was the only method of transportation that could be looked forward to for the development of commerce.

After the Revolutionary War, when our people began to settle the States of the Northwest and the Mississippi Valley, the problem of transportation was the important problem of the age.

It was necessary that some means be found to carry the products of the Lakes region to the ocean.

Our ocean commerce at that time was with the nations of Europe, and the St. Lawrence was the natural waterway leading from the Lakes region to the sea.

Efforts were made to effect some agreement with Great Britain for the joint use of the St. Lawrence by the two Nations, but to this Great Britain would not give consent.

The rule of public law which at that time obtained in reference to the use of navigable rivers flowing across national boundaries was that the right of navigation belonged to all nations touching their banks. This rule was recognized by all the civilized nations of the world.

However, disregarding the rule of public law in the case of the St. Lawrence, England boldly announced the doctrine that, inasmuch as she was the sole owner of both banks of the river, she, and she alone, had the right to the use and control of the river for the purpose of navigation and refused to enter into any negotiations concerning the same.

This attitude on the part of Great Britain made it imperative for the proper development of our agricultural and commercial interests in the Great Lakes region, that we find another outlet for our ocean-going commerce.

Let me give you some citations from recorded history pertaining to this waterway.

As early as 1808, Albert Gallatin, Secretary of the Treasury, urged upon the Senate that a canal be built which had for its purpose the reopening of the Great Lakes outlet to the sea by way of the waters of the Chicago, Des Plaines, Illinois, and Mississippi Rivers.

In 1810 Congress adopted a resolution offered by Peter B. Porter, Congressman from New York, having the same purpose in view.

In 1817 Congress adopted a resolution offered by John Holmes, of Massachusetts, requiring the Committee on Roads and Canals to investigate the expediency of this canal.

Illinois was admitted to the Union in 1818 with a population of less than 60,000.

In 1819 John Calhoun, Secretary of War, recommended that this canal be constructed on account of its importance for commerce and for military operations, following a report made in 1818 by Maj. Stephen H. Long, of the United States Army.

In 1821 a resolution was adopted by Congress directing the Committee on Public Lands to determine what was necessary to construct this canal through the public lands of the United States.

The correspondence between John Adams, Secretary of State, and the British Minister Plenipotentiary discloses that the British Government's attention was again called to the fact that upon the sound principles of public law, American citizens were legally entitled to navigate the St. Lawrence River, but the British Government persisted in its refusal to recede from its position of claiming the exclusive right of navigation of the St. Lawrence, and persisted in its refusal to enter into negotiations regarding the same.

In 1822 the Congress passed an act authorizing the State of Illinois to open this canal through the public lands, but, by reason of lack of funds, the State did not undertake its construction.

In 1827 Congress again passed an act authorizing the State of Illinois to open this canal and provided therein that there should be granted to the State of Illinois lands to the amount of 284,000 acres for the purpose of aiding the State in constructing the canal.

In 1836 the act providing for the construction of the Illinois and Michigan Canal was passed by the State.

The original design was for a deep-cut canal fed by gravity flow from Lake Michigan, but it was built on the shallow-cut plan and finally completed in 1848 at a cost of over six and one-half millions of dollars. The canal was built to a width of 40 feet and a depth of 6 feet.

It might be noted that the population of Chicago in 1848 was approximately 20,000.

In 1866, pursuant to an act of Congress, the War Department recommended the enlargement of this canal. General Wilson, in presenting a survey for the improvement, called attention to the fact that, "The Illinois River seems to have been especially designed by nature as the line by which the waters of Lake Michigan are to be connected with the Mississippi." He also stated, "A moment's consideration will show that at no remote period the waters of the lake must have been carried off by these streams, as well as by the St. Lawrence."

Reports of the Chief of Engineers made in 1868, 1880, 1884, and 1887 show an entire accord on the part of the Federal Government and the State of Illinois to increase the capacity of this canal. In the report of the Chief of Engineers of 1887, he stated that, "The United States and the State of Illinois have long been committed to the project of opening a water communication between the Mississippi River and the northern lakes of capacity sufficient for the wants of commerce and for the exigencies of our national defense, should these ever arise." The report further states that, "The problem of connecting Lake Michigan with the Mississippi River by a commodious waterway that could be used for commercial, military, and naval purposes has received attention from our most thoughtful statesmen from the day of Albert Gallatin to the present."

In 1889 the Legislature of the State of Illinois passed an act, pursuant to which the present canal was constructed providing for an ultimate flow of 10,000 cubic second-feet.

This canal was completed in 1901, and has been in operation ever since.

The legal right to withdraw water from Lake Michigan for sanitary and navigation purposes had never been questioned by our own Government, or by any of the governments of the British possessions to the north bordering on such lakes.

That the Chicago Drainage Canal was to become a link in the waterway from the Lakes to the Gulf was recognized by the Federal Government as early as 1896, when the Secretary of War authorized the enlargement of the Chicago River in anticipation of the completion of the canal.

The canal was again recognized as a part of this waterway when the Secretary of War authorized it to be opened on May 8, 1899, and again when the Secretary authorized the withdrawal of 3,333

cubic feet per second on April 9, 1901, and again when the Secretary of War authorized an increase of the flow of 4,167 cubic feet per second on December 5, 1901, and again when the Secretary of War authorized the construction of the Calumet Sag Canal, with a discharge capacity of not to exceed 2,000 cubic feet per second.

In the meantime, the withdrawal of water through this canal had entered into negotiations and treaty between the United States and Great Britain, which Governments had created an International Waterways Commission composed of three members from Canada and three representing the United States to investigate and report upon the condition of the boundary waters between the United States and Canada and make such recommendations for improvements and regulations as to best serve the interests of navigation in said waters.

The United States representatives on this Commission were appointed October 16, 1903, and the Canadian representatives were appointed January 7, 1905. The Commission began negotiations which finally resulted in the Boundary Waters Treaty of 1909.

The question of the diversion of the waters for sanitary and other purposes by either of the high contracting parties was given careful consideration.

On March 19, 1906, the American members of the International Waterways Commission submitted to Congress their report, in which they advised at that time that the Chicago Drainage Canal constructed under the authority of the State of Illinois was designed to divert 10,000 cubic feet per second, which water would naturally flow over Niagara Falls. That on the date of said report it had a capacity of 5,000 cubic feet per second, and that the flow had been limited by the Secretary of War to about 4,200 cubic feet per second.

The American members of the Commission found that the total amount of water authorized to be taken from Niagara River above the Falls to be 60,900 second-feet.

They recommended that the Secretary of War be authorized to grant permits for the diversion on the American side to the amount of 28,500 cubic feet, to be allocated as follows: Niagara Falls Hydraulic Power & Manufacturing Co., 9,500; Niagara Falls Power Co., 8,600; Erie Canal, 400; and the Chicago Drainage Canal, 10,000.

They recommended that the amount to be diverted on the Canadian side be 36,000 cubic feet per second, to be allocated as follows: Canadian Niagara Power Co., 9,500; Ontario Power Co., 12,000; Electrical Development Co., 11,200; Niagara Falls Park Railway Co., 1,500; and Welland Canal, 1,800.

On April 25, 1906, the Canadian members of the International Waterways Commission submitted their report, in which they recommended that there be a permitted diversion on the Canadian side of 36,000 cubic feet per second.

They further recommended that on account of the construction of the drainage canal, which, when in full operation, would use about 10,000 cubic feet per second, the American side of the Niagara River should be limited to 18,500 cubic feet per second, making a total diversion as estimated by them of 28,500 on the American side as against 36,000 on the Canadian side.

Afterward both the Canadian and the American Commissioners entered into a joint report to their respective Governments, in which they recommended as follows (I quote from sec. 3): "The Commission therefore recommend that such diversions, exlusive of water required for domestic use or the service of locks in navigation canals, be limited on the Canadian side to 36,000 cubic feet per second, and on the United States side to 18,500 cubic feet per second (and, in addition thereto, a diversion for sanitary purposes not to exceed 10,000 cubic feet per second be authorized for the Chicago Drainage Canal), and that a treaty or legislation be had limiting these diversions to the quantities mentioned."

Further in their report they found as follows (I quote from sec. 43): "A careful consideration of all the circumstances leads us to the conclusion that the diversion of 10,000 cubic feet per second through the Chicago River will provide for the largest navigable waterway from Lake Michigan to the Mississippi River which has ever been considered by Congress."

Pursuant to this report the Boundary Waters Treaty between this Government and Canada was signed by the President of the United States, the British authorities, and consent and approval were given by the Senate.

The treaty recognizes the right of both the United States and Canada to use boundary waters and leaves the control of such use in the respective Governments except insofar as they agreed upon the division for power purposes at Niagara Falls.

As to the provisions for which boundary waters may be used, the treaty provides: First, uses for domestic and sanitary purposes; second, uses for navigation; third, uses for power and irrigation purposes.

It fixes the diversion for power purposes at Niagara Falls at 20,000 cubic feet per second to be used on the American side, and 36,000 cubic feet per second on the Canadian side, substantially as recommended by the Commissioners.

That there was no disposition to interfere with the diversion of waters through the sanitary canal at Lake Michigan was evidenced by the following language in the treaty: "The foregoing provisions shall not apply to or disturb any existing use of boundary waters on either side of the boundary."

The Illinois Canal was, at that time, by authorization of Congress, acting through the Secretary of War, withdrawing 4,167 cubic feet per second from Lake Michigan for sanitary and navigation purposes.

As usual, our Canadian friends got the better of the negotiations. They were permitted to withdraw 36,000 cubic feet per second as against our 20,000 cubic feet, plus the amount to be diverted through the drainage canal estimated in the treaty at 10,000 cubic feet per second.

There was no reason why Canada should be given the advantage of a greater volume of water for the purpose of generating power except usual British nerve.

The water-surface area lying within the United States was 60,951 square miles, or 64 percent, as against 34,210 square miles, or 36 percent, in Canada.

Not only this but the drainage-basin area of the Great Lakes, lying within the United States, is 176,050 square miles, as against 122,030 square miles in Canada. The proportion being that 59 percent of the drainage-basin area is in the United States and 41 percent in Canada. With this must be considered the fact that the rainfall is much heavier in the United States in the tributary area than in the Canadian area.

Elihu Root was Secretary of State when this treaty was negotiated and appeared before the Committee on Foreign Relations of the Senate in the matter of the ratification of the treaty.

When asked why no specific mention of the diversion of Lake Michigan through the Illinois & Michigan Canal was made, Mr. Root explained that he purposely refused to let them make mention of Lake Michigan, as he did not consider Lake Michigan as boundary waters.

Mr. Root, when asked why he did not object to the unequal diversion for power purposes at Niagara, replied that "We are now taking 10,000 cubic feet a second out of Lake Michigan at Chicago, and I refused to let them say anything in the treaty about it. I would not permit them to say anything about Lake Michigan. I would not have anything in the treaty about it, and under the circumstances I thought I better not kick about this 36,000 cubic feet."

At and prior to the time that the boundary water treaty was entered into by the United States and Great Britain, water was flowing from Lake Michigan through the canal and thence on down through the Des Plaines, Illinois, and Mississippi Rivers in the amount of 4,167 cubic feet per second.

This amount was being withdrawn by authority of permits issued by the Secretary of War under authorization of an act of the United States Congress.

In fact we were withdrawing more than that amount, and it was recognized that this amount would ultimately be increased to the amount of 10,000 cubic feet per second.

Up to this time no protest had been made by any State or any department of our Government challenging our right to withdraw this water.

In 1920 plans for the improvement of the Illinois waterway from Utica to Lockport by and at the expense of the State of Illinois were approved by the Chief of Engineers and the Secretary of War.

On July 14, 1922, 34 years after the sanitary canal was authorized and 21 years after it had been in actual operation, the State of Wisconsin filed suit in the United States Supreme Court against the State of Illinois to enjoin the State and its agencies from diverting any waters from Lake Michigan into the Mississippi Valley.

In the meantime the United States had filed suit to enjoin the flow of more than 4,167 cubic feet per second as authorized by Congress. In January 1925, a decree was granted enjoining the flow of more than such amount with the provision in the decree that the same should go into effect in 60 days without prejudice to any permit that might be issued by the Secretary of War according to law.

Recognizing the necessity for a larger flow of water than had previously been permitted, the Secretary of War on March 3, 1925, and before said decree for injunction went into effect, issued a permit authorizing an annual average flow of 8,500 cubic feet per second from Lake Michigan for a period of 5 years.

Following this permit the opposition to the Lakes-to-the-Gulf waterway organized. Financed largely by Canadian power and other interests, they published propaganda to the effect that the withdrawal of water through this canal was lowering the lake levels, which would cause an injury to the commerce carried on from the lake ports.

On October 5, 1925, the State of Wisconsin filed an amended bill for an injunction restraining the State of Illinois from withdrawing water through the canal for any purpose.

On June 7, 1926, the Honorable Charles Evans Hughes was appointed special master by the United States Supreme Court to take evidence and submit recommendations in the Lake Level case.

At the October term, 1928, following the report and finding of the master in chancery, the Supreme Court of the United States handed down a most startling opinion, in which it announced that this flow of water through a canal encouraged to be built by the Congress and authorized by our Government and recognized by treaty was without legal basis and was being flowed for an inadmissible purpose.

The Court in its decree found that the withdrawal of water reduced the level of Lake Michigan 6 inches, and after indulging in the most visionary reasoning, found that in the year 1923 this lowering of lake levels had caused a loss of shipping of 3,340,000 ton-miles, as against a total of 81,466,902,000 ton-miles of that year's commerce.

The case was rereferred to the master for the purpose of advising with what speed the rights of the injured complainants could be restored, and the master found that after 1930 the withdrawal

should be reduced to 6,500 cubic second-feet, and that after December 31, 1935, to 5,000 second-feet, and after December 31, 1938, to 1,500 second-feet in order to restore the lake levels.

Attention was called to the Court that at the very time they were handing down their decree the lake levels were higher than they had been in over 40 years. That there had been a rise in the Lake levels of Lake Michigan of approximately 4 feet since 1923, the year that they estimated the damage and that this rise had taken place without any lessening of the flow through the canal. But the Court held that the actual rise of 3 feet as compared with the theoretical fall of 6 inches was unimportant, that the fictitious injury must be repaired, and the Illinois waterways strangled.

This was the opinion of the Supreme Court of the United States acting in its legislative capacity, denying to the Congress the right of regulating the flow by the authority given to the Secretary of War and taking upon itself the right to prescribe and legislate what that flow should be.

The record shows that when it became apparent that the waterway connecting the Lakes with the Gulf was going to be constructed our Canadian friends and their sympathizers on our side of the border became extremely busy in promoting the St. Lawrence seaway.

When the War Department approved the plans of the Illinois waterway from Utica to Lockport, a Commission was immediately appointed to investigate and report on the improvement of the St. Lawrence River between Lake Ontario and Montreal for navigation and power.

This report was submitted to Charles Evans Hughes, then Secretary of State, by the joint secretaries of the Commission on January 6, 1922, and was in turn submitted by Mr. Hughes, the Secretary of State, to President Harding on January 14, 1922.

The report contained estimates and surveys with reference to the construction of a seaway from Lake Ontario past the International Rapids of the St. Lawrence. This report was submitted for the information of the Congress by President Harding on January 16, 1922. It made no mention of the Illinois Canal.

On November 16, 1926, another joint commission, appointed to advise on the development of a shipway from the Great Lakes to the sea, made its report, which report was made by Herbert Hoover, then Chairman of the United States St. Lawrence Commission, and was transmitted to President Coolidge, who in turn transmitted it with his usual brevity for the information of the Congress.

This report had something to say about existing diversions and their effect upon the lake levels.

Without wanting my remarks construed as showing any disrespect for the illustrious gentleman connected with the above-mentioned transaction, I want it to be noted that Charles Evans Hughes and Herbert Hoover were not strangers to the problem of the St. Lawrence seaway.

After the final decree in the Lake Level case was entered on April 14, 1930, when Charles Evans Hughes had become Chief Justice of the Supreme Court, friends of the St. Lawrence seaway began to press for a treaty between the United States and Canada.

There was transmitted on January 18, 1933, by the Secretary of State to President Hoover the draft of a treaty containing various reports of the Joint Board of Engineers, the last report being dated April 9, 1932; and President Hoover, on the 19th day of January 1933, transmitted the treaty to the Senate with the reports for the purpose of receiving the Senate's advice and consent to its ratification.

Mr. Hoover and His Majesty, after providing in the treaty that the United States pay substantially the entire expense of the new construction provided for in the treaty, permitted His Majesty's Government to take credit for all previous expenditures on account of the construction of the Welland Canal. They then concluded that they would make certain of the destruction of the waterway constructed by authority of our Government from the Lakes to the Gulf.

Mr. Hoover and His Majesty were quite familiar with the opinion of our Supreme Court; and so impressed were they with its justness that, in order to foreclose our people from remedying the wrong by congressional act, they had the opinion inserted into and made a part of the treaty in the following language: "That the diversion of water from the Great Lakes system through the Chicago Drainage Canal shall be reduced by December 31, 1938, to the quantity permitted as of that date by the decree of the Supreme Court of the United States of April 21, 1930."

Let it be said to the eternal credit of the United States Senate that it refused to advise and consent to the ratification of a treaty which sought to take away the vested rights of the States of the Central West, and, more than that, it sought to turn over to the British Government the right to meddle in and regulate our own domestic affairs.

The bill presented by the Congressman from Illinois is important to undo this injustice perpetrated upon our people.

I admire British statesmanship. They are true to their country and its interests. No inducement can be offered that will persuade them to give away the public rights. They will not sit at the conference tables unless they stand to win by that conference.

After Congress has given the authority under this act to flow 5,000 cubic feet per second, Canadian power interests will still have the advantage of 11,000 cubic second-feet of the division at the Falls of the Niagara.

In justice to our people, we should insist on an equitable division of the diversion of the waters of Niagara and the International Rapids for power purposes based on the contribution of the two watersheds to the flow of those rivers.

If Canadian power interests are permitted to use 36,000 cubic second-feet, we should be permitted to use, apportioned according to drainage area, 52,000 cubic second-feet, or, if apportioned according to water area, we should be permitted to the use of 65,000 cubic second-feet of the Niagara, with the same proportion in the developments at the International Rapids.

It is about time that we explode the flimsy explanation of our negotiators that this unjust division at Niagara was made for the purpose of preserving the beauty of the Falls.

Federal Taxation

EXTENSION OF REMARKS

OF

HON. FRED M. VINSON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

RADIO ADDRESS BY HON. R. L. DOUGHTON, OF NORTH CAROLINA, FRIDAY, DECEMBER 10, 1937

Mr. FRED M. VINSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech delivered recently by the gentleman from North Carolina [Mr. DOUGHTON]:

I am pleased to have the opportunity of speaking to this radio audience on the important and timely question of Federal taxation. Much has been said and much written in recent months concerning our tax laws and their influence upon our economic system. This subject is of great concern to me, as the Committee on Ways and Means, of which I have the honor of being chairman, is charged with the duty of originating and proposing Federal tax legislation.

In the short time at my disposal I am anxious to outline briefly the problems which now face our committee and my impressions as to the general policy which should be adhered to in the enactment of tax laws.

Since the close of the last session of the Congress the Committee on Ways and Means, through its subcommittee under the able leadership of the Honorable FRED M. VINSON, of Kentucky, has been engaged in a thorough and comprehensive study of Federal taxation. We are attempting, and I trust we will be successful in working out, a satisfactory revision of our tax laws, including the much-discussed tax on the undistributed net income of corporations and the present method of treating capital gains and losses.

In connection with this revision, there are several factors that must be kept in mind. The first of these is the necessity for assurance that no substantial loss of revenue will occur. If we are to achieve a balanced budget—which many citizens, including large taxpayers, have been demanding as necessary to a sound recovery—and begin a program of retirement of our public debt, it is apparent to every thinking person that governmental revenues must be maintained at or near the present level, even if substantial savings are made by the reasonable curtailment of expenditures, which I emphatically favor. Regardless of the causes of our revenue needs, and whatever opinions may be held with regard to them, the fact stands that the funds necessary to meet these needs must be raised by taxation.

However, the knowledge that no substantial reduction in the total general tax burden can be expected does not mean that a generally beneficial reform and revision of our tax structure cannot and should not be made. In fact, we hope and expect to bring out a tax bill that will so far eliminate the defects and correct the inequities contained in existing law as to leave little reasonable grounds for complaint by those taxpayers, either corporate or individual, who are willing to bear their proportionate share of the necessary costs of their Government.

Another factor which should be borne in mind is that of the time element involved in a tax revision. Persons clamoring for instant repeal of the undistributed-profits tax apparently are taking no thought of the necessity for a tax to take its place. To repeal any law is but the work of a day. However, to thoroughly work out and fully consider a fair and workable substitute measure requires time and thought, and too great haste at this crucial time might result in inequities equal to or greater than those we are now striving to correct.

Also those who are vigorously advocating the repeal or modification of this tax to be retroactive, so as to apply to the current year now rapidly drawing to a close, evidently have not stopped to consider the hardships that such a course would produce. No matter what action is eventually taken on the undistributed-profits tax, the measure which replaces it must contain rates sufficiently high to secure a substantial tax revenue from corporate

income. Thus, those many companies that have arranged their fiscal affairs and dividend policies for the current year to conform to the effect of the existing law, by distributing their income to their stockholders in dividends, would be unfairly penalized if we were to now change the basis upon which these arrangements were made.

While rates along the lines of those tentatively agreed to by our subcommittee would work an injustice in many cases if applied retroactively, I feel confident that they would be acceptable if it were known early in a taxable year that such rates would be applicable. But if they were imposed retroactively, so that a company would have no notice of them until its policies had been fixed irrevocably for the year, it would seem distinctly unfair and in contravention of the good faith owed by a government to its taxpayers. I believe that such a course would meet justified and widespread resentment.

I have pledged and now renew that pledge to exert my very best efforts toward the revision and modification of this tax to as great a degree as our revenue needs will allow and justice to other taxpayers will permit. We are working overtime to carry out that pledge and are directing our efforts mainly toward two chief objectives. The first of these is the elimination of as many of the defects and hardships in unusual cases as we may be able to remove; and the second is the correction, to as great an extent as possible, of the harmful effects that may be caused by existing taxes on our general business conditions.

If fear, or doubt that this will not be done, has any deterring effects upon business, or is in any way responsible for the existing recession of business activity, those doubts may be removed. For I am sure that I speak the sentiment of the tax committees of both Houses, and of the Congress itself, when I say that we are determined to do everything within our power to see that the revision will be as fair and equitable as we are able to accomplish in the light of existing facts and conditions.

This is our responsibility and we gladly face it. Recognizing that some mistakes have been made, we are making every effort to correct them by utilizing the facts and experience gained in administering the law. I have yet to see a tax system, no matter how carefully considered and expertly set up, that would in every case secure the required amount of revenue without causing some injustice, some hardship, and some economic maladjustment. However, these evils can be kept to a minimum if care is used in the formation of tax policy and the drafting and administration of tax laws, and if vigilant scrutiny is made into the effects of various taxes, and if a fair and open mind is maintained toward the question of changes and reform where they are needed or likely to prove beneficial.

Constructive, intelligent, and unselfish criticism of the tax laws is invaluable both to the Congress and to the Treasury officials as it is mainly from the taxpayers themselves that we can find out whether or not the shoe is pinching too much.

Much of the recent criticism has been directed at the surtax on the undistributed net income of corporations which is imposed by the Revenue Act of 1936. This tax is based upon the percentage of the corporation's net income that is withheld by the company, and thus does not go into individual hands where it would be subjected to the surtax on individuals. The reasons for its adoption may be briefly stated. First, the pressing necessity for revenue made it doubly important that corporate profits pay a fair and substantial tax whether they were withheld by the company or paid out in dividends to the shareholders. Second, it was hoped and expected that this tax would do much toward relieving the disparity that has existed between the tax paid by business in the corporate form, and that paid by business carried on by individuals and partnerships.

In many corporations there were stockholders of great wealth in position to control the dividend policies of such companies. Purely for reasons of tax avoidance such persons frequently so arranged the company's policies as to allow the earnings to accumulate in the company to an extent far in excess of any legitimate needs. Thus by paying the flat corporate tax and avoiding the graduated individual surtax, substantial tax savings were accomplished by these persons, and, consequently, the Government suffered an equally substantial loss of revenue. If any class or group is allowed to escape its fair share of the tax load, it must inevitably result in the overburdening of other taxpayers.

This practice had grown until it was reaching alarming proportions and it was resulting in a patent injustice to many minority stockholders in addition to its adverse effect on our tax revenues. The undistributed-profits tax was designed to remedy this evil and to place on corporate profits an equal tax burden, whether they were distributed or withheld. Whatever changes the Congress may finally make in this tax in the interests of the general welfare, they should not be regarded as placing the stamp of congressional approval upon such unjustified corporate practices.

At the same time it was realized that in many cases the desire to avoid taxes was not the compelling motive behind the withholding of corporate profits. Some companies were heavily in debt, and by reason of contractual or other legal reasons, or factors involving the exercise of good business judgment, were put in such position as to make it impossible or highly inadvisable to pay out their earnings to their stockholders.

In attempting to obtain the beneficial effects of this tax, but at the same time avoid or at least minimize its harsh effects, the Committee on Ways and Means placed in the original measure certain "cushions" and relief provisions designed to ease or prevent these foreseen hardships. The Senate, however, saw fit to disagree to these provisions, and they were, with reluctance on the part of the House conferees, stricken out.

Since this tax was first imposed it has been continually under our scrutiny and its effects have been watched and carefully noted. In addition, the complaints of various taxpayers have been heard and carefully considered. We feel that the principle of this tax is well worth retention and that with modification in rates and certain needed relief provisions it should prove satisfactory to the Government and those taxpayers alike who are willing to bear their fair share of the tax load.

The subcommittee has also given extended consideration to needed revisions of the tax treatment given by the existing laws to capital gains and losses. It has tentatively agreed upon certain changes which it is believed will reduce to a minimum the untoward economic effects upon the free flow of capital commonly attributed to the capital-gains tax, without abandonment of the sound principles of taxation that the tax burden should so far as practicable, be levied according to the principle of ability to pay. The problems presented are difficult, for the question of the proper method of taxation of capital gains has been a bone of contention from the beginning of the income-tax system. There is lacking any general agreement throughout the country as to which of several alternative methods will raise the necessary revenue without undue interference with freedom of capital transactions and without undesirable stimulation of purely speculative activities. However, it is my belief that substantial progress toward a more satisfactory solution of this old problem is being made.

We are convinced that the work of our committee can be satisfactorily concluded early in the regular session of the Congress. Thus, I bespeak the patience of those who have been urging hasty action and request sufficient time for our committee to work out a thorough revision of our tax laws in as scientific and equitable manner as possible. I fully believe that we will be able to effectuate a solution of this most difficult problem in such a way as to leave little reasonable ground for criticism by fair-minded taxpayers.

Federal Business Subsidy—A Theory Compatible With an Economy of Abundance

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

STATEMENT OF HON. SCOTT Z. HENDERSON, OF WASHINGTON, AND FORMER PRESIDENT OF THE WASHINGTON STATE BAR ASSOCIATION

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks I am incorporating a program which represents protracted mediation and thought, the ideas of which were transmitted to me by the Honorable Scott Z. Henderson, former president of the Washington State Bar Association and one of the foremost lawyers of the State of Washington. Mr. Henderson serves as counsel for many of our State's leading corporations, is a man of tremendous popularity, versatile attainments, engaging personality, yet who possesses that breadth of viewpoint, that tolerance for his fellow man, that understanding of human problems, which makes his presence in a room an inspiration to all of those lucky enough to come into contact with him.

It would appear that in this day of subsidy for agriculture, for merchant marine, and for various and select groups in our national economy, that the ideas herein set forth have logical justification. If we are to retain the capitalist system, and if we are to be obedient to the laws of true economics and work under a program of an economy of abundance rather than an economy of scarcity, why should not the Government encourage business to expand rather than to contract, to work to the full limit of its capacity rather than to curtail?

PRELIMINARY STATEMENT

There cannot be wide distribution of wealth without production of wealth.

The first step in distribution is production.

The next step is to prevent concentration of that which is produced. This may be accomplished by a system, the object of which is equitably to reward those who are engaged in production.

Thus an exchange of that which is produced takes place with sufficient rapidity to distribute the wealth.

WE SHOULD STIMULATE PRODUCTION

To stop production until a perfect system of distribution is worked out is constructing a highway to destruction. Stimulated production will force distribution. Usable goods cannot remain piled up when there is continued production any more than a dam can hold back a continuously flowing stream. Either the dam will break or the water will eventually flow over the dam in accustomed quantities. The more creeks, rivulets, and run-offs directed into the main stream the sooner the dam will break or the sooner the overflow and the more overflow the better. This is just plain common sense, regardless of superrefined economic theories.

To stop production and attempt to distribute by forced draft the results of accumulated production to those not producing is to eat into existing wealth without replenishing. Further, such a policy has through the years demonstrated its terrific destruction of the morale and the morals of the people.

LET US PROVIDE AN ECONOMY OF ABUNDANCE

Superabundance is "a consummation devoutly to be wished." No one is injured by superabundance but all suffer by scarcity. Those who take advantage of the situation of scarcity are made more brutal and those who are suffering are driven to the desperation of revolt and forcible destruction. The history of all ages demonstrates that human intelligence is not sufficient to cope with such conditions. The public mind just goes berserk.

We have:

1. Manufacturing establishments of every description, advantageously located throughout the Nation, adequately equipped and ready to run, with sufficient capacity to supply every need of the Nation;
2. Available raw material for use in such factories;
3. Executives and managers organized and ready to function in the industries;
4. Skilled and unskilled labor ready and anxious to supply the manpower;
5. Millions of consumers in need and in distress, ready and anxious to use and consume;
6. Transportation facilities second to none in the world;
7. An abundance of idle capital;
8. Banking facilities organized, competent, and ready to supervise financial operations.

In short, we have every requisite for operation of industry and distribution of its products. We are idle, starving, and in distress, in the presence of abundance.

What we need:

Pay rolls to supply the lifeblood of industry. We do not have pay rolls because industry, under present conditions, cannot realize from sales of manufactured articles a sufficient sum to maintain pay rolls. Industries do not operate because these industries cannot finance the difference between cost of production and present sales prices. There is a demand for everything at a price. That price, under present conditions, does not provide adequate pay rolls. That price will provide a part of the pay roll, but the comparatively small difference between the required pay roll and the pay roll supplied by sales cannot be absorbed by industry. Our banking facilities cannot supply that difference because loans from banks must be liquid and banks do not loan to create losses. The amount of money required to make up the difference between the necessary pay rolls and the amount that can be realized from sales must be gathered from some source that is able to delay recoupment over a term of years of sufficient length to enable industry to eventually absorb, if possible, through sales, this apparent present loss.

The Nation, as a whole, faces indescribable distress because of the lack of pay rolls. The resources within the Nation are sufficient to provide the necessary cushion between the cost of production and sale price in order that industry may operate. There is no other organization than the Federal Government with ability to marshal the assets necessary to provide this cushion.

The plan:

It is estimated that a far less amount than that now expended for relief, made available exclusively for such pay-roll purposes, to be distributed in accordance with working or producing population, would be sufficient to cushion the difference between requisite pay rolls and an earned pay roll from sales, for a minimum of 5,000,000 workmen. This money would supply this cushion for a period of 12 months.

The manufactured articles would be consumed at some price. That money could be handled through the R. F. C. and through that corporation distributed to Federal Reserve banks in the industrial centers. These Federal Reserve banks are now in a position to know the condition of every industry. The banks could monthly supply, for pay-roll purposes only, just the difference between cost of production and sales. If the receipts from sales equal the cost of production, no advances would be made. Little or no additional administrative machinery is required. The Government is now so organized that this plan could properly be administered through regular established channels.

The proposal is immediately, now, to return men to work in the places where they have been accustomed to work. Everything is in readiness to accomplish this purpose. What these men would be manufacturing would not be liabilities. No time is necessary in the making of plans.

Railroad companies would then be provided with tonnage. They would not be required to borrow money which they could never pay back.

The principal cushioning necessary would be at one point, namely, at the factory.

The relief given at the factory would extend to raw materials, to transportation, and on throughout the Nation. The pay rolls thus provided would be immediately turned back into industry through expenditures. The wheels would again start. Those engaged in providing raw materials would be supplied with a pay roll, the white-collar class would be supplied with a pay roll, the mercantile establishments would have a demand for goods. It requires no stretch of the imagination to see what would happen. Our export trade is not such a large percentage as to prevent the Nation from living decently. Nature provides abundantly; the ingenuity of man has provided every mechanical appliance to make our people happy. We cannot admit that the American Nation is impotent and unable to take care of itself because other nations are not in a position to buy our surplus. To make such an admission is to concede everlasting failure.

Tariffs are essentially intended as subsidies to the laboring man, to enable the maintenance of American standards of living. If the plan suggested partakes of a subsidy, it is no more of a subsidy than tariffs and other expedients. The money provided would be provided by the Nation for its own health and to maintain its industrial existence. It should be emphasized that this money is not a subsidy to industry but a subsidy to the laboring man. Such is what it is and such it must be.

Without question, every man admits that the only thing necessary to make us prosperous is pay roll. That being true, the Nation must supply that which is necessary. It can be supplied through the existing and accustomed agencies. The American way. The self-respecting way.

Such questions as taking care of surpluses must be handled when they present themselves. The poverty of inventories will, for a time, delay the problem of surplus. Federal, State, county, and municipal incomes from taxes will cease unless pay rolls are provided. As the physical body will die when the heart can no longer beat, so will the industrial life of the Nation expire when the lifeblood in the form of pay rolls ceases to flow.

If this is designated as a species of communism, the answer is that it is only a small dose, compared to what the Nation will be otherwise given. Doles, pensions, concentration camps for feeding, charity, gifts, political pork barrels, etc., are worse forms of communism than the plan suggested. Such nostrums are not remedies; they produce festering sores and cancerous growths.

Pay rolls will stimulate agriculture; will maintain merchandising; will preserve the integrity of the greatest American asset, namely, the laboring man. The plan does not require the creation of political machines. The Government has all the statistics needed. This will cost far less than experimental work relief which does not relieve but which piles up a burden to be eventually carried by succeeding generations.

It is not intended that the money supplied for pay-roll purposes through R. F. C. and distributed by the banks is to be altogether a gift. The money would, to a large extent, be returned by industry from receipts of sales made of goods produced. Except for taxes and other governmental requirements, the money thus advanced for labor must not be used for retirement of any existing obligations. Industries will not be inclined to take on an overload, since the money advanced by the Government must, eventually, be repaid from business sources. The banks associated with industries will be inclined to advise against overloading and the realization that the eventual retirement of the money advanced by Government must come from some kind of taxes will be a protection against extravagance.

Furthermore, the agreement for handling the money should be in such form as will prevent unlawful use of the funds, and such unlawful use should be penalized in a way that will assure correct administration. Blow the whistles, start the factories going, and let's see what will happen. You will hear a glorious shout of victory that will silence the rumblings of discontent.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

Mr. BEITER. Mr. Speaker, we are considering the question of governmental fixation of hours and wages. General Johnson speaks of "putting a floor under wages and a roof over hours" of labor. This is not a new idea by any means. The Constitution itself speaks of the right of every citizen to enjoy the rights to "life, liberty, and the pursuit of happiness."

Decent living conditions are necessary to the enjoyment of these inherent rights, and decent living conditions, in an industrial civilization like ours, must rest largely upon decent wages paid for reasonable times of service.

I am going to quote here the words of Abraham Lincoln while serving as President of the United States in his message to Congress December 3, 1861:

> There is one point to which I ask brief attention. It is the effort that is being made to place capital (money) on an equal footing with, if not above, labor, in the structure of government. It is assumed that labor is available only in connection with capital—that nobody labors unless somebody else owning capital, somehow by use of it, induces him to labor. Now, there is no such relation between capital and labor. Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is superior to capital and deserves much higher consideration.
>
> Let the worthy men and women who toil up from poverty beware of the surrounding of political power which they already possess, and which, if surrounded, will surely be used to close the door of advancement against such as them, and fix new disabilities and burdens upon them until all of liberty shall be lost.

At that time Lincoln was moving rapidly to put upon the statutes of the United States such legislation as would prevent the "disabilities and burdens," which he foresaw, from being heaped on the backs of labor. It seems to me that we can well abide by his school of thought.

Seventy-five years have elapsed since Lincoln issued these words of counsel, and another President of the United States has spoken along the same lines. President Roosevelt said a few months back:

> The millions who are in want will not stand by silently forever while the things to satisfy their need are within easy reach. I see millions of families trying to live on incomes so meager that the pall of family disaster hangs over them day by day. I see millions whose daily lives in city and on farm continue under conditions labeled indecent half a century ago. I see millions denied education, recreation, and the opportunity to better their lot and the lot of their children. I see millions lacking the means to buy the products of factory and farm and by their poverty denying work and productiveness to many other millions. I see one-third of a nation ill-housed, ill-clad, ill-nourished.

Several weeks ago, across the ocean, George Bernard Shaw told the people of his country that they should put their houses in order while there is yet time, saying:

> What is it that is wrong with our present way of doing things? It is not that we cannot produce enough goods. Our machines turn out as much work in an hour as 10,000 hard workers used to. But it is not enough for a country to produce goods. It must distribute them as well, and this is where our system breaks down hopelessly. Everybody ought to be living quite comfortably by working 4 or 5 hours a day, with two Sundays in the week. Yet millions of laborers die in the workhouse or on the dole, after 60 years of hard toil, so that a few babies may have hundreds of thousands of dollars before they are born. It is stupid and wicked on the face of it, and it will smash us and our civilization if we do not resolutely reform it. No civilization, however splendid, illustrious, and like our own, can stand up against the social resentments and class conflicts which follow a silly misdistribution of wealth, labor, and leisure. But that is the one history lesson that is never taught in our schools.

I quote from addresses of Presidents Lincoln and Roosevelt, and George Bernard Shaw, to illustrate that the problem of hours and wages in labor is not new nor confined to our country alone.

There are a number of items in the bill under discussion which could be changed and probably will be before final enactment. However, I should like to discuss one or two which I believe to be of vital importance.

I am inclined to believe that any minimum wage should be variable or flexible, so as to permit prompt response to the factors which should be taken into account in fixing the minimum wage. Among these factors, perhaps, none other is so important as the cost of living, but there are other factors of consequence. It seems to me that such a variation is a natural economic condition.

I am also of the belief that no formula should preclude the employment of handicapped men or women and apprentices. Any such proposal is contrary to every sense of decency and fairness. There must be apprentices if trades are to be carried on and if skills are to be passed from generation to generation.

There has been some discussion as to whether the bill is constitutional. It seems to me that lawyers are given, perhaps unduly, to the habit of assertion that some particular proposal does not square with some particular provision of the Constitution. The Constitution itself contemplated that it would or might be amended, and prescribes the mechanics of amendment. It even contemplated that it might be wholly rewritten by a constitutional convention. If the people of the country feel strongly enough that the objectives of the bill warrant an attempt to achieve them by legislative action, and if such legislative action is not permitted by the Constitution as it is, then they will change the Constitution, because they have the power to do so, and the will to exercise that power. The Constitution may be locked up, but there are keys which will turn the lock.

We are a country pledged to promote the general welfare of its citizens. We must realize that our greatest resource is found in our workers. We depend upon our laboring men for all productivity, and, therefore, it is to our interest to provide working conditions for them which will result in the preservation of their health and vigor. Legislation to establish fair labor standards is a step in the right direction of conserving the human resources of our Nation. We have had legislation to conserve the natural resources of the country—what more natural than that a policy of conservation of the human resources should follow?

I would say further that if it is conceded that a national policy of human conservation is advisable, let us proceed with the machinery of government to deal with it, even though we realize that it must be surrounded by safeguards.

I have sought to indicate in this statement the broad considerations of public policy which are involved in this attempt to set up fair labor standards for the workers, as well as the moral obligations assumed by the Government in promoting the general welfare. I hold the belief that what happens to us as individuals is not important, but that what happens to us collectively is of supreme importance. Whether or not this plan to help the wage earners of America will work or not, no one can say, but I think even its enemies will concede that its purpose is of the highest.

The real question is whether the achievement of the social objectives can best be reached by governmental fixation of hours and wages. In the more than 40 centuries of recorded history there are many instances of similar attempts by government. If, in the beginnings, the establishment of fair labor standards in employment does not try to cover too much ground, it may give to society some help in the task, which is incumbent upon society, both by the law of God and by the very nature of its own being, of going forward toward that goal where every person will fully and freely enjoy those rights outlined in the Constitution.

The Farm Bill

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 10, 1937

Mr. ARENDS. Mr. Speaker, Congress for many years has been talking agricultural relief, but, like the weather, nothing but talk is ever done about it, with the result that futile efforts to solve the problem have only been attempted. Most of our statesmen from Washington and Jefferson to present Members of Congress realize that agriculture is the backbone of American life, and without a prosperous and thriving agricultural outlook the food supply of the Nation, as well as the

economic well-being of our commercial enterprises, will be seriously jeopardized.

In the State of Illinois alone there are 231,312 farms the value of which—including land and buildings—exceeds $2,200,000,000. What a tremendous buying power these 231,312 farm families should have for the products of our factories. Far-seeing statesmen from urban areas, whose immediate concern is the prosperity of their own immediate community, would do well to give consideration to the potential consumer ability of the man who tills the soil and whose labor provides the food that he eats.

There is one thing that everyone is in accord with, and that is, there exists today a serious unemployment problem with thousands and thousands of our people unable to purchase the necessities of life, and we must face the fact that there is something radically wrong with our economic system when we have our farmers producing more than they can sell at a profit and being asked to curtail production, when thousands of our people are on the verge of starving.

The counterpurpose proposals to date with crop-reduction programs, on the one hand, and the bringing into production of thousands of acres of land through reclamation projects is synonymous to the principle of a man trying to lift himself by his own boot straps.

If we are to have our Federal Government lay down a permanent plan with the view of making it possible for the farmer to have a market for his crops, at a price in excess of the mere cost of production, that plan must be one that is fair and equitable to all our people and must be one that has a definite objective, and not one that works at cross purposes, with one class or section of our people given a preference. I defy anyone to successfully challenge this statement. In my opinion the so-called crop-control bill, as introduced in the House, while it attempts to fix prices, will not solve permanently the situation, neither is it a bill for the relief of agriculture in the true sense of the word.

The consensus of opinion seems to be that some means must be devised to ascertain the cost of production of agricultural commodities. Just how this will be done no one seems to know, for the vagaries of Dame Nature in particular sections of our country make the raising of certain crops extremely hazardous. These crop failures must be reckoned with, if we are to accurately determine the average cost of production in that particular community, section, or State. The type of land, value of the land, and labor costs, to say nothing of unforeseen circumstances, such as floods, droughts, insect pests, extreme cold, tornadoes, and so forth, are also factors which must be considered. If Congress in its wisdom can ascertain the cost of production, it should say to the farmer, "Uncle Sam will do everything possible to see to it that you receive a fair price for your products, and if the market price of your crops is less than it cost you to produce them, your Government will lend you a certain amount of money on that crop." If this were done, the farmer would be assured that he would not have to sell his products at a loss.

However, the present bill makes no mention of mandatory loans to the farmer, leaving the question of loans on crops at the discretion of the Secretary of Agriculture. He may or he may not make a loan, and should he see fit to make a loan, the amount is to be at his discretion. Furthermore, he can make the loan whenever he so desires, which may preclude the maximum benefits to be derived from such loan, due to the time the loan may be consummated. We had a good example of such a type loan this fall, when the loans were made available after the deserving and needy farmer had been forced to sell at least a part of his crop at a loss. This is surely not conducive to confidence on the part of the farmer. He is just about in the same position as before, if not worse off, in that he has been led to believe he would be given a definite program.

The question of agricultural surpluses is an all-important one, and in times past this surplus was pretty generally absorbed by our export trade. The working out of a plan whereby we can regain at least a part of our foreign market for our agricultural products will do much to restore prosperity to the American farmer. Under present policies we are now importing more agricultural products than we export. Can a continuation of such a policy make for a more abundant life for our farmer? If we learned a lesson through the activities of the Farm Board, we should go easy in advocating the accumulation of large stores of agricultural commodities in the hands of the Government or any agency thereof. We might consider using a part, if not all, of the $630,000,000 now being paid to farmers for soil conservation and for not raising crops to make up the difference between the world price and the domestic cost of production.

If this could be done, the constant threat of a large surplus of any commodity on future prices of that commodity might be removed. Last year we sold abroad $733,000,000 worth of agricultural products; so if we can maintain this figure and use another $630,000,000 by way of an export bonus, we might go a long way toward at least partially solving our difficulties. The lack of an adequate export policy has resulted in what many believe to be a permanent loss in the world market for the American farmer. Since the World War millions of acres of land in Russia, Africa, and South America have been brought into agricultural production, which acres not only compete with the American farmer in the world markets but are competing with him in his home market. Italy plans extensive cotton operations in Ethiopia. England has developed vast cotton interests in many of her colonial possessions in direct competition with American cotton. Any measure designed to establish a permanent agricultural policy that does not make some provision for the exportation of our agricultural surplus will fall far short of the desired goal.

Not every phase of American agriculture is provided for in this so-called permanent agricultural policy of the United States. Frankly, my primary interest is in the corn farmer, coming, as I do, from the heart of the Corn Belt. Yet, in the interest of fairness, I realize that the dairy farmer, the truck farmer, the grower of oats, rye, barley, fruit, and cattle, all directly products of the soil, have not even been mentioned in the pending bill. An attempt to provide for corn, wheat, rice, tobacco, and cotton is all the bill contains. Insofar as corn is concerned, little, if any, hope need be entertained by my farmers for relief under this measure. As has been stated on the floor of this House, it will be necessary for us to have a total production and carryover of 2,928,500,000 bushels of corn in order for the corn farmer to reasonably expect any benefits under this bill, outside of soil-conservation benefits. Our bumper crop of this year was only 2,651,000,000 bushels. The yearly average, including the normal carryover for a 10-year period, has been 2,380,000,000 bushels. Are we to repeat the Farm Board episode by maintaining, through an ever-normal granary, a half billion or more bushels of corn as an ever-constant threat against the future price of this commodity. The plight of the cotton farmer should be an object lesson to us. Millions of dollars have been spent in an attempt to fix the price of cotton by purchases of huge quantities by the Federal Surplus Commodities Corporation and by the Department of Agriculture, with a result that the price of cotton reached a new low in 1937.

It appears to me that, through legislation such as the House bill, we are once more putting off the real and fundamental objective of good farm legislation. That objective should be a system of cooperative effort between the Government and agriculture in establishing a flexible, permanent, and workable policy, which, if a good policy, will work not only today and tomorrow but also next year and the years that follow. This farm bill in its present form holds no promise to the corn farmer, and I cannot support it. Our schooling in agricultural legislative matters may have been good, but I feel that the tuition was perhaps a little high.

The Wage and Hour Bill

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 15, 1937

CORRESPONDENCE REGARDING THE WAGE AND HOUR BILL

Mr. THOMAS of New Jersey. Mr. Speaker, the following letter from the National Grange, the National Cooperative Council, the National Cooperative Milk Producers' Federation, and the following resolution from the United Office and Professional Workers Union, Local No. 7, and the following telegram from the Manufacturers Association of New Jersey, all relative to the pending wage and hour bill, were received by me today, and in a way, express the opinion of some of the farmers, some of the laborers, and some of the employers on the wage and hour legislation which we are now debating:

THE NATIONAL GRANGE, THE NATIONAL COOPERATIVE COUNCIL,
THE NATIONAL COOPERATIVE MILK PRODUCERS' FEDERATION,
December 13, 1937.

To Members of the House of Representatives:

The House of Representatives will today begin consideration of the so-called wage and hour legislation. The proposed legislation is of tremendous interest to farmers of the United States. It will increase the cost of things that farmers buy. It will decrease the price which farmers receive for the products which they sell.

Notwithstanding this fact, farmers and farm organizations have had no opportunity whatsoever to express their position with respect to this proposed legislation before any committee of either House of Congress.

This bill which will so widely affect the agricultural interests of the United States was introduced at the last session of Congress. The authors of the legislation are unknown. Labor organizations claim that they were not consulted in drafting the proposed legislation. Certainly, farm organizations were never consulted nor was their advice or opinion asked as to the possible effect of such legislation upon the 25 percent of our population who live on the farms of this country.

It is true that hearings were held on the bill immediately after it was introduced. At the time of the hearings, however, the National Grange, the National Cooperative Council, the American Farm Bureau Federation, the National Farmers Union, and the National Cooperative Milk Producers' Federation had not held their annual meetings. The farmer members of such associations had no knowledge of any proposed wage and hour legislation when their last conventions were held. They were, therefore, in no position to consider the effects of such legislation upon themselves and their families.

During the interval between the last session and the present time farmers have had an opportunity to consider the effects of this proposed legislation upon their business. They are ready, willing, and anxious to express themselves before the various committees of Congress upon the possible effect of this legislation on agriculture. They feel that they are entitled to a hearing and to an opportunity to present to Congress reasons why this legislation should not be enacted, or if enacted, should be so modified as to protect the farmers of this country.

Farmers already are seeing the results of destructive competition caused by imports from abroad. Imports of agricultural commodities already prevent the attainment of any parity price structure in the United States. Our difficulties will be made greater by the enactment of this legislation, which will impose higher standards of wages and hours on our domestic industries while permitting unfair competition with such industries, both agricultural and industrial, on the part of nations having substandard wage and hour conditions far below those which prevail in the United States today.

We are at a loss to understand the speed with which it is proposed to enact this legislation. We wonder as to the forces which are behind the movement for immediate enactment. Certainly it is not the forces of industry. It is equally obvious that it is not the forces of well-established organized labor. We know that it is not the forces of agriculture. According to our information, the Committee on Labor has practically rewritten the bill in executive session. In consequence, the people are ignorant of its present contents. Under the circumstances, it is natural to assume that the Members of the House are likewise ignorant of its contents, particularly since the rewritten bill has not been on the Union Calendar and the Members have had no opportunity to study it. It is obvious, therefore, that it should be sent back to the committee for further hearings.

On behalf of the farmers of this country, we, therefore, urge that Congress send this legislation back to the Committee on Labor. Hearings should then be held, so that farmers may have an opportunity to present to the committee their position on this legislation.

THE NATIONAL GRANGE,
By FRED BRENCKMAN,
Washington Representative.
THE NATIONAL COOPERATIVE COUNCIL,
By ROBIN HOOD, *Secretary-Treasurer.*
THE NATIONAL COOPERATIVE
MILK PRODUCERS' FEDERATION,
By CHAS. W. HOLMAN, *Secretary.*

UNITED OFFICE AND PROFESSIONAL WORKERS
UNION, LOCAL NO. 7, AFFILIATED WITH COMMITTEE FOR INDUSTRIAL ORGANIZATION,
17–19 William Street, Newark, N. J., December 13, 1937.

DEAR CONGRESSMAN: At a regular meeting of the United Office and Professional Workers Union, Local No. 7, the following resolution was unanimously adopted:

Whereas one of the main reasons for the calling of the special session of the United States Congress was to obtain passage of a minimum-wages and maximum-hours bill, and

Whereas such legislation is urgently needed to supplement the efforts of trade-unions in maintaining a decent American standard of living among industrial workers, and

Whereas New Jersey is notorious as a sweatshop State and all workers are affected by the presence of such substandard establishments: Therefore be it

Resolved, That this union go on record urgently pressing for the passage of the pending wage and hour bill, and that copies of this resolution be forwarded to all New Jersey Congressmen.

Respectfully yours,

(Signed) ROSE I. DIAMOND,
Organizer.
F. OPPERMAN,
Secretary.

[Telegram]

TRENTON, N. J., *December 13, 1937.*

J. PARNELL THOMAS,
House Office Building, Washington, D. C.:

We respectfully urge you to vote and use your best influence against passage of Black-Connery hour and wage bill. What industry needs today more than ever before is fullest possible freedom to maintain present and, quickly as possible, provide more employment. It needs Government encouragement, not restrictions or bureaucratic control. We urge you to cause it to be indefinitely postponed.

MANUFACTURERS' ASSOCIATION OF NEW JERSEY,
WM. C. BILLMAN, *Secretary.*

The Civil Service Commission and Its Attitude Toward Negro Applicants

EXTENSION OF REMARKS
OF
HON. ARTHUR W. MITCHELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 15, 1937

Mr. MITCHELL of Illinois. Mr. Speaker, nothing has given me more concern since I have been a Member of Congress than the unfair attitude of the Civil Service Commission toward Negroes. Recently I received certain communications from the National Civil Service Reform League in New York urging me to use my influence against H. R. 8037—a bill providing for the appointment of first-, second-, and third-class postmasters for 4-year terms by the President, with confirmation by the Senate, to which I replied and stated my attitude toward the Civil Service Commission because of its well-known unfairness toward Negroes throughout the United States.

In my letter to the Civil Service Reform League, I took occasion to refer to certain bills which I have introduced in the Seventy-fifth Congress, namely, H. R. 3691, a bill to provide for appointments in the classified civil service of the United States of persons making the highest grade in competitive examinations and denying to appointing officers power or discretion to pass over the name of the person highest on the eligible list established as result of such competitive examinations; and H. R. 2249, a bill to prohibit the President of the United States and the United States Civil Service Commission, or any branch thereof, from re-

quiring, as a condition precedent to the taking of an examination for a position in the classified civil service or as a condition precedent to an appointment in such service, a photograph of applicants for such examinations; and H. R. 3692, a bill to provide for the manner in which appointing officers shall designate the sex of the person about to be appointed in the classified civil service, all of which bills were introduced first in the Seventy-fourth Congress and introduced again in the Seventy-fifth Congress, and are before the Civil Service Committee of the House.

I referred to the fact that I had not been granted a hearing on these bills, notwithstanding I have sought it diligently, and requests have been made by many organizations in various parts of the country for a hearing and a favorable report on these bills. I cited that as an instance to show that the civil service of the United States, not only through the Civil Service Commission but through the legislative Civil Service Committee in the House, makes no effort to be fair to Negroes. The purpose of these three bills above referred to is to wipe out injustices which are known by everyone in the country who knows anything about the operation of the civil service in the country, to exist against Negroes.

In my letter to the Civil Service Reform League I did not make any referenec to the Civil Service Commission as having denied me or anyone else a hearing, but I do say now that the Civil Service Commission has denied thousands of eligible Negroes, who had qualified under the civil-service regulations, appointment o places in the Government for no reason other than that they were Negroes. The Chairman of the Civil Service Commission is alleged to have given out a statement that I have sought no hearing before his Commission. Let him come forward and tell why his Commission has from time to time notified colored civil-service eligibles from various parts of the country to come to Washington and to report for appointment, and upon discovering that these applicants were colored has found some frivolous excuse to keep from appointing them.

I regard this department of the Government the rottenest and the most unfair department of the Government toward Negroes of any that is now in existence. It should be investigated from top to bottom and those persons who are responsible for the conditions about which I am complaining should be turned out of office if the Civil Service Commission is to continue.

NATIONAL CIVIL SERVICE REFORM LEAGUE,
521 Fifth Avenue, New York, December 9, 1937.

Hon. ARTHUR W. MITCHELL,
Committee on Post Offices and Post Roads,
House of Representatives, Washington, D. C.

DEAR SIR: On behalf of the National Civil Service Reform League, I respectfully urge you to vote to disapprove H. R. 8037, introduced by Mr. FADDIS. This bill provides that first-, second-, and third-class postmasters shall be appointed for 4-year terms by the President, with confirmation by the Senate; and that the Postmaster General may recommend for any vacancy in such an office either the reappointment of the incumbent, the promotion of a subordinate in the postoffice, or the appointment of one of the three highest persons on an eligible list prepared after examination by the Civil Service Commission.

The passage of this bill would perpetuate what has been for many years a system condemned by all Presidents and most Postmasters General, whereby postmasters are selected, not on the basis of business capacity, but on that of political value to the dominant party. It would make impossible a real career service in postal work for persons without political sponsorship, and would require incumbent postmasters to devote their main attention to political activities rather than to their proper duties, since reappointment at the end of a 4-year term would depend upon political services.

Last January the House of Representatives approved the bill sponsored by Mr. RAMSPECK which would place postmasters in the classified civil service. I hope that you may vote to disapprove the Faddis bill (H. R. 8037) which would rescind the forward step taken by the House in passing the Ramspeck bill.

Very truly yours,

(Signed) ROBERT L. JOHNSON,
President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., December 10, 1937.

Mr. ROBERT L. JOHNSON,
President, National Civil Service Reform League,
521 Fifth Avenue, New York, N. Y.

DEAR SIR: I am in receipt of your letter of December 9 with reference to H. R. 8037, introduced by Mr. FADDIS, of Pennsylvania. I write to say that I have already signed the petition to which you refer and I expect to vote for the measure if we are able to bring it before the House. I am sick and tired of the hypocrisy and absolute unfairness practiced by the so-called Civil Service Commission.

If your organization should devote itself to reforming the Civil Service Commission, so that it would in some way conform to what the founders of civil service had in mind, I should be very glad to follow you in that effort. But as the Civil Service Commission is functioning today it is my opinion that it is the greatest curse we have connected with any Department of the Government.

I shall be glad to vote for a bill to wipe the Commission out if it is to continue to function as it is functioning today. There is no intent on the part of anyone connected with the Civil Service Commission in Washington to show any degree of fairness to the Negroes of the United States. We cannot even get a hearing before the Civil Service Committee on any bill that seeks to eliminate the injustices now practiced by the Civil Service Commission against the Negroes of this country. I hope you understand my position. I expect to do everything in my power to expose the iniquity of the so-called civil-service system as it is administered today.

With heartiest thanks for your letter, I am,
Very cordially and sincerely yours,

ARTHUR W. MITCHELL.

The Death of Hideyo Noguchi

EXTENSION OF REMARKS
OF
HON. WILLIAM I. SIROVICH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, December 15, 1937

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MAY 24, 1928

Mr. SIROVICH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech made by myself in the House of Representatives, Thursday, May 24, 1928:

Mr. SIROVICH. Mr. Speaker, ladies, and gentlemen, yesterday there died on the golden coast of Africa one of the most eminent and distinguished scientists of the twentieth century, Dr. Hideyo Noguchi, born in Japan, yet belonging to the citizenship of the world.

America, the land of liberty and of his adoption, gave him the laboratory of opportunity to demonstrate his profound and scientific knowledge, so that his genius could explore those mysterious realms which harbor virulent organisms that have been responsible for the causation of the terrible plagues, scourges, and diseases that have afflicted and ravaged humanity the world over for thousands and thousands of years.

If life is but a dream and death be its awakening, then in the world of dreams the work, the fame, the name of Hideyo Noguchi will forever endure.

His contributions to the service and knowledge of humanity will immortalize his name and bequeath a heritage of scientific and useful service to a grateful posterity for having been able to force from the unyielding bosom of Nature those mysterious secrets that for centuries Nature has held inviolate and unbroken, until the fertile imagination and persistent efforts of the genius of Noguchi forced Nature to surrender its secrets to the microscope of science. [Applause.]

The Supreme Architect of the Universe reveals Himself to humble and lowly man in three mystical and inexplicable ways. First, through the life of the universe, which we term Nature. Second, through the thoughts of man, which we term art. And third, through the precision and exactness of the mind, through correct observation and thinking, which we term science.

In this great arena of life intellectual man worships at the shrine of Nature, science, and art. Here in this temple of culture are seated side by side to each other Nature, science, and art, presided over by God Almighty Himself, to whom we graciously bow our heads in humble submission as the Great All Powerful from whom all life and goodness flows. [Applause.]

The disciples of Nature, art, and science recognize no distinction in race, creed, and color. The world is their country. The brotherhood of mankind is their shibboleth and watchword, and love and service to humanity everywhere is the cement that binds them together until the curtain of life falls upon them. [Applause.]

Who are the men who have immortalized their names on the altar of medical service? Hippocrates the Great was the father of medicine. He lived 300 years before Christ was born. The oath that every physician subscribes to, ere he is permitted to embark upon his medical career, is named after him and is known the world over as the "Hippocratic oath."

Four hundred years after the death of Hippocrates there flourished in Rome the greatest commentator on the 60 books written by Hippocrates, a physician whose name was Galen. For 15 centuries Galen was worshiped by the medical fraternity as the foremost figure on the medical firmament, whose skill and ingenuity in the field of medicine was revered and honored by the countless legions who were his devoted followers.

In the year 1132 there was born in Cordova, Spain, the most eminent physician of his time, Moses Maimonides. He was educated in Tripoli, Morocco, and Algiers. He was physician to Saladin the Great, of Cairo, Egypt, who sent him out to treat Richard the Lionhearted when he led the second crusade to redeem the Holy Lands from the infidels. Maimonides was the outstanding figure in medicine, in science, in art, and in philosophy during the Dark Ages of our world.

During the period of the Renaissance, the years 1500 to 1600, Italy gave to the world five of the greatest anatomists the world has ever known—Jacobus Sylvius, the uncanny genius whose work on the human brain is immortalized by the great Sylvian fissure of the brain that is named after him—Andreas Vesalius, the distinguished and learned pupil of Sylvius, who discovered the fact that veins have valves, and whose anatomical clinics were crowded and packed with students from all over Europe who came to pay tribute to his phenomenal knowledge of human anatomy—Fallopius, the adroit and expert scholar after whom the Fallopian tubes of the female generative organs are named—Bartelemo Eustachius, who was the first to describe the Eustachian tube, that runs from the back of the nose to the middle ear, whom posterity has honored in naming the Eustachian tube after him, and last, but not the least, François Rabelais, one of the greatest anatomists of the world who lectured on every phase of human anatomy, demonstrating his lectures on the dissected body to crowded, enthusiastic, and overawed audiences.

Paracelsus, who was contemporaneous with these brilliant anatomists, was born in Switzerland in 1493 and was the pioneer in anticipating the field of infection and contagion and the first doctor to introduce mineral substances in the treatment of disease as professor of medicine in the University of Basel. Associated with him in his investigations was Ambrose Pare, professor in the University of Paris, who through his indefatigable zeal, skill, and technique laid the foundation of modern surgery and was the greatest surgeon of his time.

From the years 1600 to 1700 three mighty characters held the center of the stage in the field of scientific medical endeavor—Jean Baptiste van Helmont, born in Brussels, Belgium, considered the father of biological chemistry, and the first physician to ever examine chemically the blood and urine of human beings to definitely determine the causative factor of disease. Helmont was considered one of the greatest masters of his day.

The year 1628 commemorates forever the outstanding contribution of England to the science of medicine. That period will forever remain famous as the year that William Harvey discovered the circulation of the blood, that revolutionized the concept and the function of the heart and blood vessels, because Hippocrates and his ancient disciples thought that the air was transported throughout the blood vessels of the body in order to feed the innate heat.

Dr. Thomas Sydenham was worshiped by his contemporaries and by the public at large as one of the greatest clinicians and diagnosticians of his time.

From the year 1700 to 1800 England contributed the greatest public benefactor to humanity in the person of Emil Jenner, who in 1796 discovered the principle of vaccination, a discovery of the highest importance to civilization, that has made it possible through vaccination to drive that malignant and pestilent scourge of smallpox from the face of the world.

The years 1800 to 1900 finds every nation of continental Europe, including our own beloved country, America, all vying with each other to subjugate sickness and disease, so that longevity might be prolonged and the health of humanity bettered.

In America the versatile, talented, and gifted author and doctor Oliver Wendell Holmes, the father of our distinguished Judge Holmes, of the United States Supreme Court, was first to write upon the subject of puerperal sepsis. He felt that motherhood was paying too great a penalty upon the altar of childbirth. He proved that puerperal sepsis was caused by dirt infection. He was laughed at and jeered at for his views. But 50 years later Doctor Semmelweiss, an obstetrician of the University of Budapest, confirmed his views. The medical fraternity treated Semmelweiss as the American doctors treated Oliver Wendell Holmes. Semmelweiss, keenly sensitive to this terrible criticism, became insane and died in a madhouse. Today a monument stands in his memory in the principal square of Budapest, a statue that rightfully belongs to our own beloved scholar and scientist Dr. Oliver Wendell Holmes. [Applause.]

The Battle of Bunker Hill and Lexington did not bring as much amazement to the citizens of Boston as did the newspaper announcement in the spring of 1846 that Dr. William Morton had discovered a gaseous substance called ether that could anesthetize any human being and make him unconscious to the knife and scalpel. This drug revolutionized surgery, for prior to its discovery victims of surgical intervention had to be subjected to the deadening effects of opiates and saturated with liquor to deaden their anguish and pain.

Millions of human beings were literally dying every year from infection following operations, until in 1866 Guerin invented absorbent-cotton dressings, which formed a barrier to the spreading of this condition.

Two years later, in 1868, the world was electrified by the announcement that the great Lord Lister had solved the cause of infection by practicing the methods of antisepsis before, during, and after operations, which reduced the frightful morbidity and mortality following operations, and made surgery safe and sound when applied to any condition in which the knife had to be used in order to save life or limb.

It was just about this time that the greatest scientific genius of the nineteenth century, Pasteur, came upon the horizon of science. Within a short time he demonstrated to a skeptical and amazed world that infection was due to a bacterial invasion. To a dazed and dumbfounded world he revealed these new organisms—coci, bacilli, spirillae, fungi, yeasts. A new world. A conquest of chemical culture and the microscope. These discoveries of Pasteur completely resurrected surgery and chiefly transformed the treatment of modern diseases.

Thus far Egypt, Greece, Italy, Spain, France, England, and America had blazed the trail of medical and surgical pioneering. Teuton culture and civilization became inspired by these intrepid soldiers of the microscope, the agar culture, and chemistry, and finally Germany gave to the world the peer and master of all bacteriologists of all time in the person of Doctor Koch, who thrilled and bewildered an amazed world when he announced the discovery of the tubercle bacillus that was responsible for the causation of tuberculosis and led the mortality tables of the world in the causation of death from consumption.

Ehrlich, the wizard of biochemistry, is Germany's and the world's greatest contributor to the successful treatment of modern disease. His "606," known as salvarsan, is an absolute specific in the treatment of syphilis, that had ravaged the world for centuries and made syphilitic treatment the curse of the possessor and the bane of the physician.

From time immemorial the organism that caused syphilis was unknown. Only a decade ago a great German savant and scholar isolated this frightful assassin of human life under the field of the dark microscope and to perpetuate his memory the scientific world named this reaction after the founder in the examination of human blood and calls it in his honor "the Wassermann test."

In this, the twentieth century of civilization, America ranks in the forefront as the proud possessor of the greatest scientists of the world. Behold its roster in Public Health Service—men who have distinguished themselves in arduous and dangerous research to promote the interests and happiness of mankind.

Where is there a patriotic man or woman who will forget the courageous heroism of Dr. Lazear, who, under the supervision of Dr. Walter Reed, gave up his life upon the altar of science in order to have himself infected with the mosquito to prove to the world that the mosquito is the cause of malaria and yellow fever?

It was this wonderful experiment in which Lazear gave up his life that gave the knowledge to Dr. Gorgas to eradicate yellow fever and malaria from the Panama Canal, which made it possible for American engineers to build the canal.

DR. HENRY R. CARTER

World-recognized authority on yellow fever and malaria. In 1900–1901, by purely epidemiological studies, demonstrated that yellow fever must be conveyed by an intermediate host, and measured with accuracy the periods of incubation in that host and in man, thus laying a solid scientific basis for the subsequent experimental verification.

DR. CHARLES WARDELL STILES

Discovered the American species of hookworm, demonstrated its great prevalence, worked out its epidemiology, devised methods for the control of the disease, and inaugurated the successful campaign against it.

DRS. MILTON J. ROSENAU AND JOHN F. ANDERSON

Pioneers in the study of anaphylaxis, concerning which they contributed many of the fundamental facts. This phenomenon is of great importance in the modern conception of disease processes.

DRS. GEORGE W. M'COY AND C. W. CHAPIN

Discovered and cultivated the bacillus tularense, making methods available for its further study. They did their work in 1910 on California ground squirrels.

DR. EDWARD FRANCIS

Contributed nearly all that is known concerning the disease tularemia in man. Showed its methods of transmission and what to do in order to avoid it.

DR. R. R. SPENCER

Worked out a vaccine against Rocky Mountain spotted fever. Demonstrated its efficacy in experimental animals and its harmlessness by injecting himself first. Showed by use in hundreds of persons who are exposed by occupation that it confers a large measure of protection. The preparation of this vaccine involves a new principle of immunology. Vaccine used on humans 1925.

DR. JOSEPH GOLDBERGER

Showed the dietary origin and cure of pellagra. This is a most notable achievement since this disease has baffled the best European talent for centuries. At times it has threatened to

become seriously prevalent in the United States, but with this new knowledge the threat has been permanently removed. Study of pellagra begun in 1912 and is going on at the present time.

DR. WADE H. FROST

Planned and conducted the first thoroughgoing and fundamental investigation of the problems offered by the pollution of streams in this country. In view of the increase of population and manufactures along our streams this has been a most valuable activity. Investigation of the pollution of the Ohio River began under his direction July 1913.

DR. JOHN M'MULLEN

Demonstrated the practicability of virtually eradicating trachoma and preventing blindness therefrom in mountainous areas of Kentucky and other States by the establishment of small hospitals and the employment of skillful treatment.

BACTERIOLOGIST ALICE EVANS

In 1918 she showed similarity of causes of Malta fever and contagious abortion and occurrence of latter infection in people. Now increasingly recognized as a cause of human illness.

DR. VICTOR HEISER, CHIEF QUARANTINE OFFICER, PHILIPPINES, 1903–15

Demonstrated the possibility of establishing effective health service in a large tropical country with diverse aboriginal population.

DR. M. A. BARBER

Originated single-cell-culture method which he first used in 1902. This opened up a prolific field of investigation. The use of Paris green control of mosquitoes in 1921. This cheap method has made malaria control feasible in many areas where it was formerly impossible because of the expense.

In the science, skill, and technique of surgery, America leads the world. Where are the surgeons that are comparable to the Mayo brothers, of Rochester, Minn.; Crile, of Cleveland; Ochsner, of Chicago; Cushing, of Boston; Deaver, of Philadelphia; Kelly and Wilmer, of Baltimore; Blake, Brewer, Albert A. Berg, John Erdman, John J. McGrath, Howard C. Taylor, George Schwartz, John Pollack, and John Prescott Grant, of New York City—men of the highest caliber and ability, whose very names are household words in the cities from whence they come, where thousands of their benefactors are praying for their health and happiness? [Applause.]

Within a radius of a mile from the Fourteenth Congressional District, which I have the honor to represent, is the greatest medical research center in the world. It is called the Rockefeller Institute. It is a monument to two of the greatest philanthropists that the world has ever known, John D. Rockefeller and his wonderful and gracious son, who is emulating his father in devoting his fortune to the best service of his fellow man. This brilliant Institute has become famous through three of nature's noblemen—a triumvirate whose name and fame will persist as long as time endures.

These distinguished scholars thus far represent the three greatest scientists of the twentieth century—Alexis Carrell, Simon Flexner, and Hideyo Noguchi.

Alexis Carrell won the Nobel prize a few years ago for his brilliant discoveries in the realm of physiology, biology, and collateral subjects. He is the outstanding genius of our present time.

Simon Flexner, a great name to conjure with, internationally famous. He will live in the memory of generations that are to come for having isolated the infantile-paralysis virus, for his cure of snake venom, and, above all, for the serum that he has perfected that helps to cure and save the lives of thousands of sufferers from epidemic meningitis. As long as anywhere the tradition of science survives, Flexner's work will always endure. What conqueror has ever had such victories attached to his name as Flexner has in his service to mankind? [Applause.]

Hideyo Noguchi—the great son of Nippon—came to this country in 1900 and subsequently became associated with Professor Flexner and Dr. Carrell. He devoted his supreme and brilliant talent to ferret out the causes of terrible diseases which baffled medical skill, and whose treatment made no impress upon the nature of the disease. Seldom did he fail in his accomplishment; success usually crowned his efforts.

Through his genius the organism that caused paresis was isolated. Paresis was filling the insane institutions of the world with the victims of this unfortunate malady. He localized the organism in the brain and through the microscope forced it to reveal itself to the amazed scientific world. Noguchi proved that paresis was caused by the spirochita pallida, the organism that caused syphilis.

The versatility and genius of Noguchi further manifested itself in his brilliant discovery of the organism that was responsible for the causation of trachoma—an eye affliction and disease that caused more blindness in the world than any other condition known to mankind.

The SPEAKER. The time of the gentleman from New York has expired.

Mr. SIROVICH. Mr. Speaker, I ask unanimous consent of the House to proceed for 2 more minutes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. SIROVICH. Mr. Speaker, ladies, and gentlemen. Hideyo Noguchi was not content with his extraordinary and brilliant conquests in this his adopted land; he was looking for new fields of endeavor, new lands for conquest. In the name of science he set sail for South America to determine the cause of yellow fever in that land. In a short time the world was again thrilled by his announcement—he had again triumphed. He isolated the yellow-fever organism in South America. To determine whether the yellow fever of Africa was caused by the same species as South America he set sail for that pesthole in Africa.

In a short while Noguchi had himself infected with the dreaded organism that caused African yellow fever. Chills and fever racked his body fore and aft. His militant and brilliant mind refused to surrender to the hosts of yellow fever's organism. The battle waged on. At last Noguchi isolated the organism and gave to the world the knowledge that the yellow fever of South America and Africa were caused by two different hosts. Science triumphed, but Noguchi fell a victim to this dreadful disease. He died a martyr to duty. He will live in the memory of humanity and mankind. Greater love hath no man than to give up his life for another. God bless his soul!

Mr. Speaker, ladies, and gentlemen, if the grave is the end of all life, then Hideyo Noguchi's name will forever remain immortal through the great contribution he has given to mankind; but if the grave be the gateway to some future state of existence then Hideyo Noguchi in conjunction with the great illustrious immortals that have gone beyond the Great Divide to sleep in eternal rest, will forever be revered, honored, and remembered by grateful mankind for having given of his today that others may have their tomorrow. [Loud applause.]

The Proposed Utility Compromise

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. RANKIN. Mr. Speaker, we are witnessing one of the most terrific drives ever made by a combination of selfish interests to thwart the will of the American people or destroy the effects of beneficial legislation.

Powerful financial interests of the country seem to have aligned themselves with certain public utilities in an effort to force the country into another depression in order to wreck the administration or force President Roosevelt to recede from his position on the power question and other issues in which their interests are involved.

They know that if they could compel or induce the President to repudiate his power program they will have delivered a vital blow to his prestige, as well as that of his administration. That is exactly what they are after. They want to discredit everything that his administration has accomplished.

Having wrung untold millions of dollars from the unprotected consumers of electricity in exorbitant overcharges, flooded the country with worthless watered stocks, through which they have defrauded thousands of unsuspecting investors, having abused the functions of the courts by tying up of cities, towns, and communities with injunctions in order to carry out their schemes, having been defeated in every case where these suits have been permitted to come to trial, they now come and fawn at the feet of the Chief Executive, begging for clemency, and for permission to continue the ruthless exploitation of the unprotected consumers of electric energy for which they have been so universally condemned.

They are not only asking for pardon and protection for themselves, but they are asking President Roosevelt to turn his back on his power program and repudiate the greatest achievement of his entire administration.

The shock troops of this drive seem to be Wendell L. Wilkie, president of the Commonwealth & Southern, and Floyd L. Carlisle, president of the Consolidated Edison. The recent visit of these two gentlemen to the White House has been widely heralded by utility-inspired propaganda as indicating that President Roosevelt has changed his position and that the administration had altered its policies on the power issue.

Nothing could be further from the truth.

From the standpoint of benefits to the American people, the power program of this administration constitutes one of the greatest economic accomplishments of all time. If President Roosevelt never did anything else, this one achievement alone would be sufficient to carry his name down the centuries as one of the greatest benefactors of mankind.

To ask him to repudiate that program now, in the very heyday of its success, sounds as ridiculous as it would for the British to have come and appealed to George Washington to repudiate the Declaration of Independence and turn the Colonies back to the English at the very height of his successful administration as the first President of the United States.

What do these utility magnates propose? What do they want? Here is their proposition in a nutshell, as outlined by Wendell L. Wilkie, president of the Commonwealth & Southern, stripped of its camouflage:

First. They want the Holding Company Act modified or repealed so as to permit the large useless holding companies to continue their present parasitic existence and practices. For that concession they would agree to abolish the little holding companies under them as nuisances. In other words, they are asking that they, as the ringleaders, be given a Presidential pardon, but that the less prominent offenders be executed for the sins of these higher-ups.

Then they want the T. V. A. yardstick abandoned, all competition squelched, and the power generated by the T. V. A. turned over to private power companies at a nominal price so that they can resell it to the helpless consumers at enormous profits, just as they did before the T. V. A. was created and its yardstick rates put into effect.

In return for such capitulation on the part of the administration they propose to squeeze a billion and a half of the six and a half billion dollars of water out of their capital structure and spend it restoring prosperity, instead of squeezing out the six and a half billion dollars of water and reducing their rates to about half their present charges. That would give relief to more than 20,000,000 consumers of electric energy in every State in the Union and would do more to aid the return of prosperity than anything else these utilities could do or ever have done. But Messrs. Wilkie and Carlisle made no such proposition. They did not propose reducing their rates. That is not in their plans.

These pinch-hitters for the Power Trust must have been greatly surprised to find that President Roosevelt knew more about the power business than they did and that he was not only familiar with their present practices but with their past records as well. He evidently made them look ridiculous. He probably recalled that these same utilities tried this same stunt on President Hoover in the early days of the depression—and got away with it. They were going to help bring back prosperity then, and here is the way they did it:

Instead of spending more money and putting more men to work, they merely slowed down construction, raised rates, and, as President Roosevelt said at the time, "Raised their own high salaries higher."

The record shows that in 1929 the president of the Commonwealth & Southern, Mr. Wendell Wilkie's predecessor, received a salary of $43,790 a year. That salary was raised to $75,000 a year in 1930, and to $130,140 in 1932. Now that ought to have stopped the depression.

At that time consumers were having their lights cut off because they could not pay the bills. The common stock of the Commonwealth & Southern had dropped from 32 in 1929 to 1⅝ in 1932, and the 6-percent preferred stock had dropped from 104 in 1929 to 27⅜ in 1932. But that did not prevent the president and other high officials of this holding company from raising "their own high salaries higher," as I have indicated. Therefore, it will be seen that while prosperity came rapidly to the highly paid useless officials of this useless holding company, it went into reverse before it got down to the stockholders or the consumers.

At that time, the Commonwealth & Southern was buying power at Muscle Shoals, under a contract it had made with the Hoover administration, as a part of the program to restore prosperity, for which it was paying on an average of 1.56 mills a kilowatt-hour. It was selling it to the domestic consumers in sight of the dam and throughout that area at 10 cents a kilowatt-hour—a spread of a little more than 5,000 percent. One thousand kilowatt-hours which cost the Commonwealth & Southern $1.56 at the dam, was sold to the small consumers in Florence, Ala.—within sight of the dam—for a total of $100. No wonder the Commonwealth & Southern wants to get rid of the T. V. A. yardstick as well as the Holding Company Act. No wonder they are frantically pleading to the White House to relieve them of these responsibilities before the Supreme Court passes final judgment. They want to return to those "good old days."

The T. V. A. yardstick will never be abandoned. The power policies of this administration are here to stay. The Holding Company Act is here to stay.

What is the T. V. A. yardstick? It is a yardstick for the proper measurement of electric light and power rates to the ultimate consumers. It is 36 inches long, and by comparison the utilities' yardstick is 95 inches long, 59 inches of which is overcharges, which all of you are helping to pay, unless you are getting your power at the yardstick rates.

The T. V. A. is the most profitable investment this country has ever made. It is saving the consumers of electricity in the United States more money every single year than the entire expenditure on both the Tennessee and Columbia Rivers have amounted to up to this time.

So far as the millions of consumers of electricity are concerned, the yardstick is a golden wand. It is the most powerful weapon ever devised for their protection against exorbitant overcharges. It has already been instrumental in forcing reductions in light and power rates amounting to $556,000,000 a year. And the end is not yet. Further reductions are yet to come.

The Edison Electric Institute Bulletin shows that during the year ending February 28, 1932, the people of the United States consumed 62,653,000,000 kilowatt-hours of electricity, for which they paid $1,803,000,000. The next year the T. V. A. yardstick was created and its example began to force rate reductions in every State in the Union. The Edison Electric Institute Bulletin also shows that during the year ending February 28, 1937, the American people consumed 91,555,000,000 kilowatt-hours, for which they paid $2,086,080,300. If they had paid the same rate for that 91,555,000,000 kilowatt-hours that they paid in 1932, the cost to them would have been $2,642,000,000, or $556,000,000 more than they actually paid.

Thus the T. V. A. yardstick, along with the other phases of the administration's power program, is already yielding the consumers of electricity a dividend of $556,000,000 a year in rate reductions.

Every person who turns an electric switch gets a portion of that dividend. It will be more next year, and will increase from year to year as time goes on.

I have these overcharges broken down by States. You will find them inserted at the end of these remarks.

Since Mr. Carlisle, president of the Consolidated Edison, is making his appeals to President Roosevelt to withdraw his protection from the consumers of electric energy and return to the "good old days," let us turn to the State of New York, where Mr. Carlisle's companies operate, and see what the yardstick would mean to the consumers in that area. Of course, what Mr. Carlisle is afraid of is the development of the St. Lawrence waterway, with its great wealth of hydroelectric power to be divided between the United States and the Dominion of Canada, or the Province of Ontario.

Last year the domestic consumers of the State of New York used 1,915,442,000 kilowatt-hours of electricity, for which they paid $99,767,979. Under the Ontario rates, just across the boundary line from the State of New York, the cost to these consumers would have been $25,489,178, which shows that, according to the Ontario rates, the domestic consumers alone in the State of New York were overcharged $74,279,801 for electric lights and power in their homes in 1936.

No wonder Mr. Carlisle and his associates do not want a yardstick on the St. Lawrence River. No wonder the power

interests in New England do not want a yardstick on the Connecticut River. No wonder the Power Trust does not want any yardstick on the Tennessee River, the Columbia River, the Ohio, the Colorado, or anywhere else.

Now let us see what happened to the commercial consumers in the State of New York—the merchants, the businessmen, the professional men, the filling-station operators, the hotel and restaurant people, and others who have to pay commercial rates for electricity in that State. The record shows that in 1936 these commercial consumers throughout the State of New York used 2,242,546,000 kilowatt-hours, for which they paid $99,338,554. Under the Ontario rates it would have cost them $39,171,554, or $60,217,000 less than they actually paid. No wonder Mr. Carlisle grows desperate in his efforts to prevent the development of a yardstick to protect the power consumers of New York and the adjoining States.

Taken as a whole, the people of that State, including domestic, commercial, and industrial consumers, were overcharged for electricity last year $160,905,115, according to the T. V. A. yardstick rates, and $190,237,801, according to the Ontario rates, as will be seen from the tables I am inserting.

Although we have reduced light and power rates $556,000,000 a year, giving the American people a dividend of $556,000,000 annually in reduced overcharges, these overcharges still aggregate more than $1,000,000,000 a year. The utilities want to wreck this program and prevent further reductions lest we should extend these benefits to all the consumers of electricity in every nook and corner of the United States.

I have been asked what plan I would suggest as a substitute for that proposed by these utility magnates. My solution would be to let the administration continue its present power policies, construct dams on our navigable streams and their tributaries to control floods, promote navigation, conserve the soil, and generate power. Then build transmission lines necessary to carry this power, and sell it to municipalities, cooperative associations, and their distribution agencies, with a provision in the contract that it is to be sold to the ultimate consumers at the T. V. A. yardstick rates. Continue this program until we compel reduction in light and power rates to their proper levels in every community in every State, and extend the rural electrification program until we electrify every farm home in America.

If private power interests want to survive, let them get rid of their useless holding companies, squeeze the water out of their capital structures, get rid of their unnecessary and highly paid officials, stop spending enormous sums of money on misleading propaganda, and reduce their charges to rates based upon the cost of production, transmission, and distribution, with a reasonable return on the money actually and necessarily invested.

By that time they will have their rates down to the T. V. A. yardstick levels and the American people will be saving an additional billion dollars a year on electric-light and power rates, in addition to the $556,000,000 a year reduction that has already been brought about by the T. V. A., its yardstick, and the kindred power policies of this administration.

Then we will have reached our goal and electrified America at the yardstick rates.

I insert at this point four tables showing the cost to the ultimate consumers and the overcharges for electric energy in the various States during the year 1936.

The first table is for the residential or domestic consumers. It shows the number of domestic consumers in each State, the number of kilowatt-hours used by them during the year 1936, the total cost to the ultimate consumers, the average number of kilowatt-hours consumed, the average cost to the consumer per kilowatt-hour, and also the total overcharges to the domestic consumers in each State according to the T. V. A. rates, the Tacoma rates, and the Ontario rates.

The second table shows the same thing with reference to the commercial consumers. The third table gives the same information with reference to industrial consumers, and the fourth covers all consumers of electricity in each State.

These tables are compiled from the very best data that can be obtained, and, while they are extremely conservative, they give a fair picture of the situation in the various States and sustain my contention that the American people are overcharged a billion dollars a year for electric lights and power. While the tabulation indicates an overcharge of only $960,602,403 according to the Tacoma rates, it fails to give Tacoma credit for a profit of $785,480.62 out of a gross revenue of $2,359,964.91. This profit goes to the consumers, and, if properly credited, it would show this overcharge to be above $1,320,000,000. It increases my estimate of the overcharges according to the T. V. A. rates and shows the overcharges according to the Ontario rates to be well over a billion dollars a year, after allowing for taxes amounting to 1 mill a kilowatt-hour for the power consumed.

I hope every Member of the House and everyone who reads this RECORD will study these tables carefully. They tell a most astounding story.

TABLE NO. 1—OVERCHARGES TO DOMESTIC CONSUMERS, BY STATES

This table gives the residential sales data for electric light and power for every State in the Union, showing the overcharges in each State when compared with the T. V. A., the Tacoma, or the Ontario rates.

Take, for instance, the State of Maine. Last year the domestic consumers of electricity in Maine used 89,138,000 kilowatt-hours of electricity, for which they paid $4,865,238, or an overcharge according to the T. V. A. rates of $3,644,184, or an overcharge of about 300 percent. It is about the same compared with the Tacoma or the Ontario rates.

Take the State of New York, whose domestic consumers used 1,915,422,000 kilowatt-hours last year, for which they paid $99,767,979. According to the T. V. A. rates, they were overcharged $66,746,115, or about 200 percent. The overcharges according to the Tacoma rates were a little less than 200 percent, while compared with the Ontario rates they were approximately 300 percent.

Go over this table carefully and you will see what an enormous burden of overcharges the domestic consumers of your own State are paying.

TABLE 1.—*Residential sales data*

State	Estimated sales for 1936							Estimated overcharges according to rate schedules in 1936		
	Number of customers	Total kilowatt-hours (thousands)	Total revenue	Annual kilowatt-hours per customer	Annual bill per customer	Monthly bill per customer	Average revenue per kilowatt-hour (cents)	Tennessee Valley Authority	Tacoma	Ontario
Maine	152,372	89,138	$4,865,238	585	$31.93	$2.66	5.46	$3,644,184	$3,393,075	$3,962,764
New Hampshire	102,337	55,364	3,475,365	541	33.96	2.83	6.28	2,608,469	2,454,565	2,817,965

TABLE NO. 2.—OVERCHARGES TO DOMESTIC CONSUMERS BY STATES

This table shows the amount of electricity used by commercial consumers in each State, the amount paid for it, the average annual consumption, the average rate per kilowatt-hour, and the amount overcharged according to the T. V. A., the Tacoma, or the Ontario rates.

I wish every merchant in America, every hotel or restaurant operator, every filling-station operator, every proprietor of a garage, and everyone else who pays commercial rates for electric energy could examine a copy of this table and see the enormous burdens of overcharges which they are required to pay.

TABLE 2.—*Commercial sales data*

State	Estimated sales for 1936							Estimated overcharges according to rate schedules in 1936		
	Number of customers	Total kilowatt-hours (thousands)	Total revenue	Annual kilowatt-hours per customer	Annual bill per customer	Monthly bill per customer	Average revenue per kilowatt-hour (cents)	Tennessee Valley Authority	Tacoma	Ontario
Maine	29,921	81,824	$3,257,114	2,735	$108.86	$9.07	3.98	$1,760,000	$1,522,000	$2,025,000

TABLE NO. 4.—TOTAL OVERCHARGES TO ALL CONSUMERS, BY STATES

This table shows the number of kilowatt-hours of electricity consumed by the people in each State for all purposes in 1936, the amount paid for it, the average rates charged, and the overcharges by States, according to the T. V. A., the Tacoma, or the Ontario rates.

Please study this table carefully and tell me how the people of your State can continue to stagger under such burdens.

Purchase of Silver

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

LETTER FROM HON. J. W. ROBINSON, OF UTAH, TO THE PRESIDENT OF THE UNITED STATES

Mr. ROBINSON of Utah. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following letter from myself to the President of the United States:

DECEMBER 13, 1937.

THE PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: There are a number of reasons possibly more cogent than the one here presented why the present policy of purchasing domestically mined silver should be continued. However, in my opinion, a continuance of this policy would be justified if for no other reason than the one herein presented.

Although not intended as a relief measure, the policy of the Government in regard to the purchase of silver as established by the Presidential proclamation of December 21, 1933, and subsequent amendments thereto, has proved to be one of the most effective and most economical methods of reducing unemployment and relieving want and suffering yet adopted.

At the time the present administration assumed office the metal-mining industry in the United States was paralyzed. Prices of metals were so low that a few mines were able to operate. Market reports of that time quoted lead at 3 cents, zinc at 2¼ cents, copper at 5¼ cents, and silver at 28 cents. Only those mines whose production costs were at a minimum were able to maintain their operation. Thousands of men who would normally have been employed in these mines and allied industries swelled the ranks of the unemployed.

The establishment of the purchase price of domestic silver at the mints at 64½ cents, and the subsequent increase of that price to 77.57 cents proved to be the measure necessary to the rejuvenation of the entire nonferrous metal-mining industry. Silver seldom appears in ore alone, usually it is associated with copper, lead, or zinc, and is produced as a byproduct of these others. Therefore a good price on one of the metals would make possible the mining of the other metals which were contained in the same ore. A price of 77.57 cents on the few ounces of silver contained in a ton of copper, lead, or zinc ore made possible the mining of this ore, where it would have been impossible had the silver brought only 28 cents.

From 1933 to 1936 the production of silver in the United States increased from 22,917,198 ounces to 60,665,628 ounces; the production of lead increased 37 percent, the production of zinc increased 40 percent, and the production of copper 170 percent. It is true that the rise in prices of the other metals has been in a large measure responsible for this increased production, but the early impetus, and much of the sustaining influence of this production was furnished by the increased price of silver.

These figures for production are reflected in employment statistics. In 1929 there were employed in the metal mines of the United States 110,000 men. In 1933 the number was reduced to 38,100. Seventy-two thousand men who had formerly been employed in metal mines were, because of the low price of metals, without work.

As production in the mines began to increase, employment increased in proportion until by September of 1937 the employment figure was 92,500. Fifty-four thousand men had returned to work as a result of the recovery of the mining industry. If we add to this number the people reemployed in allied industries and the small producers for whom no figures are available, the number would be greatly increased. Accurate estimates place the total number of workers so reemployed in excess of 100,000, which would mean that, if we include their dependents, 400,000 people have been removed from the relief rolls by the recovery of the mining industry.

But to confine ourselves to the actual replacements in the mines as shown by the Bureau of Labor Statistics report, what would have been the cost to the Government had these men remained on relief? The average cost to both State and Federal Governments to keep a worker on relief projects in the Western States, where are located most of the mines, is shown by the records of the W. P. A. to be $1,008 per year. The cost of maintaining the 54,000 workers reemployed in the mines on relief projects for 1 year would have been $54,432,000.

As compared with this figure, the so-called subsidy paid to domestic silver producers is small. The total amount of domestic silver purchased under authority of the proclamation of December 21, 1933, amounted on September 30, 1937, to 172,672,400 ounces. The excess of the price paid to the domestic producer over the price on the world market amounted to $50,852,021, or slightly in excess of $12,000,000 per year. The cost of the silver subsidy as compared with what it would have cost to keep the workers reemployed in metal mines on relief is less than 1 to 4, if we accept the figures of the Bureau of Labor Statistics; and probably less than 1 to 8 if we include the workers in allied industries and those miners for whom figures are not obtainable.

The recent slump in the metal market is threatening to place the mining industry in the position in which it was in 1933. Copper has dropped from 17 cents a pound in March to 10⅜ cents at present, and lead and zinc have dropped proportionately. These prices are very near to the point below which many mines cannot operate. Unless they receive a relatively high price for the silver which they produce in connection with these ores, many mines may be forced to lay off part or all of their employees.

Industry cannot absorb these people who would be dismissed; already there is a large group of unemployed. They cannot go back to the farms. A recent study by the agricultural college in my home State revealed that farms in the State of Utah are already too small and that there is a surplus of farm labor. The men now working in the mines will merely swell the ranks of the unemployed and will become dependent upon direct relief.

There appears to be no immediate way to adequately sustain the price of copper, lead, or zinc. However, merely by continuing in effect the proclamation of December 21, 1933, with its subsequent amendments, the price of silver can be maintained at a level that will enable the mines to continue to produce even though the

other metals may drop in price to a point where they alone could not be produced.

As a Representative of a State in which 47 percent of the people are directly or indirectly dependent upon mining, a State in which a reduction in mine operation can only mean added suffering and an increased relief load on both the State and Federal Government, I wish to urge that you continue at least for another year the present policy of purchasing domestically mined silver.

Very truly yours,

J. W. ROBINSON.

The Ludlow Amendment

EXTENSION OF REMARKS

OF

HON. JOHN O'CONNOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

LETTER FROM JAMES E. VAN ZANDT TO HON. JOHN O'CONNOR, OF NEW YORK

Mr. O'CONNOR of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter written to me by Mr. James E. Van Zandt, former commander of the Veterans of Foreign Wars and now chairman of the national legislative committee:

VETERANS OF FOREIGN WARS,
Kansas City, Mo., December 16, 1937.

The Honorable JOHN O'CONNOR,
Chairman, House Committee on Rules,
United States Capitol, Washington, D. C.

MY DEAR JOHN: Confirming our personal conversation today, please be advised that the Veterans of Foreign Wars of the United States has never adopted any resolution at any of its national encampments favoring or endorsing the adoption of any constitutional amendment requiring, except in case of invasion, a vote of the majority of the citizens of this country to confirm a declaration of war against any other nation.

It is true that point 3 in the four-point program of the V. F. W. is to "Keep America out of war." It is also true that the V. F. W. recently instituted a Nation-wide campaign to persuade 25,000,000 American citizens to sign a petition calling upon the Congress and the President to adopt and apply policies designed to keep America out of war, and supported by a national-defense program adequate to preserve and protect our country and its people.

As men who have personally experienced the horrors of war, the V. F. W. has always appreciated the sincere efforts of every advocate of a policy to keep America out of war, and we have been particularly appreciative of the fact that the Honorable LOUIS LUDLOW, author of House Joint Resolution 199, has been responsible for mobilizing public sentiment to keep this Nation out of the wars of other nations, but we have not been convinced as to the practicability of the type of war referendum proposed in his bill.

With best wishes and kindest personal regards, I am,

Cordially yours,

JAMES E. VAN ZANDT,
Chairman, National Legislative Committee.

The Menace of Hagueism

EXTENSION OF REMARKS

OF

HON. JERRY J. O'CONNELL

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

EDITORIALS REGARDING LABOR CONDITIONS IN JERSEY CITY, N. J.

Mr. O'CONNELL of Montana. Mr. Speaker, under leave to extend my remarks, I wish to include editorials from several newspapers concerning the deplorable labor situation existing in Jersey City:

[From the Philadelphia Record, December 14, 1937]

THE MENACE OF HAGUEISM

It is the duty of the La Follette Civil Liberties Committee to begin an investigation into the suppression of fundamental American liberties in Jersey City. The country is indebted to the 26 Congressmen who have brought the situation forcibly to public attention by their open letter to Mayor Frank Hague.

The steady destruction of basic rights in Jersey City is more than an exceptional case, of interest only to its residents. It represents a pattern that reactionary officials in other cities may follow if Hague is successful in his campaign to destroy unionism and gag free expression in Jersey City.

Hague's antilabor activities began in 1932, after he broke with Brandle, then the "czar" of the building trades in New Jersey, because Brandle had refused to call off an ironworkers' strike against nonunion construction of the Pulaski Skyway. Later that year Hague accepted a job as "adviser" to the silk industry—he was reported to be getting $100,000 a year, but denied it—and began talking about labor "racketeering."

Talk of that kind came strangely from one who had worked for years with Brandle. When a legislative investigation called attention to the fact that Hague had spent $400,000 in 10 years on an $8,000-a-year salary, and the Internal Revenue Bureau filed income-tax claims against Hague, it was Brandle who loaned Hague $60,000 with which to settle the case.

Nevertheless, part of organized labor, because of Hague's fair labor record in the past, took him seriously, and 2 days after his statement the ironworkers' local asked him to help them end racketeer control of their union. There is no record that he ever did so.

It was soon clear that Hague's talk of racketeers, like his more recent talk of Communists, was a cover-up for a campaign that has converted Jersey City into an open-shop town. By 1932, after his notorious "The nightstick must prevail" order, Hague felt strong enough to ban picketing.

The ban on picketing broke both a barbers' and a butchers' strike, but met with resistance in a strike against a "runaway" furniture company which had gone from Brooklyn to Jersey City on Hague's invitation after the company had been ordered by the New York State department of labor to pay $2,200 in back wages. The company cut pay from $35 to $19 a week when it moved.

Many prominent people, including Corliss Lamont and Alfred Bingham, were arrested on the picket line. The Central Labor Union, for the first time in its history, came out against Hague, unanimously condemning his stand against picketing. An appeal was made to the President and for a time the right to picket was reestablished.

This year Hague seems to have the reactionary "heebie-jeebies." Since the seamen's strike in January, when Arthur Garfield Hays was forcibly denied the right to picket, Hague's record has been worse than ever and his statements less and less restrained, less and less rational: "I am the law; I decide, I do, me, right here." The latest fight came over his arrest of men distributing C. I. O. circulars.

Hague has been mayor of Jersey City since 1917, and his misuse of power is notorious. He has often been rebuked by the courts, but ignores their rulings. An attack at the ballot box is difficult. There is plenty of evidence of election frauds in Jersey City. That is putting it mildly.

Whether Hague isn't feeling well or whether he figures that because of Jersey City's high taxes he must offer industry low wages (Jersey City's annual tax bill of close to thirty million compares with the five to eight millions a year spent by other American cities of its size) we do not know.

We do know that liberty is rapidly becoming as nonexistent in Jersey City as it is under many European and Latin American dictatorships; that the people who live there have no effective remedy, and that unless the La Follette committee steps in and blows the situation wide open Hagueism might easily spread.

[From the Washington News of December 14, 1937]

A government executive like Mayor Frank Hague, of Jersey City, is a heavy handicap to current efforts to make labor's organizing and picket methods fair to the public without making them unfair to labor.

Mayor Hague's "I am the law," his "I do, me, right here, decide" what constitutes "attempted invasion" of Jersey City by the C. I. O., his wholesale deportation of union organizers, his ban on free speech, free assembly, distribution of union circulars, and anything else he chooses to call unlawful have even challenged the attention of Congress.

There are some employers unwise enough to approve of what Mayor Hague is doing—to rejoice, secretly or openly, that he is one official who is keeping labor under control and to wish that the country had more officials like him.

The fact is, of course, that stupid truculence of the Hague type does incalculable harm. It provokes labor to defiance. It is fortunate for the country, and especially for the employers of labor, that there are not more officials like Mayor Hague. For keeping American citizens under control by depriving them of their legal and constitutional rights is the most certain way to drive them out of control.

[From the Baltimore Sun, December 14, 1937]

STRUCK HOME

In spite of his supposedly humorous reply to the 26 Members of Congress who tried to remind him that Jersey City was in the United States, Mayor Frank Hague seems to be getting touchy. His latest response to protests against his dictatorial policy in denying the right of assembly to labor organizers is an attack on

Morris Ernst, who had injected himself into the situation as a lawyer and friend of civil liberties, as a "red." The mayor cited as his authority Mrs. Elizabeth Dilling's extraordinary work The Red Network; a Handbook of Radicalism. This gave Mr. Ernst the opportunity to note that Mrs. Dilling had also included Mrs. Roosevelt, Mayor LaGuardia, and six bishops, and the argument moved to a lower plane.

Whatever points Mayor Hague and Mr. Ernst are able to score against each other, the fact remains that the Hague machine in Jersey City is attempting to set up a dictatorship over certain aspects of life there. Mayor Hague undertakes to prohibit meetings sponsored by a certain type of labor union and to banish from the city organizers of that union. The right to be protected against arbitrary arrest and search and seizure is not worth much in Jersey City if one is an organizer for a C. I. O. union. To all criticism the mayor has replied, "Leave everything to me." Now, apparently, those who do not care to leave everything, including their civil rights, to Mayor Hague are "reds."

Obviously this is not the sort of thing that long prevails in America. Soon or late the outrage is expunged and ordinary democratic practice is resumed. Mayor Hague will not permanently put off that day by referring to his critics as "reds."

[From the Washington News, December 15, 1937]

IT SEEMS TO ME

(By Heywood Broun)

Jersey City is quite a large town, and its citizens should blush at the conduct of Mayor Frank Hague. In addition to playing the part of a tyrant he is also acting the role of the clown. In one and the same ring you get Mussolini and Marceline. Surely even the supporters of this brazen boss can hardly be edified by their leader when he starts reading fairy tales and talking baby talk. To be sure, it is news that Frank Hague has a book. But he must have been browsing about a second-hand shop when he ran across The Red Network—A Handbook of Radicalism, by Mrs. Elizabeth Dilling. A Jersey City bibliophile describes the writer of that engaging burlesque as "a noted author and lecturer." The lady's fame must be local, for she was laughed away in lavendar a good many years ago.

It was Mrs. Dilling who listed both Jane Addams and Eleanor Roosevelt as dangerous "reds."

No politician in America can do as much with a column of figures as Frank Hague. Still, it must be admitted that all his dazzling exhibitions have been on his home grounds. The most recent attack by the bookworm boss is aimed at Morris Ernst. Mr. Ernst has been my personal counsel ever since the truant officer was around inquiring why I was cutting classes in kindergarten. Hague says that Morris Ernst is a Communist, but I am prepared to testify that he is an old-fashioned romantic liberal.

It is interesting to note that Ernst and Roger Baldwin, who are tagged by the Jersey mayor as "red" leaders, were both refused passports to Russia last summer by Soviet officials. But, of course, Frank Hague cannot possibly be as simple-minded as his statements to the press would indicate. He is fighting C. I. O. organization in Jersey City because he finds it expedient, for one reason or another, to play ball with certain employers in his town. Jersey City has been very candid, advertising its virtues as a haven for runaway factories. It promises cheap and contented labor. Frank Hague is making the pledge that it will remain cheap.

The old firm of Me & God has been dissolved. Jersey City is wholly in the hands of Hague, Inc. Members of Congress who have insisted on asking questions as to the manner in which he has acquired his title to complete dictatorship are well within their rights. This is not a local issue. If democracy can be suspended in one locality, the plague may spread. Hague is running a school for fascism which is far more dangerous than any camp of hothouse goose-steppers. But valuable lessons may be learned from the empire which he has carved for himself across the Hudson. Here is a very specific illustration of the weakness of the case against the child-labor amendment and the wage and hour bill.

The Federal Government is one agency which can cope with such secessionists as Hague. Democracy cannot endure if little imperial islands are to be set up within the structure of the Nation.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. FULMER. Mr. Speaker, there is no Member of this House who is more interested in the wage earner and the great masses of the people of this country than I am.

I have not forgotten my first job as a wage earner at $10 per month and board. I have operated as a two-horse tenant farmer. I opened a general mercantile business with $1,000, all the money I possessed, with $1,000 borrowed, at the age of 30 years. Later I added a small country national bank and a 1,200-acre farm bought largely on credit. I imagine until I finished paying for this farm the interest amounted to just about as much as the principal paid for the farm. I have had the same heart and headaches as the average wage earner, cotton farmer, and those who are engaged in business. I may have succeeded, but many were the ups and downs and the hard fighting on the part of my wife and myself to overcome the many hard places in life, and the many blows that we were forced to take to finally reach the point at which we have now arrived.

The people in my district and in my State understand that I have not forgotten those ups and downs in life, low wages, high interest rates, fixed prices, short crops, and long crops, going down in the valley into the very shadow of death when blessed with an abundant crop and short of farm products when the prices would average good because of a short crop. I have not forgotten these years of toil and hardship, and for the past 17 years, as a Member of Congress, I have taken a definite stand for these unorganized groups, including farmers, wage earners, and the operators of small industries and business concerns. I have voted for labor legislation in practically every instance, even for the N. R. A., with the hope that it would be so administered that it would do the thing that the President intended when he suggested the passage of such legislation to the Congress.

During all of these years of my service in Congress I have been endorsed by various labor organizations on a 100-percent basis, except I did not vote for the child-labor amendment which the South did not want.

No doubt there are a great many Members who are supporting the wage and hour bill now under consideration, as I did the N. R. A., with the hope that the wage earners of the country, many of whom toil long hours and receive a wage that does not permit them to approach anywhere near the American standard of living, may be benefited.

General Johnson, appointed by the President of the United States to administer the N. R. A., who is now a bitter enemy of the President, permitted the large organized groups, industries, and business to come in and write the codes governing the various lines of industry and business, and these codes were so written that the average small business concerns and the various small industries of the country could not operate in keeping with the provisions of these codes.

Take the code governing the sawmill and lumber industry. This code was so written by 70 of the largest sawmill and lumber dealers in the United States, coming, practically every one of them, from the industrial East, that the small operators could not comply. They wrote this code purposely to put out of business the small sawmill operator and the small lumber dealer, who in the past would not join their association or cooperate with them in monopolistic price fixing. The administration of this code was placed in the hands of the Lumber Association, composed of all of the largest operators, in that the small operators were unable to pay dues. This association went to the last ditch in trying to force the small operators to pay in their dues, pay the expense of this association in administering the sawmill and lumber code, and to force the small operators who could not operate under the code as written to comply, regardless of the results to many thousands of little sawmill operators and lumber dealers.

It was stated in my district by one of these enforcement officers that the association had never been able to get the small operators to join the association and pay dues, and that they had never been able to have them come in and cooperate with them in a monopolistic way, and now they would have to do it, or they would be put out of business completely.

I wrote my small sawmill operators that I was trying to get General Johnson to amend the code so that they would be able to comply, and to continue the operation of their sawmills, paying the very best wages they could to their employees in line with the price received for their lumber

until we could succeed in having the code so amended that they would be able to come in and comply.

Shortly thereafter I was called over the telephone by one of these enforcement officers to ascertain whether or not I would come down to a conference being held at that time in one of the large hotels in the city of Washington. I stated that I was deeply interested, but I would not be able to come down. This party stated to me: "I thought you would want to come down and defend yourself."

I stated, "Defend myself about what?"

He replied, "About the letters you have been writing the small sawmill operators in South Carolina."

This party had secured one of these letters, and I told him that, if, in writing these letters, trying to save thousands of small sawmills in the South from going into bankruptcy, and the discharging of thousands of employees because they were unable to operate under the code, that if I had committed a crime, to please tell General Johnson that I had my suitcase packed and was ready to go to jail.

Soon afterward the United States Supreme Court declared the N. R. A. unconstitutional. Perhaps the N. R. A. was helpful to textile workers in South Carolina, but it played havoc with practically all small business concerns and small merchants, as well as their employees.

I want to state to you frankly that, regardless of the good intention of President Roosevelt, who has always been sympathetic toward the under dog, it was a happy day for the average business concern and the wage earners when the N. R. A. was found unconstitutional.

It is my firm belief that the whole trouble with the N. R. A., and it is largely true with practically all of the major bills passed by the Congress, is the manner in which it was administered.

The bill now pending before the House, which proposes to create a one-man dictatorship, will, if passed, be administered, no doubt, by some man appointed from the large industrial East, who probably will have the same attitude toward the South that many of the Members of Congress who are now urging the passage of this legislation have—that is, absolutely destroying business and industry in the South, where we are growing by leaps and bounds along these lines.

I want to quote from the speech of the gentleman from Massachusetts [Mr. HEALEY], which will clearly indicate just what they have on their minds.

I quote:

> My own State, Massachusetts, a State long preeminent in the manufacture of shoes and textiles, known throughout the world because of the efficiency of its workers and the quality of its products, has seen its commanding position swept away by the corrosive competition of sweated industries.
>
> During the 10-year period between 1923 and 1933 Massachusetts, the largest industrial State in this section, saw its annual pay roll in manufacturing industries decrease from $799,363,111 to $354,523,624.
>
> The decline was most pronounced in the cotton-goods industry, where pay rolls fell off from $115,080,841 in 1923 to $31,110,036 in 1933.
>
> These figures regarding Massachusetts are typical of what has also been going on in New Hampshire, Rhode Island, and other industrial New England States. During this period the New England council and various New England manufacturing associations were organized to stem the exodus of industry. State legislatures tried to solve the problem by interstate compacts. Yet the relentless decline of New England's industrial preeminence continued.
>
> It must be remembered that in the thickly populated cities and towns of New England industrial pay rolls are the lifeblood of the people. The whole economy of this region has for generations depended upon manufactures.
>
> I cite these facts, not to raise any sectional issue or with a desire to foster legislation discriminating against other portions of the country, but to show that migrating industry causes a blight upon the economic life of our whole Nation.

My friends, you can readily see the Negro in the wood pile from the remarks of the gentleman from Massachusetts. Various industries are coming South for various and sundry reasons, and it is going to be impossible for the gentleman from Massachusetts or any of these other industrial centers to change this trend. It is hoped by those who represent the attitude of the gentleman from Massachusetts that they will be able to so hamstring the South that it may be the means of closing down these small industrial groups and the holding up of other industries that are far removed from the various raw materials which they need to run their industries, from, also, coming to the South, where the possibilities, as well as the climate, are "just wonderful."

Now, listen to the Governor of Maine.

The Governor said he recently visited headquarters of the American Woolen Co. in New York "to ascertain what, if any, relief might be possible in order to resume work in Maine's woolen mills."

> I was given to understand by officials of the company—

He said—

> that one of the greatest obstacles was the competition from southern wage schedules. They stated them to be far below the current wage schedule in Maine.

The Governor added that the "southern demand" for a revised rail freight rate from the South into the North was "another potential possibility that will work great harm to industrial New England."

For a number of years I have been working to have the Interstate Commerce Commission wipe out the unfair discrimination in freight rates, in that our freight rates are much higher than they are in Massachusetts and the New England States.

The various Governors of the Southeast have been working recently along this line, but we have not succeeded in getting this relief. Is it true that New England is so deeply interested in the welfare of labor in the South, or is it their attitude concerning the passage of this wage and hour bill is just as selfish as their attitude against wiping out the discriminatory and unfair freight rates in the South?

I am now quoting a strong statement made by the Republican leader, the gentleman from New York [Mr. SNELL]:

> Now, there has been a rather anomalous position in connection with this legislation. Some of the people have been telling the manufacturers of the North, "If we can force a wage and hour bill on the South, it is going to restore you to your previous position in the industrial world." Another group of people are telling the industrialists down South, "If we pass a bill of this kind, we will put a differential in that will take care of you."
>
> As a matter of fact, they are fooling both of them. If there is any industrialist in New England or the northern part of this country who thinks they can force southern industrialists to pay the less efficient colored laborer of the South 40 cents an hour, you are just as much mistaken as you can be, and you ought to know it. There is no more chance of enforcing regulations of this kind on the industrial South than there is of enforcing the fourteenth and fifteenth amendments. That is a fact, and every man who stops and thinks knows you could not enforce such a measure any more than we could enforce prohibition.

I realize in the South that in practically every instance wages paid to those employed in industry and business, especially on the farms in the South, are ridiculously low, and that it would mean everything to the South if they were able to pay much higher wages in every line of endeavor, so as to increase the purchasing power of that great class of citizens who are clearly entitled, every one of them, to be able to live on the highest type of American standard of living.

I want to ask you a serious question. Who is responsible for this situation in the South? We have the highest freight rates of any section of this Republic, and New England and other industrial centers in the North are fighting any reduction in these discriminatory rates. We have navigable streams in the South that, if developed, would put freight rates on a competitive basis, which would mean millions to the South, but we cannot get favorable consideration of these projects. The Congaree-Santee-Cooper River project from Columbia to Charleston would mean a saving in freight rates of 30 percent, but this project was recently disapproved. If this project was in any other section of the country than the South, boats would have been running up and down these rivers years ago.

Our people pay the highest interest rates. We sell our farm products on a tariff-protected market, and practically everything purchased by farmers and the consuming public of the South is sold to them at monopolistic, fixed prices.

We hear from time to time quite a lot on the floor of this House about the wages paid to farm employees, and the type of living on the part of tenants and sharecroppers in the South. If only cotton farmers could be placed on a parity with prices that they receive for their products in line with the monopolistic prices which they have to pay for that which they have to purchase, there would be no trouble about doubling the wages to farm employees, and improving the type of living of tenants and sharecroppers, all of which would increase the purchasing power of our people, and would be a godsend to industry and business, not only of the South, but in every section of this country.

Back in 1860 at least 75 percent of the farmers in my State owned their farms and their homes, which had been handed down to them by their fathers and grandfathers.

Today, because of just what I have been talking about, thousands of these good farmers, through no fault of theirs, have been losing their farms and are being forced into tenant and sharecrop farming.

Look at the record and you will find, instead of 75 or 80 percent of the farmers owning their lands, as stated, only about 35 percent are permitted to live on the farms that they claim to be their own.

If, however, you will count the number of mortgages and the total mortgaged indebtedness on these farms, you would find that the equity belonging to those who still cling to their farms would be very small.

It is my firm belief that selfishness, the thing that is destroying civilization today more than anything else, is largely responsible for the bill that we are now considering.

If there should be any good reason why we should pass this type of bill, God knows at this time, when we are in the midst of what appears to be a real recession of business, and what may end in a real depression, this would not be the proper time. I make this statement especially for the following reasons:

It would mean the closing down of small industries and the turning off of thousands of employees, increasing the millions of unemployed, who are now clamoring for jobs of any kind, or that they may be permitted to be enlisted on the relief rolls of the Government in order to maintain themselves, their wives, and their children.

The great trouble with the country today is, as stated, selfishness and greed. We had just as well be frank about it. There are just too many people, especially in prominent places in the Government and in business, who have no regard for the Written Word or for their fellow countrymen, and it is my firm belief unless those in high places, especially those who are trying to run this country on a selfish basis, without any regard to millions of human beings who are daily being robbed, and who are living in poverty, misery, and ignorance, do something to remedy this situation, we are facing one of the worst catastrophes ever in the history of this country.

Is there a Member of this House who will deny the statements that I have been making about the selfish, monopolistic groups who propose to run this country or ruin and defeat every effort that may be made to give every American citizen a fair and square opportunity to make for himself and his family a reasonable income so that they may enjoy the natural resources placed in the earth purposely for the people, and the many good things that others are so selfishly enjoying, and to which they are clearly entitled?

No doubt you noticed in the press some days ago that the steel industry, one of the biggest trusts in the country, stated that their prices for 1938 would be the same that they were in 1937. The great automobile industry stated some days ago, also, that they expect to increase the prices of trucks and automobiles about $100 each. They can do this very thing, and they have been doing it; that is, fixing the prices of the output of these large industries right down through the local agencies to the consumers, and the consumer has to take it or leave it.

What about the farm machinery manufacturers of this country? Everybody knows that they are well organized, well financed, and that their prices are absolutely fixed, including millions for advertising in the press, in magazines, over the radio, in addition to high-price salesmanship and large salaries to the officials and owners of these businesses.

As previously stated, for many years I was engaged in a general mercantile business, and I contracted with one of the largest of these concerns to handle their farm machinery and farm implements. In that contract, not only did they fix the price to me both cash and credit, but they listed the price that I would have to charge my customers, without any regard to a price I might be able to fix myself which perhaps would have been much cheaper because of the smallness of the overhead expense in doing business where I was located. However, if I failed to demand their monopolistic price, they would take the agency away from me, and give it to some other dealer who would be forced to comply with their contracts. This concern is doing the same thing today, and there is nothing being done about it.

Go to any dealer today and purchase an automobile, a threshing machine, or a mowing machine, and you will find the prices the same in every instance, except any difference in freight rates thereon. We had quite a lobby around Washington last session, and they had the Congress to pass a real price-fixing bill, permitting manufacturers, who have never been able to control the retail dealer as to fixed prices, to actually fix the retail price of their goods through the retailer to the consumer, denying the actual purchaser of these products any bargaining power as to securing a cut in any of these fixed prices. In other words, the retailer will operate as a chewing-gum machine, and the consumer can take it or leave it.

The increased prices under this bill—that actually puts the antitrust laws in a pigeonhole—to the 130,000,000 consumers will cut the purchasing power, the thing that we have been trying to restore under the Roosevelt administration, and which is so badly needed today—millions of dollars annually.

Many of the Members of the House representing large city districts, whose constituents are consumers, are all the time referring to the fact that if we are able to pass a farm bill, for instance, that might tend to increase the price of farm products on a fair basis, that it is simply a move on the part of those of us who are interested in saving agriculture to increase the price to their consumers.

This year cotton farmers of the South were blessed with the largest crop of cotton ever produced in the South—about an eighteen and three-fourth million bale crop. Cotton is selling from 5 to 8 cents per pound. Let me ask those of you who represent consumers' districts:

Are your people today buying cotton goods on a basis of 5- to 8-cent cotton? Oh, no, my friends. Cotton goods are still running along on a high, stabilized line of prices—fixed prices, if you please—and if you will take time to do a little investigating so as to ascertain the widespread difference between the farmers' price and the price that your consumers have to pay for that which they purchase you will find that your consumers' prices are much higher than prices received by farmers. That is what I have been talking about. It is not what farmers receive, but the monopolistic fixed price charged the consumer.

Your efforts should be against these monopolistic, price-fixing groups and toward the wiping out of thousands of middlemen who are today operating between producers and consumers, sapping the very lifeblood out of both of these great classes of people. Many of these middlemen are useful and serve a good purpose, but we have millions of them who are simply parasites, living off the producers and consumers. I would love to join with you in trying to remedy this situation, which is absolutely destroying the purchasing power of millions of helpless consumers.

There is another thing that I want to call to your attention, and there is nothing being done to remedy any of these unfair and destructive problems; that is, we have today at least $10,000,000,000 worth of installment-paying business on the books of those who are doing a real credit business.

I state to you that in this type of credit business there is contained unreasonable profits, cutting the purchasing power

of these consumers who purchase on the installment plan millions annually.

The city of Washington is nothing but a racket along this line, actually making collecting agencies out of the various departments of government.

I talked with a taxi driver one evening this week, and he told me a sad story, which is true in hundreds and thousands of instances; that is, that his wife was taken sick, had to go to the hospital, and, in that he was working for his daily wage, he had to borrow the money to take care of this emergency. He stated that it would take him 16 months to repay the amount he had borrowed, and that he was paying monthly out of his salary at the rate of 43 percent on the dollar.

My friends, all of these things are known to the average Member of Congress, but there is nothing being done about it.

Oh, yes; we have a Federal Trade Commission composed of some of the best men that can be found who are spending millions annually in investigating these monopolistic groups. They have actually put over a splendid piece of work in that they have caught practically every one of them with the actual goods; but have you ever heard tell of one of these criminals, who are daily robbing the innocent consuming public with monopolistic fixed prices, being placed in jail?

I could take considerable space in the RECORD enumerating the many monopolies that have been caught with the actual goods, the charges having been proved against them, but all that the Federal Trade Commission does is to tell these offenders:

> We have caught you, and you must desist or stop doing these things which really are not permitted by the antitrust laws or we will investigate you again.

It reminds me, as stated the other day on the floor of the House, about spending millions of dollars for research work, in that we do not get results, by placing these offenders in jail, where they should be; it is like riding on a merry-go-round—we go around and around and get off eventually right where we started—with a considerable amount of the taxpayers' money wasted.

From time to time we read in the press where those who have a monopoly on electric power, aluminum, gas, and various other natural resources of this country are giving millions to hospitals, colleges, and other institutions, all of which came out of the hard-earned money of millions of consumers, many of whom are living in poverty and misery.

Yet when we would attempt to enter these fields by the assistance of the Federal Government, so as to break up these monopolistic, price-fixing groups and let the people enjoy that which was intended for them, we find that those who have been able to monopolize in these lines of industry are going to the last ditch in the courts for the purpose of holding up any constructive efforts that may be made to reduce prices to the average consumer; and if they are not successful in the courts, as a rule they get the results desired from decisions on the part of the United States Supreme Court.

We hear so much these days about States' rights, liberty and freedom under the Constitution, and the divine United States Supreme Court, the bulwark of democracy. Where is all of this glorious and high-sounding propaganda coming from? It is largely from these selfish groups which are daily destroying the freedom, liberty, and the type of civilization that our forefathers fought and died for. How can there be any States' rights when day by day we are centralizing dictatorial power here in Washington over the States, like you propose to do under the wage and hour bill, in a one-man dictatorship? How can there be any freedom and liberty with millions unemployed living in poverty and misery, with their children growing up in ignorance?

I contend that it is almost useless to try and do these things that would help build up the purchasing power of the people, for instance, as you propose to do for wage earners under this bill, unless something is done to protect the consuming public so that they may be able to get value received out of their purchasing power.

In voting against this bill it is my firm belief that I am rendering a proper service to that great section of this country which I represent, and to that great class of wage earners, who are, as stated by the gentleman from Texas [Mr. DIES] being humbugged, and who will not get the results that are so eloquently displayed here on the floor of the House by those who are supporting this bill.

An Address on the Topic of Peace

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. ANDERSON of Missouri. Mr. Speaker, inasmuch as we are about to adjourn this Congress in a few days in order to observe Christmas, I think it is fitting that we give public thanks that our Nation yet enjoys tranquillity and peace; that our children, brothers, sisters, and friends are not enveloped in the carnage of war which prevails elsewhere in the world; and that we are more firm than ever in our intention to resolutely resist every implication or commitment that would tend to endanger our Nation's peace.

The press seems to greatly enjoy its multiple and unmitigated insinuations that Congress is in a state of war, so to speak. It is charged that our House is divided against itself, and that selfish bickerings and sectional interests have overshadowed the legislative program outlined for our attention at the beginning of this session. But be that as it may, I am positive and certain that every man and woman in Congress is united and working in closest harmony on one great issue—peace. While there may be a few honest differences as to what we can do to insure peace, we have no differences as to the ultimate goal.

We are aware that Congress will shoulder the responsibility for preserving peace. If by our vigilance we promote peace, our reward will be ample in the continued confidence and respect of our people. If by our laxity we allow the calamity of war to come upon us, our only reward will be the unrequieted damnation of all future generations. It is impossible to visualize how great would be the catastrophe of our entrance into a war, whether we emerge victorious or not. One of the greatest military leaders of all time, the Duke of Wellington, tersely summed up the idea in these words:

> The next dreadful thing to a battle lost is a battle won.

Not only does war take its toll in human life and property, but it leaves gaping wounds in civilization, in culture, and in the relationships among nations everywhere. It brings about alliances and plots that linger on years after actual hostilities have ended, and the maladjustment of economy is almost as deadly as the war itself. One of America's great statesmen and Presidents—James Madison—spoke thus of war and its effects:

> Of all the evils to public liberty, war is perhaps the most to be dreaded, because it comprises and develops every other. War is the parent of armies; from these proceed debts and taxes. And armies and debts and taxes are the known instruments for bringing the many under the dominion of the few. In war, too, the discretionary power of the Executive is extended; its influence in dealing out offices, honors, and emoluments is greatly multiplied; and all the means of seducing the minds are added to those of subduing the force of the people. No nation can preserve its freedom in the midst of continual warfare.

I have never been able to find a more fitting summation or a more fitting evaluation of war. Those words of James Madison are definitely apropos of this very time. His reference to armies and its relation to debts and taxes is worth pondering now.

Perhaps I am committing party heresy, but the time has come when we should take cognizance of the national debt, and we should take steps to prevent its growth if not to cut it down appreciably. No business—and the Government is a business—can continue to spend more than it takes in and remain solvent. The solvency of our Government must be maintained unimpaired lest we perish in the mire of our own folly. Not only is the national debt a matter of grave concern but the issue of taxes is imminent. The people of this Nation are literally bled to death by taxes now. I say to you there is a limit to their tolerance. The oppression of ever-increasing taxes will eventually be thrown off and it behooves us to act while there is still time to relieve America of this yoke. Taxation has reached a point where initiative and enterprise is being slowly but surely ground out of our people; and when that is lost, America is lost. This Nation was built by initiative and enterprise, thrift and freedom, and it cannot endure when they are gone.

Aside from the tax burden occasioned by the increasing expenditures of the National Government our people are faced with ever-increasing State and local taxes of every kind and description, including the iniquitous and abominable sales taxes in many States.

The tax problem has reached serious proportions. And on top of this already terrific burden the grim specter of war casts its lengthening shadows over the world. Therefore, our task is cut out for us. We must avert war; we must do everything to promote peace.

One step toward that end would be an immediate withdrawal of all American troops from foreign war zones. After we have afforded our nationals every reasonable opportunity to leave the scene of conflict there can be no reason or justification to jeopardize our Nation's peace by maintaining troops in a war zone anywhere in the world. We do not have and cannot have such an interest in any foreign land that will justify the presence of and possible killing of American troops.

A second worth-while step would seem to call for the officials of this Nation to maintain a neutrality not only on the battlefield but also in the spoken word. In foreign disputes in which we can have no legitimate interest it is fitting that we do nothing to alienate the good will of any nation that might be participating in that conflict. Certainly we can take notice of the destruction of civilized values in foreign lands but we cannot ever again leave our shores to fight on foreign soil in a foreign dispute. We did this once not so very long ago and God knows it taught us a lesson we cannot forget.

It has been well put by a prominent journalist that we should not issue statements that contain implied but very evident threats to any foreign nation unless we are prepared to back up such threats implied or otherwise to the fullest extent. Every time this Nation goes on record as taking sides and then does absolutely nothing when its warnings are totally disregarded, we suffer irreparable loss of prestige, or in the vernacular, "We lose face." In this respect we should take example from the League of Nations. It issued threats and warnings of drastic action to several nations at various times. The affected nations chose to pay no heed whatsoever, and the consequence is now evident to everyone who has reached the age of reason. No nation bent on war or aggression of any kind is troubled by what the League may say or do. It is quite thoroughly discredited so far as serving any useful purpose. Therefore, we should avert a similar disrespect, and we can do it by keeping the Nation's mouth shut when we know full well that we have no intention of demanding by force a respect for those implied threats. In other words, it is my contention we should refrain from every act and every word that will alienate the good will of nations with whom we should have every desire to remain at peace. It behooves us to avoid intimidation by word as well as by deed.

A third point in the peace program has to do with the problem of national defense. I should like to preface my remarks by assuring everyone that I am as ardent an exponent of adequate national defense as can be found. I believe in the words of George Washington, "To be prepared for war is one of the most effective ways of preserving peace." However, preparation for war has two possibilities. We can prepare for war of offense or war of defense. We can prepare to carry on war at great distances from our borders, in other words for a foreign war; or we can prepare for a war to defend our shores against invasion or aggression. These two phases of preparation for war are not the same but on the contrary are quite dissimilar. Only the latter is national defense.

Congress is about to be called upon to authorize the largest peacetime appropriation in history for the Army and Navy in 1939. The sinister task of preparing for destruction is one that must be faced by the Congress. Unless we provide adequately for our Army and Navy we shall be unworthy of our post. We shall invite disaster. In this world of mutual suspicions and ever-increasing armaments we must be prepared to face all hazards. It is my contention that we should be so well prepared for war that no nation will dare attack us. However, this can be done and should be done solely on a defensive basis. I say, let us fortify ourselves against all aggressors however powerful. But when we are called upon to appropriate these billions for the Army and Navy let us see that the money goes into a national defense program and not into an international offense program.

I feel that there can be no justification for Congress authorizing these billions to build a navy and army for carrying on operations thousands of miles from our shores. It is a scientific and military fact that we can render this Nation practically impregnable against invasion with far less money and effort than is called for to sustain our present Army and Navy, which is equipped for large-scale operations anywhere in the world rather than a defense of this Nation. We have no far-flung empire beyond the seas for which we must appropriate billions to protect. We have no designs on territorial expansion, and we have no desire for conquest. Certainly we can have no desire to again fight other nations' battles. Every reasonable avenue of consideration in the national-defense program leads to the conclusion that we should arm fully and adequately for defense, but there can be no reason to expend millions for military and naval equipment that can be used only for offensive purposes.

Therefore I say to you, I exhort you, to study this problem of military and naval appropriations, so that we can provide for our Nation's defense and at the same time reduce materially the possibility of being caught in the toils of foreign intrigue or conflict.

Now, as we retire to our homes to celebrate Christmas with our families and to gladden the hearts of our children, let us be mindful that such happiness can be had only when a nation is at peace.

I wish to close this brief address with two appropriate quotations. First, in the words of the immortal Shakepeare:

> Peace is in the nature of a conquest, for both parties nobly are subdued, and neither party loser.

And lastly, as James Thomson says:

> Peace is the happy, natural state of man; war, his corruption and disgrace.

Child-Labor Provisions of the Wage-Hour Bill

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mrs. O'DAY. Mr. Speaker, as a veteran of the child-labor amendment fight I would be proud to be a Member of the Congress responsible for ending once and for all the exploitation of children in interstate commerce in the United States.

The child-labor provisions of the bill before us are basically sound. Certain unwise exemptions, however, have been included, and these the amendments offered by my colleague, Mr. SCHNEIDER of Wisconsin, will correct.

These amendments seek specifically to do three things:

First. To specify that certain general occupational exemptions, such as forestry, should not apply to the child-labor provisions.

Second. To modify the exemption permitting children of any age and in any occupation to be employed by their parents. This exemption, obviously designed to permit children to work around the home or the home farm doing the things that all children do to help their parents, and to which no reasonable person could object, would actually permit the employment of children in such work as tiff mining, where they are not hired or paid directly. The amendment offered by Mr. SCHNEIDER of Wisconsin would in no way interfere with those customary duties around the home or home farm, but would prevent such wholesale exploitation of childhood as revealed in the recent report of conditions in the tiff mines of Missouri published by the National Child Labor Committee.

Third. To limit the power given to the Federal Children's Bureau to exempt a child of any age for work in any occupation. The Children's Bureau itself does not want this power. To insist that it assume such far-reaching responsibility would result in tremendous pressure being brought for it to modify the provisions of the bill for a vast number of individuals and groups. The power would be limited only by the unchecked judgment of the Bureau Chief.

Again let me say that I find the child-labor provisions in the House bill sound in principle. Mr. SCHNEIDER's amendments will close those loopholes through which those seeking to violate the clearly intended purposes of the authors of the bill may and can do so legally.

Those of us who for the past 2 decades have fought to put an end to child labor have been shocked to see it, these past few years, increasing rather than decreasing. Today, the year of 1937, we find that children are being exploited under conditions fully as revolting as those that first aroused us to national protest.

I call your attention to the report of the National Child Labor Committee on the tiff mines of Missouri, the shrimp picking and heading sheds of Texas and Louisiana. In the tiff mines children, many of them under 10 years of age, toil side by side with their parents under full protection of the law. Babies of 6, 7, and 8 drag themselves from their sleep when the whistles of the shrimp boats blow at 4 a. m. With the consent of those of us responsible for the childhood of the country these youngsters are barred from wholesome play and needful schooling to earn a mere pittance.

In the tiff mines the earnings of the 86 children studied averaged $2.87 per week with 20 earning less than $2. I might cite you a few of the examples listed by the Child Labor Committee in its annual report:

The story of the R family illustrates the frightful poverty of the tiff miners, especially where the families are large and the children young. Although the mother is only 26 and the father 28, they have eight children, of whom the oldest is only 13. The others are 11, 10, 7, 4, 14 months, and 3 months. The mother said they never had any milk, sometimes they had meat once a week. Berries have been plentiful and have been the main item of their diet for some time. They live in a miserable two-room shack, unfit for human habitation, no screens, flies terrible, no privy, one bed, the rest sleep on the floor in bunks. Last week the 10- and 11-year-olds scrapped about 1,000 pounds of tiff, the father dug a like amount, less than $5 a week all told. That was better than their family average.

Mr. and Mrs. S cannot read or write and have worked in tiff mines all their lives. They have three children, 4, 2, and 15 months. The mother has worked every day since the baby was 3 weeks old. The 4-year-old scraps tiff with her mother but stops to look after the "babies" when they cry. "She sure knows tiff," her mother says.

Although I have referred specifically to the studies of child labor in the tiff mines and shrimp sheds, these industries are not the sole violators of the rights of childhood. The rapid return of child labor after the abolition of the N. R. A. is appalling. Individuals and industries who fatten upon the exploitation of the innocent have again started their race for the reduction of labor costs at no matter what price.

The wage-hour bill, with the Schneider amendments, is the opportunity offered us here in the Halls of Congress to call a halt to such practices.

Monetary Control

EXTENSION OF REMARKS

OF

HON. CHARLES G. BINDERUP

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

AN ADDRESS BY JAMES H. R. CROMWELL, FRIDAY, DECEMBER 10, 1937, BEFORE THE HOUSE OF REPRESENTATIVES STEERING COMMITTEE FOR MONETARY REFORM

Mr. BINDERUP. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech delivered last Friday, December 10, by Mr. James H. R. Cromwell before a number of Members of Congress on the subject of monetary control and the necessity for a yearly increase of our money supply to correspond with the increase in population and the increased industry, and upon other important matters:

Gentlemen, it is my sincere conviction that the degradation and insecurity of the American working masses is attributable not to capitalism but to ignorance concerning its functioning. Surely no one will deny that the march of science and production has far outstripped the social sciences, particularly economics.

Mr. H. G. Wells told me about a month ago in New York that President Roosevelt enjoyed both his admiration and his sympathy. His admiration for the President, which I fully share, sprung from Mr. Roosevelt's indomitable courage in fearlessly seeking some new path to lead us out of this swamp of economic ignorance in which our Nation is floundering.

And to whom, asked Mr. Wells, could the President turn for guidance and counsel in the hour of national crisis? To our universities and institutions of learning? He did turn to them, said Mr. Wells, and what did he get? Did he hear the voice of collective wisdom unfolding a matured plan of action formulated by years of scientific analysis and research? He did not. He heard instead a chorus of dissenting, wrangling opinions, nearly all of which were based upon economic theories applicable to our social organization as it existed a hundred years ago.

And when the President turned to the business leaders of the Nation, asked Mr. Wells, what did he get from them? Nothing, positively nothing, because our business leaders were bankrupt of knowledge concerning national affairs. They proved wise counselors only insofar as their own individual business problems were involved. Pity our poor President, says Mr. Wells, and I agree 100 percent.

Like the quarterback to whom he compares himself, no one advises the President what play should next be called in our life-and-death game of economic strategy. But when he calls the wrong play, oh, then what a chorus of vituperation and jeers burst from our millions of do-nothing kibitzers.

Yes, Mr. Wells is right. Pity our poor President, for he knows not where to turn for sound and unanimous advice. He himself told me not 2 weeks ago that economics was still a dark science, and that since taking office in 1933 he had examined literally hundreds of economic plans and panaceas. He feared to pass any likely scheme by, he said, for fear it might contain some solution to our problems.

Now, as a businessman I say to the other businessmen of America, "Put up or shut up." Put up to the President a definite, practical, and complete plan of action agreed upon by those who manage the majority of American business interests or else shut up. There is no law in this country that I know of which prevents our business leaders from gathering together and at least making an effort to agree on some constructive plan.

Oh, certainly they will agree that corporate and individual taxes should be reduced. So do I, wholeheartedly. But then what? We had fairly reasonable taxes in 1929, but that did not stop us from plunging into the worst depression ever endured by this Nation. No; business will have to do better than that. The American people

want something more than a mere return to the status quo of 1929, and President Roosevelt will insist that they get it.

I say that if businessmen want lower taxes and less Government interference they must agree on what caused the depression of 1929 and they must submit a comprehensive plan to the American people which will assure us all against the recurrence of another such calamity. But I doubt if American businessmen are capable of reaching such an agreement and submitting such a plan. After all, each one is, of course, chiefly concerned with the problems and anxieties relating to his own business. The vast economic problems which beset this Nation are probably beyond his comprehension and he has no time to become a student of modern economics.

How many businessmen, for instance, know what the Keynes theory is? How many businessmen realize that administration policies, since 1933, have been largely founded upon the Keynes theory? How many realize that the policies of high taxation, heavy Federal spending, and production control are based, not upon political expediency, but upon the profound thinking of John Maynard Keynes? Whom, by the way, many informed people consider the world's greatest economist. Can they refute his theory and explain its fallacies?

Now, my associate, Mr. Czerwonky, and I have spent many years analyzing the economic theories of Mr. Keynes and sundry other distinguished economists. We think we understand Mr. Keynes' theory and we believe we know why it does not and cannot work in practice. I contend, therefore, that Mr. Czerwonky and I are businessmen who are qualified to talk. We are prepared to explain to the American people what caused the depression of 1929 and, indeed, what caused our previous depressions. We are prepared to explain why individual and corporate taxes should be reduced and how the coming of another depression can permanently be forestalled and prevented. Put up or shut up. That is our challenge to other businessmen and it is likewise our challenge to you.

After all, yours is the primary responsibility. A businessman's primary responsibility is to his business, his stockholders, and his employees. Your primary responsibility is to enact such legislation and provide such agencies as will permit businessmen to achieve capacity production and full employment in the United States.

It is primarily your duty, not the businessman's, to put up to the President a definite, practical, complete plan of action agreed upon by a majority of the Congress. Can you reach a common ground of agreement? I hope and pray that you can for the fate of this, the world's greatest democracy, hangs in the balance. And let me assure you, gentlemen, that both Mr. Czerwonky and I are here to help you to the best of our abilities. Our time is at your disposal and we are your servants to command.

Now we know full well that many of you are prepared to "put up." That you have definite, practical, plans of action to suggest and that you are sincere, eager, and well-informed students of the economic problems which beset our Nation. Obviously this is so, otherwise you would not be here. The first problem to be solved, therefore, is to promulgate a definite, practical and, most important, a comprehensive and complete plan of action with which the majority can agree.

Before Mr. Czerwonky and I begin to analyze and discuss such plans of action, either monetary or otherwise, which some of you gentlemen may have to submit, I beg that you will permit us first to present for your consideration our own plan of action. Naturally we believe it to be definite, practical, comprehensive, and complete, and naturally we hope we may obtain for it the approval of the majority. Everybody with a plan of action believes and hopes such things as that!

Now, let me say immediately and emphatically that we are wholly devoted to the cause of democracy and capitalism. We do not believe in communism, socialism, fascism, or regimentation of any kind, because we think such systems not only spell the doom of democracy but, in the final outcome, lead only to failure, misery, war, and chaos.

My visit to Italy, Germany, and Russia this last summer left me with a horror of regimentation, irrespective of what "ism" may disguise it. Those unfortunate peoples, in the hope of achieving security and higher standards of living, sacrificed liberty and economic freedom. They traded their birthright for a mess of pottage and lost liberty without gaining either security or better conditions. For there is no security in the armed camp that is Europe today; and standards of living are lower, not higher.

And so, gentlemen, there is no choice. We must make capitalism work. We must and can find within its framework the means to achieve capacity production and full employment and thereby grant to the American people the cornucopia of plenty which capacity production and full employment would guarantee. In common justice, before we discard capitalism, democracy, and economic freedom for a system of regimentation and rationing, surely we should seek to remedy the defects of our monetary organization and give capitalism a fair chance to show what it can do.

How can we be so heartless as to cut production and restrict output when millions of our people are in dire want? How can the President reconcile a policy of restriction with his statement that one-third of our people are ill-nourished, ill-clothed, and ill-housed? It is certain that the living standards of these unfortunate people can never be improved by cutting our national production of goods. It seems to me to be unmistakably evident when we have a vast overproduction of goods on the one hand and an equally vast need and desire for these goods on the other hand that our problem is one of distribution.

This problem of distribution is basic to any economic system, whether it be capitalism, socialism, or fascism. The basic concern of each is to facilitate the exchange of goods and services between the individuals living within the system. And the test of any economic system is the success with which it can coordinate the potential power of people to produce with their potential power to consume.

Now, why can't our ability to produce be coordinated with our ability to consume? This question and the answer to it are explained more simply and concisely by my friend Senator SMITH, of South Carolina, than by anyone else I know. I quote Senator SMITH: "Let us liken business and commerce to ships traveling on a vast canal, carrying goods between producers and consumers. If some uncontrolled force drained one-third of the water out of the canal so that only two-thirds the normal number of ships could navigate, what would you do? Destroy a third of your ships or replace the missing one-third of the water in the canal?"

By the water in the canal the Senator means, of course, our money system and it is a fact that one-third of our supply of money actually did disappear from our economic canal between the years 1929 and 1933. I assume that everyone here agrees that it would be better to replace the missing water in our money canal than to destroy our ships of industry and agriculture. And that brings me to the purpose of my appearance before this gathering of the keenest minds in Congress. I am here to explain why a third of the water in our money canal vanished; how it can promptly be restored, and, lastly, how once restored it can be maintained.

The fundamental cause for the catastrophe of 1929, and of previous depressions, was, in my opinion, the failure of financial authorities all over the world to understand the vital necessity for injecting new money into the economic system as the flow of finished consumer goods increased. It is obvious that our flow of money actually has increased in proportion to the increase in our flow of goods. If this were not so, then the same amount of money we had in 1776 would still suffice today.

Under our capitalistic system of relatively fixed costs drastic declines in the prices make it impossible for producers to earn a profit. If profits cannot be earned, wage earners are discharged, purchasing power is reduced, prices fall to even lower levels, and depression sets in.

Now you, gentlemen, are aware of the fact that industry can be shut down when prices become unprofitable, whereas agriculture cannot be shut down. The maintenance of price stability, therefore, is absolutely essential to agriculture.

What, then, fixes the price of any given agricultural unit? Two distinct man-made factors—one, the flow of goods to the market; and, two, the flow of dollars to the market. Of course, the production of agricultural goods changes from year to year, and minor fluctuations in the price of such goods cannot be avoided. Nor would they be important.

What is important, however, what indeed, is ruinous to our farmers, are fluctuations such as this: In 1920 our production of cotton was thirteen-million-four-hundred-and-forty-thousand-and-odd bales, and the price was 40 cents per pound. In 1932 our production of cotton was thirteen-million-two-thousand-and-odd bales, and the price was 5 cents per pound—a difference of 3½ percent in production and 700 percent in price.

Why? Because, as everyone knows, our flow of money in 1920 was expanded, whereas in 1932 it was contracted. But dollars are merely effective demands for goods. They are created by man, not Providence; and if the flow is inadequate, the prices of agricultural goods will fall.

That, gentlemen, is why the fundamental thesis of our theory is of such vital importance. Unless the flow of money is increased as the production of finished consumer goods increases the flow of dollars will become inadequate, prices will fall, and recurring depressions of ever-increasing intensity are inevitable. Now, if this hitherto unrecognized thesis is correct, if it cannot be denied and proved to be false, then the reasoning based upon this thesis is incontrovertible.

That brings me to the first of my definite contentions. If it is necessary to coordinate or synchronize the flow of dollars with the flow of finished consumer goods, then it is absolutely necessary to do two things. First, to direct the Federal Reserve Board to synchronize and, second, to equip the Board with positive power to carry out the directions.

Now, this book, In Defense of Capitalism, written by Mr. Czerwonky and myself, sets forth these directions and equips the Board with the necessary positive powers in the shape of a definite bill to amend the Federal Reserve Act. The book is 373 pages long and it is devoted to an explanation of the need for the bill and a detailed description of how the Board, once directed and equipped, should employ the positive powers provided to regulate and control our monetary and economic system.

There is, of course, no purpose in my attempting to include a description of these powers within the contents of this brief statement. I believe these matters can be more clearly explained to you by your questioning Mr. Czerwonky and myself according to your wishes.

The Road to Recovery

EXTENSION OF REMARKS
OF
HON. CHARLES H. LEAVY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, December 16, 1937

RADIO ADDRESS OF HON. H. JERRY VOORHIS, OF CALIFORNIA

Mr. LEAVY. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following radio address delivered on Thursday last at the Town Hall program in New York City and broadcast over a national hookup, by the Honorable H. JERRY VOORHIS, a Member of this body. This speech is an exceptionally fine analysis of present economic conditions and filled with valuable constructive suggestions. It is as follows:

THE ROAD TO RECOVERY

America needs the spirit of a people confronting a great task with faith that they can accomplish it. She is not going to be helped out either by wealthy people complaining about taxes or politicians trying to prove that someone else is to blame for the difficulties we now face.

Fundamentally our trouble is that we have not yet adjusted our national economic life to the machine age. Our problem is not in any fundamental sense due to government interference with business, taxes, and an unbalanced Budget. I wish it were as simple as all that. But during the decade of the twenties business was fancy free, taxes were extremely low upon the wealthy, and the Budget was more than balanced. And yet the result was the worst crash in history—that of 1929. And if tomorrow we repealed all these taxes on large incomes and monopoly, ruthlessly laid off the rest of the people on W. P. A. to balance the Budget, and abolished the Securities and Exchange Commission, the people of America would not go back to work.

It is orders that make for production, and the source of orders is consumer buying power. When producers of consumer goods have orders for consumer goods, then, and only then, do the durable-goods industries expand. This is a matter of history and the basic conclusion of the study conducted on this subject by so conservative a body as the Brookings Institution. So you can't expect to revive business by cutting taxes and balancing the Budget at the expense of consumer buying power and the right to work of the unemployed.

In 1935, before the taxes about which most complaint is made were passed, the mining and manufacturing industry spent $3,400,000,000 for capital goods. In 1936, after the taxes were passed, these industries spent $5,700,000,000 for capital goods—more than was spent in the calendar year 1928. The reason? Consumer buying power was more plentiful in 1936 than in 1935, first because production was larger, and second because Government was increasing purchasing power, in the pockets of those who otherwise would not have had it, by about $300,000,000 a month. Even in 1937 the mining and manufacturing industries will spend about 85 percent as much for capital goods as they did in 1929, in spite of the current spell of bad business.

We need tax revision to exempt small corporations but not to permit the wealthy to escape the surtaxes or to permit large corporations to accumulate unnecessary surpluses to further aggravate the concentration of economic power. We need in general to reduce taxes as much as possible on active competitive business and consumer buying power, and probably to increase taxes on inheritances and on monopoly and monopoly practices. But basically, taxes are not the trouble. Indeed, the principle behind every tax levied by this administration has been sound. But while some modifications should be made, nevertheless changes in the tax laws are not the cause of this recession nor will they turn the tide.

What, then, will? I think we know from experience. The Federal Budget is not merely a balance sheet of what the Government collects in taxes and what it spends. Our Federal Budget is the most powerful force in the Nation regulating the amount of purchasing power in the channels of trade at any given time. If our Government is spending more money than it is taking in, then it is expanding buying power. If our Government is taking in more than it spends, then it is reducing buying power.

In the spring of 1937, before it was time to do so, the Government yielded to conservative pressure. Congress yielded over the protest of some of us. Up to June 1937 Government was putting into circulation about $300,000,000 a month of new purchasing power in the form largely of wages to C. C. C. and W. P. A. workers. Then suddenly we quit doing our job. We started in to balance the Budget too soon. A million people were cut off W. P. A. alone. And today, if we count social-security taxes, Government is taking out of circulation as much money as it is putting back in. In other words, the cash budget is balanced. Business began to drop from exactly the time we began throwing people off W. P. A. There were other reasons for it such as unwarranted increases in prices in many fields. But we should have kept our program going until our production had got back up beyond 1929 levels. By that time the Budget would have been more than balanced and it would have been right to have it so. As it was, we did a cruel thing and got what was coming to us. We should put these million people back to work and do it now.

But the problem clearly is how can Government assure the people and the industries of America of an expanding consumer buying power without piling up a huge debt? We want to eliminate these violent fluctuations in our business life. We want to stop depressions and booms alike. We want a dollar whose buying and debt-paying power will remain constant. Well, our money today is bank credit or check-book money. Between 1929 and 1933 this synthetic money shrank from twenty-two to fourteen billion dollars, with what consequences we only too well know. Through the process of calling loans, foreclosures, and the refusal of banks to make new loans, $8,000,000,000 of our money was destroyed. Then the Government started to create money in the only way it can at present do it, namely, by borrowing at interest from private money creators. And from 1933 to 1937 the amount of check-book money in circulation increased from fourteen back to twenty-three billions. And business and production increased. But the national debt went up, too. Today, because Government is trying to stop borrowing before private industry has given full employment, we have a recession.

Our present system of money and banking is an outworn, unstable system. Money has become a business in itself instead of a help to business. It makes the volume of our credit and money at the disposal of business and industry dependent upon the willingness of business to borrow, and of the banks to lend. The Federal Reserve Board can make credit easy, but they cannot force people to borrow.

Let those who oppose an increase in the public debt, as I suppose we all do, take note that under the present money and banking set-up, the administration has no choice in rescuing business from the danger of depression but to go into debt to private financiers so as to create the circulation of credit money that will restore prosperity.

I believe this system should be changed so that the control over the currency and credit in circulation shall no longer rest with our banking system, but with the Government. This was the undoubted intention of the founders of this Nation who stated in article I, section 8, of the Constitution that "Congress shall coin money and regulate the value thereof."

Briefly, I would do this by making the Federal Reserve Board the Nation's sole monetary authority and charging it with the duty of reestablishing the 1926 price level and then maintaining a stable price level and therefore a steadily expanding buying power in the Nation. The Reserve banks have been woefully slow in commencing even the orthodox open-market operations which are urgently needed at the present time. The Reserve Board would need more power than it has now and I believe the Government would have to acquire control of the 12 Reserve banks. The Board would need to increase reserve requirements in the banks to 100 percent behind demand deposits, which merely means that for every dollar the bank lent they would have to have a dollar for that purpose, entrusted to the bank as an investment. But the bank could not any longer create credit by lending out demand depositors' money, which the bank is supposed to keep for its depositors against the time they may call for it. To build up these 100-percent reserves banks should be allowed to count Government bonds as cash and the Federal Reserve Board should lend them, at no interest, enough additional new cash money to make the 100-percent reserves. From that time on, with this system in effect instead of the private manufacture of credit, we would substitute Government creation of the people's money by the Federal Reserve Board working under the explicit instruction that there be no inflation or deflation but stability instead. Instead, therefore, of Government having to go into debt to create money, which process is ridiculous on the face of it, it would create money directly as the Nation's economic progress required it.

With this kind of truly scientific money and credit system, our Government would be in a position not to inflate or deflate—that would be forbidden by law—but to expand the amount of money in circulation in proportion to the increase in our national population and power to produce wealth. The increase would not be nearly as great as some suppose, but it could and should be put into circulation in the form either of purchase of Government bonds or of old-age pensions so that every dollar of it would go into immediate circulation or contribute to a reduction of the national debt. Thus, we could have a balanced Budget and reduction of our national debt and also the expansion of buying power which alone saved us in 1933, and which is the first requisite to meet the situation we now face.

Another step along this road to true recovery is the extension of our social-security system so that it will be a complete and adequate system including all the people. It will have to be one including old-age pensions for all Americans over 60 years of age. It will have to include widowed mothers, the blind, and others as we have started to do under our present act. It must be a system to which all contribute in reasonable proportion to their ability and in which the Government acts as agent of the people, paying out promptly in benefits what it collects in taxes.

Will these measures be enough? Perhaps temporarily. But we have a long hard road ahead of us, I suspect, and no one or two steps will bring us to a promised land. One more thing, therefore, I want to bring before you tonight. We have to plan for abundance. That is the key to adjustment to the machine age.

Monopoly control is a greater menace to American democracy than anything else in our Nation. Two hundred corporations control 58 percent of our corporate wealth today, and at the other end 90 percent of all our small businesses made only 6 percent of all business profits last year. Moreover, monopoly means high prices and artificial scarcity, but it does not mean steady pay rolls. In one great monopoly industry, controlling 90 percent of all the business in its field, prices declined only 14 percent during the depression while pay rolls went down 83 percent. Meanwhile in agriculture, which supported more people during the depression than before, prices went down 63 percent. Economic unbalance is inevitable when some prices fluctuate freely and others are controlled and kept at artificially high levels. And one of our greatest monopoly corporations has organized itself in such fashion that it can profitably operate at only 45 percent of capacity, which means it is free to employ or not employ—and still make money. Oddly enough a great New York banking corporation has objected to the Federal Government fixing minimum wages for workers getting less than $16 a week on the ground that such rigidity accentuates the business cycle, but this institution has never protested against the rigid prices maintained by monopolistic industry.

These facts should indicate that in this very hour it is more important than ever before that those who would serve the people and preserve a decent degree of equality of opportunity in America should stand their ground.

What then shall we do? Better distribution alone will never solve our problem unless we likewise steadily increase production. The small-business man would like to employ people, would like to expand his business, but doesn't dare do so for fear he will have an unsalable surplus on his hands. He needs to know that other businesses, too, are going to expand their production at the same time so he can sell his goods to their workers. Today he dares not venture until he gets his cue from big business and big business finance.

We used a governmental service, the Agricultural Adjustment Act, whereby Government paid to bring about reduction of farm surpluses to meet effective demand. Turning that idea right around, the Industrial Expansion Act, introduced in Congress last session by Congressmen Allen, Amlie, Maverick and myself, proposes to offer to industry guarantees against loss and a fair margin of profit as a means of bringing industry to enter into agreements covering all major industries for the production of goods up to the limit of consumer needs in America. In other words, just as curtailment of surpluses was brought about in agriculture by governmental guidance and benefits, so the production of abundance is to be brought about through cooperation of government with industry and guarantees to cooperating producers.

But increased production is not all we need. We need also a more equitable distribution of the income created by production. And we need lower prices for industrial goods as a matter of justice to the farm population. And so the Industrial Expansion Act provides that, of the increased income derived by any industry from the increased production brought about, not more than 10 percent shall go to capital and 90 percent must be passed on in either higher wages or lower prices.

It is well for us to remember that great ends are never accomplished by small means, nor is justice built except on measures conceived in justice. We shall not attain recovery unless we take every man, woman, and child in America with us on the road. For there cannot for long be prosperity for some while others are forgotten. Our Nation calls us to a devotion she has asked of few, if any, generations before. Let us answer with strong hearts, knowing full well that life is not an accident and that the God who judges us will not reward us for a chance success but only for fearlessly doing the thing that is right and just, and then doing it again and again until we solve our problem. [Applause.]

Dangerous Ludlow Resolution

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

LETTER TO OSWALD GARRISON VILLARD

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following letter:

DECEMBER 14, 1937.

Mr. OSWALD GARRISON VILLARD,
20 Vesey Street, New York, N. Y.

DEAR SIR: There is pending before the House Judiciary Committee, of which I am a ranking member, the so-called constitutional amendment known as the Ludlow war referendum bill. Among other things, it provides as follows:

"SECTION 1. Except in the event of an invasion of the United States or its Territorial possessions and attack upon its citizens residing therein, the authority of Congress to declare war shall not become effective until confirmed by a majority of all votes cast thereon in a Nation-wide referendum. Congress may by law provide for the enforcement of this section."

I have your letter of December 13, wherein you notice with regret that I did not sign the so-called discharge petition.

If I had signed that petition I would be placed in rather an unusual position of having sought to discharge myself, since I am a member of the Judiciary Committee. There has been ample discussion of this proposed amendment before the Judiciary Committee, and I personally acted as chairman of a subcommittee that conducted, June 19, 1935, lengthy hearings involving 106 pages of testimony and correspondence.

Frankly, however, I am opposed to this amendment. You will notice that the President and Congress are precluded from declaring war, except in the event of an invasion of the United States or its Territorial possessions, plus an attack upon its citizens residing therein. That means, for example, that Japan could attack and seize Alaska, Hawaii, and even parts of our west coast and there could be no declaration of war except by the referendum method unless in the process of attack and seizure Japan made an attack upon our citizens.

Even if there was involved such an attack upon our people, how long do you suppose a referendum would take? By the time a referendum were gotten underway Japan very likely might spread her attack and seizure to embrace several States. In other words, while we waited for the returns to come in we would get trounced pretty hard. A referendum in this great big country of ours might take weeks. I shudder to think of what might happen in the interim. LUDLOW'S resolution simply would mean that we would have to "turn the other cheek." We would be powerless to do anything consistent with war.

Be it remembered also campaigns are waged without war even being declared. Battles are waged first and war declared after. This was the situation in the Russo-Japan conflict. The Japanese destroyed the Russian fleet first, and then issued a declaration of war. I do not recall any preliminary declaration on the part of Mussolini before he seized Ethiopia. Witness what is happening in China today. There is no declared war between China and Japan. Yet for all intents and purposes there is war. After Japan has satisfied herself with a sufficient seizure of Chinese territory it may then declare war. Under such circumstances, of what avail would be the Ludlow resolution except to create havoc, confusion, and arouse in the hearts of well-intentioned people false hopes?

The least I can say for my very esteemed friend Representative LUDLOW, for whom I have an affectionate regard, is that he and his followers are enthusiastically misguided. The Ludlow amendment, boiled down, is as follows: While we are casting our ballots the enemy can attack and seize.

Let us assume also an attack upon our vessels—our merchant marine on the high seas—this would not involve, within the words of the Ludlow resolution, either invasion of the United States or our possessions. Suppose our entire merchant marine were blockaded on the seven seas; then under this resolution we would be powerless to take any move unless there would be a referendum. From a commercial standpoint we would be bottled up and our entire commerce crippled, yet Congress and the President would be powerless. Suppose there was an attack on one of our vessels like the sinking of the *Maine* just before the Spanish-American War.

Many people, furthermore, would not participate in referendums. There is a great deal of apathy accompanying referendums. Often people do not take their responsibility with reference to a referendum seriously enough. Take the repeal of the eighteenth amendment. About one-half of the qualified voters cast their ballots. That meant approximately less than 20 percent of the population voted. I don't believe the people would be any less apathetic when it came to voting on war.

Suppose, furthermore, that Germany would attack us. You would first hold a referendum which would result in the declaration of war against Germany. Suppose an ally of Germany, say, Italy, would attack. We could not war against Italy until we had again had another referendum; and suppose a second ally of Germany, say, Japan, then seized some of our possessions. We would then have a third referendum. One can readily envision how cumbersome, confusing, and impossible the situation would become with repeated referenda.

Under the language of the resolution, even if an enemy declares war against us, there would have to be a referendum, because a declaration of war by any country is not equivalent to invasion plus an attack upon our citizenry. Thus Germany could declare war against us and we would have to wait for a referendum before we can retaliate.

Let us assume that the Japanese Emperor declared war on us. He has the undoubted right to do so. Japan mobilizes her forces on Mexican territory. She is well prepared to strike at us. We could not do a thing until she struck at us; we could not get ourselves into training and make ourselves ready for war, despite the presence of Japanese troops on Mexican territory; we could not declare war or do anything consistent with war until there would be a referendum.

One of the great traditions of our country is embodied in the Monroe Doctrine. It has had a great moral effect. If the Ludlow resolution was carried into effect, there could be no Monroe Doctrine. I doubt very much whether an attack upon a South American Republic would inspire the American people, through a referendum, to declare war against the invader of the South American Republic. The Ludlow resolution would kill the Monroe Doctrine.

Furthermore, delay would kill the Monroe Doctrine. While we are having a referendum to determine whether we should uphold the Monroe Doctrine, the foreign invader would plant and secure itself in any South or Central American Republic. The Ludlow resolution takes care of no emergency. No matter what any foreign government would do, Congress and the President would be powerless.

Again, what would be the question submitted to the people in the referendum? What would that question embody? Would it be a mere declaration of war? Let us assume that while the question was being submitted something very perilous comes up, between the time of the submission and the time of the vote, would there be submitted a second question, and if so, what form would the second question take? The Ludlow resolution does not cover such a contingency, yet the resolution involves a most perilous and serious change in our Constitution.

I thoroughly sympathize with the proponents of the resolution. I detest and loathe war just as vehemently as they. I have a holy horror of war, which affects the lives of every man, woman, and child in this country, and which causes such dreadful suffering and economic losses. On the other hand, the Ludlow resolution will not bring about a remedy. It will be a cure worse than the disease.

You might as well try to stem the tide with a groan as to prevent and discourage war with such an impracticability as the Ludlow resolution.

However well intentioned, it is bound to embarrass and hamper President Roosevelt and Cordell Hull in the negotiations concerning the bombing of the *Panay*. It must indeed give great comfort to Emperor Hirohito of Japan. The militarists ruling Japan realize they can go ahead without any fear of our retaliation. It gives the impression that we are a nation of spineless jellyfish. Frankly, this proposal, if successful, would make us the laughingstock of the world. It is the most fantastic and most impractical measure yet advanced. Certainly charity requires me to say that those who signed the petition of discharge were unaware of the nature of their act.

Very truly yours,

EMANUEL CELLER.

Wages and Hours

EXTENSION OF REMARKS

OF

HON. EDWARD W. CURLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. CURLEY. Mr. Speaker, this proposed legislation is intended to perform three distinct functions:

First. To establish a minimum wage by establishing a floor below which it cannot penetrate.

Second. To establish a maximum workweek in hours of labor by establishing a ceiling above which it cannot penetrate.

Third. To abolish child labor.

These functions shall only apply where substandard labor conditions shall be found to exist in occupations for the production of goods shipped in interstate commerce after hearings have been held and the facts adduced by the administrating agency have been proven to indicate substandard labor conditions existed.

AMERICAN LABOR CRIES OUT TO CONGRESS FOR EMANCIPATION

This forward, progressive, and constructive legislation is designed to help the downtrodden unorganized workers of America. It may not be a perfect specimen, but it is a step in the right direction of economic progress for the helpless, unskilled mass of approximately eight to ten million unfortunate workers who are now held in a strait jacket. It means the emancipation and freedom to enjoy their economic liberty as well as their political liberty, if a fair standards of labor bill is adopted by the Congress. This bill specifically is aimed to lift the lowest paid group of workers to a considered fair wage and a reasonable workweek. If 40 cents an hour or 40 hours per week will be made the standard fair labor rate and hours of work, it means $16 per week for the worker or $800 per year. If the industries cannot understand that this improvement in the social economy of their workers will more than repay them in dividends later, they should at least purge their minds of prejudice and respect the constitutional right of each of the oppressed workers to a decent living wage. This bill does not in any remote way conflict with organized labor and labor's fundamental right to bargain collectively for better living conditions than the bill provides. As a matter of fact, this bill specifically protects collective bargaining; nothing in this bill will prevent organized labor from bargaining collectively above the minimum-wage floor established under this act and below the ceiling of hours per workweek.

Another milestone in social progress will be written when minimum wages and maximum hours are assured to all workers in America. When all substandard labor conditions existing in the production of goods in occupations engaged in the shipment of such goods in interstate commerce and all child labor under 16 years of age employed in the production of goods for interstate commerce shall be prohibited and penalized by law, then we will have written a new chapter in labor's social progress and improvement. The Black-Connery Fair Standards of Labor Act of 1937 will do just that for humanity.

INVENTION FORCES WHOLESALE CHANGE IN ECONOMIC STRUCTURE

When we note the inventive genius employed in the technological development absorbed in our American economic structure, we must realize it was difficult for labor to keep pace with the drastic forces rapidly displacing them in industry. That modern history reveals the age of machinery entering our life—then we realize manpower had to yield to horsepower—and next horsepower was superseded by steam and electricity. To top all these new inventions off we find industry and business was revolutionized by the marvelous development in communications through the telephone and telegraph and the mastery of the air in transportation. Our daily lives were vastly changed by inventive genius, as the industrial age arrived.

Today we have the concentration of men and women in industry, money, and machinery controlled by the invention of the dynamo and the assembly line in the dense congestion of manufacturing plants and industrial cities. That old-time self-reliance of the individual was forced to give way to those technological changes too numerous to mention. When you visualize the networks of steel and concrete highways which carry the products of remote farms, forests, and mines to the market places, you can then realize the vast displacement of labor that took place, without planning for reallocating labor in the economic structure, to balance it and secure economic equilibrium. If private industry failed to recognize their fallacy in increasing profits, through lessening costs of production, by use of machinery, thereby causing a reduction in the number of workers, and increasing the number of unemployed, with the resulting decrease in the purchasing power of the consumer, then industry must be shown the error of its ways by the Government. The Black-Connery bill will be the vehicle to lift low-wage workers to a decent level of living. The bill is meritorious, constructive, and deserves the support of all unbiased minds.

Statement Made Before the United States Tariff Commission

EXTENSION OF REMARKS

OF

HON. ARTHUR B. JENKS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

STATEMENT MADE BY HON. A. B. JENKS BEFORE THE UNITED STATES TARIFF COMMISSION, DECEMBER 14, 1937

Mr. JENKS of New Hampshire. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement which I made on December 14, 1937, before the United States Tariff Commission in behalf of an increase in the duty on shoes:

Mr. Chairman and members of the Tariff Commission, first permit me to express my appreciation of the opportunity of presenting my plea to your Commission in behalf of the shoe manufacturers of New Hampshire and New England generally and their employees.

I am one of the Representatives in Congress from New Hampshire, which State produces the fourth largest quantity of shoes in the United States; my home city of Manchester stands fifth in the United States in the production of shoes. Therefore, you can readily understand my interest and the interest of the people of New Hampshire in this very important question of adequate tariff protection on shoes.

Having been identified with the shoe-manufacturing industry in New England for 30 years, I am in a position to thoroughly understand and appreciate the anxiety that the people of my State feel over the increasing amount of imports into this country from Czechoslovakia; such imports are a hindrance and a menace as well as a constantly growing threat to employer and employee alike.

These importations of shoes from Czechoslovakia have and are taking orders from our manufacturers and work from our people, which means just so much actual money lost to our industrialists, their employees, and their communities. While this invasion of our domestic markets has caused a great deal of concern to date, the increase in these importations during the past 12 months over the previous year has been of such proportion as to alarm our manufacturers and workers over the possibility of their mounting until eventually an industrial activity, upon which thousands of people are dependent for a living, is wiped out.

These importations thus far have been mostly in the cheaper grades of shoes, but there is no good reason to believe that this invasion of our markets will not extend into the better grades of shoes, thereby injuring and demoralizing the entire American shoe industry.

Shoes imported from Czechoslovakia are now sold to our retailers at a lower price than they can be manufactured by our American manufacturers, some of whom, unfortunately, are trying to meet this foreign competition by reducing wages. While self-preservation is an almost irresistible urge, a situation should not be allowed to continue and further develop that is forcing our manufacturers to cut the wages of their workers to meet foreign competition. We can readily see how this is brought about; for example, an agent of the John Doe Shoe Co., of New Hampshire, presents his line for consideration and is advised by his former customer that from Czechoslovakia similar shoes can be purchased and delivered at a price under his; this agent returns home to his factory and immediately begins to figure how his firm can get its labor costs down to meet the Czechoslovakian competition. At the same time the Bata Shoe Co., of Czechoslovakia, can cut in and sell a million pairs of shoes to the large mail-order houses in this country, who are the principal retailers of these types of shoes, and do untold damage to our American shoe manufacturers and retailers and the employees of both.

It is not only the number of pairs of shoes that come into this country from Czechoslovakia that is detrimental but it is also the pace price that these shoes set for domestic manufacturers, which ultimately harms everyone concerned.

The Bata Shoe Co. and other foreign competitors are a menace to our leather industry as well as to our shoe industry. I am advised by a reliable manufacturer in my State that as recently as last April he was approached with a proposition to purchase leather from the Bata Co. at prices quoted far under the prices of domestic leather of the same grades. This manufacturer showed no interest in the proposal, but the possibility remains that other manufacturers might have.

Shoe manufacturers of New Hampshire and the entire United States must meet conditions and requirements laid down to them by the Federal Government in the way of taxes, unemployment insurance benefits, etc., which must be taken into consideration in conjunction with this question of adequate tariff protection.

I understand that representatives of the Tariff Commission have been sent to Czechoslovakia to ascertain facts relative to the actual costs of production of shoes, hours of labor, working conditions, etc. I do not know what difference the information they obtain might make, because the fact remains that the Bata Shoe Co. does make shoes which are laid down in this country and sold at a much lower price than our own manufacturers can produce and sell similar merchandise.

I believe that if our own American shoe manufacturers are to retain their domestic markets and maintain their employees and pay rolls they must be properly and adequately protected against the invasion of foreign goods that are produced under conditions and standards much lower than prevail here. Therefore, I appeal to your Commission to grant the increase in tariff on shoes, which the facts fully warrant, so as to afford our own manufacturers and workers the protection to which they are rightfully entitled.

Time and a Half for the Graveyard Shift

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. MURDOCK of Arizona. Mr. Speaker, I have sought to extend my remarks and include therein a telegram or two in order to go on record with regard to certain provisions of the wage and hour bill. Certain of my constituents are very apprehensive over any provision for time and a half for the graveyard shift. Most mines and smelters and perhaps meat-packing plants and sawmills in Arizona would like to be exempt from such a provision regarding the graveyard shift.

When the gentleman from North Carolina [Mr. BULWINKLE] offered his amendment late today I questioned him as to whether his amendment would apply to mines, smelters, meat-packing plants, and lumber mills. His answers satisfied me concerning mines and smelters, but I am not so sure with regard to meat-packing plants and sawmills.

Being in sympathy with the broad objectives of this measure now before us, I am particularly anxious that its provisions shall not be too ironclad as to wages and hours. I know that the lumber mills in the mountains of northern Arizona are having a hard struggle for existence and deserve some consideration both in the matter of wages and hours. This viewpoint will be made clear in the second telegram included below.

In attempting to benefit labor, let us not destroy our small industries. In many communities in my State these industries have been furnishing the sole, private employment for some years, and often this has been done without profits to the employers. In this bill we should protect those employers who have kept going during the depression, entirely because they did not want to throw men out of work.

DOUGLAS, ARIZ., *December 16.*

JOHN R. MURDOCK,

House of Representatives:

Apparently change in wage-hour bill now in debate in House carries no relief from 40-hour maximum relief except upon payment of time and one-half. Consider very desirable that some elasticity be given in bill to cover continuing-process operations, such as smelting. Such elasticity would be very helpful to both employers and employees, and will appreciate your help in this matter.

P. G. BECKETT.

FLAGSTAFF, ARIZ., *November 24.*

JOHN R. MURDOCK,

House of Representatives, Washington, D. C.:

On behalf of all the principal lumber manufacturers of Arizona, I wish again to call to your attention their opposition to the passage of any bill by Congress fixing minimum wages or maximum hours of employment. Because of unfavorable competitive conditions with the rival plants on the Pacific coast and Northwest manufacturing ponderosa pine, an attempt to fix wages in accordance with their scale would be most disastrous to the lumber industry of Arizona. An attempt to fix maximum hours, because of the seasonable nature of our activities and the natural shortage of surplus labor due to the isolation of our plants, would seriously and perhaps fatally handicap us in our operations. Lumber is the most important industry of northern Arizona. We ask your assistance to its full protection.

CHANDLER M. WOOD.

The Farm Bill

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 10, 1937

Mr. HOBBS. Mr. Speaker, today I crave the attention of the ladies and gentlemen of the House, and particularly of the farmers of Manhattan and our other great cities, many of whom were in their teens before they learned that milk did not grow in bottles. [Laughter and applause.] In the closing hours of this debate I wish that I might be given the power of Marc Antony, so that I might appeal effectively to your minds and hearts. Though I lack his eloquence and his mentality, I share with him the consuming sorrow which possessed him as he spoke in Caesar's funeral. For today, as I look at this farm bill, a weakling from the beginning, now stabbed to death with the daggers of amendment—the most unkind cut of all being that by "Brutus" BOILEAU—I sadly ponder upon what might have been and

bemoan the grievous loss. But this bill can be resurrected with your help and lifted to new heights of power. The farmers of America need the active friendship of every urbanite today, as never before.

The plight of the farmer everywhere is sad enough, but in the Cotton Belt it is tragic. This true story may throw some light upon the picture. A Negro farmer in Alabama came to his advancing merchant at the end of the year and they had a settlement. The net cash which was due the Negro for the year's work was $1.57, which represented the combined earnings of himself, his wife, and five children. He stood there with the money in his hand, looking down at it. Finally the merchant said, "Charley, what's the matter? Is there anything about your account that you do not understand?" The Negro answered, "No, suh; I understand it, boss. Every figure on that book is just right. I remembers it all. You ain't charged me as much interest as you could, and I thanks you. No, suh; I ain't worrying 'bout my 'count; I'se jest thinking." The merchant inquired, "What are you thinking about, Charley?" The answer came, "I was jes thinking that the next time I says, 'Git up' to a mule he's gwine to have to be a-setting in my lap." [Laughter and applause.]

Now, Mr. Speaker, very seriously I wish to call your attention to the situation which confronts us at this time as a background for the thinking which I hope you will do with reference to the cotton provisions of this bill.

At the last session of Congress we enacted a resolution in which we pledged ourselves to the enactment of a bill which would control agricultural surpluses.

There was predominant in the thought of the President of the United States in issuing the call for this special session of Congress conviction of the imperative necessity of control of agricultural surpluses. In fact, that was the sine qua non of this special session, the whole motivating cause.

Coming now to speak for cotton, I wish to make this basic observation: Cotton wants nothing for itself which is not given to corn, to wheat, to tobacco, and to rice, the other commodities included in this bill. There is nothing in the remarks I am making today in behalf of cotton, nor in the amendments which I offered to better this bill with respect to cotton, seeking even the slightest unfair advantage for cotton.

Cotton has a right to the floor for a few minutes. Congress is not being asked to think on a petty subject when cotton asks your undivided thought while it pleads its case for equality under the pending bill.

I would call your attention solemnly to the fact that the trade balance in favor of America all through the years of our national life has amounted to a grand total of $37,000,000,000, in round figures, and that cotton has accounted for $35,000,000,000 of this total. In other words, cotton, had it the privilege of speaking to you today, as it is attempting to do for a few moments through my poor lips, could tell you a moving story of what it has meant to this Nation and of how it has enriched the rest of the Nation by the favorable trade balance which it has brought to this country.

Let me give you a few facts with respect to the challenge which cotton presents in the national picture today. The income from cotton last year was only $200 per cotton farmer, and this, in many cases, means the total income for the whole family. This fall, in the present marketing season, we are getting less for 19,000,000 bales than we received a year ago for 13,400,000. In one county in Alabama where a survey was made, 5 percent of the population of that county are engaged in work in the cotton-textile mills, and this 5 percent received more in wages than the total farm income of the county, although more than half of its population are farmers. These facts tell something of the tragic need. We are met to answer such challenges.

Our Committee on Agriculture is a great committee. I am not saying this in an attempt to curry favor with the distinguished, erudite, and able chairman and his strong associates. I say here to your faces what I have said to your backs. There is no more patriotic, studious, or intellectually competent group in this House than the committee which reported this bill. [Applause.] That committee has set forth the philosophy of this bill with respect to cotton on pages 55 and 56. I will not take time to read these provisions, but the motif is that excessive surpluses must be reduced, that to allow violent fluctuation in supplies or prices is utterly disastrous, and that—

> The continuously operative provisions of this part are necessary in order to minimize recurring surpluses and fluctuations in the supplies of cotton; to provide for the maintenance of adequate reserve supplies and further the orderly marketing of cotton; and to maintain a fair balance between the incomes of farmers and the incomes of individuals other than farmers.

I challenge you to read these two pages, in which is set forth the philosophy of this bill, and then tell me why the provisions of this bill, which they say are necessary, are not made applicable to the cotton crop of 1938? Why do they postpone these blessings until the cotton crop of 1939 or 1940? If it is a good bill, if the philosophy set forth here is sound, then why must we wait until 1939, knocking at the door of Congress' promises as stated in the resolution we passed last August? Why must we wait in the face of the clarion call to this duty? Why must we wait when the philosophy of the bill, as set forth in the bill itself, speaks in such positive words of the necessity? Must we pile Pelion upon Ossa, surplus on surplus? Why must be wait in the face of the fact that we now have a staggering carry-over of 11,000,000 bales? There is not a man in this House who knows cotton soundly who does not know that the Department of Agriculture and its Bureau of Economics are right when they say that the price of cotton is largely fixed by just one factor, the annual carry-over. On August 1, 1936, we had a carry-over of 6,000,000 bales. The price throughout the ensuing marketing season of that year ranged around 12½ cents. No loans were made to stabilize or peg this price, yet it remained practically constant. It did not fall. This year, on August 1, 1937, the carry-over had increased to 11,000,000 bales. The price has dropped during the ensuing marketing season just about 5 cents per pound, so that the average price obtained by farmers for their cotton has been about 7½ cents per pound. This further fact should be noted well: In a frantic attempt to avert this catastrophe and save the Cotton Belt the entailed half-billion-dollar loss, we passed a resolution last August, under which a 9-cent loan was made to peg the price at that figure, but the law of supply and demand laughed at the law of Congress and drove the price down through this "floor" which we had provided to stop the price drop.

We now have a total supply of cotton exceeding 25,000,000 bales. Of this we cannot hope to sell more than 12,000,000 bales, both at home and abroad, and this estimate is a million and a half bales higher than the expected demand. So we are faced with a certainty of a carry-over on August 1, 1938, of at least 13,000,000 bales, and the best-informed authorities estimate that it will be nearer 15,000,000; some say as high as 16,000,000. This means that the price which may be expected for cotton in the 1938 marketing season will be not better than 5 cents and probably lower.

Had the Cotton Belt received a parity price this year the cotton farmers of the Nation would have had more than $1,000,000,000 more money with which to purchase the products of the farms of the West, the canned and fresh fruits of California, the fish of the east and west coasts, and the products of industry. This billion dollars of purchasing power we did not have—so the rest of the United States failed to get from us that billion dollars which we would have been glad to spend for your products. The Cotton Belt did not receive for its cotton this year what it cost to produce it. Enlightened selfishness dictates that you representatives of other sections who produce things for sale which we of the Cotton Belt need and wish to buy should help us get a parity price for our cotton so that we may have the wherewithal to buy your wheat, corn, rice, tobacco, fish, fruits, and

manufactures. You should not kill the goose that lays the golden eggs. [Applause.] It is with these thoughts in mind that I introduced the amendments to this bill which would have made this bill apply to the 1938 cotton crop, thereby preventing another 20,000,000-bale crop from coming to market next year. Your rejection of these amendments makes our tragic situation worse. I beseech you, therefore, by the bitter need of the millions whose purchasing power is wholly dependent upon cotton, by the long-delayed justice which should be theirs, and by your own enlightened selfishness that you reconsider your action in rejecting these amendments and adopt them. [Applause.]

The only answer to the farm problem is a price for farm products which shall be on a parity with the prices of the things farmers have to buy. The tariff walls add 45 percent to the cost of everything the unprotected farmer has to buy. Unjust, discriminatory freight rates against the farmer add another 39 percent to his freight bill. As Hamilton said in his report on manufactures, bounties paid to farmers to equalize the effects of the protective tariff benefiting industry are not a gift but are mere restitution. The Jeffersonian principle of equality of all men before the law still holds. Not until we have placed the prices of farm products upon a parity with the prices of the products of industry and commerce have we done justice. When we do so, we have not been generous—we have only been fair. [Applause.]

For these reasons, I have pressed upon the consideration of all those in authority my bill, House Joint Resolution 518, which is the same bill I have been urging for 3 years. It would accomplish the purpose of giving the farmers of every section of this great Nation parity prices for their staple crops. The best way to do anything is to do it. [Applause.] Uncle Sam owes parity to the men and women who feed and clothe his 130,000,000 children. [Applause.] And the debt is long past due.

But my bill has been rejected. Therefore, I am attempting to help make this the best bill possible. The farmers of Alabama voted 96 percent strong for compulsory crop control covering the 1938 crop. They voted 99 percent strong against the meaning of the Boileau amendment. Therefore, having failed in my efforts to get my plan adopted, I am obeying the mandate of the farmers of Alabama, and of the Fourth District which I have the honor to represent, and am representing their wishes as expressed in their overwhelming vote.

If a cow strays onto an acre diverted from cotton and planted to kudzu and there takes a bite of the kudzu vine, that bite, according to the provisions of this bill, costs the owner of that farm all payments which would otherwise be his—unless he and his household eat the cows. [Laughter.]

The same thing is true if a hog or a chicken consumes any of the soil-building and soil-conserving crops planted or produced on land normally used for the production of cotton, wheat, rice, tobacco, or field corn. [Laughter.]

If a chicken takes a peck at a soybean raised on a diverted acre, the owner cannot sell the chicken or any egg produced by her. [Laughter.]

If he observed the law laid down in this bill, a bachelor farmer, who had no household to help him, might have to eat a whole drove of sheep, hogs, or goats, if they had found a crack in the fence, for he could not sell a pound of any of their meat if he killed them for anything but his own consumption. [Laughter.] He could not sell a one of them nor a one of their offspring.

If he gathered the soybean hay and fed it to his dairy herd, he could not sell a drop of milk from a single cow without forfeiting all payments to which he would be otherwise entitled under the Soil Conservation Act.

These are but a few of the absurdities now in this bill by reason of the adoption of the Boileau amendment.

Others may do as they see fit with reference to voting this bill up or down, but as for me, I shall never vote for a bill which seeks to perpetuate the one-crop system, which has been the curse of the South for lo, these many years. [Applause.] The people of Alabama spend every year more than $41,000,000 for food that should be produced upon the farms of Alabama. I have no desire to hurt anyone's business and I know something of the problems, the difficulties, the hard work, and meager returns of the poultry and dairy industries. I sympathize with them in their anxiety to keep their legitimate market. But I maintain that Alabama is not a part of the legitimate market which these great industries have a right to preempt. The freight cost alone of transporting these products from Chicago and Wisconsin is a sufficient reason for Alabama to serve her own necessities in the poultry and dairy field. Alabama should feed herself. She has every right to do so. She must do so if she is ever to attain unto even a modest prosperity. [Applause.]

Not only in the lines of poultry and dairying is this true, but also, to a greater extent, must the fertile grassland of Alabama be used for raising livestock. Alabama's pastures are as fine as any on the earth. We are there blessed with a uniform rainfall and a climate which permits at least 10 months' pasturing. Neither floods nor drought are frequent. With such natural advantages we welcome the aid of a wise Federal policy which proclaims that our lands are ours to use, but not abuse, that they are the common heritage of this and the succeeding generations who must sustain life with the products of our soil, and with these thoughts in mind that the soil must be conserved and its fertility preserved by sensible, proven methods.

We are grateful that at last the truth first spoken by Hamilton has come to be generally accepted—that under our American system of a high protective tariff benefiting industry the farmers' subsidy is not a gift but a restitution. [Applause.] We in Alabama appreciate the tardy and partial restitution which is now being made to the farmers of the Nation, and we welcome the aid of the Federal Government in diverting acres which have been worn out in the production of soil-depleting crops to the production of soil-building and soil-conserving crops. We welcome the opportunity which this enlightened program gives us, and we should protest the closing of the door to that opportunity by the Boileau amendment. Alabama wants and claims the right to produce at least as much of chickens, eggs, milk, butter, and cheese as her own people consume. [Applause.] She also wants and claims the right to raise enough beef cattle to supply her own tables and a reasonable share of the market demand. [Applause.]

The Boileau amendment virtually denies that Alabama has any such rights, and disputes her claims of them. Therefore, as much as I would like to "go along" with the leadership of my party at both ends of the Avenue and with my colleagues from Alabama who are going to vote for this bill, I cannot bring myself to do so. I await with confidence the verdict of time and experience with this bill, if it be enacted into law; but I predict that upon sober second thought, when our conferees and those from the Senate sit in conference on this bill, the Boileau amendment will be stricken. It is with this thought in mind that I shall vote against the recommitting of the bill. [Applause.]

Cotton begs fair and equal treatment with that accorded her sister commodities. If there be balm in this Gilead, she asks that it be applied to her wounds now. Make this bill apply to the 1938 cotton crop. Let us stop the insane piling up of surplus on surplus, which is not only permitted but encouraged by this bill. Let us strike out the Boileau amendment. So, and only so, may we avert the threatened bankruptcy of the Cotton Belt. [Applause.] The South

should no longer be regarded as "a conquered province." [Applause.] We must keep faith with those who trust us. We must make good our party's platform pledge. [Applause.] The American farmer is asking bread. Will we give him a stone? [Applause.]

[Here the gavel fell.]

Disappointment in R. H. Jackson

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM THE JAMESTOWN JOURNAL

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in a recent issue of the Jamestown Journal, headed "Disappointment in R. H. Jackson."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Jamestown (N. Y.) Journal]

Many Jamestown friends of Robert H. Jackson, who has risen to Assistant Attorney General in the New Deal administration, read of his address on the current business recession in Monday's Journal with interest, coupled with disgust. That there has been such reaction among his former neighbors and friends is apparent in the many comments to representatives of the Journal, some of whom have even suggested that an effort be made to challenge Mr. Jackson's statement or to make apparent to him the feeling back home.

To those who have known Mr. Jackson for several years and have had an admiration for his personal qualities, the spectacle of him resorting to such unintelligent demagogy is a distinct disappointment. With a knowledge of his earlier views on business and government, his past keen conception of problems, his friends are hard pressed to believe that he has sincerely concluded that big business is cutting off its nose to spite its face by prosecuting a campaign to bring about this recession and that some increases in prices have not been made reluctantly with full knowledge of the effect upon volume of business but necessarily to meet rising costs in which both increased taxes and labor costs have had their part.

We wonder how long this concerted effort to arouse class feeling—to aline class against class by charging business leaders with working against the interests of the Nation—is going to be continued by the Roosevelt administration. Particularly do we wonder how long our old neighbor who achieved such standing in this community is going to play this game with Roosevelt.

Others who have risen to high positions in the administration but could not stomach many of the Roosevelt methods which they felt were doing real damage to the United States have gotten out and are voicing their honest and earnest objections to much of this demagogy. Among them is Gen. Hugh Johnson, who has been reported as taking a vigorous slam at Mr. Jackson for his latest harmful effect.

It is a real disappointment when men of ability fall into the petty ways of demagogy instead of attacking problems with their expected perception. All should know and understand that businessmen are not destroying their life's work just to embarrass the President. It is high time that the President and his followers who do his bidding cease their destructive tactics and make an effort to work with business so that it may once more go ahead with a progressive policy that is essential to providing the jobs for renewed prosperity for all.

The President should know by now, and so should Mr. Jackson, that one of the chief obstacles in the path of economic progress for all is the lack of a stable and reasonable tax policy and a reasonable policy of regulation that does not restrict and restrain to the point of confiscation or dictation. When the administration abandons its punitive attitude toward business and gives a definite and lasting assurance of stability, businessmen will take new courage and the enterprise and initiative of the American people that has brought this Nation to its world leadership and high standard of living will carry the United States to new heights.

A Permanent Farm Program

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

EASTERN OREGON WHEAT LEAGUE REPORT AND RECOMMENDATIONS

Mr. PIERCE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following Eastern Oregon Wheat League report and recommendations of Federal agricultural programs committee, La Grande, Oreg., December 3–4, 1937:

Consideration of recommendations from the Eastern Oregon Wheat League concerning Federal legislation for agriculture has involved two phases. The first of these is in connection with the agricultural conservation program, which is law today and which is likely to be a portion of any additional legislation. The second phase concerns a more complete, comprehensive, and long-time farm program now being considered by Congress. While the committee recognizes close relationships existing between these two phases, for the purposes of discussion we have considered them separately.

1938 AGRICULTURAL CONSERVATION PROGRAM

The committee wishes to commend the 1938 agricultural conservation program as an important improvement over the 1936 and 1937 programs. We call attention to the fact that recommendations of the Eastern Oregon Wheat League made at our last annual meeting have to a considerable degree been embodied in the 1938 program. We particularly commend the simplification of the program and the provisions which permit to a greater degree administration by local committees.

The committee gave detailed study to the various provisions of the program as outlined. We feel that prohibiting joint compliance and at the same time requiring joint deduction on multiple farm operations will work a hardship on some Oregon farmers and will prevent others from participating in the program. We recognize, however, the difficulties and practical impossibility of securing modification of the program for this year, and we recommend that careful study and consideration of this provision be made under actual application looking toward formulation of programs for the future.

The committee gave serious consideration to the classification of restoration land. It is our recommendation that for the present we should move slowly. The classification of land as restoration land as outlined under the 1938 program is a complex problem and we believe that for the present most of the acreage which should be permanently retired from cultivation can be classified to better advantage as cropland rather than as restoration land. We recommend that land not be classified as restoration land in the Columbia Basin unless it is subject to severe wind erosion which is a menace not only to the land itself but to land in the surrounding community.

While we commend the Conservation Program as a step in the right direction we unalterably feel that it is not a complete solution of the wheat-growers' problem. For this reason the committee has given consideration to principles for a permanent farm program which would adequately solve the wheat growers' economic ills.

RECOMMENDATIONS FOR NEW LEGISLATION

Briefly stated, the committee recommends that a permanent farm program should include the following provisions:

1. Continuation of soil-conservation program.
2. Production control to be exercised by voluntary means but with the provision that when burdensome surpluses develop that marketing quotas for every wheat grower may be established by a two-thirds majority of the producers voting.
3. Provision for benefit payments sufficient to bring price and income to parity.
4. Crop insurance.
5. Designation of wheat produced in white-wheat area as a separate commodity with special treatment in subsidization of exports.
6. Commodity loans of at least 50 percent of parity when total supplies of white wheat become burdensome.
7. Processing tax on wheat to finance benefit payments in excess of payments provided under conservation program.
8. No discrimination in payments because of size of operation.
9. Adequate consumer safeguards.
10. Provision for intervention by Secretary of Agriculture in proposed freight-rate increases on agricultural products.
11. Adequate tariff protection for wheat.

A discussion of each of the points enumerated above as our recommendations follows:

Continuation of conservation program: We believe that the objectives of the conservation program are sound and that they should be a part of and supplemental to a more complete program. In no way do we abandon the idea that the conservation of our national soil resources should be a part of a permanent farm policy.

Production control: In 1936 the Eastern Oregon Wheat League asked Congress for legislation to give American farmers machinery by which they could adjust production to effective demand. We reaffirm this position with all the strength at our command. With the production of only one normal crop, we are faced with declining prices which have already placed the price of wheat below the cost of production. Without the machinery to make adequate production control possible this situation can only become worse and worse until wheat growers will be forced out of the business. Experience of the past few years has indicated clearly that more wheat can be produced in the United States each year than can possibly be used in this country or exported abroad under present world conditions. We want and must have production control if we are to maintain the purchasing power of the wheat grower and keep him off of the relief rolls.

We believe that insofar as possible production control should be accomplished by voluntary means. We have great confidence in the honesty and foresight of the wheat grower which will make him willing to cooperate in the effort to maintain his price levels. We do believe however, that a provision should be included which will give the Secretary of Agriculture power to establish marketing quotas when depressing surpluses are present (if two-thirds of the producers of wheat voting are in favor of marketing quotas). This provision should mean that if two-thirds of the wheat growers want the establishment of marketing quotas then these quotas may be established for every wheat grower. This is not regimentation, it is democracy.

Parity payments: We believe that parity payments should be made to cooperators. Such payments should be based on the difference between the average farm price and the price determined as necessary to bring the purchasing power and income of farmers to a parity with that of individuals other than farmers. Briefly, we want a fair share of our national income. We believe that parity payments should be graduated according to supply as outlined in some of the bills already presented to Congress.

Crop insurance: We strongly favor the principle of crop insurance as outlined in the bill already passed by the Senate. Parity of income cannot be obtained for farmers by maintaining prices alone. Some protection in the form of a partial guarantee of production is necessary. Obviously, a wheat farmer who because of weather conditions, fire, or other act of God has no wheat to sell cannot be benefited by price improvement. We believe crop insurance to be workable and sound. Eligibility for crop insurance should be made contingent on participation in other phases of the national program.

White wheat area: The committee spent more time in consideration of the proposal to classify wheat produced in the Pacific Northwest as a separate commodity than on any other one subject. This proposal has obvious advantages if properly administered.

Briefly, the committee has gone on record as favoring the proposal for the reason that we believe the handling of the Northwest wheat surplus requires special consideration. This consideration can best be given if Northwest wheat is considered as a separate commodity.

Commodity loans: We realize that the making of commodity loans when wheat is at a normal price level would tend to hold our wheat out of the channels of export and domestic trade. We ask, therefore, that a plan for commodity loans which is fair and equitable be established for use whenever supplies become burdensome. This is essentially the provision of the Pope-McGill bill introduced in the last session of Congress. We desire commodity loans only when our wheat prices drop to ridiculously low levels. We are aware of the dangers of a repetition of the Farm Board experience if commodity loans are made at too high levels.

Financing of wheat program: We believe it just and equitable that a processing tax on wheat should be levied to provide funds for benefit payments to wheat growers in excess of payments provided under the conservation program. We call attention to the fact that a 20-percent per bushel processing tax on wheat would increase the cost of a loaf of bread only one-third of 1 cent. We also call attention to the fact that when processing taxes were removed from wheat in 1935 there was no decrease in flour or bread prices.

Size of payments: We believe that any discrimination in rate of payment depending on the size of operation or the establishment of a maximum payment would only defeat the fundamental purpose of any program.

Adequate consumer safeguards: We believe the consumer is entitled to reasonable safeguards to assure him an adequate supply of foodstuffs at reasonable price levels. We commend the ever-normal granary principle where applicable, but feel that it does not particularly affect the white wheat area because of our stability of production.

Freight-rate provisions: In the so-called Jones bill is a provision making it the duty of the Secretary of Agriculture to intervene on behalf of farmers before the Interstate Commerce Commission when proposals for freight-rate increases on agricultural products are advanced.

We commend this portion of this bill and believe it should be included in farm legislation.

Tariff protection: If farmers are to reduce their production to a point approaching domestic requirements, we must have adequate tariff protection from imports of all classes of wheat. No one factor would defeat a voluntary production-control plan so effectively as the importation of large quantities of foreign wheat.

Adopted unanimously this 4th day of December 1937 in convention assembled at La Grande, Oreg.

CHAS. W. SMITH, *Secretary.*

Selective Logging in the Timber Industry

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

December 17, 1937

ARTICLE BY LOWELL THOMAS MURRAY, OF TACOMA, WASH.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks, I include herein an article written by Lowell Thomas Murray, of Tacoma, Wash., whom I regard as one of the most progressively minded and one of the most intelligent loggers in the United States. During the recent Congressional recess I had the good fortune to spend a day with Mr. Murray and ride over a portion of his vast logging domain. He conducts a model logging operation. All his employees belong to organized labor. At the main boarding house every facility is provided to make the men's stay a happy and homelike one. Situated on the shores of beautiful Mineral Lake, in northeastern Lewis County, Wash., the view from each bedroom window is inspiring and the very mountain air winey and salubrious.

Magazines, pool tables, cards, radio, good food—all these are readily available.

PROGRESSIVE LOGGING FROM A CONSERVATION VIEWPOINT

More than 25 miles of main-line logging railroad are in actual operation, in addition to which are countless spurs. A tremendous investment has been made in logging machinery and railway equipment. Some of the stretches of this railroad cost scores of thousands of dollars per mile, because they were blasted through solid rock. The view from the railroad, as one rides along its well-ballasted road-bed, is superb and awe-inspiring. Mineral Creek, rich in mountain trout, bubbles and roars its way down from the mountain heights. It forms eddies and transparent swimming pools, almost irresistibly inviting in the beauty of the pure water. Mr. Murray has established a complete telephone system and weather statistical stations along his right-of-way. He specializes in caterpillar logging operations, so as to protect the standing timber which he allows to remain, as he selectively logs this vast and beautiful natural resource.

THE NEW SYSTEM REPLACES THE OLD

Lowell Thomas Murray deserves the laudations of all of us. He has a vision and the intestinal fortitude to carry it out. He is logging selectively. In other words he cuts the old and ripe timber and selects trees in such a way as to permit a continuous forest growth. He treats timber as a crop. The system of high-line logging, which rips and tears the ground and devastates it as though a hurricane and earthquake had combined to destroy everything irreparably, finds no defender in Mr. Murray. But let his article speak for itself:

A PRIVATE FOREST OWNER LOOKS AT CONSERVATION IN THE STATE OF WASHINGTON

(By L. T. Murray, president, West Fork Logging Co., Tacoma, Wash.)

A logger, it is sometimes said, is opposed to forest conservation. Critics claim he has wastefully cut off the virgin timber and left nothing but blackened stumps. Sincerely, I doubt if there is a logger anywhere who has willfully set about to destroy the for-

ests and their many uses. On the other hand, his efforts have created a product of economic value to the entire Nation. Houses, barns, factories, furniture, paper, and thousands of other necessities and luxuries were partly the result of his work. True, some of the practices many loggers have followed have resulted in forest devastation, but this was not due to any malicious desire to spread destruction but due, rather, to economic conditions, uncertainty of markets immediately and many years ahead, risks of loss from forest fires, disease, and insects, lack of knowledge of the correct forestry practices, the financial inability to bear the carrying charges and taxes on a sufficiently large amount of timber to permit sustained yield management, insufficient courage and foresight, and lack of enabling legislation which would remove the legal obstacles to private forest management.

In spite of these hazards to forest management there is a need for a constant supply of wood products. Industries must be maintained, people must be kept employed, and the products of wood must be made available for use. By no means do I feel that these obtsacles are insurmountable, but, nevertheless, I know that the difficulties cannot be overcome through the efforts of either the industry, the Government, or the general public alone; all must cooperate.

During my nearly 30 years of logging in the State of Washington, I have seen the birth and the growth of the conservation movement. In its progress, I have enjoyed taking an active part. Naturally, since I am engaged in the business of growing and harvesting trees, I am very much interested in continuous forest production. However, conservation means much more to me than just management of timberlands for the production of wood. I recognize the importance of preserving intact some virgin stands of lofty trees for their inspirational and scientific values, the importance of maintaining a forest cover to help prevent floods and soil erosion and to protect sources of water supply, and the tremendous recreational value of certain forest areas to the nature lover, the hunter, fisherman, or the casual tourist. All of these uses of the forest deserve consideration in proportion to their value to the users. Some of these uses can be harmonized on the same area, others can be properly accomplished only to the complete exclusion of all the other uses. It is important therefore to determine which uses deserve the most encouragement.

LUMBER IS WASHINGTON STATE'S GREATEST INDUSTRY

There is no question that the forest industry is by far the most important industry in the State of Washington. In 1929 forest products produced in the State were valued at $352,000,000, or 44 percent of the value of the products of all industries. In this same year 24 percent of all the industrial establishments were engaged in forest production. For the past 10 years Washington has produced 20 to 24 percent of all lumber manufactured in the United States. From a local and from a national standpoint it is essential that these industries be maintained.

Their maintenance is even more important when it is considered that 80 percent of the value of the products of these industries normally is distributed within the State for wages, supplies, taxes, construction, and the like. In 1929 the 70,000 wage earners engaged in this industry received $100,000,000 in wages. This represented 61 percent of all wage earners and 62 percent of all wages paid in all industries. In addition, two-thirds of all rail- and water-borne tonnage originating in the State is forest products tonnage, and a large portion of inbound freight is for the use of these industries.

The city of Tacoma and its environs, for example, has been widely known as the lumber capital of America. Here 10,000 wage earners employed in 1929 in sawmills, pulp plants, furniture factories, and other forest industries received a total pay roll of $13,000,000 and produced products valued at $38,000,000. These figures represented 52 percent of all industrial workers, 50 percent of the total industrial pay roll, and 40 percent of the value of all industrial products produced. This city ships more lumber products than any other port in America, amounting last year to $28,000,000. This important city, with a population of 107,000, is undoubtedly dependent mostly upon the products of the forest. Other cities of Washington in which forest industries play a very significant part include Seattle, Bellingham, Everett, Aberdeen, Hoquiam, and Port Angeles. Hence, it seems obvious that in any practical conservation program for the State of Washington full consideration should be given to the maintenance of a permanent timber supply for these industries. If these industries should be forced to cease operation because of the lack of raw material, practically all the other industries in the State would be seriously affected. In addition, the many people indirectly dependent upon these industries, such as storekeepers, lawyers, doctors, teachers, and other service occupations, would be left without employment.

Even though less than one-half of the original 578,000,000,000 feet of timber still remains in the State of Washington, yet there are greater opportunities here for sustained-yield forest management than anywhere in the United States. In the first place, 146,000,000,000 out of the present 277,000,000,000 feet of timber are at present operable; second, a large number of existing forest industries provide a market for various types of products; third, about 15,000,000 acres are classified as potentially permanent forest land; fourth, wood growth is rapid compared to other regions; fifth, young stands of timber are relatively easy to obtain if timber crops are harvested under good forestry practices; sixth, cheap water transportation is available for the delivery of the manufactured goods; and seventh, here there is a large class of highly skilled woods and mill labor. Nevertheless, the numerous impediments to forest management will have to be eliminated or reduced to a large degree before any real progress can be made.

SUSTAINED YIELD TECHNIQUE AN INDISPENSABLE FACTOR IN CONSERVATION

Some operators have already taken steps toward sustained yield management in spite of the existing hazards to private forest management. Their efforts deserve every reasonable encouragement from the general public and the Government. The West Fork Logging Co., for example, has definitely committed itself to not only the harvesting but also the growing of trees. Its entire operation is being carried on under the best forestry methods possible under the present conditions. Every one of the 10,000 acres harvested in the last 10 years has been cut with thought of providing for a second crop. A constant effort has been made to improve the methods employed.

Here are a few policies already a part of the present operation.

1. Selective logging by areas, groups, or trees is practiced wherever practicable. Within some of these areas only the ripe merchantable trees are marked for cutting. Within the physical limitations of the equipment, methods, and the labor, the unmerchantable trees are left standing to provide for a second crop and to provide seed for a third or fourth crop, and to reduce the fire hazard created by slash from the tops of the cut trees. I believe that in some places where adequate provision is made for a seed supply clear cutting is good forestry practice especially in overmature stands of large timber where stunted or defective trees would be the only trees left after cutting.

2. The individual operations are scattered so that large blocks of timber between the cut areas are left for relatively long periods of time. This method is good forestry because the fire hazard of one continuous cut-over area is eliminated and a seed supply to the adjacent cut areas is more assured. This forestry requirement necessitates much more investment in transportation facilities than would otherwise be necessary and hence from a financial standpoint this practice constitutes one of the costs of forestry practice for which an operator receives no special consideration.

3. Strips of timber are left along streams, railroad rights-of-way, between clear-cut and selectively logged lands as an additional safeguard against fire. At the same time these strips maintain the natural beauty of routes of travel.

4. The above systems of cutting maintain a more even flow in the clear mountain streams which provide part of the water for two power dams and one irrigation district located outside of our operating unit.

5. At present we are preparing a forest management plan so that through a long-term systemized method of cutting we may assure a sustained-yield operation.

6. We are in constant cooperation with the United States Forest Service, the West Coast Lumbermen's Association, the Washington State Forestry Department, and the Forestry College of Washington University in order to secure the best of technical aid and advice.

7. We are members of the Washington Forest Fire Association which through a specified charge per acre is providing partial fire protection to our lands. In addition, we are building up our own fire protection organization.

8. We employ as superintendent of our operations a logging engineer who is a graduate of a forest school, a technical forester who devotes his entire time to the improvement of our forestry practices, and an engineer who is revising engineering methods in order to overcome the physical and mechanical handicaps to forestry practice.

9. We have made permanent camp headquarters in a small town so that men with families can live close to work. Also, we have provided permanent and comfortable living quarters for all single men.

10. Through our woods foreman we have been educating and training our woodsmen to the value of forest conservation by drastically changing their methods of work. Considerable effort was required to overcome their set prejudices toward new and different types of logging. Results have been ample proof of the value of their work.

11. On our State land we are carrying on the best selective logging the situation permits. Because we are unable to buy the land along with the timber at an appraised price we are forced to remove every tree which promises a return at or above cost. Although a deed to timber expires within 5 years from the date of sale, yet we have left uninjured a large number of small trees for additional growth and as a source of seed supply.

12. We are paying taxes on many acres of young growth and cut-over land which will not produce an income for 50 to 100 years in order to carry out our plans for sustained yield.

13. In the last analysis, we consider our timber as a crop and not as a mine.

THE PUBLIC HAS A DEFINITE RESPONSIBILITY IN FOREST MANAGEMENT

I honestly feel that although other loggers and ourselves have taken a long step toward our ultimate objective of sustained-yield management, much remains to be accomplished. Since we are engaged in the business of tree production, we protect and manage our timber because of the financial return we expect from the forest crops. I recognize our responsibility to the public to maintain the productivity of our land and I realize that the public will benefit or suffer according to the practices we follow. At the

same time I do not believe that the public understands its obligation to the forest land owner to make it economically possible and attractive to conduct his operations in conformity with the public needs. The public sentiment created by the "cut out and get out" practices of past generations of loggers is either apathetic or openly hostile toward any call for public cooperation in obtaining better forestry practices. The public needs to be made to understand that it is not a question merely of helping the logger and lumberman, but also one of public welfare. Permanent employment and permanent industry are essential to the support of any nation.

Not only on our land but on all land in the State of Washington, there is the ever present danger of losing all or part of the mature trees or young growth from forest fires. In spite of and partially offsetting the increased efficiency of forest fire protection, an ever increasing percentage of forest fires are being caused by the public so that the public is now the major fire hazard of forest areas. Aside from limited assistance from the State and Federal Governments the land owner foots the bills for these fires.

From one viewpoint, the public benefits from the protection and proper management of private forest land but contributes little or nothing towards defraying the cost of improved forestry practices, and in fact is the principal cause of forest fires.

This situation makes it unreasonably difficult for a private operator to practice sustained yield management. It is obvious that public understanding of the problem and public support of remedial measures is necessary. The uninformed public is apt to make the error of basing its acts on emotional appeal of the "woodsman spare that tree" type, when what is needed is constructive planning and support of remedial measures based on factual evidence.

FEDERAL LEGISLATION IS NEEDED

The question then arises, what can the public justifiably do to encourage private forest management. To me, there are several things the public can do through Federal legislation.

1. Sponsor an educational program to enlighten the public as to the value of the forest, the need for public participation in forestry problems and a better conception as to the benefits which will result from the proper use of the forests throughout the future.

2. Increase public participation in fire-control costs on private land. A first step in this direction might be to increase the Clark-McNary appropriation to the extent of providing one-half of the cost of adequately protecting forest lands from fire.

3. Enact legislation authorizing the Forest Service to enter into cooperative agreements with the State, county, and private forest-land owners in order to create sustained-yield units. This is necessary in cases where national-forest timber is an integral part of a proposed sustained-yield unit.

4. Provide for research into (1) the improvement of existing and the development of new machinery and methods which will better accomplish the objectives of forest management, (2) the development of wider uses for wood and wood products so that closer utilization of the forest may be possible, (3) the development of better techniques of forest management, (4) the development of better methods of protection and control of forest fires, insects, and disease.

5. Promote through trade agreements more export outlets for forest products and through tariff regulations restrictions on importations from low-wage-scale countries as a means of encouraging better forest practice by the commercial forest landowner.

6. Give legal authorization and appropriations for Federal acquisition of private lands in a sustained yield unit for the purpose of relieving an operator of taxes and other charges on a large acreage of land and timber of which much of the latter would not be harvested for a long period of time during a sustained-yield cutting budget. This would aid such an operator to limit his cut to the sustained-yield plan over a long period of years.

7. Appropriate funds under the Fulmer Act for State acquisition purposes. This would enable the State to assist private operators where State lands are an integral part of a sustained-yield unit.

8. Enact legislation to remove limitations in the terms of Federal grants, enabling the States to manage, sell, and exchange (with the Federal Government, counties, and private owners) land grants for the purpose of furthering the establishment of sustained-yield units.

9. Permit the deduction from the undistributed-profits tax of funds expended for reforestation and other capital expenditures for forest development, including the acquisition of growing timber, in connection with sustained-yield management.

10. Make the necessary revisions in the present inheritance-tax laws which would have the effect of forcing liquidation with the resultant breaking up of well-balanced forest-management units.

11. Maintenance of the present forest industries of the State of Washington should be without question one of the principal objectives of the conservation program. The proposed establishment of a national park from 300,000 acres on the Olympic Peninsula now under National Forest Administration would remove from industrial use about eight and one-half billion feet of timber. This area can be made to serve the admirable purpose of recreation without locking up such a tremendous area and volume of timber so necessary to the industries of the State. Recreation could be given legal status as a national-forest activity with provisions for appropriations for urgently needed recreational facilities on national-forest land with the provision that the multiple-use principles of national-forest administration be adhered to and that recreation and other forms of national-forest resources will be provided but without undue priority being given to any one activity to the detriment of other uses. I might add that this area is far removed from any possible operation of our company. The point I wish to emphasize is that the maintenance of forest industries is so important to the State and the Nation that we cannot possibly afford to lock up timber which, at the same time it is serving industrial purposes, could be made use of for the full development of its recreational opportunities.

12. Close scrutiny should be made of the present proposal to transfer the Forest Service from one Department to another. Here in the State of Washington, the Forest Service has well earned its reputation for its leadership in conservation work. This is largely a result of its highly meritous personnel who are selected and promoted under civil-service regulations. Any entrance of political preferment into appointments or advancement undoubtedly would destroy the morale of this organization.

The Wage and Hour Bill Unfair and Discriminatory—The Bill Should Be Recommitted

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. PLUMLEY. Mr. Speaker, no man is more cheated than the selfish; and where all are selfish, the sage is not better than the fool but rather only more dangerous. "So stands it written." If ever the foregoing truth were better exemplified than by the turmoil and discussion incident to the wage and hour bill, I have failed to observe the fact.

The controversy aroused by this bill as written has developed into a wordy contest disclosing the robust self-interest of many groups; the clutching, intense determination of all, with each one wishing and striving for his own advantage rather than that of his fellows; with each wishing only to protect and benefit his particular group or section at the expense of others. "It is not truth, justice, liberty which men seek; they seek only themselves"; and as far as this particular measure is concerned, it is patently clear that, although they so wish, they are not at all sure that they are to be benefited at that.

The wisdom of spending no more time in the discussion of this phantasmagoria on the floor of the House at this session cannot be seriously questioned either by those who are sincere with themselves or by those who are really concerned for the welfare of the laboring man and of the people at large. The bill should be recommitted.

It should be recommitted, among others, for those reasons so ably stated yesterday by the gentleman from Texas [Mr. LANHAM]. I suggest that his remarks have your careful study, if they have not already been given the attention they deserve.

When the tumult and the shouting dies and calm reason once more ascends the throne, friends and foes of this present bill alike, who are honest with themselves, will know that after all "the only freedom which deserves the name is that of pursuing our own goal in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to attain it."

Coercion must always be illegitimate. Discrimination, moreover, is not legislation. We devoutly want fair labor standards to be provided and established in industry, but they must be fair, not established by or through discriminatory legislation.

Petition Calling for Referendum on War Regrettable Situation for United States at This Time

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

COLUMNIST FRANKLYN WALTMAN COMMENTS UPON THE ADVISABILITY OF AMENDING THE CONSTITUTION OF THE UNITED STATES SO AS TO LIMIT THE CONGRESS IN THE EXERCISE OF ITS POWER TO DECLARE WAR

Mr. GEARHART. Mr. Speaker, the securing of the two hundred eighteenth signature to the motion to discharge the Judiciary Committee from further consideration of Congressman LUDLOW's proposed amendment to the Constitution of the United States initiates what I feel is to become one of the greatest constitutional debates of our times. The taking from the Congress of its ancient prerogative to declare war and the lodging of that great responsibility with the people would establish in the United States a principle of government utterly unknown in any other country on the face of the globe. So important does the issue promise to become that I deem it a privilege indeed to be able to offer for the consideration of the Congress and, through the columns of the CONGRESSIONAL RECORD to the Nation, the timely comments of the Washington Post's most able writer, Mr. Franklyn Waltman. With the unanimous consent of the Congress, expressed this day, as my authority, I hand Mr. Waltman's article to the Public Printer for incorporation in the CONGRESSIONAL RECORD.

It is simply incredible that 218 Members of the House of Representatives are so naive or so willfully indifferent to the responsibilities of their office as to place their names on the petition forcing to the floor of that body the absurd Ludlow resolution for a constitutional amendment requiring a national referendum before this Government would be able to declare war on another nation.

And it is especially unfortunate for world peace efforts that the last of the 218 names—the number necessary to make the petition effective—should have been added to the document this week, when President Roosevelt and Secretary of State Cordell Hull are confronted with the delicate situation growing out of the sinking of the American gunboat *Panay* by Japanese aviators.

The Japanese could not have desired a more favorable development at this time, and undoubtedly that country's diplomatic emissaries here lost no time in cabling the news to the foreign office in Tokyo.

It is hard to understand why patriotic men and women elected to a responsible place in the affairs of their country should undertake in such manner to give aid and comfort to a group of Japanese militarists who have shamefully outraged American rights.

If it is contended these Members of the House are sincere and honestly believe that they are serving the interest of their country by supporting the Ludlow resolution, then the conclusion is inescapable that nurses should be appointed to take care of them, for the Ludlow resolution is childish.

If, on the other hand, some of the 218 signers of that petition acted—as many are suspected of having done—in response to the demands of emotional or unthinking constituents stirred up by pacifist organizations supporting the Ludlow resolution, then they are playing politics at a crucial moment in the history of their country, and that cannot be justified on any basis.

Nothing could be sillier than the Ludlow resolution—not even the Neutrality Act. Secretary of State Cordell Hull, speaking of that measure yesterday, asserted that "from the standpoint of promoting peace and keeping this country out of war I am unable to see either the wisdom or practicability of the proposal." Mr. Hull was speaking with restraint.

Under the Ludlow proposal, before the President and Congress could declare that a state of war exists between the United States and another country—except in the event of invasion—a national referendum would have to be held on which the populace would be asked "Shall the United States declare war on * * *?"

While this is going on, what do Representative LUDLOW and his supporters in this matter think the country named in that question would be doing? Does he suppose its military forces would patiently wait until the verdict of the American people was registered at the polls?

No government would take a chance on the outcome of such a referendum. In the first place, this country would swarm with spies and agents who would seek to prevent an affirmative vote on that question. Secondly, it would place itself in a position to get the jump on the United States when war is declared—if it did not make the referendum unnecessary by actually assailing American territory and arms.

What reason has Mr. LUDLOW for thinking that the voters would vote down this country going to war? Indeed, the populace usually is more desirous of war than those in charge of the government, as is evidenced by what happened in this country in 1898 and again in 1917. Instead of the decision as to whether the country should go to war being made on a basis of calm reason and sense it would be based on hysteria and prejudice. As one opponent of the proposal has said, we would have a civil war within the country as well as a foreign war outside.

But aside from that phase of the matter, has not Mr. LUDLOW heard that countries now go to war without any formal declaration? At a time when the formal declaration of war virtually has been abandoned in international intercourse, he would have the United States hold a referendum on a meaningless question. Assuming that his proposal is written into the Constitution, does he suppose that any President who wanted to take the country into war would be deterred by it?

That is one of the things which this Congress and the pacifists seem unable to get into their heads. Congress can pass all the neutrality acts, constitutional amendments, and laws it wishes, but it cannot bind the hands of a President who wants to go to war. There are too many ways of getting into a war. But by passing such legislation Congress can bind the hands of a President who earnestly is striving to maintain world peace and keep the country out of war.

* * * * * * *

But all this is academic, for the Ludlow proposal will never get into the Constitution. It is doubtful if it will receive the necessary two-thirds vote in the House. It is certain that two-thirds of the Senate and 36 States will never approve such a proposal. When all the oratory dies away, Mr. LUDLOW will have to take consolation in the fact that he succeeded in embarrassing his Government at a critical time and made his country ridiculous in the eyes of the world.

Wage and Hour Legislation—Historical Background

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 13, 1937

Mr. ALLEN of Pennsylvania. Mr. Speaker, I have studied the history of wage and hour legislation in considerable detail. During the general debate which has ensued on the Black-Connery bill during the past week, I have noted that the arguments which have been presented against the bill are as old as recorded history itself. In the welter and confusion which have prevailed in the House during the past few days, many Members are tempted to consider wage and hour legislation as something new, or of an experimental nature. Neither is correct. Legislation regulating wages and hours in industry is very old. No civilization since the beginning of history has failed to reduce working hours or to set time aside for recreation, repose, and education. For centuries, by virtue of divine law, we have limited the labor of mankind to 6 days. On the seventh man has rested. For centuries, under the laws of man, we have steadily reduced the long hours through which he must toil.

Since the early development of the factory system in England and all during the rapid progress of the machine age, legislation pertaining to the wages of labor and the hours through which labor must toil has been enacted. In 1800, in the early English textile mills, men worked 19 and 20 hours a day, and the average day's work in all England during that period was 16 hours. In 1819, 95 hours constituted the average workweek in England. In 1890, because of regulatory measures, long back-breaking hours had been reduced to 45 hours per week in the English coal mines, and

by 1894 the average workweek in all England has been limited to 56½ hours. All through the nineteenth century, as the factory system developed, working hours were reduced in number. In 1802 the first factory act in England was passed. This law provided that no child under 18 should work more than 12 hours a day. Previous to this law little children 8 years old were toiling 15 hours a day in the English mills and mines. When the law of 1802 was passed the businessmen of England cried to high heaven that Parliament was ruining their business. To prohibit them from working little children 15 hours a day would mean the destruction of British industry. Instead of that the opposite obtained and business in England expanded as never before. Again, in 1846, humanitarian Englishmen decided that too many children 13 years and younger were working 12 hours a day under wretched conditions. Consequently a law was passed reducing the hours of work for children from 12 hours to 10. Again big business in England wailed that Parliament would ruin their business, but during the next 40 years after the passage of that act the textile mills in England doubled their capacity program. Profits and prosperity increased beyond all expectation. These are historical facts and they prove definitely that such legislation as the Black-Connery Act provides has been attempted successfully many times in history.

The second argument prevailing against this type of legislation was then as now that it would benefit one class of people at the expense of another. Again I refer to history, and again history proves that just the opposite is true and that all classes benefit when the masses of any people are uplifted. If we succeed in raising the living standards of those who are underpaid today and if we return to private employment several million of our unemployed, the living standards in America will be raised, and all our people will benefit.

The third argument which has been inveighed against the Black-Connery Act is that if the hours of work are reduced, production will be reduced likewise. In other words, a man working 8 hours a day can produce more than a man working 6 hours a day. That is true, and we will not argue that point. But we cannot confine our argument to a day's comparison; we must consider it in terms of months or a year. History has proved that a man can work rapidly and to the limit of his capacity for 6 hours a day for weeks, months, and years, but a man cannot work at the same high speed for 8 hours a day. A runner can cover a 100-yard dash at full speed, but he could not maintain that same speed for a mile. Men can sprint in industry for 6 hours and in a year's time produce as much as a man working 8, 10, or 12 hours. The history of past experiments has again indicated that when it is necessary to reduce the hours of work in order to increase employment and to raise living standards, that productivity has gone up also. Men are able to work harder and with greater efficiency during reduced hours over a yearly period.

After the laws of 1802 and 1846 in England which reduced hours, production went up rapidly and exceeded all previous records. Witnesses working against the Black-Connery bill claim that there will be a great loss in our national wealth if we reduce working hours. Well, based on that argument, during the past 200 years of our life we have lost 33⅓ working years because we have rested on Sundays. According to their argument, if we had worked 1,600 Sundays during the past 200 years, we would have increased our national wealth considerably. That is a ridiculous argument, and the world knows that if we forced labor to work 7 full days we would have been a poorer Nation, less civilized, less educated, and with less productive capacity.

The fourth argument against this legislation has been that the Government has no right to interfere in private enterprise. I remind you that the Government has the constitutional right to promote the general welfare of our people. Here the general welfare is concerned. It is the duty of government to interfere with the contracts and activities of individuals if those contracts are inimical to the general welfare. Let us consider for a moment what this so-called Government interference actually is. During the past few years in the coal industry, mechanical loading machines have been introduced. Three hundred men today can easily do the work which formerly required 800 men. It is reliably estimated that 100,000 miners have been replaced recently because of coal-loading equipment, and remember that these miners have dependent upon them 300,000 women and children. The steel mills have recently installed new rolling equipment, and today 1,600 men in one mill can do the work which formerly required 3,200 men. In 1929 it cost $4 in labor to make the door of an automobile. Due to a new invention, this same door can now be made with a labor cost of 15 cents. I cite these few statistics to demonstrate that if labor-saving machinery is used to disemploy men, the result is poverty when it should be prosperity. The general welfare of the Nation is at stake and it is the duty of the Government to regulate the introduction of new machinery by reducing the hours of work so that those men who have been thrown out of employment can regain their rightful places.

The fifth argument aimed against this act has been that so much leisure time will be the moral ruination of our laboring men and women. Of course, there is no evidence to prove this—in fact the only real evidence which was introduced came from a liquor dealer in Brunswick, N. J., where, at the Johnson & Johnson Manufacturing Co., a 6-hour day has been in effect for several years. This liquor dealer complained that since the 30-hour week had been instituted his sales had fallen off drastically, and that instead of frequenting his bar, men had taken their families on outings and were spending their time in outdoor, healthful recreation. In other words, if we permit our laboring classes to live normal lives they will learn how to repose normally and to enjoy healthful recreation.

And the last argument is that lower hours and higher wages will increase production costs so that our foreign trade will be lost and our markets will be flooded with cheap goods from abroad. Here, again, I introduce absolute facts which are a denial of this statement. The great percentage of our foreign trade today is in goods produced in industries where the wages are highest and the hours of work are shortest. We sell abroad automobiles, heavy machinery, and industrial equipment, and in all these industries wages are high and hours short. We have little or no foreign trade in textile or cotton goods, and in these industries we find the lowest wages and the longest hours.

Now, let us turn our attention for a moment to the other part of this bill, namely, that which will set minimum wages. Here again I call upon the experience of the past to prove that high wages result in high productivity. High wages actually mean low labor costs. They are the most powerful stimulant to exertion and efficiency. A man well paid is happy in his work. Who is there so blind that he will claim that the low-paid Chinese coolie can produce as much as the skilled American machinist? Low wages in the backward countries of the world have brought laziness, indolence, and indifference. In 1860, English laboring men were paid three times as much as Irish laborers and it is an actual fact that they produced more than three times as much in England as in Ireland. In 1872 Thomas Brassey, a world contractor, demonstrated clearly that low wages resulted in little work. Whenever he paid higher wages in foreign countries on his construction projects, the immediate result was more efficient work and actually low labor costs. In 1892, a great German economist endeavored to determine why the English textile mills were so much more productive and profitable than those in Germany. In his report he concluded that the high wages paid in England and the shorter hours were the answer and he recommended that Germany do likewise.

In America today, one-fifth of our families must exist on an income less than $1,000 per year, which is little more than $20 a week. In many sections of our country, especially in

the South, tobacco workers laboring 230 hours a month receive as little as 11 cents an hour. In other portions of the South agricultural workers receive as low as $21 per month for 300 hours of work. In our textile industries over four-fifths of the women receive less than $15 per week, and one-third of the women employed in that industry are paid less than $10 per week. A few moments ago I explained that improved machinery could manufacture between 40 and 50 percent more today than in 1920. Goods are manufactured to be sold. How can we sell these goods if we pay such low wages as I have mentioned above? How can one-fifth of the families of America, averaging four persons, a husband, wife, and two children, purchase proper clothing, furniture, decent housing, or nourishing food at $20 a week with living costs as high as they are? The immediate increase in wages in America will increase the buying power of the masses of our people, and that is absolutely essential, both from the standpoint of humanity and for the preservation of our economic order.

Let me remind you again that in all the history of the world when conditions such as exist in America today have demanded Government regulation of hours and wages, the results have always been beneficial for all classes of people. Labor wants a law of this type passed for obvious reasons. Businessmen should welcome it because the moment the unemployed are put back to work relief appropriations will be unnecessary and taxes can be lowered. The farmer should fight for this act because high agricultural prices are entirely dependent upon the ability of the industrial worker to pay those high prices. If the industrial worker is steadily employed and receiving a high wage, he can afford to pay the farmer a fair price for his produce. A family of four receiving $20 a week and less can never pay the farmer a profitable price. The interests of the laboring men and the farmers are bound together in this act.

In conclusion let me say that unemployment and low wages in America are the unholy twins of destruction. They represent a national problem which transcends political party lines. Higher wages and shorter hours of work have benefited our country in the past and, in my opinion, at this time it will do much to correct the deplorable conditions which exist in America.

Wage and Hour Bill

EXTENSION OF REMARKS
OF
HON. ARTHUR B. JENKS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, December 17, 1937

Mr. JENKS of New Hampshire. Mr. Speaker, before this House there has been no legislation of greater national importance or more humane significance than this wage and hour bill. Its provisions in the main affect that large group of semiskilled and unskilled workers scattered over the length and breadth of this land, and indirectly affect the interests of every man, woman, and child throughout the entire country. For that reason, this legislation deserves and should have the unstinted attention and consideration of every Member of this body.

At the outset I want to say that I most heartily favor the basic principles of this measure—that is, the establishment of a decent minimum wage, the setting of reasonable maximum working hours, and the abolishment of child labor. I believe that the adoption of these principles would be a step in the right direction, socially and economically.

Let us construct a mental chart of the labor groups in this country. On the basis of the 1930 census—I have been unable to secure any later figures—we had 6,282,667 skilled workers; 7,977,572 semi-skilled workers; and 14,008,869 unskilled workers. It is with the latter two groups, minus the agricultural and other exempted classes of workers, that this bill is concerned. On the basis of the 1930 figures, it could be roughly estimated that there are somewhere between twelve and fourteen million semi-skilled and unskilled workers. The purpose of this wage and hour bill is to stabilize employment and raise the general standard of living for this group of employees.

Unlike many issues that come before us, the division of opinion over this legislation appears to be engendered not so much by partisanship as by sectionalism. Strangely enough, it is from the sections where the enforcement of the provisions of this act would do the most to improve the standard of living that the greatest opposition is coming and the greatest doubt exists as to the wisdom of passing it.

Quite naturally a heterogeneous population such as ours, spread over an area the size of this country, varying in resources, climate, and interests, was bound to develop diversified standards and conditions that in due time became stabilized, static, and habitually accepted. Because it is easier to pursue the tenor of our ways, settle in a groove, and move along in it as best we can, we are not prone to exert ourselves to change until we reach an impasse that literally forces us to bestir ourselves to meet altered conditions and circumstances that can no longer adequately and efficiently fit or move in the outworn and outmoded groove.

But however that may be and from whatever section we may come, each and every one of us is confronted with a condition that is universal and that must be adjusted, from the border to the Gulf and from the Atlantic to the Pacific, before we can hope to make any further sound progress and begin to hit on all 12 cylinders again. It has long been a recognized fact that the rapid strides that have been made in mechanical labor-saving devices, plus high-powered scientific management, have brought about a displacement of labor that is one of the root-causes of the backfire in our economic machinery. We all know that there are more workers than there are jobs—that there are not enough jobs to go around, because labor-saving mechanical devices now do the work that formerly kept many hands busy, with the result that many hands are now idle. The remedy—shorter hours, which would mean the employment of more workers, thus dividing up the existing or available jobs and spreading employment—has been long under consideration. The curtailment of working hours to 40 a week, as provided in this bill, makes a step in the right direction. It is my understanding that the first 30-hour week bill was introduced sometime about 1930, so that this question of shortening work hours with a view to spreading employment has been before the Congress for some 7 years. In that time the unemployment situation has not automatically remedied itself, nor will it. Something must be done to adjust it. Action may be deferred again, but the issue will not down. Eventually we must face and solve this unemployment problem—at least to the extent of compelling a more equitable distribution of the available work—that is draining not only the financial resources of the Treasury but undermining the morale of a large percentage of our people who are able and willing to work but for whom not enough work exists.

The bill aims to establish a minimum wage of 40 cents per hour, which, on the basis of a 40-hour week, would require that no full-fledged worker would be paid less than $16 per week.

At this juncture, I wish to insert a bulletin issued by the Bureau of Labor Statistics of the United States Department of Labor, showing hourly entrance rates of common unskilled laborers in 20 industries, as of July 1937:

The average hourly entrance rate of common unskilled laborers in 20 industries was 51.2 cents in July 1937, according to an announcement made today (Saturday) by Commissioner Lubin of the United States Bureau of Labor Statistics.

"There was a considerable differential in the average entrance rate per hour between different geographical regions," Mr. Lubin said. "The northern average amounted to 55.3 cents, as compared with 38.9 cents for the southern region.

"For the country as a whole, 14.7 percent of the common laborers in the industries surveyed received less than 40 cents per hour. In the South, 48.4 percent of these workers were paid under 40 cents. In the North, 3.5 percent averaged under 40 cents per hour.

"The number of common laborers paid 70 cents and over constituted 4.9 percent of the total. Nearly all of the common laborers receiving 70 cents and over were found in the northern region, the actual percentages being 6.3 in the North and 0.7 in the South."

The above figures are taken from the twelfth annual common-labor survey of the Bureau of Labor Statistics which will shortly be released. They cover 5,238 establishments in 20 industries with 222,555 common unskilled laborers on their pay rolls at entrance rates.

The 20 industries included in this survey were selected because they employ relatively large numbers of common laborers. Furthermore, they represent a cross section of the various industries in the country. They include 16 manufacturing industries, 3 public utilities, and building construction.

Every State and the District of Columbia are represented in this survey. The southern region includes the South Atlantic, East South Central, and West South Central States, while the northern region embraces the remainder of the country. (See table 1.)

TABLE 1.—*Geographic classification of average hourly entrance rates of adult male common laborers, in 20 industries, July 1937*

Mississippi	.322
West South Central	.375
Arkansas	.288
Louisiana	.332
Oklahoma	.419
Texas	.434

The petroleum-refining industry showed the highest average hourly entrance rate, with an average of 61.1 cents for the country as a whole. Five industries (iron and steel, slaughtering and meat packing, automobile parts, building construction, and paints and varnishes) averaged between 55 and 60 cents. Three other industries (chemicals, cement, and glass) had averages of 50 and under 55 cents.

TABLE 2.—*Hourly entrance rates of adult male common laborers, by industry and region, July 1937*

Industry	Average hourly entrance rate			Percentage of common laborers receiving less than 40 cents per hour		
	United States	North	South	United States	North	South
All 20 industries	$0.512	$0.553	$0.389	14.7	3.5	48.4
Manufacturing industries:						
Automobile parts	.554	.554		2.9	2.9	
Brick, tile, and terra cotta	.457	.484	.319	20.4	10.0	74.3
Cement	.514	.553	.414	13.1		46.8
Chemicals	.524	.560	.439	23.7	.1	53.6
Fertilizers	.364	.539	.279	62.2	7.2	89.0
Foundry and machine-shop products	.496	.507	.381	5.3	1.2	47.1
Glass	.504	.509	.485	3.5	.7	14.2
Iron and steel	.585	.595	.534	.9	.4	3.4
Leather	.477	.504	.387	10.3	2.0	39.0
Lumber (sawmills)	.437	.546	.245	44.9	15.1	97.4

Manufactured and natural gas	.473	.494	.406	6.5	.4	25.6
Building construction	.553	.636	.382	14.9	1.8	42.3

[1] Less than 50 employees; no average computed.
[2] In order not to reveal plant identity, district figures are not given.

The industries with averages ranging from 45 to 50 cents were foundries and machine-shop products, soap, rubber tires and inner tubes, leather, paper and pulp, electric street railways and city motorbus operation and maintenance, manufactured and natural gas, electric light and power, and brick and tile and terra cotta. The lumber industry averaged 43.7 cents. The average in the fertilizer industry was 36.4 cents.

In each case where the figures are available for both regions, the averages in the North were considerably higher than those in the South. The smallest differential per hour appeared in glass, 2.4 cents; iron and steel, 6.1 cents; petroleum refining, 7.9 cents; and manufactured and natural gas, 8.8 cents. The highest differentials were found in lumber, 30.1 cents; fertilizers, 26 cents; and building construction, 25.4 cents. In the remaining industries the differentials varied from 10 to 20 cents.

In the northern region only three industries, namely, lumber, electric street railways and city motorbus operation and maintenance, and brick, tile, and terra cotta, had any appreciable number of employees paid less than 40 cents per hour.

The southern industries with the highest percentages of common laborers receiving less than 40 cents per hour were: Lumber, 97.4 percent; fertilizers, 89 percent; electric street railways and city motorbus operation and maintenance, 83.1 percent; brick, tile, and terra cotta, 74.3 percent; and chemicals, 53.6 percent.

It readily will be seen that the operation of this proposed wage and hour law would have a most beneficial effect in the New England area, where, according to the foregoing analysis, only slightly over 3 percent of unskilled workers receive less than 40 cents an hour, while more than 48 percent of such workers in the Southern States receive less than that amount. Nevertheless, New England industry and labor must compete in domestic and world markets with this lower standard prevailing throughout the South.

As the bill now stands, however, there is no guaranty that a minimum wage of 40 cents per hour will be attained, as the act provides that in the establishment of a minimum wage consideration shall be given to local economic conditions, which, of course, would permit differentials in minimum-wage scales. Because of the readjustments a law of this character would involve, there seems to be some merit to the contention that a certain flexibility should be maintained in order to meet and deal with varying existing circumstances.

During the discussion of this legislation it has been said that no industry, large or small, which cannot or will not pay a living wage has a right to exist in this country. I agree with that statement, but at the same time I would point out that what would be a living wage in a small community would not be a living wage in a large industrial city. I would also stress the fact that many thoroughly sound and substantial business enterprises have grown out of very small beginnings and in localities that, in their infancy, were somewhat remote places. I grant that I derive a certain assurance from that section of the bill that takes cognizance of the fact that it would be impossible to achieve the objectives aimed at arbitrarily or by a change so abrupt and drastic that serious injury to American industry and American workers might result, and warning that these objectives must be achieved through cautious and careful action without seriously disturbing and dislocating business and industry.

I am fully aware that the administration of this act will present certain problems that only time and experience can solve; I concede the administrative imperfections of the measure as it stands, which, by inference, are recognized in the bill itself in that it makes specific provision that the administrator shall from time to time make recommendations for further legislation in connection with the matters covered by the act. I do not believe that any Member in this body is opposed to the basic principles of this legislation, but it has become very evident that most of us are somewhat dubious regarding the administration of the act. I opposed the proposal to establish a board to administer this law, which would have meant the creation of another huge Federal agency here in Washington vested with practically unlimited power over industry and labor throughout the entire country. In my opinion, the appointment of an administrator to supervise the enforcement of the provisions of the act in conjunction with the State labor divisions, thus localizing and giving each State a voice in the administration of the act, is preferable. I understand that there will be offered in the neighborhood of a hundred amendments to the bill, and I am hopeful that the discussion and sifting of these amendments will aid in clarifying and improving the measure.

I am not going into a discussion of the abolishment of child labor, because I believe that every decent, fair-minded human being is opposed to that abomination.

In closing, permit me to state that in the course of my lifetime I have stood on both sides of the reservation; in my early years I was a worker, receiving a pay envelope on Saturday night, after working 10 hours every day, and for many years I was an employer who had to find ways and means to meet a pay roll each week. During my thirty-odd years as an employer of labor, not one of my employees ever lost a single day's work on account of strike, lock-out, or any difference with the management. Because of my personal experience as employee and employer, I believe that I am in a position to view this issue from both angles, and I have no hesitancy in saying that I am convinced beyond any shadow of doubt that until such time as there is brought about a more equitable distribution between industry and labor, so as to enable the mass consuming public to absorb on a larger scale the products of industry and agriculture, the necessary balance between supply and demand, which is so vital to our national prosperity, cannot be attained. In other words, the purchasing power must be put into the pockets of the rank and file of the consuming public if the products of industry and agriculture are to be absorbed.

I am hopeful that this legislation can be whipped into acceptable and workable form and passed without any unnecessary delay because I feel that it will be a step toward destroying sweatshop labor and banishing it at least from interstate commerce, curbing the power of the chiseler over the honest employer, and benefiting children by giving them a chance to have a normal childhood in which to properly grow and develop.

Organized Labor of Puerto Rico

EXTENSION OF REMARKS
OF
HON. SANTIAGO IGLESIAS
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

REPORT OF THE FEDERATION OF LABOR OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, to ascertain more accurately the actual activities and conditions of labor in Puerto Rico, it seems to me appropriate to insert in the RECORD the last report of the island's Federation of Labor, a very practical report:

As soon as the island of Puerto Rico became a part of the United States in 1898, and particularly since the Puerto Rican people became citizens of the United States, unprecedented progress has been made along almost every conceivable line. To realize and believe that statement, one must have lived on the island in the old days. Humble as their circumstances may seem, today the working classes are better off in every way.

Take labor conditions for example. Some writers claim that the present-day laborer's plight in agriculture and in some industries is miserable. That may be true, but we have to look below the surface. It is true that many of the laboring class in the country live in crudely-built homes with a minimum of furniture and conveniences; that they are destitute. It is true that the dollar wages today are much lower than we would like to see them, but they are about three times as high as in 1898 and are increasing steadily under efforts of the labor organizations over there.

We always have had a serious unemployment problem and will continue to have one until new sources of employment can be created, but we are not in quite such bad shape as some people have stated. In other words, labor conditions in Puerto Rico are becoming superior in certain respects to those prevailing in some very poorer sections of several States and have improved greatly since the American occupation.

Wages for agricultural laborers are relatively low, but they are higher than those prevailing in many of the independent countries in the Caribbean area and in Central America. Wages in our sugar industry are higher than the rates paid in most of the other sugar-producing areas of those nations where workers have been denied the privilege of organization. In short, we have made many advances that we rightly can be proud of.

Not only is there more food to eat, but the average diet is better balanced than it formerly was. Puerto Rico buys and consumes each year much more of the important nontropical foods such as meat, lard, wheat flour, butter, and milk than any of the neighboring tropical countries. The average diet, to be sure, is not what it might be; there are many cases of malnutrition in our island, just as there are in some sections of the States, but there has been much improvement in the average diet and there will continue to be.

AMERICAN BUSINESS

Importance of island prosperity to American business is stressed by the Governor in reporting that, with the exception of Canada, Puerto Rico in 1936 was the largest purchaser of United States products in the whole of the Western Hemisphere.

For the fiscal year the island exported products valued at $114,953,827; purchases imported totaled $98,875,491. Ninety-two percent of the trade was with the United States.

Continued gradual recovery from two hurricanes in the past decade stimulated by improved business aided by Federal spending was a factor that helped produce $17,000,000 general insular revenues, an increase of $4,300,000 over 1936, previously the record high. Sugar represents almost 70 percent of the total value of island products for export.

"Puerto Rico is naturally a peaceful community," his report states. "Hold-ups, bank and pay-roll robberies are practically unknown here. Several unfortunate occurrences, chargeable to a small group of discontented individuals, were dealt with promptly. The spread of propaganda and activity by this subversive group of terrorists resulted in violence on several occasions; but prompt action on the part of the authorities prevented further disorder. Eight of their leaders were convicted in the United States district court and sentenced to the Federal penitentiary at Atlanta."

FREE FEDERATION OF THE WORKINGMEN OF PUERTO RICO

At a meeting held by the executive council of the Free Federation of Workingmen of Puerto Rico on November 19, 1936, a 3-year organization plan was approved to be inaugurated on January 1, 1937. This plan was recognized as "Tres Años de Renovación y Vida," the purpose of which was to inject new life to the organized labor movement throughout this island.

Sugar industry: The first activity conducted in compliance with the above-mentioned plan was a meeting of representatives of agricultural labor unions affiliated and unaffiliated with the State federation to discuss the terms of a collective agreement to be submitted to the Sugar Producers Association of Puerto Rico, as the grinding season was to begin about 30 days after this meeting was held. Two additional meetings of the same representatives were held at weekly intervals and finally a committee was appointed to meet the representatives of the Sugar Producers Association to discuss the stipulations and terms of the agreement to be in force for the whole year 1937. The terms preliminarily agreed upon by representatives of both sides were submitted to the ratification of the different local unions and a collective agreement was approved by which some 140,000 workers were benefited.

Thirty-three out of the 41 sugar mills of Puerto Rico entered into agreement, and 8 of them, for different reasons, refused to sign it.

This collective agreement—

(a) ratifies the principle of collective bargaining for the workers;

(b) it grants a 12-percent increase in the salaries;

(c) it recognizes labor organizations as represented by the American Federation of Labor;

(d) it establishes the 8-hour working day, with the exception of those employed as ditchers, who should work not over 7 hours;

(e) it creates local adjustment committees to decide, on any difficulty that might arise and also creates an Insular Agricultural Adjustment Committee as a tribunal of appeals for final decisions. This committee is composed of two representatives of the employers and two representatives of the Free Federation of Workingmen.

Because of this agreement, it was possible for the island to produce nearly a million tons of sugar during the last crop without any industrial difficulty.

Longshoremen: An agreement between the longshoremen unions of Puerto Rico and the shipping companies was again renewed by which the workingmen received an increase of 16 percent on their salaries, and full control is granted to the Insular Council of Longshoremen Unions employing their members in the different ports of Puerto Rico.

Approximately 12,000 longshoremen and dock workers throughout the different ports of Puerto Rico are covered by this agreement.

Tobacco-stripping industry: As a result of the action taken by the commissioner of labor of Puerto Rico in declaring that Act No. 45 of 1919, establishing minimum wages for women employed in industrial and commercial occupations was constitutional and in full force in Puerto Rico, beginning April 1, 1937—that is, after the Supreme Court of the United States of America decided the case of *Elsie Parrish* v. *West Coast Hotel Co.*—a general campaign was conducted among the women tobacco strippers to have them organize and insist upon demanding that they be paid the minimum wage provided by law.

The result of this campaign has been that, at the time of writing this report, over 25 employers in the tobacco-stripping business have signed collective agreements with the different unions. The main features of these agreements follow:

1. Full recognition of the labor organizations.

2. Provisions to establish, for the first time in Puerto Rico, a general collective agreement covering the whole tobacco-stripping industry.

3. It gives opportunity to the employees to protect their salaries by appointing a supervisor from among themselves to reweigh the tobacco.

4. It gives opportunity to the women workers to have an increase of 25 percent over the wages previously received. This figure was arrived at by reducing the number of pounds of tobacco used to put in the bundle for stripping.

5. It creates local and insular committees to intervene in any difficulty affecting both parties.

6. It gives our organization a better opportunity to increase the membership in the island.

By this agreement some 25,000 women tobacco strippers are benefited.

Third National Conference on Labor Legislation, 1936: There was held in Washington, D. C., November 9–11, 1936, the Third National Conference on Labor Legislation, called by the United States Secretary of Labor, and it was the privilege of the vice president of the Free Federation of Workingmen of Puerto Rico to attend this conference.

Resolutions regarding Puerto Rico were adopted by this conference as follows:

That the Wagner-Peyser Act be amended to include Puerto Rico.

We urge that the proper authorities undertake to secure an amendment of the Social Security Act by the Congress to provide the benefits of the Social Security Act to the workers of Puerto Rico and all other territory comprising the United States of America.

Minimum wages for women: Act No. 45, approved June 9, 1919, established minimum wages for women. This act declares it to be unlawful for any employer to pay women (girls included) in industrial or commercial occupations or public service undertakings lower wages than those specified by law, to wit:

At the rate of $4 per week to women of 18 years of age, and $6 per week to women over 18 years.

The Supreme Court of Puerto Rico rendered decisions declaring this act to be constitutional in 1920 and again in 1921 in the cases of *The People* v. *Alvarez* and *The People* v. *The Puertorican American Tobacco Co.*, respectively.

Later, in the year 1924, by virtue of jurisprudence handed down by the Supreme Court of the United States in *Adkins* v. *Children's Hospital* (District of Columbia, 261 U. S. 525), which declared unconstitutional an act similar to ours, in regard to the fixing of minimum wages for women, the Supreme Court of Puerto Rico revoked its former decision in passing judgment in the case of *The People* v. *Laurnaga & Co.*, and decided that Act No. 45, approved June 9, 1919, was contrary to the constitution, because it violated the principles of free contracting.

On March 29, 1937, the Supreme Court of the United States handed down an opinion in *West Coast Hotel Co.* v. *Ernest and Elsie Parrish* upholding the constitutionality of the law in regard to minimum wages for women of the State of Washington, thus reversing its former decision in the case of *Adkins* v. *Children's Hospital of the District of Columbia.*

As soon as this decision was rendered the Free Federation of Workingmen of Puerto Rico requested from the commissioner of labor information as to the legal status of the women workers under the circumstances. The attorney general of Puerto Rico rendered a legal opinion to the effect that the minimum-wage law of Puerto Rico had been revived automatically by the decision of the Supreme Court of the United States.

The attorney general of Puerto Rico, after quoting a legal opinion rendered by the Attorney General of the United States to the President of the Nation, concludes as follows:

"It is my opinion that the pronouncement of the Supreme Court of the United States in the recent case of *West Coast Hotel Co.* v. *Parrish*, supra, has revived our Act No. 45, of June 9, 1919. From a slight reading of the case of *People* v. *Laurnaga*, supra, it can be understood that our supreme court was never of the opinion that Act No. 45 of 1919 was unconstitutional; and if it so declared it, it was because it was bound by the decision of the Supreme Court of the United States. We base this assertion on the following words, which we copy from the opinion of the case in *People* v. *Laurnaga*, supra:

"'In *People* v. *Alvarez*, supra, we considered that the minimum-wage law was a health measure duly passed by the legislature. It might be held that the Legislature of Porto Rico in effect said that a minimum wage was necessary for the woman worker in Porto Rico. The Supreme Court of the United States in *People* v. *Adkins*, by a vote of 5 to 3, has considered that the obtaining a minimum wage is not a matter of health. Whatever the individual opinions of the judges of this court may be, we are necessarily concluded by the decision of the Supreme Court of the United States' (32 P. R. R. 767)."

However, it might be argued that the act of 1919 was declared unconstitutional by virtue of a decision of our supreme court in a case that originated in and was decided by said court, and that until another pronouncement is made by our supreme court in regard to the same question arising in this jurisdiction, revoking the judgment in *People* v. *Laurnaga*, said Act No. 45 of 1919 cannot be considered as being in force in Puerto Rico; but as the Supreme Court of the United States is a court of appeal from the judgments of our supreme court and consequently the final arbiter of our judicial decisions, and therefore a part of our judicial system; and as there is also the established precedent that the decisions of the Supreme Court of the United States are binding on ours, it is obvious that if a case is instituted in our courts for obtaining a pronouncement in regard to the revocation of the doctrine in *People* v. *Laurnaga*, supra, and consequently a declaration in regard to the constitutionality of Act No. 45, of June 9, 1919, the result would be affirmative. It is, therefore, evident that to maintain the need of a previous pronouncement now in regard to the constitutionality of Act No. 45 of 1919 as a requirement for its becoming effective, would lead only to delaying a clear question of law by subjecting it to a technicality. Justice should at all times be placed above futile technicalities in order to have it rest on what is fundamental and important which, in this case, has for its main purpose the protection of the life, the health, and the safety of the employee. By the abandonment of the doctrine that destroyed the effectiveness of the law, the law in all its force has virtually become again legally effective under the principle that holds that if a decision declaring a statute unconstitutional is later revoked, the statute should be considered as valid and in force from the date of its approval (12 Corpus Juris, 800 and 801).

We know the principle that a law declared unconstitutional cannot be considered as such law, but it should rather be considered as if it had never existed. But, on the contrary and following a like and logical reasoning, a law declared constitutional should have its full effect from the date of such declaration without it being necessary for the legislature to pass it again, since such a requirement does not lead to any practical end and results in a notoriously unnecessary act.

For the reasons stated above, I am of the opinion that Act No. 45, of June 9, 1919, is in force in Puerto Rico.

Official notice of the legal opinion rendered by the attorney general was served to all the employers by the commissioner of labor, and they were requested to make the necessary arrangements to operate their business under the law by paying the amount of wages required as a minimum.

The official notification of the commissioner of labor was strenuously opposed by the employers who claimed that the commissioner of labor had no authority to interpret the law to make it applicable to home work. The strongest opposition was conducted by the employers in the needlework industry and those of

the tobacco stripping industry, who claimed that tobacco stripping was incidental to agriculture, and that, if it was any industry at all, it was an agricultural industry. (Agriculture and agricultural industries are excepted from the operation of the law.)

This opposition of the employers in the needlework and tobacco stripping industries was followed by a general lock-out of all the different shops in Puerto Rico, and culminated in legal proceedings instituted before the District Court of San Juan, asking for a writ of injunction against the commissioner of labor to prevent him from enforcing the law. It was also demanded in this action that the court render a decision to the effect that the minimum-wage law was not applicable to home work or to the tobacco stripping industry.

Both actions were heard by the District Court of San Juan, constituted by three judges, and on August 18, 1937, the court handed down a decision in the case instituted by the needlework industry employers, deciding:

That Act No. 45, approved June 9, 1919, is constitutional and in full force and operation in Puerto Rico.

That the law is not applicable to home work and that the commissioner of labor has no powers or authority to regulate home work.

That the decision of the court reviving this law gives no retroactive effect to the act.

That the injunction requested by the employers to prevent the commissioner of labor or his agents from enforcing the law as covering home work, is perpetually granted.

As to the action instituted by the tobacco stripping concerns, no decision has been rendered at the time of submitting this report.

Under date of June 24, 1937, a special convention of the women unions affected by the law was called, and delegates representing 25 of the different towns of Puerto Rico, and very specially the tobacco strippers, the needlework, and the packing of fruits, attended this convention.

A special committee was organized in charge of the women's organization to conduct a campaign in favor of the minimum-wage law under the direction of the executive council of the Free Federation of Workingmen of Puerto Rico. The result, as previously stated, was that a general collective agreement was entered into for the benefit of the membership in the island.

In view of this situation created by the decision of the court as to home work it is advisable that the whole situation be presented to the next coming insular legislature for the proper remedy.

Ninety percent of the needlework industry is conducted in the home, and we would not be surprised if the 10 percent that is now made in the shop is turned out also to the home where no labor laws can be enforced as to hours and other conditions, unless adequate legislation to regulate or prohibit home work is adopted.

It is also our suggestion that the modern minimum-wage law generally accepted by the United States Department of Labor, duly adapted to local conditions in Puerto Rico, be enacted to take the place of Act No. 45 of 1919, if the decision of the District Court of San Juan as to home work is upheld by the Supreme Court of Puerto Rico, where an appeal has been filed by the commissioner of labor against the decision of the District Court of San Juan.

Act No. 49 of 1935: The validity and constitutionality of Act No. 49, approved August 7, 1935, to regulate the working hours of persons employed in commercial and industrial establishments and in other lucrative businesses was contested before the District Court of San Juan last year.

The case was decided in favor of the Government of Puerto Rico, and an appeal was taken before the Supreme Court of Puerto Rico by the merchant retailers who were against the establishment of the 8-hour law. This appeal was heard by the Supreme Court of Puerto Rico on January 13, 1937, and on April 13, 1937, the Supreme Court of Puerto Rico handed down a very constructive and illuminating decision upholding the philosophy and principle involved in this humane legislation. Consequently, its validity and constitutionality is upheld, as the district court had decided before. This is the law which establishes the 8-hour day of work for all kinds of business, including agriculture.

Increases in salaries: Due to the efforts of our organization, having a substantial representation in the House of Representatives and Senate of Puerto Rico, thousands of the employees of the people of Puerto Rico have received increases in their monthly salaries this year. The efforts of the organized labor movement in Puerto Rico have proved successful in the general elections which took place in our island in November last, and the possibilities are that there will be less difficulty in securing the adoption of better social legislation in the near future than in previous years.

Homesteading: The homestead laws of the Insular Government, administered by the labor department of Puerto Rico, are being conducted successfully with the cooperation of the organized labor movement of the island. This legislation was adopted years ago due to the insistent demand of our organization and it has proved to be very beneficial for the working classes in the industrial and agricultural regions of Pureto Rico.

Labor temples: A committee of the executive council was appointed to raise a fund of $50,000 for the construction of an insular labor temple to be erected at San Juan on the land granted by the Insular Legislature of Puerto Rico, through a bill presented by the labor representatives. This committee reports that there are already available and collected among the unions, members, and sympathizers some $12,000. We propose to make a drive this year in the island to be able to construct our building as soon as possible.

Labor temples have been erected in the towns of Puerta de Tierra, by the longshoremen's unions; in Dorado, by the agricultural laborers' unions; at Ponce, by the Central Labor Union; at Barceloneta, by the agricultural laborers' unions; at Vieques, by a Federal local union; at Rio Grande, by the agricultural laborers' unions; at Humacao, by the longshoremen's union; at Fajardo, by the longshoremen's union; and at Rio Piedras, by the agricultural laborers' unions.

Puerto Rico Reconstruction Administration: For many years the Free Federation of Workingmen of Puerto Rico, with the cooperation of the American Federation of Labor, has been demanding from the United States Congress the approval of Federal measures to promote the economic and social welfare of the people of our island, to improve living and working conditions, and to establish a decent standard of living for the masses.

When the Puerto Rico Reconstruction Administration was established in this island with Federal funds, to improve local conditions, the executive council of our federation logically expected that this organization would follow the same policy as established by the President of the United States in regard to the American Federation of Labor. We expected that appropriate and fair representation would be given to labor in Puerto Rico to develop the plans intended to improve local conditions. Our organization has been giving moral support to all the plans and projects being developed by the administration, with the understanding that the permanent reconstruction of the island was perfectly in line with our policy and our demands of so many years. Organized labor, however, has not been granted representation in the executive boards of the Puerto Rico Reconstruction Administration, and there has never been heard the voice or the voice or vote of labor in any of the different agencies of the Puerto Rico Reconstruction Administration. It was for this reason that our delegates to the Tampa convention presented a resolution, which was unanimously approved, urging cooperation of the executive council of the American Federation of Labor to secure representation in the above-mentioned bodies.

Workers' education: Our organized labor movement was affiliated this year to the Workers' Education Bureau. Although our institution is in lack of funds to carry on a systematized plan for workers' education, diffusion of educational matter has been made in the form of printed matter, through radio broadcasting, and on the public platform in cooperation with the labor department of Puerto Rico.

In connection with the workers' education plan the fifty-sixth annual convention of the American Federation of Labor unanimously adopted a resolution asking the president of the American Federation of Labor to urge the proper Federal authorities to carry on workers' education in Puerto Rico, as is done among the different States of the Union, and that funds from the Puerto Rico Reconstruction Administration or from any other available source be allotted for this activity.

LOCAL AND CENTRAL BODIES

It is reported that there are active unions in Puerto Rico affiliated and unaffiliated numbering 195, and that there are unions affiliated and unaffiliated which are inactive numbering 157, making a total of 352, and 7 central bodies.

In compliance with the 3 years' organization plan, approved November 19, 1936, the executive council of the Free Federation of Workingmen has developed an intensive campaign through the radio, the press, public meetings, and lectures in different halls and in the open air. All these activities have been conducted with the cooperation of local and insular labor leaders and officials of the department of labor in the cities of Adjuntas, Aguada, Aguadilla, Aibonito, Arecibo, Caguas, Canóvanas, Carolina, Cataño, Ceiba, Barceloneta, Bayamón, Dorado, Fajardo, Gurabo, Guaynabo, Guayama, Hatillo, Humacao, Juncos, Manatí, Mayaguez, Naranjito, Naguabo, Ponce, Quebradillas, Rio Grande, Rio Piedras, Salinas, San Juan, Toa Baja, Toa Alta, Utuado, Vega Alta, and Vieques.

As a result of this propaganda 77 new labor unions have been organized, comprising different trades which are following the principles and tactics of our federation and that of the American Federation of Labor, although not all of them are actually affiliated with the State federation of labor.

NEED OF SUPPORT

In addition to the natural difficulties confronted by the labor movement here in Puerto Rico, as in so many other parts of the continental United States, of an economic and social character, the labor movement of Puerto Rico had to confront political conditions created by small groups agitating for the separation of the island from the United States. The president of this federation was the victim of an assault while delivering a speech last October in Mayaguez, when shots aimed at him intended to take his life were made by one of the members of such groups who claimed to believe in independence, but not in liberty and freedom.

The organized labor movement of Puerto Rico has been, since its inception, in favor of a permanent union of Puerto Rico with the United States. It has been our duty not only to fight against social and economic evils, but also against political evils which would deprive the people, and very particularly the workers, of all intervention in the organization of our Government. Political conditions, on account of the actions of these groups practicing terrorism, were unsettled to such an extent that our labor movement had to take a strong stand to protect the leaders of our movement against assault and assassination. Fortunately, the Government has succeeded in stopping terrorism and conditions at present are different from what they were about a year ago.

Taking into consideration the economic, social, and political difficulties we had to confront during the year and the lack of adequate funds to conduct our campaign; as well as unemployment which is general in the island and also the result of seasonal employment of many of our very limited industries, the 3 years' organization plan as being conducted has produced very satisfactory results which have been of great benefit to the working people of the island.

The moral support of organized labor, as represented by the American Federation of Labor, its ideals and principles which have always been an inspiration for us, constitute the strongest grounds upon which our organization campaign has always been based and we are grateful to this movement for all it has been able to do for Puerto Rico and will continue to do in the future.

FREE FEDERATION OF WORKINGMEN OF PUERTO RICO

(Executive Council's Report, pp. 213–221)

Your committee desires to compliment the Free Federation of Workingmen of Puerto Rico upon the results obtained and notes the progress made during the last year.

The suggestion is made to the workers of Puerto Rico that the only way the advancement of the workers can be attained is by thorough trade-union organizations. We recommend to the executive council of the American Federation of Labor that they continue their moral assistance and advice in aiding the workingmen of Puerto Rico in attaining their economic ends, and render them such support as is possible to remain a part of the United States.

The report of the committee was unanimously adopted.

Conditions In China

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM PHILADELPHIA RECORD, DECEMBER 17, 1937

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Philadelphia Record of December 17, 1937, dealing with our affairs in China. The editorial is entitled "What Are We Waiting for in China?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record, December 17, 1937]

WHAT ARE WE WAITING FOR IN CHINA?

The Neutrality Act of 1937—law of the land—says that the President shall embargo both sides when, in his judgment, a state of war exists between foreign nations.

The President recognizes perfectly well that a state of war exists in the Far East.

The official White House memorandum of the President's protest to Japan on the sinking of the *Panay* reads: "The President is deeply shocked and concerned by the news of indiscriminate bombing of American and other non-Chinese vessels."

If there is no war in China, isn't the bombing of Chinese ships just as open to condemnation as the bombing of any other ships? Isn't the President's note an admission that the bombing of Chinese vessels is in a special category?

That special category is war. By his choice of phrase the President recognizes that war exists between Japan and China. Yet he does not invoke the Neutrality Act.

The United States Maritime Commission is an official agency of the United States Government. It is currently paying sailors on its Government-owned ships in the Far East service bonuses of $50 per month because they are serving in war zones.

That, too, is an official recognition that war exists in the Far East. Yet the Neutrality Act has not been invoked. We still sell to both sides; we still maintain armed forces to protect American nationals. If the act were invoked, those nationals would stay at their own risk—and we would have no incidents like the sinking of the *Panay*.

Dispatches from London indicate that we are working very closely with Great Britain in handling the Far Eastern crisis; that Britain looks to us to lead in the protests against Japan, just as it looked to us to lead at the farcical Nine Power Conference at Brussels.

We have protested the sinking; the Japanese have accepted all our demands; and it only remains for us to clear out of the war zone and to stay out.

We don't want to work with Great Britain in handling the Far Eastern crisis; there is only danger in such an alliance. We want to keep out of war. The Neutrality Act is on the statute books. It is the law of the country. No question of cowardice or loss of prestige is involved in obeying it.

When will the President enforce it?

How the Land Racket in New York City Increases Rents

EXTENSION OF REMARKS

OF

HON. HERBERT S. BIGELOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

RADIO ADDRESS BY WALTER FAIRCHILD

Mr. BIGELOW. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address given over radio station WINS, Wednesday, November 10, 1937, by Walter Fairchild, president, Torrens Title League, and counsel for the American Association for Scientific Taxation:

Homes in which people live are made up of two things: First comes the land. Then comes the building. The land in New York City is limited to the area of the city. Building materials are without limit.

As our conditions improve, building materials get cheaper and better. As our population increases, however, land prices rise. The housing problem is not so much a construction problem as it is a land problem.

High rents in New York City are due to high land prices.

LAND VALUE—PUBLIC SERVICE

Land value is produced by the labor of the entire population—mainly through spending tax moneys for public improvements like streets, parks, playgrounds, schools, etc., and for public services done by teachers, police, firemen, street cleaners, hospital workers, and such. Where more of these public improvements and services are used, there land prices are and should be high. These services are used most where most people collect. They are used most in the population centers of the city.

In Times Square, for instance, where you have many streets, many police, many detectives, many subways, many sewers, and where hundreds of thousands of people collect, land prices are very high. On the outskirts of the city—in Queens and Brooklyn—where there are few trains, few streets, few schools, few policemen, few people there, land prices are low.

SLUMS WASTE PUBLIC SERVICE

The value of public improvements and public services is wasted when unsanitary and crime-breeding buildings are allowed to infest heavily populated areas of the city. This is proven by the statement of Tenement House Commissioner Langdon Post, who said recently that the city pays out $3 in services for each $1 in taxes paid by slum tenements.

Tenants in modern apartments pay more than their share of taxes because they must pay the slum deficit. Take Manhattan, for example. Twenty-nine thousand buildings over 35 years old cover three-quarters of the island. For more than 35 years these slum buildings have been condemned from every point of view. They are a menace to the health, morals, and prosperity of the city.

These old-law tenements cover land valued on the tax rolls at $508,000,000. The buildings are valued at nearly $260,000,000, about half the land value.

In Washington Heights, where you find the best examples of modern, decent apartments, there is a different story. On land worth $29,000,000 the buildings are assessed at sixty-four millions.

A modern apartment house costs about twice as much, on the average, as the land on which it is built. This proportion holds in the Federal low-rental housing projects on the Harlem River and in Williamsburg.

The Federal housing law proposes to build apartments to rent to the low-income class. In order that rents may be within reach of slum dwellers, it will grant a subsidy of slightly more than one-third of the combined cost of land and buildings. This subsidy will just about cover the cost of land for the housing projects.

FEDERAL SUBSIDY GOES TO LANDOWNERS

In essence this subsidy will go to the landowners. It will not reach nor benefit the tenants. On the contrary, it benefits the landowning class of the city, which in Manhattan is less than half of 1 percent of the population.

Any additional subsidy granted by the city and State in the form of tax exemption also will not benefit tenants at large. On the contrary, every dollar of exemption means an increase of taxation on other property or upon the population at large.

The deficit of public money not raised by proper taxation on land values is raised mainly by sales taxes, which bear down upon all classes—but heaviest upon the tenants and small-home owners.

THE TENANT; HE PAYS THE FREIGHT

Wendell P. Barker, recently chairman of the State mortgage commission, says:

"The mainspring of successful real-estate operations is naturally the tenant or the consumer. He pays, and what he pays and how well he pays are the most vital factors in the success of any real-estate enterprise."

How true this is. The tenant pays and pays and pays. It is the tenant who pays the land cost. It is the tenant who pays the building cost; the tenant pays the mortgage, interest, and taxes.

Now, those who direct the Federal Housing Act are fully aware of the great rock of high land prices which stands in the way of slum clearance and the erection of decent homes. Until the problems of high land prices and proper taxation are solved there will be no solution to the problem of slum clearance. As matters stand today, the taxpayers are subsidizing the maintenance of the slums.

SLUM CLEARANCE—A LAND PROBLEM

Editor Irving Brant, of the St. Louis Star-Times, speaking of the problem of land prices and public housing, said:

"There are two possible forms of compulsion to force land prices down to a reasonable level. One is the right of eminent domain. The other method consists in the organization of neighborhood improvement districts, with the power to levy taxes. I suggested a year ago that such districts be formed in slum areas and that taxes be levied upon land, exclusive of building improvements * * *."

This method of taxation would rapidly result in the demolition of slum buildings. Our main remedy for our slum problem lies in the effective administration of the tax department.

THE GREAT RUN AROUND

Laws to regulate construction alone have not worked. I remember coming to New York from college about the year 1900, when Jacob Riis, a reporter on the New York Sun, was arousing public sentiment against the miserable tenements in which "the other half lives." A new law was passed then, and owners of those tenements were allowed 6 months to make their old buildings conform with the law. Today, after a full generation, those old houses remain as they were, except they are worse. Again, landlords are getting 6 months time to obey the law. I prophesy that unless the problem of the high price of land is solved, that coming back after another generation in the year 1970, you will find the same old buildings encumbering the fair face of Manhattan Island and a new tenement-house law will be passed and the owners of the old buildings will again be promised 6 months to conform with the law. There is no solution of the problem in a law which confines itself to construction only. The remedy must be found in the solution of the land question.

It has been said that a Federal subsidy is necessary because private industry cannot or will not build low-rent houses. On the contrary, if private industry were given the same aids and exemptions which the Federal Housing Act gives to the Government, private industry could and would build houses. In other words, if exemption from local taxation were given to all houses, private industry would immediately go to work to build houses.

It is obvious, however, that if all housing properties were exempted from taxation, the tax base of the city would be destroyed to that extent. The remedy and the method which should be applied, both to Government projects and private industry, is that the buildings should be exempted from taxation and the value of the site only should be taken in taxes for the support of the municipal government.

To sum up: In order to reduce rents, in order to make plans and ideas for slum clearance practical, I recommend the following:

First. Exempt all buildings from taxation.

Second. Limit all taxation to the site-value of the land, and make the tax rate such that every plot of land will pay into the public treasury that proportion of the benefit of municipal improvements and services that the land receives.

The United States and the War in China

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM THE NEW YORK DAILY NEWS AND ARTICLE FROM PHILADELPHIA RECORD

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial dealing with our place in the war picture, published in the New York Daily News, and reprinted in the Washington Times of December 15, entitled "You May Get Shot on a Battlefield"; also a news item published in the Philadelphia Record of December 17, 1937, setting forth an open letter to the President, published in the student publication of the University of Pennsylvania, dealing with the war question.

There being no objection, the editorial and news item were ordered to be printed in the RECORD, as follows:

[From the Washington Times, December 15, 1937]

YOU MAY GET SHOT ON A BATTLEFIELD

We think that at this time we would all do well to remember that one note led to another on a previous momentous occasion in our history, and that the accumulation of notes finally led us into a war. If we are now meditating a war with Japan we ought also to count the cost beforehand. Last time we counted the cost afterward. We're still counting it.

COST OF A WAR ON CHINA SOIL

What we would be fighting for would be the right of American warships and marines to be absolutely safe as neutrals on a battlefield. The Yangtze River is a battlefield with Chinese and Japanese soldiers on both sides and with fighting ships and fighting planes on it and above it. We have a treaty right to safety for our men on this battlefield, but the real-life fact is that some more of them are likely to be hit if they stay there.

Some of them were hit last Sunday—hit in the heat of battle by, no doubt, wildly excited and irresponsible young Japanese fliers. It is often the innocent bystander who gets hit. People who go on battlefields—Red Cross workers, military observers, newspaper correspondents—know they may be killed. If they aren't willing to take that risk they should stay off the battlefield.

To fight Japan for the right of Americans to be 100 percent safe in Chinese war zones would now cost us an expeditionary force to China of more than 1,000,000 men. And it is doubtful that 1,000,000 men could win for us.

The Japs could put 1,000,000 men in China by spring and keep them there, living on the country, as long as Hannibal stayed in Italy (about 15 years).

The time has gone by when we could have fought the Japs on the Yangtze by arming the Chinese against them. The Chinese are prostrate.

MAKE CHINA SAFE FOR THE CHINESE?

Maybe it will seem that we have been stampeded by the *Panay* excitement and are talking wild words about possible war. It has already been pointed out that nobody is talking war with Japan now, but simply that we should admonish Japan in regard to its conduct toward our nationals, and that it is not becoming to us to "scuttle out of China" at Japan's frown.

Well, that was exactly the kind of talk that got us into the last war. There is no more real common sense in having our gunboats sailing up and down the Yangtze with the Japanese and Chinese fighting on its banks than it would be to have our gunboats sailing up and down the Danube when the next European war breaks out, with a view to protecting our nationals in the various fighting countries.

We can sympathize with China; most of us do. We are sorry it is being despoiled. But after all, it is not our duty to come to the rescue of a great big slob of a country with 6 times the population and 10 times the resources of Japan. If the Chinese don't love China enough to keep it free, we shouldn't either.

PICK OUR OWN BATTLEGROUND

We think an American-Japanese show-down is coming sooner or later. But the show-down should take place in the middle of the Pacific Ocean, not in China or the Sea of Japan.

And it should be fought between the American and Japanese navies, with the American far superior. That would be an American war; a war of defense fought to preserve our independence, not a war of offense fought to preserve China's independence.

Let's be smart enough this time to pick our own battleground, and to know what the fight is about.

[From the Philadelphia Record, December 17, 1937]

KEEP US OUT OF WAR, UNIVERSITY OF PENNSYLVANIA PAPER URGES—WOULD GIVE UP LIVES FOR OTHER PEOPLE BUT NOT FOR THEIR MONEY

"Keep us out of war in the Far East," the Daily Pennsylvanian, student publication of the University of Pennsylvania, pleaded yesterday in an open letter to President Roosevelt.

"Oldsters will say we are cowardly," the letter states, "but we are not. Many of us still hold to the heroic ideal of giving up our lives for other people—but not for other people's money.

LITTLE BESIDES MONEY

"Besides money, what has America at stake in war-torn China? National prestige, gunboats, and a few citizens. Prestige is a nebulous sort of thing that nobody admires except the person who has it.

"American gunboats and citizens could have been withdrawn from China long ago without injury even to our prestige.

"But the money may have to be sacrificed. And why not? All the money in the Orient isn't worth the physical security of 130,000,000 Americans.

A "CHRISTMAS GIFT"

"Otherwise, the Nation's unwanted Easter present of 1917 will be rewrapped in a few distorted treaties, tied with diplomatic red tape and handed to us as a 1937 Christmas gift.

"The Daily Pennsylvanian speaks for hundreds of thousands of American students when it entreats you, President Roosevelt, to exert all your influence to get us out of China and keep us out."

Restoration of Purchasing Power of Farmers and Laborers Necessary to Permanent Recovery

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. HILL of Washington. Mr. Speaker, in 1809 President Jefferson wrote as follows:

We are a rural farming people; we have little business and few manufacturers among us, and I pray God it will be a long time before we have much of either. (Harvard Law Review, p. 5, vol. 48.)

Possibly that wise and farseeing statesman, being also a farmer, could understand the inherent simplicity and rugged honesty of farm life and intuitively realized the necessary complexity of business life and the attendant possibility for undue profits and unfair pressure on government. Of course it would not only be unjust but also untrue to intimate that all business is dishonest. In this modern world of ours business activities of all kinds are absolutely essential to our welfare and happiness and it behooves us to accept this fact, but to do our utmost to control these activities in the interest of the many and not the few. The big corporation of today, which has no soul, is permitted to do, and is doing, things to which most private individuals would not dare to stoop. The purpose of all government is to protect the individual in his inherent rights against the encroachments of the group. That was comparatively easy in 1809; it is quite difficult in 1937.

In 1859, a half century later, President Lincoln wrote as follows:

By some it is assumed that labor is available only in connection with capital—that nobody labors unless somebody else owning capital, somehow, by the use of it, induces him to do it. But another class of reasoners * * * hold that labor is prior to and independent of it; that, in fact, capital is the fruit of labor and could never have existed if labor had not first existed without capital.

President Lincoln was another wise and farseeing statesman. In this statement he has in simple language expressed an undeniable fact. Without labor, on the farm, in the mines, in the forests, there would be no factories, no industries, no cities. The gentleman from New York [Mr. BARTON] in discussing the cost of the proposed farm bill the other day asked how the people of the great metropolis could pay for the increased cost. May I remind him that without the farmers and laborers there would be no New York City—no, not even a "silk-stocking district."

I have quoted the patron saint of the Democratic Party and the patron saint of the Republican Party, and it is my firm conviction that these two statements combined succinctly and clearly prove that the two groups—farmers and laborers—form the foundation upon which our economic structure in the United States has been erected. This foundation was not only ncessary but its maintenance is absolutely essential to permanent prosperity in this country. Even as you construct a house by laying a firm foundation first and then rearing upon it the superstructure—the walls and roof—so we must first concern ourselves with the interests of the farmers and laborers that manufacturers and merchants and bankers may have their legitimate share. Too many are concerned about the walls and roof of our economic structure, forgetting that without a solid foundation the whole structure is doomed to fall in complete wreckage. If the purchasing power of these two all-important groups is restored by cost of production to one group and living wages and reasonable hours to the second group, the other groups in our country will prosper as never before. The interests of the farmer and laborers are in common, editorials in our dailies and speeches by our great industrialists to the contrary notwithstanding. It is a self-evident fact that if by the cost of production and a reasonable profit the purchasing power of the farming group is fully restored they will furnish the best market for labor-made goods in the country. It is equally a self-evident fact that if by good wages and reasonable hours the unemployed are put back to work and the purchasing power of the labor group is fully restored they will furnish the best market for farm products. The farmers and the laborers are the great consumers. Money and credit, to an overwhelming extent, should belong to them, so that they could purchase and consume most of the products of their labor. If this were done, factory wheels would never cease to spin, acres would never be idle, and no future depression would be possible.

The purpose of this special session is to materially aid these two groups and to attempt to solve their problems. To a certain extent they must help themselves—the farmers by cooperatives and the laborers by collective bargaining and an honest effort to conciliate their differences. To illustrate what I mean by cooperation, may I cite an instance: A constituent of mine sold 3,000 loose boxes of Delicious apples to a certain shipping firm. I have the contract here before me. Following were the prices:

Variety	Extra fancy price	Fancy price
Delicious:		
150's and larger	$0.75	$0.55
163's to 216's	.50	.25

On the same day—September 22, 1937—was the following quotation in a Seattle paper:

DELICIOUS PRICES TOP SEATTLE APPLE MARKET

Seattle retailers Monday paid $2.40 to $2.50 a box for extra fancy Delicious apples, $1.75 to $2 for Delicious packed fancy and better.

If this was the price to the retailer, what was the price to the ultimate consumer when the retailer added his commission? Of course, the laborer—the consumer—cannot afford to purchase such high-priced apples and unjustly blames the farmer without knowing where the big profits went. Now, the farmers, by forming cooperatives, could hold their commodities and market them themselves, and if the excessive profits and unreasonable freight rates were abolished they could sell them to the consumers at a reasonable and attainable price. If the railroads will not be content with reasonable rates, let the Government own and operate them as it does the Post Office Department—for service and not for profit.

The farm bill passed by the House is not what I would really like to see enacted into law; it is more or less of a compromise, as all legislation usually is. I would rather see the Massingale-Eicher cost-of-production bill enacted. But we were not permitted to either discuss or register our votes on that measure. Such are the undemocratic rules of the House. But the Jones bill is a step forward and does the following for agriculture:

First. Its major feature, the appropriation for soil conservation, applies to all soil-depleting crops throughout the country.

Second. Provision is made for an annual appropriation of $125,000,000 for the double purpose of purchasing and distributing, through the Federal Surplus Commodities Corporation, farm commodities in this country, and also to finance the exportation of farm commodities and the products

thereof to foreign countries. This is applicable to all farm commodities and is a very important provision of the bill.

Third. There is a provision for making loans on various commodities. This applies to all commodities that can be successfully stored.

Fourth. There is a provision which authorizes the Secretary of Agriculture to apply for correction of discriminations against agricultural products in the freight-rate schedules. This applies to all commodities.

Fifth. There is provision for research into new uses and new markets for the various commodities.

Sixth. The only feature of the bill, the use of which is limited to corn, wheat, cotton, rice, and tobacco, is the marketing-quota provision. It is simply a limitation on marketing. Appropriate provision for marketing agreements applicable to most other commodities was passed during the last session of the Congress and is already in effect. This was separated from the main farm bill because of the need for immediate action thereon.

Thus it will be seen that all appropriations, the Soil Conservation Act, freight rate, new uses, research, and export provisions apply to all farm commodities.

The proposed wage and hour bill is also a compromise. I would rather support a bill with definite minimum wage and maximum hour provisions which would give unorganized as well as organized labor in this country a decent standard of living. There would be no talk of a dictatorship (nor grounds for it) if the farmers received the cost of production for their investments and efforts, and laborers were all employed and received wages sufficient to guarantee them a decent standard of living. Contented and industrious home owners are not a very fertile field for the spread of the doctrines of communism, fascism, or nazi-ism.

We are nearing the adjournment of the special session. We have not accomplished what could have been expected and hoped for. But it is up to the bitter critics of these two measures to prove that they are not steps in the right direction and that the great agricultural and labor groups will not be substantially benefited by the enactment of these laws.

It is difficult to legislate as long as different sections of our country disagree, as long as farm organizations disagree, as long as labor organizations disagree. But let us keep this important fact always in the forefront: The ultimate interests of the farmers and the laborers are in common, both groups desire permanent, stable purchasing power that each may consume the products that result from the efficient labor of the other group. I am concerned with the welfare of these two groups, because upon them depend the welfare of all other groups.

I desire, in closing, to repeat and emphasize that these two groups are the foundation of our economic structure, and this foundation must at any and all costs be maintained secure and inviolate. What we may have failed to accomplish in these two bills may we sincerely and earnestly determine to accomplish with the coming of the new year.

The Republican Party

EXTENSION OF REMARKS

OF

HON. FREDERICK STEIWER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

LETTER BY WILLIAM S. BENNET TO HON. GEORGE D. AIKEN, GOVERNOR OF VERMONT

Mr. STEIWER. Mr. President, some days ago there appeared in the RECORD a statement issued by the Governor of Vermont, Hon. George D. Aiken. An answer to that statement has been made by a former Member of Congress, Hon. William S. Bennet. It is a short letter. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 10, 1937.

Hon. GEORGE D. AIKEN,
Montpelier, Vt.

DEAR SIR: Your open letter of December 4 to the Republican National Committee made the headlines on the first page of several New York papers, but about all that the papers used were your two statements—one that "we have become a party of old men," the other that patriotic citizens are not turning to the Republican Party. There was also some quotation of your somewhat sweeping attack on the Republican Party and your demand for the immediate preparation of an affirmative program. I find, however, that Senator GIBSON, of your State, on December 6, inserted your statement in full in the CONGRESSIONAL RECORD, and I have read it several times carefully. Practically none of the worth-while suggestions which you made are carried in the newspapers. However, there are none of them that have not been under discussion for at least a year, and some of them as long as 40 years. You go back to the McNary-Haugen bill; properly emphasize the necessity of increased production; oppose the use of enormous expenditures and special benefits as a political expedient for attaching agriculture and others to our party; ask that the peculiar difficulties of agriculture be recognized, as well as its fundamental importance; that industry's workers be assured of their share of the national production; the restriction of "monopolies and a minimum of regulation."

Your sixth demand is "for all workers, whether in industry, agriculture, or the service occupations, we further demand the coordination into a rational system of our present unrelated policies of governmental borrowing, expenditure, employment, and relief on the one hand, and private employment, taxation, and debt repayment on the other." I have read that six or seven times and have not the slightest idea what it means specifically. As a generality it's all right, and I am for it. You also demand proper relationship between the Government and business; state that the rightful sovereignty of the States must be recognized, because the well-being of the people demands that we do so, and, finally, that we must preserve all useful elements of our Government and change only by constitutional means those whose usefulness has ended. I should think that as to this program you would have with you about all the 20,000,000 people who voted in 1936 for either Governor Landon or some Republican candidate for Governor or United States Senator or Congressmen. You close with the demand "to purge the party organization of its reactionary and unfair elements, to focus its forces on the recognition of the youth of our Nation, to prepare immediately an affirmative program." The phrase "reactionary and unfair elements" sounds well, and I have either read or heard it a good many times in the last 5 years, but rarely accompanied by any definition. Who compose the reactionary and unfair elements? Are all men and women over 50 years of age in that group? Does it comprise all the members of the national committee? Unless your expression is merely rhetorical you cannot expect the national committee to comply with your request. You can't ask to have someone fired without explicitly defining who the person is you wish fired.

The first point under your third demand is "accept in general the social aims which the opposing party has had the wisdom to adopt, but has lacked the ability to put into efficient operation." If you will send me a list of those social aims, I will undertake to show you within 48 hours after receipt of your letter how each and everyone of these social aims that are worth while, if there are any, originated with some Republican. The New Deal has not a single new worth-while thing. If what you are advocating is that the Republican Party ought to return to power so as to resume its very worth-while welfare program, then I am with you, but I refuse to admit, because it is not the fact, that the New Deal has one single, new, worth-while aim.

As to your statement "we have become a party of old men," I can understand how that seems to be true in Vermont, and for a very creditable reason. Years ago Vermont started what I think is the good practice of selecting good men for places in the Senate and House of Representatives, and keeping them there until they die or voluntarily retire. I served in the House with Frank Green and Porter Dale, who subsequently went to the Senate and died there, and William P. Dillingham, as a House member of the Immigration Committee, of which he was the chairman. He died in office. I have not the slightest doubt that to a young, highly successful businessman such as yourself, with these examples before you, you rather look upon the Republican Party as "an old-man's party." Incidentally, in the House of Representatives in the Sixty-first Congress, I myself went on the Foreign Affairs Committee to succeed a House member, David J. Foster, who died in office.

Has no one ever told you about the Young Republican clubs in Oregon? Did you never hear of the Pittsburgh Young Republican Club which no one over 35 years of age is permitted to join, which has 30,000 members and which did such excellent work in the recent municipal campaign there? In your neighboring State of New York, the Republican Party has been a young men's party for years. The last elderly candidate that we nominated for Governor was Levi P. Morton. Our last elderly Republican State chairman was George W. Dunn in 1901. We have run only one senatorial candidate of 60 years of age since the direct election

of Senators was instituted. That was Mr. CLUETT in 1934, a highly successful man like yourself, as active and vigorous as a man of 40. In 1936, his own congressional district sent him to Congress, where he is serving acceptably. At our recent election, we made Tom Dewey district attorney of New York County by 111,000 majority. He is 35 years of age. Newbold Morris, on January 1, becomes the first president of the council of a city of 7,000,000 people, at the age of 33. I attended a meeting at the Young Republican club on December 4, 1937, in honor of BRUCE BARTON, incidentally, himself not an old man, at which Al Simon, the president of the Associated Young Republican Clubs of New York State was present. In November he was elected district attorney of Saratoga County. His immediate predecessor, Donald Boyle, was there. He is judge of the children's court in Amsterdam, N. Y., and his predecessor, Walter J. Mahoney, a State senator from Buffalo, was there, also.

If you want to see a really fine body of young Republicans, run over to Albany, any time in January, and give the 85 Republicans in the assembly, in which the Republicans have 20 majority, the once-over. I have been up there now once each year in 1934, 1935, 1936, and 1937, and have always been impressed with the youth and evident ability of the Republican assembly. There are fine young men in our State senate too, but that is a smaller body, and one isn't so forcibly impressed as by the large body and larger number in the assembly. Also you should have been in New York in October and gotten in touch with the committees of young people who were working for Dewey, Morris, Stanley Isaacs, and others. In New York, the young people are in the Republican Party, and to a very large extent are running it. The bold and masterly planning which preceded our primaries this fall was largely that of Republican county chairman of New York County, Mr. Simpson, who was born in 1895. It is our belief in New York that in choosing leaders, the least important element to be considered is the calendar. In 1936, we chose as our candidate for Governor, Judge William F. Bleakley; not an old man, but older than any of our recent candidates have been. Judge Bleakley made the best run that any Republican candidate has made in years, receiving 279,434 votes more than Governor Landon.

Nor is the success of young Republicans and their prominence in the party confined to New York. Senator LODGE, from your neighboring State of Massachusetts, was elected in 1936, at the age of 34; HENRY STYLES BRIDGES was elected Governor of your neighboring State of New Hampshire in 1934 at the age of 36, and United States Senator in 1936 at the age of 38. I could add to these instances. They do not at all accord with your statement "we have become a party of old men." Your next statement is that patriotic citizens are not turning to the Republican Party today. In 1936 Henry E. Stubbs, a Democrat, was elected to Congress from the Tenth District of California by a 40,000 majority. He died early in 1937, and his Democratic successor was elected by somewhere around 4,000, possibly a little more. In 1936 Theodore A. Peyser, a Democrat, was elected to Congress from the Seventeenth District of New York by a little over 7,000. He died, and on November 2, BRUCE BARTON, a Republican, was elected to succeed him by a plurality of over 13,000, and an absolute majority over both Democratic and American Labor candidates. In Ohio, on November 2, the city of Bucyrus went Republican for the first time in 30 years, and by a substantial majority. The Republicans also carried Cincinnati, Cleveland, Columbus, Youngstown, and Akron. The Democratic Governor of Ohio did not call an election to fill the vacancy caused by the death of Warren J. Duffey, a Democrat, although he could have done so. Here are three instances of people turning to the Republican Party since January 1937. I do not claim the result in New York City as a Republican victory.

It was a nonpartisan victory for good government, but it is worth noting that with a reduced registration as compared with 1936, 15,000 more people voted for Mayor LaGuardia in the Republican column than voted for Governor Landon in that column in 1936, and that the votes that the mayor received in the Republican column exceeded the votes which he received in the City Fusion, American Labor, and Progressive Parties combined. In addition, it was a great spiritual victory, the greatest the Republican Party has had probably since 1896, and did more to make us a united party in New York City than any campaign since that date. Please cite me some proof that patriotic citizens are not turning to the Republican Party today. I cannot find it in the election returns.

Your proposition in relation to the national committee has very little value. The real fight on that question was on the reduction of southern representation in national conventions. It started about 1900, but the time is immaterial. Not only was representation from the Southern States in the national convention substantially and materially reduced, but there was also a reduction from congressional districts in Northern States which cast small Republican votes. In New York State we lost two or three delegates to the national convention because some of our New York City districts are so heavily Democratic. On the other hand, States which cast their electoral votes for a Republican candidate for President get a bonus of three delegates at large. Vermont, which would have had six delegates in the Republican Convention of 1936, therefore had nine, a 50-percent increment for Republicanism, and it will have the same honor in 1940.

The national committee has its chairman chosen for it at each national convention by the candidate for the Presidency chosen at that convention. If the chairman resigns in his 4-year term, then the national committee must choose his successor. The only other time that it regularly votes is when it sits immediately preceding a national convention on protested election cases. There have been very few of these in recent years. Heretofore, no one has ever thought of reducing the power of national committeemen of Maine, Vermont, Delaware, Wyoming, Texas, Louisiana, Mississippi, and so forth, and increasing tremendously the power of the national committeemen of New York, Pennsylvania, Illinois, and one or two other large States. However, if you can get some of the other smaller States to join you in your crusade, I imagine that New York, Pennsylvania, and Illinois would go along with you. They would have everything to gain and nothing to lose. In 1936, Illinois cast a million and a half Republican votes, New York over 2,000,000 and Pennsylvania about 1,700,000, thus considerably over 25 percent of the votes cast for Governor Landon, and on your plan would give these three States 25 percent of the voting power in the national committee. Vermont cast 81,000. To what extent your plan would reduce the power of the national committeeman from your State you can see for yourself.

I am for an affirmative program, and pretty near the whole country is for the same program. Let us put first things first. We are all agreed that what we need is a revival of industry. President Roosevelt and the National Association of Manufacturers agree that the country is fundamentally sound. That association is meeting in New York City now. They say that if a few statutes are repealed they can bring back prosperity. They should know. They are running the industries of the country. If they take the responsibility of giving that advice, it ought to be tried. I would add one thing to what they said; that is, stop trying to make a trade agreement with Great Britain. Your neighbor, Senator LODGE, points out that the mere threat of that agreement was largely responsible for the laying off of 700 men in one textile factory in Massachusetts. In times like these we cannot afford doubtful experiments. Besides, until the present business recession is stopped Congress will not be in the mood to consider even such a thoughtful program or long-range legislation as you suggest, for good legislation requires careful thought and deliberation. It rarely is passed in a business panic. The Bible tells us that there is a time for all things. Right now is the time to repeal a few statutes. We must be Americans even before we are Republicans, and consider the good of the country even before party advantage. Don't ask for new substantive statutes when what we need is the repeal of some we already have. As the young lady sang on the East Side, "Don't bring me posies when its shoeses that I need."

Very truly yours,

(Signed) WILLIAM S. BENNET.

Mayor Hague Does Not Believe That There Are Any Rights Which He Is Bound to Respect

EXTENSION OF REMARKS

OF

HON. JERRY J. O'CONNELL

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

EDITORIAL FROM THE NEW YORK TIMES

Mr. O'CONNELL. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial appearing in the December 17 issue of the New York Times, which deplores the attitude of Mayor Frank Hague regarding the suppression of civil liberties in Jersey City, as follows:

[From the New York Times of December 17, 1937]

"I AM THE LAW"

It is a little embarrassing to know what to do about Mayor Hague, of Jersey City. Other officials in this broad country have successfully suppressed this or that civil liberty for a time. But most of them have thought it necessary to surround their action with an alibi of some sort, a pretense of legality, a touch of that hypocrisy which is the homage that vice customarily pays to virtue; not so Mayor Hague. He has no use for either practical or philosophical subterfuges. If you don't want union organizers in your city, you tell them to keep out. If they come in, you have the police arrest them or kick them out. If they come on foot, you physically force them back into the tubes or on board the ferries. If they come by car, you have policemen meet them and ask them to drive back the way they came. You prohibit the distribution of leaflets. You don't allow peaceful picketing when you don't want it. You intimidate the owners of assembly halls so that they will not rent to the C. I. O.

So far as can be learned, Mayor Hague does not believe that there are any rights that he is bound to respect. His political science is simple: "I decide, I do, me, right here. I am the law." This states the issue plainly, and no one who believes in a reign of law or in the preservation of human liberties need be confused.

One point, however, is confusing. What does a man of Mayor

Hague's supposed astuteness think he is achieving? His object all sublime, as far as one can make out, is to attract employers to Jersey City, so that they will rent or build factories, give employment, produce more goods, and pay more taxes, making bigger and better pay rolls possible for the Hague machine. The chain of causation seems perfectly sound at every point except the beginning. His methods are not likely to attract employers to Jersey City. For it is impossible to believe that such methods can be more than temporarily successful. Meanwhile, they are calculated not merely to create sympathy throughout the country for C. I. O. organizers but to build up a growing resentment on the part of workers in Jersey City that will make them much more willing converts to the C. I. O. organizers when they eventually do enter than they would otherwise have been.

When Mayor Hague said, "I am the law," he unconsciously recalled Louis XIV. Some genuinely devoted friend ought to emulate another prominent figure in French history and warn the mayor that his suppression of civil liberties in this instance is worse than a crime; it is a blunder.

Wage and Hour Legislation

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON, DECEMBER 16, 1937

Mr. BURKE. Mr. President, last night at the Town Hall in New York City, a very able, interesting, and, I might say, illuminating address on the subject of wage and hour legislation was delivered by the junior Senator from Washington [Mr. SCHWELLENBACH]. I ask unanimous consent that for the information of the Senate the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Only General Johnson and I fully appreciate what a privilege it is for me to be here—not only able to appear with him, but even to have a chance to say my say before he can say his.

In the World War I was a private in the Twelfth United States Infantry, Eighth Division. The commanding general of the division was—General Johnson. This is the first time I have ever been within a mile of him without having to stand at attention.

1. DEMOCRATIC GOVERNMENT MUST KEEP ITS PROMISES

Only in a democracy can a private speak as freely as a general. That's one of the reasons I like it.

But in many countries people have grown tired of democratic leaders who promise much and then forget their promises. If the American people have faith today in the democratic method of government it is because they have faith in democratically chosen leaders who carry out their covenants; it is because they have faith in the ability of the democratic system to meet the problems of the modern world in accordance with the will of the people.

In the Madison Square address which closed the last campaign President Roosevelt promised: "Our vision for the future contains more than promises. This is our answer to those who, silent about their own plans, ask us to state our objectives. Of course, we will continue to seek to improve working conditions for the workers of America, to reduce hours overlong, to increase wages which spell starvation, to end the labor of children, to wipe out sweatshops."

In unmistakable numbers the American people voted "Aye." Unless democracy is a sham, a start must be made on that program to carry out the President's promise.

A majority of the Congress believes that the wage and hour bill pending in the Congress is a good start.

2. THE ECONOMIC PURPOSES OF WAGE AND HOUR LEGISLATION

In 1936 the American people responded enthusiastically to the proposal that Government take affirmative action to bolster up wages excessively low and to curb working hours excessively long.

Why?

Was it simply an emotional urge to make a few cruel and antisocial employers toe a mark?

No. It was an intelligent realization that, as President Roosevelt said in his recent fireside chat, "a few more dollars a week in wages, a better distribution of jobs, with shorter working day, will almost overnight make our lowest-paid workers actual buyers of billions of dollars of industrial and farm products."

In other words, the American people are determined to turn the increasing use of labor-saving devices into increased wealth and increasing security instead of increased unemployment and increasing instability.

3. THE NECESSITY OF USING AN ADMINISTRATIVE AGENCY BUREAUCRACY

Possibly the wage and hour bill now in Congress may be criticized for not going far enough toward that objective, but, so far as it does go, it is a good start. With time and experience the machinery it will set up can be constantly improved.

The bill states that its objective is to work toward a maximum 40-hour workweek and a minimum wage of 40 cents an hour for industries competing in the interstate markets. Over a period of time it is expected that it will be possible to establish these as minimum standards for all industries throughout the United States.

As an ultimate objective, we want adequate labor standards uniform throughout the country. But the Congress cannot ignore existing geographic and industrial diversities and hope to eliminate all of them immediately. For years widely different wage scales and hour schedules have prevailed in different industries and different localities. These cannot be adjusted to a single minimum-wage scale or maximum-hour schedule without producing great hardship unless the wage scale and hour schedule is so low as to be illusory for most of the workers whom we are trying to protect.

If you agree—if you believe that at the beginning we have no choice except to tolerate different minimum standards for different industries and then work toward evening them upward over a period of time—somebody must determine what those differences shall be.

That job is too complicated for a Congress that has a thousand other things to do. As Justice Cardozo wisely pointed out in the N. R. A. case (*Schechter case*, 295 U. S. 495), "the industries of this country are too many and diverse to make it possible for the Congress in matters such as these to legislate directly with adequate appreciation of varying conditions."

Congress has to turn over the determination of what those differences shall be and how long they shall last to some administrative agency, a board, a single administrator, or some combination of the two. If we are going to have differentials, there is simply no other way to meet the problem.

General Johnson himself is on the record respecting need of flexibility and administrative discretion in legislation of this character. A day or so after the wage and hour bill was introduced, the general in his newspaper column pointed out that the bill did delegate broad powers to an administrative board. But let me quote to you just what he then said about the need of such discretionary powers.

"This column does not criticize that. It thinks, as has been repeatedly stated, (1) that such a law is necessary to keep degraded labor conditions in one area from degrading labor conditions generally and to prevent such downward spirals as ruined labor in the depression; (2) that American conditions are too varied to do that by legislative fiat or otherwise than by administrative action on the broadest possible discretion; and (3) that it can't be done at all without adequate power to discipline chiselers.

"This bill does all that, and don't let anybody tell you anything different. This column's only regret is that it couldn't do it frankly, in barnyard language."

Furthermore, you can't effectively enforce wage and hour legislation applicable to all American industry without utilizing an administrative agency. Those who propose leaving the enforcement of a wage and hour law to the local Federal district attorney really don't want effective wage and hour legislation. Can you imagine the position of a district attorney's office in a locality where the law is unpopular because its violation means a competitive advantage over some other community. If he is human, the district attorney will see no evil, hear no evil, speak no evil. Prohibition taught us that.

That is why the bill now in Congress authorizes an administrative agency after investigation and hearing to fix—and to enforce—minimum standards for different industries and if need be for different localities which will approach the stated objectives of a 40-cent minimum wage and a 40-hour maximum workweek as nearly as is economically feasible without curtailing employment or earning power.

4. THE ALTERNATIVE OF A SYSTEM OF STATE TARIFF WALLS

Critics of the bill now propose as an alternative that the Federal Government hand over the regulation of minimum wages and hours completely to the States and permit each State to forbid goods not produced in conformity with its own labor standards from crossing its borders. American industry now has a broad domestic market free of all tariff barriers. Under the scheme I have just described it would have to adjust itself to the tariff walls, border patrols, and, I suppose, customs services of 48 different States. One of the chief reasons for the Constitution was the desire to get rid of internal trade barriers between the States so they would not come to hate each other like the wrangling countries of Europe.

I am willing to let the Federal Government prescribe wage and hour standards which manufacturers in my State of Washington must comply with if they wish to ship their goods in interstate commerce. But I am not willing to let the Legislature of the State of New York or the State of Illinois prescribe labor standards for the State of Washington.

5. DIFFERENCES FROM N. R. A.

The proposed legislation embodies all of the good and none of the bad of the old N. R. A.

First, it applies only to workers who are engaged in the production of goods which are shipped across State lines or which compete with goods so shipped. It does not apply to strictly local services or trades with which the States are competent to deal without fear of interstate competition. The men who administer this statute, unlike the administrators of the N. R. A., won't have headaches about little pants pressers in Jersey City.

Second. The proposed legislation deals with labor conditions solely; it has nothing to do with fixing prices, with trade practices, or with production control.

Third. The wage and hour regulations are to be imposed by a Government agency; not by private code authorities. No dominant group in private industry is given permission to write its own ticket.

Too often under the N. R. A. such dominant groups did not keep faith with the overworked Government administrators or the spirit of the law. Under a mere pretense of improving labor conditions, they used the N. R. A. chiefly to legalize new schemes for monopolies. The proposed wage and hour bill grants no power to anyone that can be so abused and perverted.

6. THE "YES BUT-TERS"

Legislative experience has taught me to expect attack upon almost any proposed regulation of industry or labor, no matter how great the evils and abuses which cry for remedy; no matter how modest and reasonable the proposed method of dealing with those evils and abuses. Opponents have a standard strategy. They always agree with the human objectives of the bill, but they advance certain steretotyped objections to its particular form. I call them the "Yes But-ters."

They always say "Yes; the idea is fine, but we don't like the form of this particular bill." They either say that the legislation puts an inflexible strait jacket on industry or that it gives some administrative agency dictatorial and flexible power over industry.

About the wage and hour bill they say both—at the same time. The attempt of Congress to steer a practical middle-of-the-road course has drawn the fire of extremists to the right and extremists to the left.

7. THE NECESSITY OF MAKING A START NOW

I appreciate the natural craving for simple laws which everyone can understand, and short laws which everyone can read. But no simple and short law can be drafted which will meet the complexities and diversities of American industry. American industrial life is complex, and legislation can never again make it simple.

The Congress is attempting to meet its solemn pledges to the American workers. In a democracy there are bound to be differences of opinion as to how pledges to the electorate may best be met. But the time comes when those differences must be resolved. A famous author once said: "There comes a time in the history of every book when it has to be written." So with a law. It is better to make a practical start now than to continue piously to mouth our good intentions while perfectionists find fault with any proposal that has a chance of adoption now.

Perfectionists may debate until doomsday without agreeing upon a solution, but no responsible statesman can fulfill his promises to the American people by interminably arguing the relative advantages or disadvantages of alternative solutions.

The proposed legislation is a sincere and honest attempt to meet a pressing need. Time and experience will undoubtedly suggest constant improvement in meeting that need. Let us all cooperate to make it meet that need, to make it improve the purchasing power of American workers, and enlarge the markets for American industry and for American agriculture.

Emergency

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, December 17 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS BY HON. H. STYLES BRIDGES, OF NEW HAMPSHIRE, DECEMBER 17, 1937

Mr. WHITE. Mr. President, this afternoon over the Columbia Broadcasting System the Senator from New Hampshire [Mr. BRIDGES] discussed current questions before the Senate, his topic being Emergency. I ask unanimous consent that his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, it is my intention to speak briefly this afternoon on the subject of the present business depression and to submit a program for its cure.

For the purpose of hastening the enactment of legislation much favored by the administration, such as the N. R. A., the wage and hour bill, Federal Housing Authority, Neutrality, Wagner Labor Relations bill, we of Congress and the American people as a whole have heard much use made of the word "emergency." "Emergency," "emergency," has been drummed into our ears for 5 years. When necessary an emergency can always be discovered to justify the forcing of an issue. The very word "emergency" instills fear in the hearts of a few. Coming from those in power the word "emergency" attached to a recommendation has meant, for the most part, immediate action without proper study. Overuse of a phrase causes it to become hackneyed. In the last few months particularly, so-called emergency measures have been but wolves in sheep's clothing.

Bills which, stripped of the cloak of "emergency," stand out as administration must bills or measures of political expediency, innocent enough on their face but whose passage means greater centralization of power. The danger of making the word "emergency" commonplace is evident. Like the cry of "wolf," too many false alarms make for a poor fire department. When a real crisis appears the powers of resistance are broken down and the ability to recognize an emergency before it is too late is destroyed.

Today the United States has a real emergency at hand. We are slowly bogging down into the quicksands of a depression. Weasel words such as "market reaction," "business setback," or "recession," do not correctly state the cause of recent thousands of lay-offs of workers in industrial plants; of the wholesale cancelation of orders for new goods; of the many thousands of new applications for relief; and for the economic jitters of the American people. No; this time the emergency is real and not even the warning scream has gone out from the administration forces. This is something they didn't plan that way.

There has been no dearth of New Deal planners to tinker, to adjust, to sit in high places on boards and on projects, to tell the farmer how much he must plant, and to tell the businessman who he must hire and fire. But so far no administration leader has made a constructive move toward 1937 national recovery. Congress has been in special session over a month, called by the President for the purpose of enacting extraordinary measures. Adjournment for Christmas is drawing nigh and, so far, all the Senate has accomplished is to filibuster on antilynching, to vote itself traveling expenses, and to discuss a farm bill that is of very questionable merit.

The House has spent its time voting itself traveling expenses, voting the questionable farm bill, and jockeying a wage and hour bill that business does not want, that the American Federation of Labor does not want, and that seemingly nobody wants. The President has spent much of his time fishing. The real emergency has been allowed to gain headway. Not one thing has been done to check the fires of depression. Not one constructive thing has been done to encourage industry to produce more goods, spend more money, or employ more labor. Not one thing has been done to give the people confidence in the money of the Nation or in the security of their jobs. Not one thing has been done to start the Treasury on the road to a balanced Budget or to keep the country from bankruptcy. Not one official act has been undertaken to remove the threat of inflation from our statute books. Not one thing has been done to remove the fear of uncertainty in the country's financial and economic future.

It would be useless to talk endlessly of the plight of industry facing depression, of labor facing unemployment, and of our people as a whole in a state of economic unrest, if a program for the correction of the causes of depression were not at hand. The deplorable part of the whole affair is the presence of real emergency at our very doors and nothing being done. We have seen in the past 9 years what the disease of depression can do to ruin a country and ravage a people's morale. We have the medicine at hand to stop the further encroachment of the disease and to recoup the losses. Under the leadership of the President and Congress we could start the march to economic safety today, if we could have a sincere effort on the part of the administration and immediate action on the part of Congress.

The steps to economic recovery are:

First. The immediate repeal of the tax on undistributed corporate profits, which burdens industry and jeopardizes the jobs of those employed; which prevents the absorption into private industry of those now unemployed; which is in direct conflict with the administration relief program in that it discourages the employment in private industry of those on relief rolls; which penalizes the accumulation of corporate reserves normally used to maintain wage payments and hence employment during business recession; which makes it impossible for industry to finance expansion out of profits and hence prevents the normal growth of American business; which promotes monopoly and places a discriminating burden on small business enterprises; and which complicates our tax system because it is not a tax measure at all but one of social reform. Its immediate repeal would be a ray of sunshine on the black business horizon.

Second. Drastic amendment of the capital-gains tax, which is a weight on industry and the cause of many of our economic ills; which prevents the growth of business and seriously retards the financing of new enterprises; which harms labor and creates unemployment by closing the gates of industrial expansion; which was an important factor in the credit inflation of 1928 and 1929; which leads people to believe that prices are values. The capital-

gains tax is unfair and should be amended so that capital gains would be treated on a basis of separate flat tax. To treat capital gains as on a par with earned income is disadvantageous both from a revenue and business standpoint. We should go back to the course originally adopted in 1921 and put capital gains in a special classification and subject them to moderate tax. In this way this tax would be fairer and, what is more, would produce more money to the Government, which, after all, is the purpose of a tax.

Third. Take the Government out of competition with private industry in all fields, and thus give some indication to the private citizen that he can go into business without having his own Government, which he supports by his taxes, as a business competitor. The progress of America is tied up with the progress of American industry, and not with the progress of Government-financed projects.

Fourth. Amend the Wagner Labor Relations Act so that the National Labor Relations Board may arbitrate the differences between employers and employees in an American manner and not subject industry and all labor organizations, save its own favorite, to a third degree; equalize the rights of both parties involved in a labor controversy so that all employers and all employees, regardless of their organization, may have a fair, unbiased hearing; remove the partiality which the Board has displayed, in the vast majority of its cases to date, toward one arm of organized labor and thus prevent discrimination against one branch of organized labor and favoritism to another.

Fifth. Devise a sensible plan to balance the Budget in the near future and stick to it instead of making semiannual promises based on wishful thinking. This plan would entail the cutting down of Government expenditures in wasteful and useless projects and for the upkeep of the vast political bureaucracies now saddled on the backs of the people, encourage Government saving rather than Government spending.

Sixth. Repeal the Thomas inflation amendment to the Agricultural Adjustment Act of 1933 so that the vicious threat of inflation may be removed. The power that was given the Chief Executive in 1933 to issue $3,000,000,000 in greenbacks, irredeemable in anything of value and with no backing whatever, is a fundamental influence in undermining business conditions. The power to regulate money should rest in Congress where it belongs. There is no excuse on our part for having the Thomas greenback amendment on our statute books.

To my mind these would be constructive steps and would show our people that their Chief Executive and their elected representatives were taking action to arrest the very real emergency that is now upon us. These steps are all part of the Republican program to end this depression. There are many measures now before Congress, introduced by Republican Members, which would accomplish the reforms I have outlined above. This depression is a common foe and it is no time to quibble about partisanship. Strangely enough, the only positive action, however, has been by Republican Members of Congress and by members of the Democratic Party who have had the vision to realize that the arrest of economic disaster is more important than orations about social reform. I have not spoken in the sense of an alarmist, but it is evident that if something is not done at once all that we have been through since 1929 shall have been in vain, with a greater public debt our only accomplishment.

The very roots of democracy are endangered. America is its last stronghold. We see Europe in an economic swamp or in a field of battle. We see either communism or fascism rampant and battling each other to the death, each awaiting the chance to move into America, stir up class hate, belittle religion, and regiment our people as they are regimented in Germany or Russia. There are no excuses for the existence of either in the United States of America and they shall not come here unless our people so lose their grip on their self-respect, on their initiative, and on their enterprise, that the Government is forced to take over all of the factors of production. Our country cannot stand another depression with the wounds of the last one still unhealed.

This time it is not Wall Street alone that is jittery, it is not the big banking interests, it is not the utilities, but it is every main street and every side street in America; it is those who see their friends and relatives being let out of jobs and again using up their savings during periods of unemployment. Immediate action is the watchword. Our people want it, democracy wants it, and America can wait no longer for it. We have learned our lesson; let us profit by it.

Fair Labor Standards for Workers

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. WOLVERTON. Mr. Speaker, the bill now before the House seeks, within constitutional limits, to provide fair labor standards with respect to wages and hours in employments in and affecting interstate commerce.

The underlying purpose of this legislation is to provide better working conditions in occupations where substandard labor conditions now prevail. There has been general denunciation of sweatshop and child-labor conditions as detrimental to the physical and economic health, efficiency, and well-being of workers who come within either classification. This bill seeks to eliminate such, as far as it is within congressional power to do so.

While some of the details of the bill are not entirely in accord with my views, and experience will probably show the necessity of amending some of its provisions from time to time; yet I cannot for this reason overlook the fact that I am in full accord with the general object that is sought to be attained, and will therefore cast my vote in favor of the bill.

It is my hope that with this step forward in the realm of Federal regulation that it will be an incentive to provide similar State regulation where necessary so that there may be proper working conditions for all workers, whether engaged in interstate, State, or local occupations.

It has been truthfully said that this bill will only directly benefit a portion of the Nation's workers. This is true for several reasons: First, the jurisdiction of Congress to legislate is confined to regulation of interstate commerce, consequently all occupations of a strictly intrastate or local character are not within the regulatory power of Congress; second, most of the large industries whose products enter into the channels of interstate commerce already observe wage schedules, and in many cases hours of employment, that are equal to or better than required by the provisions of this bill; third, agriculture and allied industries are specifically exempted as seasonal in character and otherwise not within the particular object sought by this legislation; and fourth, occupations identified with railroads, steamship and water carriers are exempted from the provisions of the act, because these workers are already provided for under the terms of legislation already effective pertaining to these particular industries. There are other exemptions than those enumerated, but those mentioned cover, in a general way, the classes of workers who do not come within the present purposes of the act. But the fact remains that, notwithstanding the exemptions provided for, this legislation will be a forward step in the effort to eliminate substandard working conditions in those occupations and industries wherein practices detrimental to the physical and economic health and well-being of workers now prevail.

During the time the wage and hour legislation has been before Congress for consideration there has been considerable discussion. Varying viewpoints have been disclosed as existing even within the ranks of organized labor. These differences of opinion, however, relate more particularly to details or methods of administration rather than to the fundamental objects sought to be accomplished. In a similar manner, objections have been voiced by some business enterprises fearful that a strict interpretation of some of the provisions of the bill might create hardships to them not intended, and, arising because of the peculiar conditions in their industry as called upon to face in the manufacture of their particular commodity. But in no case has any serious objection been made to the underlying purpose of this legislation. It is encouraging to realize that there is such general accord with the effort now being made to provide better working conditions and improved standards of living for those who toil.

It would be strange if the general opinion was otherwise than favorable to this type of legislation. The great mass of our people, including leaders in industry, business, and finance, have little patience with that small minority which has been termed "chiselers." It is particularly at this minority that the bill, a modest and conservative approach to the great objectives set forth, is aimed. It is an attempt to begin to meet and not to avoid some of the most vital problems of American economic life. In doing this a few may suffer some inconvenience for a short time; but the fact that

a tremendous number of injustices will be cured by the bill fully justifies its enactment.

It is generally recognized that there never has been, and possibly never will be, a law of a general character passed, such as this, that will not cause some inconvenience in making adjustments to meet its provisions. To write a bill embodying the principles which this bill seeks to make effective and at the same time not inconvenience someone would be impossible. The most that can be done is to be fair and just, and this bill by its carefully drawn provisions does seek to do that, and has accomplished it to a commendable extent.

The thought has been expressed that this is not a proper time to pass legislation of this character. Individuals who express this opinion are not always those who are opposed to the bill in principle, but are frequently those who sincerely feel that in view of the present recession in business that it is unwise to adopt anything of a regulatory character that might hamper or handicap business in its efforts to reestablish normal business conditions.

I am not convinced that the passage of this bill at this time would be harmful to business recovery. I am inclined to believe it would be more harmful to have business suffer from the uncertainty that would follow if its passage is delayed, and it should remain a subject of discussion in the months ahead. It would mean a continuance of the unsettled condition that now exists. Businessmen have impressed upon me their desire to have the "rules of the game" settled so that they may know upon what basis they can proceed and without being continually handicapped and hampered by a state of uncertainty as to what will be the law.

In the drive for recovery we have had many remedies proposed. In my opinion, there is no one economic principle or panacea that can accomplish it. To solve the problem will require numerous and varied remedies. It is generally agreed, however, that increased purchasing power is of prime importance, and without which there can be no real, widespread recovery.

There is hope among the supporters of this measure that the enactment of this bill will be of material assistance in providing a measure of increased purchasing power, so necessary in this time of business recession. The bill seeks to provide "a fair day's pay for a fair day's work" on the theory that the application of this principle will increase purchasing power among a large class of American workers who have little or no purchasing power at this time. It will enable them, in turn, to buy more products from farm and factory. It will, therefore, give increased employment in industry and on the farm to those now unemployed. Thus, while it is not contended that this bill would be sufficient in itself to solve the basic problem of purchasing power, which must be approached from many angles and in many different ways, yet it does give promise of being a reasonable approach to the problem.

In conclusion, permit me to say that this bill does not purport to solve all the problems surrounding the conditions it seeks to correct. These undesirable labor conditions are of long standing and cannot be cured overnight. This bill, however, does attempt in a modest way to raise the wages of the most poorly paid workers and to reduce the hours of those most overworked. It seeks to enable them and their families to have a more desirable standard of living than now prevails. The beneficial results to follow the enactment of this legislation, however, are not confined to the workers whose standard of living it seeks to raise. It will also protect an employer, who is doing the right thing by his employees, by preventing competing, chiseling employers from undercutting decent minimum-wage standards or from stretching decent maximum hours of work standards. And last but not least, the bill does away with the evil of child labor. It will ban from the channels of interstate commerce goods produced at the cost of ruined lives of American children.

This bill, as a means to improve living and working conditions of those who now labor under substandard conditions, such as we know to exist in some instances, arouses my sympathy and claims my support to the end that we may have "fair labor standards," with particular reference to wages and hours of employment that will correct such conditions.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. A. J. ELLIOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. ELLIOTT. Mr. Speaker, as we consider this wage and hour bill let us be honest with the workers of this Nation and also the workers who are at present unemployed. This bill will not provide more jobs—it will only tend to protect the wage level and preserve fair standards of hours in many industries. The so-called business recession will not be halted by this legislation, and, as I stated before, the unemployed will not be provided with jobs. Our relief problem is our greatest burden, and we have administered great and ever greater appropriations for the W. P. A. and unemployment relief.

The recent unemployment census reveals that many of the unemployed are old and not wanted on jobs. It is a nasty, unhappy problem, that our great relief appropriations have not taken care of. We cannot play ostrich and stick our heads in the sand. Something must be done, and we, the Congress, are the ones to do it, and we can do it by enacting the general-welfare bill (H. R. 4199), which is now in the Ways and Means Committee. There is a petition on the Speaker's desk to bring this bill out of committee. One hundred and four of the Congressmen have signed this petition to release the bill from committee and if you have not signed, I urge you to do so now. When this bill is enacted the Nation's greatest burden, that of Federal relief spending, will be removed. It is estimated that 4,000,000 annuitants under this act would give up their positions, which will mean that 4,000,000 productive jobs will be given to younger people who are now unemployed. Business would be revitalized by a new and greater purchasing power. Enactment of this bill would help solve the farm-relief problem which we considered last week. Thousands of hospitals and charitable institutions, for the maintenance of which we are now heavily taxed, would be made unnecessary. The General Welfare Act will correct the Nation's economic disorder.

We have tried to assist people in all walks of life by legislation, but we have done nothing to provide for the welfare of the old people; those who have carried on and made it possible for you and I to have what we enjoy today. Let us consider humanity when we legislate.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. TREADWAY. Mr. Speaker, I am heartily in favor of the establishment of minimum wages and maximum hours for workers engaged in industry. Sweatshops, starvation wages, and child labor cannot be defended. They have no place in the American scheme of things, nor has the so-called graveyard or midnight shift for women.

The fact that we have put up with these deplorable conditions of employment during the century and a half of our existence as a nation is no reason why we should continue to do so, or refrain from taking the necessary steps to remedy them.

Business and industrial concerns, for many years, have realized the necessity for improved working conditions and higher wage standards. The voluntary effort, by business itself, to correct the oppressive and unfair conditions under which men, women, and children have labored has carried us a long step forward. Unfortunately, however, a minority of business and industrial concerns have failed to "see the light," and have continued to bleed and oppress labor. Likewise, certain sections of the country, notably the South, have failed to keep step with social progress. This minority has made impossible of complete success the voluntary effort of business leaders to correct and improve employment conditions. It goes without saying that one section of industry, or one section of the country, cannot maintain high wage standards and improved working conditions, with the resulting increased cost of production, and at the same time compete with the products of the recalcitrant minority which can put out a cheaper article by paying starvation wages and working their employees for long hours.

Just as a minority in industry can prevent industry itself from remedying these evils, so a minority of States can prevent the more enlightened States from establishing maximum hours and minimum wages by State law. The only solution, as I see it, is uniform Federal regulation within the constitutional powers of Congress.

Mr. Speaker, the fact that I favor Federal regulation of wages and hours does not mean that I am necessarily committed to support any and every measure that is offered for that purpose. One can be in favor of certain principles and still be opposed to some methods for carrying those principles into practical operation. And just because a Member of Congress may oppose one method for carrying those principles into operation does not mean that he is opposed to other methods, which to his mind offer a better and more practicable solution of the problem.

During the consideration of the pending wage and hour legislation in the House, several different plans have been offered as substitutes for the plan presented by the Committee on Labor. Indeed, the committee has itself offered two different plans, first reporting the Senate bill with certain amendments and then offering as a substitute a complete new bill.

I am not in favor of either of the committee plans, for two principal reasons. In the first place, I am absolutely opposed to conferring discretionary authority to establish minimum wages and maximum hours on any board or single administrative agency set up in Washington. In the second place, I am opposed to the establishment of wage differentials as between different sections of the country, as to my mind this simply perpetuates the existing evils and discriminates against those sections of the country, including my own section, New England, which take a more progressive and enlightened attitude with respect to working conditions in industry.

It is not necessary to mince words. Let us be frank about it. Why have a large portion of the industries, which formerly gave employment to thousands of New England men and women, at fair wages and reasonable hours of employment, moved to the sunny southland? For no other reason than to take advantage of the low cost of operation resulting from the low-wage scale prevailing in the South and the longer hours of employment. The wage and hour bill recommended by the Committee on Labor would perpetuate the differentials now existing between northern and southern industry and continue the present unfair competitive advantage now enjoyed by the latter.

Two substitute plans have been offered to the committee bill. The first was the so-called American Federation of Labor bill, also referred to as the Dockweiler bill, which was offered by the gentleman from Indiana [Mr. GRISWOLD]. I was among those who voted for this substitute proposal, which was defeated by a vote of 131 to 162. This measure would have prescribed by law, with no discretion on the part of any administrative agency and no differentials as between northern and southern industry, a minimum wage of 40 cents per hour and a maximum workweek of 40 hours. This measure was prepared by, and had the support of, the American Federation of Labor, represented by its president, Mr. William Green.

The other substitute plan for which I voted was that offered by the gentleman from Ohio [Mr. LAMNECK]. I favored this plan over the committee bill because it would have put the regulation of wages and hours under the jurisdiction of a quasi judicial body in which the public has great confidence, namely, the Federal Trade Commission. This substitute plan was likewise defeated.

Had it not been ruled out on a point of order I would have voted for the resolution offered by the gentleman from New York [Mr. BACON] to establish a Federal commission of inquiry for study and report on the abolition of unfair labor conditions. The debate on the pending measure has amply demonstrated the confusion now existing over the proper method of handling this question, and shown the need of careful and comprehensive study before any attempt is made to legislate intelligently on the subject.

Before a vote is taken on the pending bill, a motion will be offered to recommit the bill to the Committee on Labor for further study. I shall vote for that motion because I cannot support the bill as recommended by the committee. I agree with the gentleman from Texas [Mr. LANHAM] that the committee bill proposes the establishment of a dictatorship over labor and industry, with the identity of the dictator yet unknown and undisclosed. It is not a question of having to take the committee bill or nothing. The Committee on Labor can give the question further study and bring out a bill which everyone, or nearly everyone, can support.

It is of moment to note that Mr. William Green, in a letter to Members of Congress, has requested that Members vote in favor of the recommittal of the bill rather than accept the present committee proposal. Mr. Green's views coincide with my own. The same position was taken by the National Grange and other farm organizations in a joint statement published for the information of Members of Congress. As a large portion of my district is agricultural, the opinion of the National Grange naturally had an influence on my decision to vote for the motion to recommit. Should that motion prevail, as now seems probable, it is my hope that at the next session of Congress a proper wage and hour bill may be enacted into law.

"Some Aspects of Labor's Fight Through the Ages"

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

LABOR IN ANCIENT TIMES

Mr. SHANLEY. Mr. Speaker, labor, like religion and liberty, has been the recipient of mixed motives since the earliest times. Man in the fields or in the shops has had to struggle against the plundering proclivities of small minorities of those who guide the haphazard destiny of our society. From time immemorial when he was rushed from those fields or the crowded, disease-provoking centers of population to fill the ranks of the plundering empires of the Assyrians or the Babylonians or later the Medes and the Persians, he

a tremendous number of injustices will be cured by the bill fully justifies its enactment.

It is generally recognized that there never has been, and possibly never will be, a law of a general character passed, such as this, that will not cause some inconvenience in making adjustments to meet its provisions. To write a bill embodying the principles which this bill seeks to make effective and at the same time not inconvenience someone would be impossible. The most that can be done is to be fair and just, and this bill by its carefully drawn provisions does seek to do that, and has accomplished it to a commendable extent.

The thought has been expressed that this is not a proper time to pass legislation of this character. Individuals who express this opinion are not always those who are opposed to the bill in principle, but are frequently those who sincerely feel that in view of the present recession in business that it is unwise to adopt anything of a regulatory character that might hamper or handicap business in its efforts to reestablish normal business conditions.

I am not convinced that the passage of this bill at this time would be harmful to business recovery. I am inclined to believe it would be more harmful to have business suffer from the uncertainty that would follow if its passage is delayed, and it should remain a subject of discussion in the months ahead. It would mean a continuance of the unsettled condition that now exists. Businessmen have impressed upon me their desire to have the "rules of the game" settled so that they may know upon what basis they can proceed and without being continually handicapped and hampered by a state of uncertainty as to what will be the law.

In the drive for recovery we have had many remedies proposed. In my opinion, there is no one economic principle or panacea that can accomplish it. To solve the problem will require numerous and varied remedies. LABOR IN ANCIENT TIMES

Mr. SHANLEY. Mr. Speaker, labor, like religion and liberty, has been the recipient of mixed motives since the earliest times. Man in the fields or in the shops has had to struggle against the plundering proclivities of small minorities of those who guide the haphazard destiny of our society. From time immemorial when he was rushed from those fields or the crowded, disease-provoking centers of population to fill the ranks of the plundering empires of the Assyrians or the Babylonians or later the Medes and the Persians, he

became part and parcel of systems that raised enormous sums from its subjects to sustain vast armies. In those barbaric days the laboring men had no position at all. He was truly fodder for battles' maw.

AMONG THE HEBREWS

The typical despotism saw the favored few, the great nobles and their friends, in luxury, while underneath the broad base of the pyramid widened out to include the poorest classes in abject slavery. Hammurabi, who lived about 2000 B. C., encountered one of the first pioneers in labor movements in the person of Abraham, who fired his fellow shepherds to set out to the northwest toward Haran and seek the promised land on the hillsides of Canaan. The escape from Babylonian tyranny was later followed by that of the extraordinarily vain and selfish Egyptian, Rameses II, who sought to build his temples with his predatory wealth. Enslavement, labor without pay, constant war to recruit slaves and resources, were the order of the day. With the advent of Moses, he encountered opposition but the Egyptian despot countered the Jewish pleas by forcing the Jews to find their own straw for the bricks. It is not until the deliverance that Jewish life presents redeeming pictures with the practice of the Hebrew landowners in leaving the grain in the corners of the field uncut, the scattered gleanings which fell from the hands of the harvesters as well as the fruit that fell from the vines and trees. The most touching story in the Old Testament is built on that practice in the tale of Ruth, who was allowed to glean after the reapers on the barley fields of Boas of Bethlehem even though she was a foreigner.

But Hebraic annals are filled with the efforts of the prophets to alleviate the condition of the oppressed for the prophets were always on the side of the poor, and even the authors of Deuteronomy tried to shape their law to protect the poor. Even the famous 7-year imprisonment for debt was softened to include a provision that at the end of that 7 years the master must not send the debtor away empty-handed but must give him food and clothes to sustain him in his search for work. But then came the awful days as tenant farmers on the estates of Nebuchadrezzar as told in the prophetic book of Ezekiel. So, too, under the successive tyrannies of Greek and Roman rules the children of Israel understood the cruelties of the then ruling dynasts. It can be said that 600 years before the birth of Christ absolutism held sway, supported by the unchanging influence and potency of arms and religion.

THE GREEKS

The first and epochal rescue from these days of servitude came with Solon, the wisest man in all Athens and the most profound political genius of antiquity. He found the poorest classes exempt from direct taxes and in return, so to speak, were excluded from office. He gave these classes a voice in electing magistrates from the classes above them and the right to call them to account. In every way he put the law above all other masters for he said it is the essence of democracy to obey no master but the law.

When Greece sank later into the abyss of decadence it was rescued by a prototype of Solon, the great Pericles, who resolutely struck away all the props that still sustained the artificial preponderance of wealth. He sought to diffuse power for all so that there should be independence for labor, security for property, the protection of the rich against envy, and the poor against oppression. When he went, the corroding effect of unlimited power took its toll. It seemed hopeless until the Gracchi attempted to find a remedy for the masses of poorer families, brutalized, starved, and driven to desperation by the enforced war service. They were ruled over by an aristocracy of 2,000 men who had divided the domain of the state to themselves. The Gracchi asked for an allocation of some of that land but to no avail with the result that that refusal with kindred insults prepared the way for Julius Caesar and his unparalleled series of conquests.

FEUDALISM

Withal the poor man still suffered as authority was shifted from one dictator to another, from one form of oligarchy to another until even down to the days of feudalism progress in the amelioration of the rights and condition of man were small. Even feudalism introduced a new form of master—the feudal landlord. The masses of people had no other source of wealth than the produce of the soil and were dependent upon the landlord for an escape from starvation. The power of the feudal lord became paramount over the freedom of his subject and challenged even the state, and the poor man was still between the jaws of the vise.

THE CRUSADES

As a matter of fact, one of the most effective means of giving new hope to labor was the opening of the east by the Crusades, which stimulated industry. The workers came by the thousands from the country to the town, for men could find a way of living without dependence upon the class that owned the land. Power, slipping from the owners of immovable wealth, came to those possessors of movable wealth in the rapidly growing cities.

THE BLACK DEATH

But the rise of the city brought problems of concentrated population to rival the warlike depredations of the Jenghiz Khan, the most terrible scourge that ever afflicted the human race, and Tamerlane. The black death of 1347 roared into these terribly concentrated places and the ensuing pestilence left the indelible marks on the unsanitary, wretched, crowded homes of the poor. Twenty-five millions, it is said, paid the penalty to this awful calamity of peace.

STATUTE OF LABORERS

But in its wake came labor trouble of the most sizable proportions in history. The employer saw that the scarcity of laborers due to the plague would give labor the upper hand, so they repudiated their former agreements by legislation. In England, for example, by the Statute of Laborers (1351), which made it a misdemeanor for any unemployed laborer to refuse to work for the wages paid before the plague. The peasants revolted. Tumult, violence, sacking of cities, abbeys followed. When the end came, as is always the case with revolts, the peasants were scattered to four winds, with the leaders pitilessly put to death. But it caused the landlords to agree to the commutation into money payment or rents for the personal services of the serfs or laborers. That gain at least was salvaged.

VISION OF PIERS PLOWMAN

The Chaucers and the Langlands arose in this period, and we find critical exposés of life of the day, but it remained for the latter in Vision of Piers the Plowman to paint an immortal, soul-stirring picture of the unhappy plight of the poor and oppressed. The hungry, the labor-worn peasant was doomed to a life of weary routine and discouragement, beset with the effects of the black death, and worn out by the long wars with France. World history racing through discoveries, occupies itself more with armadas and wars of religion. But little by little there was forming the slow, unwieldy, cumbersome movement for the man in the ditch, the galleys, and in the fields.

THREE INVENTIONS

Still with dissatisfaction, unrest, complaint among the working classes, skepticism increasing among the more educated and those fiercely independent, three mechanical giants arose to change the course of history—the printing press, the use of gunpowder, and the mariner's compass. The lands of the West and the East veiled in supposedly eternal mists and whirlpools, beckoned for exploration, and the ones who were not chained to the soil had their chance, but in the end it meant little at that time at home for the ill-clad, the ill-housed, and ill-nourished. While it produced a treacherous Pizarro here and there it did, however, lay the groundwork for new outlets for the teeming millions of Europe stagnated and in chains. To the poor at home it still meant the long religious wars which occupy so many pages in histories with the Treaties of Westphalia and of Utrecht meaning little to the underdog, who only thought of his worse plight after the long years of wars and disordered finance.

THE PREOCCUPATIONS OF HISTORY

Even as we recall our history we see the tens of pages dealing with warlike ambitions and religious polemics, with hardly a phrase or sentence for the rights of the bitter plight of the many. From the black death to the plague of London in 1665 disaster seems to be grinding down the submerged, inarticulate millions, and even the formal legal battles of habeas corpus, Bill of Rights, and even the Magna Carta seem remote from man's search for food and shelter.

LOUIS XIV

Men of elemental passions and offices like Peter the Great, who made a nation out of Russia by obtaining access to the sea, only accentuate the curse of irresponsible power. Even the so-called lofty nations had seemingly moments of forgetfulness when England secured by treaty from the French the sole, exclusive monopolistic right to ship annually 4,800 slaves to the Spanish colonies in America. It was not until the uncivilized plight of the French people tore the mask from their lives that the world was awakened to the personal element. When Louis XIV was told of the terrible plight of his people because of the burden of taxation, his reply to his marshal, Vauban, was an increase in the type and incidence of those taxes. The French people starved on grass, say the historians, and Fenelon said that France was one enormous hospital, and in a single generation 6,000,000 people died of want. But from these days of dire distress came the philosophers—Montesquieu, Voltaire, Rosseau, Didderto, and D'Alembert—obtaining public hearings and seeking to alleviate the hard lot of the many. Those thoughts for which the world had erected scaffolds were not accorded altars. The man in the street was getting places, but at a frightful cost. Still before him was the Napoleon regime, in all its terrors.

COMPROMISE AND CONCILIATION

But still the vast numbers of people had little say or influence. Why, in the English Revolution of 1688, for example, but 200,000 of the 5,000,000 people had a vote, and these voters were of the upper class. Yet in England the excesses of the French Revolution taught the omnipotent lesson of English history—the power of compromise and conciliation. England did it with reform bills and an increase in the franchise. What caused revolutions and nihilism in other countries was met by the English with concessions, and those compromises were epochal events in the rise of labor.

THE VICTORIANS

A great English churchman urged William Gladstone to relax the laws of landed property, as the poor law, which had saved England for a century, had fallen down. What were the four cardinal principles of the great prelate's plea to the most liberal of Victorian giants? They were—

1. Prohibit the labor of children under a certain age.
2. Compel the payment of wages in money.
3. Regulate the number of dwellings according to the population of parishes.
4. Establish tribunals of arbitration in countries for settlement of questions between labor and land.

These were not the creed of a modern labor leader or of a radical party of 1937 but of the Archbishop of Westminster, the son of a governor of the Bank of England in the Victorian seventies. A little later he was claiming "for labor and the skill which is always acquired by labor the rights of capital." He said, "It is capital in its truest sense."

COLLECTIVE BARGAINING

This progressive English prelate was a friend of Henry George, of W. T. Stead, the most forceful journalist of his day. That austere churchman, gifted beyond living men with the capacity for organization, became one of the most dynamic social-work reformers of his day. He fought for the dockers in their struggle to emerge from vassalage. He wrote to Tom Mann, one of the most powerful English leaders, that "the public authorities ought to find work for those who want work or relief for those who cannot. Why is a house called a workhouse?" he asked. "Because it is for those who cannot work." He formed the gasworkers' union. He said the bedrock of his principles was the right of unorganized and defenseless workers to organize for their self-defense and the right of every worker to a living wage.

STRIKEBREAKERS

He deplored the bringing in of men to fill the place of strikers as inviting bloodshed and bitterness for 50,000 men at work replacing the 50,000 out of work on strike would have meant conflict. He understood better than any man living the restlessness and ignorance of the workers, yet he knew that in their desperation to stay at work on the docks, they stained their graying hair lest they be turned off as old men. Everyone of these thoughts and efforts is the story of 50 years ago.

THE PURPOSE OF LABOR HISTORY

The great object in trying to understand this labor history is to get behind the men and to grasp their ideas. Ideas have a radiation and development, an ancestry and posterity of their own, in which men play the part of godfathers and godmothers more than that of legitimate parents. We want more than the picturesque scenery of the historians of sense. The false habit of dwelling on appearances, not on realities; of preferring the report of the bullet and the echo to the report.

LABOR'S FIGHT IN AMERICA

Significantly enough one of the most telling as well as one of the most indirect tributes to the rights of the masses of laborers who were virtually unrepresented in our colonial legislature and even in our Constitutional Convention, was the naming of Thomas Jefferson to write the Declaration of Independence. He had the only appeal to the cultivators of the soil.

JEFFERSON'S DEMOCRACY

Jefferson had set a fitting example in his own home State by fighting for and obtaining the abolition of the rights of primogeniture and entail, and thus the preservation of large landed estates was made increasingly difficult. In this particular era, with the distribution of the large Tory estates of the Pepperells, Phillipses, Penns, and Fairfax families, the common man had an excellent chance for securing his parcel of land. With the impoverishment due to military service and the absence of work this was a real chance. Jefferson gave it real impetus.

MODERN CONGRESSIONAL SUCCESSES

However, it was in the Fifty-ninth Congress that the first modern attempt to limit hours succeeded. That was the successful fight to obtain a maximum of 17 consecutive hours as a proper limit for the labor of railroad employees—but the reason was not the welfare of the workers but the safety of the passengers. That was in 1907, and that was the session in which Senator Albert J. Beveridge shocked his Republican colleagues with his progressive crusades for placement of meat-inspection costs on the packers and the dating of cans and his never-to-be-forgotten 4-day speech on child labor statistically bulwarked and eloquently delivered.

He shouted at the die-hards, "Does the Senate find that amusing—a girl going a mile or more across a wind-swept valley to begin work at half past 6 at night, and working until 6 in the morning for 3 cents an hour?" It was a voice crying in a congressional wilderness. An endeavor also to limit the use of injunctions in labor disputes was utterly overthrown as was the attempt to legalize the boycott by exempting labor unions from the operation of the Sherman antitrust laws.

REPUBLICAN INSURGENCY

The insurgency of the Republican liberals was on, and it numbered in this Congress in the Senate La Follette, Beveridge, Dolliver, Cummins, Bristow, and Clapp. They matched the powerful Aldrich machine in oratory and debate and parliamentary maneuvers but victory was always on the side of the heavier battalions.

LA FOLLETTE

In the Sixty-first Congress La Follette attempted to cut down the existing 17 legal hours of consecutive labor on

railroads to 14 but he failed. Nothing of a liberal nature came out of these efforts except a fertilization of minds for the progressive thought of Wilsonian Democracy which was really rendered still-born and almost abortifacient by the impact of the World War. However in the midst of all the martial legislation Senator La Follette did get legislation curing the slavery of the forecastle and making ship's officers amenable to the law. War emergency was properly responsible for the easy transit of the Adamson law establishing the 8-hour day for railroad employees especially with the threat of a strike. The Keating-Owens Act legislating against the use of any products of child labor in interstate labor commerce is significant though legal or judicial emasculation took its toll here.

THE TWILIGHT OF LABOR IN POSTWAR DAYS

The World Court, multilateral treaties, prohibition, scandals, Harding normalcy, Coolidge placidity, and stock-market lunacy filled the legislative picture in a nation of seeming prosperity that proved an opiate of delusion.

THE CRASHING DENOUEMENT

Then came the dawn, and labor and capital awoke to find the entire structure tumbling down on their heads; or was it a dream? It was no dream to see the unending lines of unemployed men, the stark idle plants, the gripping fear of chaos in banking circles, the proud denizens of the stock exchange humbled and bewildered, and the entire country in the clutches of panic and terror.

OUR INHERITANCE

The needs that rushed President Roosevelt into office in 1933 were based on the tremendous discrepancy which had grown up between agriculture and industry; the intolerable disproportion of incomes between the consuming and investing classes and the haphazard brutal organization or absence of it in industry; a mistaken outmoded tariff system, a vicious policy of foreign loans, and an uncontrolled credit system, which saw the emergence of the comet-like increases in checks and instalment buying, all side by side with maladjustments in transportation, public utilities, and even in the Government itself.

PERVERTED CORPORATE SURPLUSES

Enormous corporate surpluses were used in those days not to be saved for expected rainy seasons but were dumped into new and unnecessary plant expansions, into the call-money market of Wall Street, and gigantic stock bonanzas that defied reason and reasonable returns.

CHAOS

It was felt at that time that the enormous waste in our industrial system could not go on forever, with its unnecessary duplication of productive facilities; the urge for newer and more up-to-date structures, with the consequent scrapping of still useful equipment and structures—the dead-end trails from which neither industry nor labor could extricate themselves and the profligate wasting of our natural resources.

NEW DEAL LABOR HIGH LIGHTS

Labor has truly been benefited by the legislation that has come from our New Deal Congresses and their predecessor, the democratically controlled Seventy-second Congress. It was these sessions that put through the Norris-LaGuardia Act prohibiting the use of "yellow dog" contracts by employers and limiting the use of Federal injunctions in labor disputes by prescribing that they must be preceded by public hearings. From them came the N. R. A., which embodied the noblest ideals of fair treatment in all history—the spreading of work among the adult unemployed through the elimination of child labor, radical reduction of working hours, increasing the purchasing power of the masses through the establishment of minimum wages, the stimulation of labor-union organizations, the abolition of unfair competition among businessmen. We obtained the prevailing wage provision in the relief appropriations, compulsory unemployment and old-age insurance, the Government contracts bill setting wage and hour standards for workers on governmental contracts, the Strikebreaker Act barring interstate transportation under heavy penalty of men brought in to interfere with peaceful picketing in labor disputes, the Air Transport Act making provisions of the Railway Act apply to air carriers' employees, the railroad bill for displaced employees—to mention a few apart from the preponderant number of all bills benefiting the country as well as labor.

PROOFS OF DISPARITY

No better evidence of the acceptance of the need of liberal legislation has ever been better penned than that of the editorial of David Lawrence in the United States Daily for this week.

On his feature editorial page, signed by himself, appear his thoughts on the adamant need for recognition of labor's right by intransigent capital. His page is headed by the caption "Toward the Middle," and in the bank we read, "Business should accept reasonable intervention by Government; manufacturers in their speeches last week asked for confidence and a removal of uncertainty, but did not themselves present a policy of realism in world trade or labor relations."

He asked if capital "Is to remain unyielding on the 100-percent rightness of their views that all who differ with them must surrender honestly held convictions as being valueless?" Will the businessmen ever learn that the right of unionization is unilateral and hence none of the employer's affair? He submits Editor Lawrence answers that question by implication in another proposal—Does anybody think a committee of workmen dealing directly with an employer is as effective as a committee whose component members do not have to fear loss of job or discrimination if they talk perhaps too vehemently to the boss?

It may be too much to hope that some such reversal of thought may be present at some future day over our present fair labor standards bill. Until that day you, my colleagues, must go forward as pioneers and we must avail ourselves of every tunnel through the mountains excavated by our predecessors.

Dedication of Post Office and Federal Building at Salem, Oreg.

EXTENSION OF REMARKS

OF

HON. NAN WOOD HONEYMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

ADDRESS OF THE HONORABLE JAMES A. FARLEY, POSTMASTER GENERAL, AT THE DEDICATION OF THE NEW POST OFFICE AND FEDERAL BUILDING, SALEM, OREG., OCTOBER 16, 1937

Mrs. HONEYMAN. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address of the Honorable James A. Farley, Postmaster General, at the dedication of the new post office and Federal building at Salem, Oreg.:

It is a genuine pleasure to come to Salem on a happy occasion of this kind, and I want you to know that I am most appreciative of the honor which you have bestowed upon me by inviting me here today for the purpose of participating with you in the dedication of your new Federal building.

The progressive and forward-looking policies which have long since been characteristic of the people in this section of the Pacific Northwest, and their high ideals of the purpose of government, have resulted in Oregon standing foremost in the fight for a new deal and a square deal for all the people. It is for this reason that in being in this enterprising city of Salem today, I feel that I am in the home of my friends.

In assembling here today for the purpose of dedicating this splendid new building, which is to be the home of the Federal Government in this city, we are marking another milestone in the civic and postal history of Salem. You have a civic heritage of which to be proud and as for your own post office, it ranks as one of the oldest in this section of the country, having been established as early as November 8, 1849, with J. B. McClane as the first postmaster.

While on the subject of your local postal history you might be interested in learning that postal service played a vital role in the early and romantic history of the old Oregon Territory. Postal service from away back in the days of the old Roman Empire has been one of the mightiest implements of human democracy and also in the development of states and nations in every corner of the globe. I doubt if anywhere in the history of this country postal service took a more conspicuous part in the development and expansion of a given area than it did here in the old Oregon Territory.

The problem of good postal service to the early settlers in this region was so important that an act of the old Territorial legislature was passed, creating a post office department and authorizing the appointment of a postmaster general for the Oregon Territory with full power and authority to conduct the movement of the mails as he saw fit throughout the Territory.

William G. T'Vault, editor of the old Oregon Spectator, the first newspaper published west of the Rocky Mountains, was named Postmaster General of the Territory. On February 5, 1846, in the first issue of the Spectator, Postmaster General T'Vault advertised for bids for carrying the mails once in 2 weeks on two routes. The Oregon Territory Post Office Department was doomed to failure, however, and a concerted public demand for the extension of the United States postal service in the Territory was made upon Congress. It was the settlers' memorials and other appeals to the National Legislature that caused Congress to insert in the act of 1850, which established numerous post roads in the United States, a clause authorizing the establishment of nine through post roads in this section of the Territory.

The mail service that was afforded those hardy pioneers of the old Oregon Territory less than a century ago, when the only mode of overland transportation was by pony express rider and stage coach, is in striking contrast to the many modern facilities which are provided in the Salem post office today.

This new Federal building which we are dedicating today is one of several hundred new post-office buildings that have been and are now being constructed throughout the country under the present administration's post-office building program. During the past 3 years Congress has provided funds for more than 1,400 new post-office buildings throughout the country. Eight hundred and forty-six of these buildings have been completed or are in the course of construction, and it is anticipated that the remaining projects will be placed under contract within the next few months. Every State, Territory, and insular possession shares in this vast building program, and I need not inform you of the tremendous impetus that this program of President Roosevelt has given to the building, heavy industries, and allied trades. It has resulted in thousands of men receiving employment, both at the site of construction and in the production of the raw materials that have been used in the buildings.

This particular project was authorized under the act of Congress of August 12, 1935, at which time $265,000 was allotted for the acquisition of a site and construction of this new Federal building here in Salem. On December 2, 1936, this amount was increased by $45,000, making a total of $310,000 available for consummation of the project.

This new building will result in the residents of this community receiving better mail service than they have had at any time in the past because of the enlarged and improved facilities, while at the same time it provides ideal working conditions for those public servants who work within its walls.

On arriving in Oregon it was pleasing to find that this State is enjoying a substantial measure of prosperity and that there is noticeable a fine spirit of optimism and courage whenever the future is discussed. The same tale can be told of every State in the Union. This country is moving forward once again, and the people have little time and less patience with those who like to dispute the evidences of their own senses. To those of you who recognize facts when you see them the reason for this present encouraging state of affairs is obvious. This country is doing well under the administration of President Roosevelt, who has handled the most trying problems with rare skill and understanding, and I know that the people of Oregon are grateful to him for the magnificent way in which he has fulfilled the promises made 5 years ago. You had faith in him then. You emphasized that faith last year, and we all know that your confidence in him is as great today as it was then.

The purpose of government, and its only legitimate purpose, is to maintain and, if possible, increase the contentment and prosperity of citizens generally. The task for which the Roosevelt administration was originally placed in power was to halt the downward spiral of business, decrease unemployment, substitute hope for despair, and not only to get the wheels of industry moving again but to take such steps as might be necessary to prevent any future return of such complete economic collapse as we had from 1929 to 1933.

As I said before, the success of any administration is dependent on the kind of government that administration has given the people. If it has satisfied the people, the party in power is continued in power. If it has failed, the people put another party in power, as they did in 1932 after our predecessors had shown an incapacity to meet a grave emergency.

This new post-office building is only one of the many things on all sides that offers visible evidence of the many things that have been undertaken and accomplished by that great humanitarian who now occupies the White House, your President and mine, Franklin D. Roosevelt.

Today a citizen can put his savings in a bank with the absolute assurance that his money will be there when he wants it. That assurance is backed by the financial resources of the Federal Government itself. I have reference, of course, to the Federal Deposit Insurance Act, which was enacted into law as part of the President's New Deal program and which guarantees bank deposits up to $5,000, a guaranty that the depositor never before possessed. The history of the collapse of 1929 and the subsequent banking crisis is too recent for me to have to remind you what this means to the many millions of our citizens. Never again will this country see those long lines of panic-stricken people standing outside banks hoping that they can get to the withdrawal window before it closes for all time.

With the aid and backing of his Government, the wage earner is today providing for his future security with the greatest of all nightmares, a dependent old age, gone forever. Perhaps of even greater importance is the President's determination that what happened in 1929 and the resulting 4 years of economic chaos must never happen again. Overextension of credit for unbridled speculation, palming off of worthless stocks and bonds, whose chief value is the paper they are printed on, all these are being eliminated as rapidly as possible. The day of the financial racketeer is over.

There is no need for me to cover the whole list. Everybody knows the work of the Civilian Conservation Corps, which gave thousands of young men a chance to get off the street corners and engage in a far-reaching conservation program which will pay rich dividends, not only in this generation, but in the generations to come. The Federal Government came to the rescue of thousands of communities with money for public improvements, already too long delayed. Thousands upon thousands of farms and homes have been saved through the intervention of the Government, and tremendous strides have been made by President Roosevelt and his administration in the fight against soil erosion and floods.

Thanks to President Roosevelt, the time is coming when the fact that this is the finest country in the world will really mean that to all and not to the privileged few.

He has brought this country through the greatest economic crisis in its history. Future generations will appreciate his greatness, even more than we do today, and the people of Salem will regard this useful and worthy addition to your institutions as a memorial to the wisdom, the humanity, and the farsighted public interest of Franklin D. Roosevelt.

A great deal is being said these days about Government in business. It is quite a controversial subject. Be that as it may, the United States Postal Service is the one business which is carried on by the Government with unanimous approval.

The Post Office Department is rendering a service which, although an indispensable governmental function, is paid for by the public in the same manner as you pay for services provided by private concerns, except, of course, that the Postal Service is not conducted for profit. While its primary purpose is the receipt, transportation, and delivery of the mails, it carries on other activities necessary to complete the regular functions of the mails, such as the registration and insurance of letters and parcels, and the c. o. d. facilities.

The Post Office Department wound up the fiscal year 1931 with a net postal deficit in round numbers of more than $98,000,000; the fiscal year 1932 ended with a net postal deficit of more than $152,000,000; and there was a net postal deficit in the fiscal year 1933 of more than $50,000,000. The deficit for 1933 was incurred notwithstanding that at the beginning of that year the postage rate on all first-class matter was raised from 2 to 3 cents, which increased the revenues of the Department approximately $75,000,000. The present administration assumed office in March 1933, 4 months before the end of that fiscal year and too late to exercise any marked effect on the finances of the Department for that year.

The fiscal year 1934 was the first full year of operation under this administration. At the beginning of that year the postage rate on local first-class matter was reduced from 3 to 2 cents. This reduction resulted in an annual loss of more than $20,000,000 in revenue. With postage receipts for the year $900,000 below the receipts for the previous year, the Department showed a net postal surplus of more than $12,000,000.

The fiscal year 1935 was ended with a net postal surplus of approximately $5,000,000.

The 40-hour-week law and the transfer of the custody of post-office buildings from the Treasury Department to the Post Office Department brought an increase in expenditures of $60,000,000 during the fiscal year 1936. Notwithstanding, the year ended with a net postal deficit of less than $17,000,000.

The latest financial reports of the Department, which I now have on my desk in Washington, indicate that for the fiscal year 1937 another net postal surplus will be shown.

Some critics have pointed out that while surpluses were shown for the fiscal years 1934 and 1935, the Department drew substantial sums from the Treasury to meet expenses in those years. In this connection, let me remind you that large sums were also drawn from the Treasury during the fiscal years 1931, 1932, and 1933, and that these sums, like those drawn from the Treasury during the fiscal years of this administration, were to cover the cost of services rendered by the Department free under the law, or at less than cost, or to pay aviation and merchant marine subsidies which the law required to be paid through the Post Office Department.

It was after taking credit for such so-called nonpostal items that the previous administration showed deficits ranging from

$50,000,000 to $152,000,000 a year, and it was after taking credit for such items that this administration has shown annual surpluses, with the exception of the fiscal year 1936, when the 40-hour-week law and the transfer of the custody of post-office buildings from the Treasury Department added $60,000,000 a year to the Department's expenses.

It has been a source of pleasure to have been able to participate in these ceremonies with the citizens of Salem. In making use of the modern postal facilities which will be found in this new building, may I express the hope that you will find every happiness and success.

Wage and Hour Legislation

EXTENSION OF REMARKS
OF
HON. DONALD L. O'TOOLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, December 17, 1937

Mr. O'TOOLE. Mr. Speaker, the wage and hour bill now being considered by this House is to my mind the most important piece of social legislation in the program of our great President. For over 100 years the laboring people of our country have in many instances been persecuted and kept in almost a condition of servitude by grasping, greedy, and conscienceless tycoons of industry. The manner in which many of these individuals have treated their employees both as to wages and to the number of hours they compelled them to work would put Simon Legree to shame.

You have heard, during the course of the debate of this bill, instances where people are compelled to work as much as 100 hours a week for a paltry five or six dollars. These were not figments of the imaginations of the Members of this House, because the accusations were accompanied by records from various State departments of labor, plus records from some of the employers themselves.

In the great city of New York, from which I was elected, there are hundreds of thousands of unfortunate human beings who are earning less than $16 a week despite the fact that the standard of living in this metropolis is the highest of any city in the world. These people are compelled, due to their low earning power, to live in tenements that are not fit for human habitation. Likewise, they are compelled to limit their diet to food which is often harmful to their physical well-being. This condition exists not only in the city of New York, but is prevalent throughout the entire breadth of these United States.

How often in the last few days have we heard of sharecroppers, poor whites, and the many other classes who are compelled under the present economic system to live in almost degradation because of the fact that they are underpaid for the work that they do.

Gentlemen, this is the first Congress that has ever had the honesty and the courage to face this terrific problem which is a blot on the escutcheon of the most prosperous nation on the earth. Since we have had the courage to face the question, let us not do things halfway. Let us give to these people a wage and hour bill that will be substantial. Let us set a minimum wage that will make it possible for them to live in better homes, to eat more substantial foods, to clothe themselves fittingly, and to educate their children.

My thought is that many of the Members of this House who were opposed to this bill were opposed to it because of the fact that they have among either their clients or their set of social acquaintances mill owners and other exploiters of labor. If such is the case, to these men I now address myself and I beg them, in the name of this country and in the name of its people, to please cast all personal reasons aside and support this bill so that hundreds and thousands of children who are in this country may have the same opportunity to advance educationally, socially, and morally that they have had. Let us pay these people a wage that will make it possible to live in the homes that we are building under the great housing plan of our President. Let us raise the standards of this bill from 40 to 50 cents an hour and America will not only soon be out of the depression due to the greater spending power of its people, but will also see the greatest days of prosperity that the Nation has ever known.

I, therefore, ask you to vote for my amendment increasing the terms of this bill from 40 to 50 cents per hour.

A Year in Congress

EXTENSION OF REMARKS
OF
HON. EDWARD L. O'NEILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, December 18, 1937

RADIO ADDRESS OF HON. EDWARD L. O'NEILL, OF NEW JERSEY, DECEMBER 18

Mr. O'NEILL of New Jersey. Mr. Speaker, under leave to extend my remarks I include a radio address which I will deliver tonight over the network of the Mutual Broadcasting System:

Ladies and gentlemen, I have long felt that those who are the Nation's representatives could more thoroughly sound the attitude and opinions of the people they represent by holding in their districts, at periodic intervals, forum meetings to which all registered voters might be invited. Having announced my intention to try such a method of contact, I engaged for tonight the auditorium of the East Orange (N. J.) High School, but due to the work demanded by the special session of Congress it has become necessary to postpone the meeting until a date in February or March.

Through the courtesy of station WOL of Washington and WOR and L. Bamberger & Co., of Newark, N. J., for which courtesy I give my appreciation, I am able instead to speak from the Nation's Capital to the people of the Eleventh New Jersey District, whom it is my honor to represent in the Seventy-fifth Congress and submit in somewhat limited measure a report on the year in Congress. In a few days the Seventy-fifth Congress will adjourn its second, an extraordinary session called by the President of the United States for the purpose of considering certain emergent conditions.

PRESIDENT'S MESSAGE

The four most important points in the President's message are those which I will discuss tonight—taxes, wage and hour legislation, housing, and agricultural relief. They affect every person in the Nation. They are particularly appropriate, relating as they do to a general condition which becomes increasingly apparent every day. Now, those who will be critical of my thoughts tonight should know first that I am too young to be reactionary in the political sense of the word and that I am conservative only insofar as it can apply to a desire to hold fast to the great traditions of a great Nation, giving every opportunity possible for a finer, more decent living for the great numbers of the people. They should know that I believe in and advocate the widest possible civil liberty under the law.

CIVIL LIBERTIES

During the last 2 weeks two members of the President's Cabinet have spoken on fascism and civil liberties. I was glad to read their speeches and glad they said what they did. I think that we are all against fascism, but fascism is not the only form of state we must be concerned about.

Now if Spain wants Franco, Spain may have him. If Spain wants the Reds let Spain take the Reds, or the Reds take Spain. If the Germans are happy under Hitler—and I doubt it—they may keep him. If Russia feels that she is democratic now that Stalin has permitted an election, that's Russia's business. But when the smoothly cunning apostles of any of them come here to expound their subversive alien theories and to agitate civil unrest, it becomes your business and mine and make no mistake about it—they are here! They have their champions and spokesmen in high places and their battle plan is the "liberation of American democracy." Let me ask, ladies and gentlemen, where else in all the world are people so free of their Government as we are? Why then do we permit in our midst the organization and functioning of groups designed, under the cloak of advocates of civil liberty, to change and overthrow our form of Government.

"FOR A SOVIET AMERICA"

Recently in the city of New York the Communist Party held a convention. Banners strung about Madison Square Garden carried the slogan, "For a Soviet America." Three thousand men rose and with clenched fists upraised cried, "For a Soviet America." Do we—indeed do they who are not its leaders—know what it means? Closely allied with the Communist Party is a high-sounding "League Against War and Fascism." Now just being Amer-

ican—a real American I mean—presupposes that one is against war and fascism and the interesting thing about this organization is that it has never issued any pronouncement against another menace to Democratic Government—soviet fascism.

If this so-called League Against War and Fascism would change its name to the "League Against War and Civil War, Fascism, and Communism," that would be something, but that could not be, for that would mean a break in their united front. We will concede that communism is against war and fascism, but communism is not against civil war because out of civil war emerges the soviet form of fascism. For that we need look only upon the desecrated and torn land of Spain in her present sorrow because she did not see. Why, too, do we permit another flank in this united front to collect money here to prolong the strife in Spain? They are high-sounding, too, "The Friends of Spanish Democracy." Now, no matter which side wins in Spain, Spain will not know democracy, and a recent report by the Federal Government indicates that but a small percentage of the money solicited found its way to Spain. The rest was spent, and is being spent, here to spread the propaganda of the Soviet State.

LABOR'S FALSE FRIENDS

These organizations would make it appear that they carry labor's banner, and when labor finally realizes that they are but false and expedient friends and casts them out labor will make more progress by doing so than since the first workers guild of centuries ago until now. We must remember that our rights of free speech, free press, and assemblage are recognized by our Government, which itself is derived from the people; and all must understand, and those who do not must be taught, that liberty implies obedience to legitimate authority. Now, my friends, it is a fact well known that no Communist or "red," no agitator of any label, will make a convert of a contented, propertied worker. There are conditions and facts which must be recognized, not only by labor but by capital as well. If our form of society is to go on as we know and cherish it, then capital must cure the cause of social unrest, and the cure is a fair wage under decent working conditions, and the wage contract should as soon as possible be modified so that the worker will have a share in the profits, management, and ownership of industry. There are two extreme errors concerning profits—one is the liberalist error that capital is entitled to all of the profits; the other is the Marxist error that labor is entitled to all of the profits. In between is the golden mean that since both capital and labor share in the production of wealth each should share to some extent in the profits.

LIBERTY NOT UNBOUNDED LICENSE

Just as labor must not believe its antilaw and order leaders who teach that liberty is unbounded license, so must the employer know that capitalism has its responsibilities to the hands that produce the Nation's wealth. No workman will ever sit down on his machine if he knows that he can derive from working the machine a fair and decent wage. Capital and labor each has its responsibilities to the other, and the Government, derived of both, should be the protector of both.

For the purpose of enabling and extending that protection to industry, labor, and the whole Nation, the special session was called. The legislative items I mentioned in my opening each have a bearing on the well-being and security of the Nation. I am glad to recall an interview by a member of the staff of the New York Times, which appeared in that newspaper on Sunday, October 4, 1936, before my election to Congress, in which I stated my opposition to the capital-gains and undistributed-profits taxes. Both are inequitable and unjust and should be repealed or revised. The undistributed-profits tax destroys reserves necessary for expansion of plant and pay rolls. Feeling that action toward this end during the present session would have a most beneficial effect upon business and employment, I joined in an effort to require immediate consideration, but the urgency of other legislation and the long debates on the farm and wage-and-hours bills prevented it. It is reasonably certain that they will be acted upon shortly after the opening of the session on January 3.

During the special session a bill was passed to formulate a program for the farmers. After listening to the debate on the bill for nearly 2 weeks I cast my vote against the passage of the agricultural bill. The theme of this legislation is the philosophy of scarcity all over again. Under it the Government will pay certain considerations to the farmer for planting only so much of a given commodity in so much of the acreage of his farm. He may devote the acreage taken out of any commodity to grow certain other commodities but not other alternatives. He will have to plow with a lawbook in his hands.

In our cities this winter perhaps none will starve, but certainly many are going to be hungry. Many will not have sufficient with which to clothe themselves, and I am thinking how well could be used any surplus of food or cotton. Perhaps no single one of us knows the solution. But solution there must be, and it would seem the approach is not by way of the problem of so-called overproduction but to meet the problem of distribution. The principle is morally wrong and on that basis in my opinion cannot be either politically or economically right. I hope that it will be possible to balance the Budget and if it can be done without further injuring the least fortunate of the country I shall vote for it. But I do not feel that I will be able to subscribe to any program of curtailment that will involve further reductions in Government relief or W. P. A. activities unless private industry resumes and accelerates the absorption of the unemployed. It is my hope that the present major effort of the administration to lessen unemployment in the bulding trades, and provide employment for hundreds of thousands of others, will be enacted before the adjournment of the special session—the liberalizing amendments to the National Housing Act. The amendments make it possible for one to buy or build a home with 10 percent of the total cost as a down payment. Two million low-cost homes are needed in America. The broadening of the opportunity under the F. H. A. should put a real dent in that number. The Seventy-fifth Congress passed legislation to eradicate slum conditions and make possible the erection of decent, livable homes in their stead, and, realizing that a measure of emergency still exists for many who found it necessary to turn to the Federal Government through the Home Owners' Loan Corporation, steps are being taken to enact legislation reducing the interest obligation and extending the period of amortization.

The fourth point in the President's message is wage and hour legislation, the principle of which I have earnestly and vigorously supported. Passed by the Senate during the first session, an amendment was substituted in the House, and last night, after a week of debate that was no little of the time acrimonious, the substitute bill was recommitted to the House Committee on Labor. I voted to send the bill back to committee. The principle of the bill was sound—a minimum wage of $16 a week. If the provisions of the amended bill could have been invoked to put manufacturers in other sections of the country on a comparable basis of competition with the industries in my State, I would have voted for its passage; but for material improvement for worker and employer in the industrial sections of the East the bill held no promise. A wage bill allowing no differentials—the right to make exceptions sectionally and otherwise—should be written. Employers and employees in my district have both indicated their opposition to the terms of the bill, and with the pulling and tearing of a divided house of labor the common interest of labor and industry could not be served. Considering the gravity of the situation as a result of the sinking of one of our naval vessels in Chinese waters, those of us who are not charged with the responsibility of conducting the country's foreign affairs may well leave the supervision of policy and subsequent action to the President and to the Department of State. I had intended to discuss with you tonight the neutrality law, but for this reason I have omitted any observations on it.

I wish that the time would enable me to review the work of Congress in greater detail. You will observe, I am sure, how closely intertwined with your daily life is the Nation's legislation. What your Representative is doing should at all times command your lively interest—for your interest and in the interest of honest, representative government.

One of the privileges of Members of Congress is the designation of cadets and midshipmen. Tonight I wish to announce the designation of Russell J. Cooper, Jr., of East Orange, to West Point, and John P. Breslin, of Orange, to Annapolis. I congratulate them and hope that they will fulfill the never modest hopes of their parents and that they will serve their country well and faithfully.

It is nearly Christmas and I hope that the holy season will bring blessings to all of you. Let it be that those of our fellow citizens who celebrate their solemn religious feasts at other seasons of the year share now in our joys.

My first year in the Congress as your Representative has been a busy, happy one. Many thanks to those of you who made it possible for me to have the great honor of being your voice in the Nation. To all of you—a Happy Christmas and an abundant New Year.

Thank you and good night.

California's Interest in Foreign Trade

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. BUCK. Mr. Speaker, a copy of the annual report of the general manager of the California Fruit Exchange came into my hands the other day. I was particularly interested in the information given therein, showing that a remarkable increase in the volume of export shipments of California deciduous fruits had taken place during the shipping season just ended.

These exports, which extend all over the world, amounted to 1,337 carloads, an increase of 237 carloads over the year 1936, or an increase of over 21 percent. The f. o. b. value of this fruit in California amounted to $1,467,580. A vigorous sales campaign is now being conducted in important markets

of the world, with the design of making the name of California fruits a byword in foreign markets.

Since much of this increase had occurred in countries with which the United States had entered into reciprocal-trade agreements where tariff concessions had been given us on these products, I concluded that it would be of some interest to examine more fully into California's stake in foreign trade. As a result of this examination, it has become apparent to me that my State has an even greater interest in foreign trade than I had previously understood.

It developed that approximately one-fourth of the workers of the State gain their livelihood directly from producing articles sold abroad. Many other workers and businessmen are dependent on imported raw materials. Tin, for example, used in the tin-can industry, whose output in 1935 was valued at $44,305,000, is one of the essential imports utilized in California industry.

A third large group includes those engaged in transportation, shipping, port work, banking, financing, and other services which add time and place utility to both exported and imported products. These services constitute the connecting link between all groups of interests—producers, exporters, importers, and consumers. Finally, every citizen of California is interested in the peace aspects of liberal trade between nations.

IMPORTANCE OF EXPORTS TO CALIFORNIA

That California's prosperity and well-being are closely identified with foreign trade is not a subject for debate. This State has a vital interest in foreign commerce and consequently in the Government's trade-agreements program, which has for its purpose the modification of trade-strangling barriers. Through the negotiation of trade agreements with foreign countries the Government is providing a means for restoring the foreign trade of the United States as a whole, and California has a large investment dependent upon the success of this program. Because of its resources and geographical location California industries have been built upon the basis of exporting a comparatively large proportion of their production. From the early days California has had to look in two directions for the sale of her surplus products—to the eastern part of the United States and Europe and to the Far East. California was one of the greatest sufferers on account of trade barriers. It probably furnishes a larger percentage of more exported products than any other State. California producers of fresh, dried, and canned fruits in particular have seen the unfavorable effects of decreased foreign trade during the depression. In the past 2 years they have enjoyed a more normal level of export trade.

In the attempts of isolationists to minimize the importance of export trade it is frequently said that only a small percentage of the total production is exported. This may be true in a number of instances, particularly when the total production of the United States is included, but this over-all average conceals the importance of exports to a particular community or State. For example, figures show that about 26 percent of the production of canned sardines are exported from the United States. This represents a comparatively large proportion of domestic production, but 97 percent of the exported sardines are produced in California. In some instances, such as canned peaches and dried apricots, more than 99 percent of that portion exported from the United States originates in California. The whole economy of the State is built upon the necessity for exports. Past trade policies of the United States have not taken the true interest of California into proper consideration. The trade-agreements program, which, strangely enough, has not had the support of some members of the California delegation in Congress, is an attempt to gradually reverse the unfavorable policy so that the vital interests of the State may be safeguarded and promoted.

By means of mutually beneficial trade agreements with foreign countries, involving carefully considered adjustments of the American tariff on one hand and the reduction or removal of excessive foreign tariffs and trade barriers on the other, the Government is expanding foreign markets for both agricultural and industrial products. In every one of the 16 trade agreements, concessions have been obtained which are of direct benefit to California agriculture and industry. Furthermore, the people of this State are sharing the general economic improvement which may, to an important extent, be attributed to the stimulation of foreign markets for American agricultural and industrial products.

California produces by far the greater part of our commercial crops of apricots, artichokes, and olives; is the leading producer of asparagus, carrots, lettuce, avocados, cantaloupes, oranges, lemons, dates, figs, grapes, peaches, plums, and prunes; and is a principal producer of apples, grapefruit, strawberries, watermelons, celery, onions, potatoes, and tomatoes.

In the industrial field, petroleum products, agricultural, electrical, and other machinery, and motor vehicles, aircraft, and films are among important products of which California exports substantial quantities. California ranks third among petroleum-producing States; and refined petroleum products, together with crude petroleum, comprise the State's most important export. Valued at $138,491,000 in 1929, California's exports of crude petroleum and refined products decreased by 56 percent to $60,136,000 in 1932. Concessions have been obtained in a number of agreements on a relatively wide range of petroleum products.

There are those who desire to know something of the results of the program in terms of trade. The trade results of the program show an appreciably expanded volume of foreign trade in both directions. Exports of the United States have increased at a greater rate to the trade-agreement countries than to nonagreement countries. This is a practical test of the program which cannot well be dismissed.

During the first three quarters of 1937 exports to trade-agreement countries increased by 44.5 percent over a similar period of 1936; exports to the nonagreement countries increased by 33 percent. Imports from the trade-agreement countries for the first 9 months of 1937 increased by 27.4 percent over the corresponding period of 1936; imports from nonagreement countries increased by 44.4 percent. The greater relative increase in imports from nonagreement countries clearly indicates that the United States is not being flooded by imports as a result of trade agreements. This greater increase from nonagreement countries largely represents imports of raw materials, such as tin and vegetable oils, which keep the wheels of industry going in California and elsewhere.

The two currents of trade with agreement countries have been running somewhat parallel, with an increase in exports to those countries of $276,824,000, and imports from them of $202,933,000 for the first three quarters of 1937, over the corresponding period of 1936. This is the best tangible record of the results of trade agreements now available.

So much for the general picture. There may be those who want to know just how California has specifically benefited from the expanded trade. Fortunately there are some figures available which indicate rather definitely that California has been the beneficiary of some of these agreements in terms of specific increases of exports. The specific information given below does not purport to be the complete and full picture of the results of trade agreements, but is meant to furnish some illustrations.

In volume of trade and concessions obtained, the Canadian agreement was probably the most important agreement to the State of California. In the fiscal year 1929–30, the United States shipped to Canada $28,000,000 worth of fresh fruits and vegetables, but owing to drastic tariff increases adopted by both countries in 1930, this trade had shrunk to $11,000,000 in 1933–34. As a result of the Canadian trade agreement, the Canadian duties on fresh vegetables were generally cut in half, or from 30 to 15 percent ad valorem, while duties on fresh fruits were generally reduced by 25 percent. These lowered Canadian duties have greatly enlarged the market opportunities for California producers.

Encouraging increases in exports of products such as are produced and exported from California to Canada and other countries are indicated below.

United States exports to Canada (among those on which Canada reduced duties)

	Preagreement year 1935	First agreement year 1936
Oranges	$1,770,000	$2,066,000
Grapefruit	776,000	1,055,000
Grapes	627,000	903,000
Peaches	281,000	423,000
Pears	401,000	549,000
Plums and prunes	162,000	302,000
Nuts	443,000	771,000
Lettuce	450,000	665,000
Tomatoes	293,000	537,000

United States exports to Cuba (among those on which Cuba reduced duties)

	Preagreement year (September 1933 to August 1934)	First agreement year (September 1934 to August 1935)	Second agreement year (September 1935 to August 1936)
Milled rice	$2,000	$978,000	$843,000
Canned peaches, pears, etc	38,000	113,000	145,000
Canned sardines	71,000	128,000	231,000
Unexposed films and photographic paper	92,000	192,000	162,000
Radio apparatus	402,000	790,000	989,000

United States exports to France (among those on which France reduced duties or enlarged quotas)

	Preagreement year (July 1935–June 1936)	First agreement year (July 1936–June 1937)
Borax	$120,000	$206,000
Dried raisins	352,000	456,000
Dried prunes	2,324,000	2,710,000
Conserved fish (canned salmon)	3,000	166,000
Oranges	779,000	1,195,000

United States exports to Belgium (on which Belgium reduced duties)

	Preagreement year (May 1934–April 1935)	First agreement year (May 1935–April 1936)
Dried apricots	$120,000	$176,000
Fresh pears	71,000	127,000
Prunes	308,000	327,000
Canned fruits	144,000	194,000

IMPORTANCE TO CALIFORNIA OF IMPORTED RAW MATERIALS

The significance of import trade to the United States, and to California in particular, cannot be gaged merely by the value or volume figures standing alone. The ramifications of the movement must be studied in relation to industries which may or may not participate directly in foreign trade. The entry of crude materials or semimanufactured products for use in manufacturing branches of many domestic industries is often essential to their very existence. A point worth emphasizing is the fact that the ability of foreign producers to dispose of their raw materials enables those countries to purchase California products. Short-sighted "buy national" propaganda would, if really effective in this country and in foreign countries, destroy mutually profitable foreign trade and play havoc with many domestic industries, particularly those in California. The larger the sales of certain raw materials to us, the more foreign countries will be able to buy such export products as fruits, films, borax, copper, oil products, machinery, automobiles, and many other typical American commodities in which the United States excels in production. Such exports are exchanged for tin (probably the most important single import to California industries), nickel, rubber, copra, silk, and other basic raw materials drawn from every continent of the world. These imported products keep the wheels of industry going in many important lines of production. Thus, the indiscriminate talk of imports depriving wage earners of their jobs has no basis in fact. Every import gives some employment. This side of trade is too often overlooked by critics of the trade-agreements program. For illustration, without the imports of tin at least a half dozen important California industries would close down and unemployment would immediately result.

In this connection it may be pertinent to consider for a moment some of the ramifications of the importation of this one raw material. As indicated above, the value of the products of the tin-can industry in California amounted to $44,305,000 in 1935. That volume of business in itself is of substantial importance to the State of California. Moreover, the use of preserved foods, largely made possible by tin containers, has had an incalculable effect in the diversification of our modern life. It has greatly facilitated the industrial development of the United States. Tin containers make it possible for the palatable and appetizing California products to be enjoyed at all seasons of the year in the most remote corners of the globe.

The value of canned and dried fruits and vegetables, juices, preserves, sauces, and so forth, alone amounted to the stupendous sum of $174,012,000 in 1935. In that year the California fruit and vegetable canning and drying industry employed, on an average, more than 30,000 people. A large proportion of these workers depend on exports as well as on imported tin for their existence. Add to this the production of canned fish, condensed and evaporated milk, meat packing to some extent, paints, pigments, and varnishes, petroleum products, and vegetable cooking oils and one begins to realize the ramifications of one single imported product.

Imported materials for the industries producing rubber tires and tubes, soaps, chemicals, electrical machinery, and others might be similarly treated.

SHIPPING AND RELATED INTERESTS

The important ports and the shipping industry of California, together with the banking and financing of foreign trade, have much to gain through any program which will increase the movement of goods in international trade. The United States is attempting to rebuild its merchant marine. To do this on a sound basis the transportation system must have in-bound as well as out-bound freight. Without traffic in both directions, sea voyages turn out to be losing ventures. With freight moving in only one direction the rates would have to be very high. The transportation of imports and exports provides employment for thousands of workers. The dock workers and others are not interested in imports as distinguished from exports. They are interested in handling cargo, which means employment. The carriage of import freight from the chief seaports is just as important to railroads as carrying products to those same seaports for exportation. The financing and insuring of such shipments give business to banks and insurance companies all over the United States.

Shipping and these allied activities constitute important California activities. Transportation has become a structure directly or indirectly affecting many elements of the State's economy, particularly in the major business communities. In 1929 exports and imports aggregating $649,000,000 passed through the customs districts of San Francisco and Los Angeles. By 1932 this trade had been reduced in value to approximately $234,000,000, and the consequent repercussions of this tremendous decline were felt throughout the State. Statistics indicate that by 1935 California's total foreign trade recovered to about $334,000,000, and there are indications that this has further increased since trade agreements have gone into effect.

OTHER BENEFITS OF EXPANDED FOREIGN COMMERCE

There is another side to this question of the importance of trade agreements to the State of California. Greater industrial activity is promoted by a sound commercial policy such as the trade-agreements program involves. There is a direct interrelationship between prosperity of any section

of the country and prosperity of the country as a whole. Thus California stands in a strategic position to gain from benefits of the trade agreements to other sections of the country. For example, increased exports of automobiles from Detroit, Mich., may well set in motion a series of economic activities which means a greater demand for California raw materials and a greater consumption of California fruits and vegetables in this industrial center.

In addition to the obvious material benefits of foreign commerce, there is another side that is of intense interest to us all. That is the importance of trade as an agent of peace. The President, in a message to the recent Foreign Trade Convention at Cleveland, Ohio, said:

> The importance of the trade-agreements program as a movement for peace perhaps transcends the importance of the material benefits to be gained from it.

Millions of workers throughout the world are dependent upon foreign markets for a livelihood. To cut off those markets is to cut off their means of existence. There has been too much gambling of this sort with the livelihood of millions during the last decade. Other millions, in order to earn a living, must have access to raw materials not produced in their own countries. International trade—by permitting an exchange of commodities, and by making raw materials available to all—is the surest guaranty yet devised to stay the madness of war—a disaster for all. The citizens of California have a large stake in any program devised to promote and maintain peace.

The New National Housing Act

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. SMITH of Washington. Mr. Speaker, I have actively supported and am voting for this legislation to liberalize and enlarge the scope of the National Housing Act of 1934, of which I was one of the original sponsors.

In his message to Congress of November 27, 1937, President Franklin D. Roosevelt said:

> As a practicable means of encouraging and facilitating a more effective operation of private enterprise and private capital in the housing field, I am suggesting enlargement of the framework of the National Housing Act in the light of actual experience. This legislation, enacted by the Congress in 1934, provided a new financial mechanism applicable to all types of lending institutions that make loans for housing purposes. Enabling legislation giving effect to this new mechanism was subsequently enacted by all the States. Within the limits of the types of housing to which it applies, it has proved to be both popular and practical.

This act will encourage institutions making housing loans by insuring mortgages up to 90 percent of the appraised value not in excess of $5,400, and up to 90 percent on first $6,000 plus 80 percent of balance up to $10,000, and will make it easier for the borrowers by requiring a down payment of only 10 percent and an over-all carrying charge of but 5 percent, thereby substantially reducing the cost of financing the construction of new homes.

Mr. Speaker, President Roosevelt has repeatedly stated that one-third of the American people are ill-housed, and it is estimated that we need 800,000 new homes a year for the next 5 years just to catch up on the Nation's actual housing shortage. Eight hundred thousand new homes at $4,000 each, the estimated cost, would mean a capital expenditure of $3,200,000,000 per year, or a total of $16,000,000,000 in the next 5 years, in order to provide 4,000,000 new homes during that period, which are sadly needed.

BENEFITS TO LABOR IN THE LUMBER INDUSTRY

It is estimated that 800,000 homes, at $4,000 each, would require 6,000,000,000 board feet of lumber and 120,000,000 man-hours of work for loggers, sawmill workers, salesmen, clerks, and others.

BENEFITS TO LABOR IN ALLIED INDUSTRIES

It is estimated that approximately one-third of the entire capital expenditure, or more than a billion dollars per year would be paid in wages to carpenters, plumbers, electricians, painters, bricklayers, and others who would be employed.

Building experts have estimated the items of building materials which would be required in the construction of 800,000 homes per year to be as follows:

Cubic yards of stone or gravel	22,400,000
Linear feet of molding	1,520,000,000
Square feet of insulation	1,816,000,000
Barrels of lime	4,800,000
Gallons of paint and varnish	27,200,000
Sets of locks	10,400,000
Window and sash frames	16,000,000
Electric switches	4,800,000
Wall plugs	19,200,000
Light fixtures	9,600,000
Bathtubs	800,000
Medicine cabinets	800,000
Kitchen stoves	800,000
Water heaters	800,000

Mr. Speaker, I have mentioned but a few of the scores of materials and articles necessary to housing and home building and which will furnish jobs and employment for people who will spend their wages in making purchases from merchants and storekeepers. This will result in depleting the store stocks of goods and merchandise and create new orders to manufacturers and factories so as to replenish the stocks, providing more jobs and the payment of more wages and that revolving process and turn-over of business which cause prosperity and good times.

Mr. Speaker, the housing program made possible by this legislation will constitute one of the greatest achievements of this administration.

Industrial Expansion

EXTENSION OF REMARKS

OF

HON. THOMAS R. AMLIE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

RADIO ADDRESS OF HON. THOMAS R. AMLIE, OF WISCONSIN

Mr. AMLIE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech which I delivered recently over the radio:

I shall talk to you briefly tonight about the industrial expansion bill introduced in Congress last June by Congressman ALLEN of Pennsylvania; MAVERICK, of Texas; VOORHIS, of California; and me. This bill seeks to set up the machinery for coordinated, Nation-wide industrial expansion, designed to raise our national income immediately from $65,000,000,000 a year to $95,000,000,000 or $100,000,000,000.

When the bill was introduced I said, "When the next depression strikes, the Government will have to assume a degree of control heretofore unknown in this country. When that time comes the key to the whole situation will be the power of the Federal Government."

I am not going to essay the role of a prophet and seek to predict the seriousness of the present business recession. We do know that in the past 3 months industrial activity has fallen off as much as it fell off in the first 18 months following October 1929. We do know that half the gains made by the New Deal since March 1933 have already been wiped out. We do know that from 2,000,000 to 2,500,000 men who had employment last summer will be unemployed at the end of this year. This in itself should be enough to make Americans think seriously about a national plan of industrial expansion.

During the past few weeks Congress has been considering the so-called farm bill. The principal purpose of this bill is to reduce cotton production by 40 percent. From studies made of the living standards of professional people in San Francisco and skilled workers in New York City we know that if all the American people were to buy mattresses, sheets, towels, underwear, shirts, work clothes, etc., to the same extent that these professional people

and skilled workers are in the habit of buying them, we could use the total average annual output of cotton that has been produced in this country during the past 10 years. In other words, we are producing not more cotton than the American people need but 40 percent more cotton than they are able to buy. Congress, however, is devoting its attention not to the problem of finding a way whereby the American people can buy the things that they need and can produce but, rather, to the problem of cutting production down to the level of the effective demand.

What is true of cotton is true of almost every other line of activity in the United States. The only difference is that the men who own and control industry can cut their production by 40 percent or more, without the help of the Government, while the cotton, wheat, and corn farmer can do it only with the aid of the Government. While the Republicans join with us Progressives in denouncing this philosophy of scarcity mongering, their program is to let the monopolies contrive a scarcity of what they have to sell, and let the producer of raw materials and the farmers produce an abundance at ruinous prices. Scarcity mongering may be economic insanity, but the program of destroying the producers of raw materials for the benefit of monopolists is nothing short of criminal.

But is there no choice between the Republican program, of letting nature take its course, which in this case means letting monopolists ruthlessly exploit the producers of raw materials, and the efforts of the New Deal to help these raw material producers by achieving monopolistic scarcity for them as well? We believe that there is an alternative. We believe that the instruments created by the New Deal to achieve scarcity can also be used to achieve abundance. The Industrial Expansion Act, as we see it, is merely New Dealism put on the track headed for abundance rather than scarcity.

In the Industrial Expansion Act we have tried to work out a program in which the power of the Federal Government is used, not to force production down but to force it up; to force it up not only in one industry but in all industries. What we propose to do in this bill is to take one of the instruments made familiar to us by the New Deal and used in the A. A. A., namely, the processing tax, and use it to force production up to capacity. A Nation-wide plan would first be formulated that would call for the output, in terms of goods and services, not of $65,000,000,000 or $70,000,000,000 a year but of $95,000,000,000 or $100,000,000,000 a year. Industry as a whole would be persuaded to step up its production.

The constitutionality of the National Labor Relations Act was recently upheld by the Supreme Court; like the National Labor Relations Act, the Industrial Expansion Act is based upon the power of Congress to regulate interstate commerce.

A processing tax similar to that used in the A. A. A. would be levied upon the value added to goods in the manufacturing process. But to the manufacturer who steps up production, who steps up employment, who meets required wage standards, who agrees to abide by a program designed to maintain a stable price level, the Government will refund this processing tax. This method worked in bringing 3,000,000 farmers into line with a national program; it ought to be possible to use the same instrument to bring 3,000 great corporations into line. Most of the 300,000 corporations in the United States are small; the great bulk of all manufacturing and industry is conducted by less than 3,000 corporations, and less than 200 corporations conduct a majority of all business.

It would, therefore, not be necessary to make the terms of the Industrial Expansion Act apply to every little retailer, pants presser, or member of the service trades. This, as we see it, was one of the great mistakes of the N. R. A. From the viewpoint of increasing the total industrial output, it will only be necessary to cover the larger and more important industries.

But the Government under this plan would do more than merely use its power to compel compliance with a national program designed to achieve optimum production. It would also go out of its way to cooperate with all units agreeing to go along with this program. It would enter into contracts with each cooperating industrial unit. It would agree to take over at cost a part of the total output if it should prove to be unsalable. But it is a question whether this arrangement would be necessary. If, let us say, a manufacturer now makes 65,000 suits of clothes, while the national income is approximately $65,000,000,000, he would be just as safe in making 100,000 suits of clothes if he knew that, by stepping up production all along the line, the national income would be $100,000,000,000.

Let us assume, however, that it would become necessary for the Government, under this guaranty arrangement, to take over a substantial part of the total factory output. At the most, it would probably not exceed 1 or 2 percent of the total output. Certainly it would be better to have the Government buy up this surplus and distribute it in those areas which are largely outside the industrial and agricultural sections. In the United States, half of our farmers produce seven-eighths of the total agricultural output that reaches the market, while the other half, of approximately three and a half million farmers, produce only one-eighth of the total agricultural produce marketed. These farmers are, more properly speaking, subsistance homesteaders. They are, to all intents and purposes, outside the economic system. In addition to this group, we also have another large number of people who could not even be classed as subsistance homesteaders, and who still subsist on less than $100 or $200 a year. It will take a long time to find a place for these people within the industrial system, and in the meantime the United States could well afford to provide them with those commodities that every American family considers essential to the maintenance of an American standard of living.

It is doubtful, even if this plan were carried out, whether the cost to the Government would be more than the average cost for relief during the past 4 years. Since the plan as a whole would greatly increase the total national income, it would be relatively much easier to bear than present relief costs, and from a social and economic standpoint would be far more desirable.

With the Government guaranteeing to take over part of the finished product at cost, if it should prove to be unsalable, the cooperating manufacturer would be running less risk than he is now, under the prevailing uncertainties of a system that is highly competitive for the raw material producers, and monopolist controlled in the industrial and utility fields. It is contemplated in this program that of the increase in production, 10 percent would go in the form of profits, while 90 percent would be used for wages and reducing or maintaining the general price level.

The plan further recognizes that even if we were to achieve maximum production, we should still have three or four million men who would be unabsorbed even by capacity operation of our industrial plant, because of the technological advances of the past 8 years. A recent Government study shows that throughout industry as a whole the output per man-hour during the past 8 years has increased by 20 percent. As we see it, work must be provided for these men in a long-term program designed to rehouse the American people, and in a long-term public-works program designed to preserve our natural wealth and more effectively utilize our national resources.

If such a plan is ever to be carried out, it will only be as a result of initiative on the part of the Federal Government. In the first place, while we may have three or four million people who will never find employment in private industry, these people must be retrained before they can be employed on a long-term housing or public-works program. Only the Federal Government itself can undertake this program of retraining, and furnish the guarantees and assurances that must be provided if the American people are to be adequately housed at the end of a 20-year period, or if our natural resources are to be effectively protected and developed as contemplated by the Norris regional planning bill.

As the present recession deepens into a depression, and as the futility of the palliatives now being considered by Congress becomes more apparent to the people, as a whole, the time is fast becoming ripe when, with proper leadership, the support of the American people can be secured for the type of national planning contemplated in the Industrial Expansion Act.

The authors of the Industrial Expansion Act feel that this is the first effort that has ever been made in Congress to work out a plan designed to achieve abundance rather than scarcity.

Exemption of Government Officers and Employees From Taxation Should be Done Away With

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. TREADWAY. Mr. Speaker, it seems to me that the time has arrived when some action should be taken to remedy the situation not only with respect to tax-exempt securities but also with respect to tax-exempt salaries.

There is a widespread misconception regarding the latter subject, however, which I should like to straighten out. I frequently receive letters protesting against the exemption of Federal salaries from the income tax. These protests are based upon a partial misunderstanding of the facts. Let me make clear that Federal employees pay Federal income taxes, just as State employees pay State income taxes.

However, according to the interpretation placed upon the Constitution by the courts, that instrument prevents one government from taxing the means and instrumentalities of the other government because, as Chief Justice Marshall said, "the power to tax is the power to destroy." Since governmental officers and employees come within the designation of "instrumentalities," the Federal Government cannot levy an income tax upon the salaries of State employees, nor can the States collect income taxes on Federal salaries. But as I have indicated, it is not true that governmental employees are exempt from both State and Federal income taxes.

I cannot agree with the reasoning of the courts in exempting Federal employees from State taxation, and State employees from Federal taxation, so long as the tax imposed is not discriminatory. I do not believe that by subjecting State employees to the same taxes that other citizens of the United States must bear there is any danger to the continued existence of the sovereign States. Likewise, the taxation of Federal employees by the States, at the same rates paid by other citizens, would in no way threaten the existence of the Federal Government.

So far as taxpaying ability is concerned, Government employees are no differently situated from other classes of citizens. They should be made to pay their fair share of the tax burden imposed by both the Federal and State Governments. There is no excuse whatever for a continuation of their present freedom from taxation, and I therefore strongly urge the adoption of a constitutional amendment to correct this condition.

While there are some who believe that the situation I have described can be remedied without any amendment to the Constitution, the Supreme Court has never reversed its earlier decisions, and its recent decision in the Dravo case clearly indicated to my mind that the amendment method is the only solution.

The Business "Recession"—Why It Is Here—What Must Be Done

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

RADIO ADDRESS OF HON. ROY O. WOODRUFF, OF MICHIGAN, DECEMBER 18, 1937

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks in the RECORD I submit the following speech which I today delivered over the National Broadcasting system:

Christmas of 1937 finds the Nation facing another business recession which may develop into a depression of major proportions. Unemployment is again increasing. Business is fearful. The Budget remains unbalanced. The Nation is $16,000,000,000 deeper in debt than it was on Christmas of 1932. In Congress and throughout the country everybody is asking why this new downward glide into the depths of fear and depression has taken place, and what is to be done to stop it. It is vital that the Nation learn the answers as soon as possible.

The present situation is totally at variance with what we have for 5 years been led to believe, namely, that definite plans for recovery were operating according to schedule, and that the dangers of a recession in the prosperity of the Nation had been permanently averted.

Time and again, responsible officials of the Government have asserted emphatically that the depression was over. Now we find it is not over. Time and again, responsible officials of the Government have declared the Budget could and would be balanced. Now it is admitted that the Budget cannot be balanced before 1940, if then.

We have been told the depression was conquered and that business was on a permanent and stable uprise, because "it was planned that way."

If you ask what has caused this set-back, it must be answered that fear and uncertainty have caused it. It must be answered that not only do capital, industry, and business have this feeling of fear and uncertainty, but that the consumers of this Nation feel that fear and uncertainty.

Rising prices, lowered purchasing power of our money, accompanied by a rapid decline of retail sales show that the fears that have been generated by experimentation, uncertainty of plan and policy, and danger of foreign entanglements, have gone deep into the public consciousness.

The next question you might ask is what condition or combination of conditions has caused fears so deep and widespread throughout the Nation as to produce these results.

The answer to the second question involves many elements. Thoughtful citizens recognize that the Nation today faces the absolute necessity of a frank discussion of these elements if the recession is to be reversed by removing the conditions and stilling the fears responsible for it.

I will briefly review some of the conditions which constitute the reasons for these fears and their resultant phenomenon of depression.

For 5 years business and industrial leaders of the United States have been assailed, abused, and accused of being conspirators against the welfare of this country.

For 5 years class hatreds, class hostilities, class prejudices, and class consciousness have been generated and nourished by political demagoguery.

For 5 years there has been a constant and unremitting drive for the regimentation and regulation of business, of agriculture; indeed, of every activity in which the citizens of this country are normally engaged. This drive has been conducted by an army of bureaucrats bent wholly upon perpetuating themselves in power by lavish and wasteful spending, regardless of the terrible cost to the people of the Nation. It is to be regretted this drive still continues.

For 5 years business and industry have faced a continuous campaign for punitive taxation.

For 5 years finance, business, agriculture, indeed, the whole national economy have been treated as guinea pigs in the laboratory of legislative experimentation.

Today it stands as a fact that finance and business and agriculture, the whole economy of the Nation, have been subjected to a succession of ill-advised experiments proposed, and, in most cases, executed by impractical theorists. Most of them flitted for a brief moment across the stage of affairs, added their bit to the fears and the confusions, and then retired into the limbo of the forgotten and unlamented, leaving the evils of their experimental works behind them.

For the greater part of 5 years there has been an unremitting campaign to drive prices to the levels of 1926, and yet with prices still 10 or 15 percent below the 1926 levels, it is now recognized that high prices have produced a rebellion on the part of consumers whose dollars have decreased in purchasing power, until today their incomes no longer enable them to live as Americans should live.

For 5 years this Nation has not known what our foreign policy was or might be from day to day. The mothers of America have wondered and worried about the danger of their boys being sacrificed on the bloody altar of war. Our citizens have not known when or how we might again be entangled in the madness that today makes of China a vast slaughter field, and of Spain an inferno. It is regrettable beyond words that this situation seems more acute today than at any time.

For 5 years, my friends, American industry, American agriculture, and American workers have faced the ever-increasing and widening threat of competition in our own markets with cheap foreign commodities produced by cheap foreign labor, and still the campaign for reciprocal-trade treaties goes on unabated.

For 5 years this Nation has been subjected to a constant series of alarms. A new "emergency," or a new "crisis" has been from time to time heralded by those in places of high responsibility; each time to be followed by a demand for new legislation to grant some "new instrument of power" to a branch of Government in which power has already been overcentralized.

These are facts, and there is not a single voice raised today to deny them.

The wonder is not that a business recession hit us when it did; the wonder is that it did not hit us long before.

It is always easy to boast, when all seems to go well, that "it is not luck, we planned it that way—and don't let anybody tell you differently"; and it is always easy, when trouble appears, to lay the blame to lack of cooperation by the other fellow.

Never in the history of this Nation has there been a more concentrated and unremitting campaign waged at the expense of the taxpayers for the centralization of all power in the executive department of the Federal Government.

Leaders of finance and industry and a very great and rapidly growing number of other citizens of this country have feared that we are driving toward an autocracy. In the opinion of many leaders in the Congress in both parties these fears are not unfounded.

Such are the reasons, in the main, for the fears which have produced this present recession.

Let me urge upon you that this is not now a time for incrimination and recrimination, nor for bickerings or skirmishes for political advantage. This is the time for all citizens of every class, of every political belief, of every economic and social philosophy to pull together to avert national disaster.

If we are to reverse the present trend, we must first allay the fears which have produced it. This can be done only by forthright declarations from the responsible leaders and officials of Government that persecution and strangulation of business are to cease; that punitive and paralyzing taxation is to be abandoned; that industrial disorders and lawlessness are to be met by firm resistance on the part of duly constituted officials sworn to execute the law and to uphold the rights of all citizens impartially; that we are not to be entangled in foreign wars; that American industry, American agriculture, and American wage earners are not to be

swamped and suffocated by an influx of cheap foreign goods; that actual attempts to balance the Budget shall replace empty promises; that incitement of class hatreds and class prejudices is to cease; that we are to return to that same, sound philosophy which holds that the interest of employers and employees are one, that the interests of producers and consumers are one, that the interests of all classes of our people are a common interest, and that one class of our citizens cannot be penalized for the benefit of another class without producing confusion and misfortune for all of us.

It is vital to the welfare of this Nation that there be brought about a better understanding, more friendly relations and a much higher degree of cooperation between capital and labor, with the full recognition on the part of both that the general public has rights which are paramount to those of any group and which not only must be preserved, but which cannot continually be violated without bringing ruin upon both capital and labor.

Price gouging and monopolistic practices insofar as they exist should be stamped out by the heel of ruthless and impartial justice.

We must restore agricultural buying power by giving the American farmer the American market to the extent that he is able to supply it; we must give the American farmer an American price for that part of his production the American people consume, thus assuring him his fair share of the national income. There must be an honest desire to achieve this condition—not merely action to secure some momentary political advantage.

Nothing has happened in America to justify this recession, insofar as potential production and potential consumption are concerned. But I would urge upon you who hear me today this fact: Under existing conditions, quarrels based solely upon partisanship between political parties, or quarrels between labor and capital, or between Government and business, are foolhardy and dangerous.

The solution for this problem is to be found in that fundamental philosophy enunciated on the hills of Galilee nearly 2,000 years ago: "Peace on earth to men of good will" can be applied to economic questions, to relations between government and business, to relations between capital and labor, to relations between States, and, finally, to relations between the nations of the world.

Of course, America can reverse this trend toward depression. Of course, we can attain that degree of cooperation that will restore prosperity. Of course, we have the intelligence and the energy and the resources to meet this situation, and with leadership with the vision and the nobility of purpose sufficient to rise above personal aggrandizement or political advantage, the tide can be turned quickly. We must demand that this be done; and if that demand is insistent enough, it will be done.

Housing Loans At 3 Percent

EXTENSION OF REMARKS

OF

HON. H. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 16, 1937

Mr. VOORHIS. Mr. Speaker, we are about to consider amendments to the Housing Act. Of course, I shall support the bill reported by the Banking and Currency Committee along lines recommended by the President, for I see clearly the desperate need for the increased home construction which it seeks to bring about.

One major trouble with our economic system for a long period has been lack of balance in the production of the three basic necessities of life—food, clothing, and shelter. Food and clothing have both been produced in abundance and many farmers and textile workers have been terribly underpaid for their labor. But we have not been constructing the homes the American people need. Indeed, many authorities tell us we should construct 14,000,000 new houses in the next 10 years in order to have American families decently housed.

OUR BASIC WEALTH IS HOMES

Furthermore, homes are the basic wealth of any people—certainly of the American people. They are the best security, therefore, that you can have for loans, and good houses are a still more important "security" against disease, crime, and despair.

Now, under the new amendment, the Government will guarantee private loans at 5½-percent interest up to 90 percent of such loans. That is to say, the cost of financing housing construction, while somewhat reduced, still remains high; and also, in spite of the fact that no ultimate risk is taken by the private lender, still a very generous rate of interest is to be received. (It is understood, of course, that the Government would only step in in case the insurance fund built up through loan operations became depleted. Nevertheless, it remains true that the Government bears, in the final analysis, all the risk.)

IS OUR NATION SOVEREIGN OR NOT?

Our banking system today creates and loans out credit or money on the basis of partial reserves. Our Government does not. On the contrary, the Government literally pays to the banking system an interest charge every time it finds it necessary in the public interest to expand the volume of money in the country. In this respect, we have surrendered American sovereignty over to the banking system.

PARENTHESIS

(Now what ought ideally to be done is that our Federal Reserve Board should be given enough additional power and instructions so it could become a real monetary authority in the Nation. Today, under circumstances where banks have ample reserves but loans are not being made, the Board is, in the last analysis, helpless. It could have conducted open-market operations months ago in order to replace some outstanding Government bonds with cash in circulation. This would have helped. But the Federal Reserve Board can neither compel banks to lend or business to borrow. And today we only expand the amount of money in circulation when someone goes into debt. This is unsound.

The 12 central banks ought to belong to the Government. And the banking system should be required to keep its depositors' demand money inviolate and intact, to keep dollar for dollar of cash reserves behind demand deposits instead of lending out their depositors' money. The banks would, of course, have to be assisted in building up such large reserves. All this, however, would be useless unless in addition the Government monetary authority then brought into circulation year by year the amount of new currency which the business and banking life of the Nation required. History shows that our national capacity to produce and exchange goods has increased on the average of 4 percent a year throughout American history. Therefore, the United States Government should add an additional 4 percent to our available money supply each year. But it should do this without paying a cent of interest for the exercise of this fundamental right of every sovereign nation; it should put this additional purchasing power in circulation at the bottom, not at the top, of the economic scale. This 4 percent is a large part of the answer to the present argument over large social-security reserves, for generally it should be used to pay old-age pensions, in which case it would go immediately into circulation.)

WHY NOT DIRECT GOVERNMENT LOANS AT 3 PERCENT?

Until, however, we can get our monetary tangle straightened out we have to do the best we can. I have introduced a bill—H. R. 8687—which provides for direct advances of credit by the Treasury to the United States Housing Authority for the purpose of enabling the Authority to make loans for housing construction at 3 percent. Such loans are to be made to municipalities, counties, States, limited-dividend corporations, or consumer cooperative housing associations. The total outstanding at any time is limited to $2,000,000,000, and this may be reduced at any time that the Federal Reserve Board finds that the general price level has risen to that of 1926. The loans are to be secured by mortgages on the properties constructed as well as by 2½-percent bonds of the United States Housing Authority, both of which are to be deposited with the Treasury as security for repayment to the Treasury. The reserves which enable the Treasury to set up a credit account for the Housing Authority are, of course, many times what would be required of any banking institution, for the Treasury reserves include, realistically, the taxing power of the Nation, the great gold stock, and its unquestioned ability to sell its bonds.

This plan therefore amounts simply to a lending of the Nation's credit for low-cost housing in precisely the same

way that private credit is lent. Homes would be built. There would be income to the Treasury. Money would be put into circulation at the bottom of the economic scale where it will do the most good. If we really want recovery and if the present amendment to the Housing Act should not be as effective as we hope, I earnestly ask consideration for my measure or one similarly drawn.

Social Security for All and the Truth About Taxes

EXTENSION OF REMARKS

OF

HON. H. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

RADIO ADDRESS OF HON. H. JERRY VOORHIS, OF CALIFORNIA, DECEMBER 13, 1937

Mr. VOORHIS. Mr. Speaker, because I believe it contains matter of vital importance to our Nation at this time I have asked permission to include in my remarks the following address, delivered by me over the Columbia Broadcasting network on Monday, December 13:

Congress has been wrestling with agricultural legislation. The House passed the Jones farm bill last Friday and we must now await action by the Senate. After that, the conference between representatives of the two Houses will determine the legislation upon which final action is to be taken.

Many people don't understand why farm legislation is necessary for the economic health of the whole country. Here is the reason: There are about 6,000,000 farmers in the country. Farmers sell their crops in the fall in competition with one another. A comparatively few people buy the crops of the farmers. The price is fixed not by the farmer sellers but by the speculator buyers. Moreover, the farmer has to depend on nature to determine the size of his crop and he has to plant it months before it goes to market. He is at the mercy of natural and economic forces he cannot control. In many cases, he is a tenant and in an alarmingly increasing number of cases he is pushed off the land he used to farm, as landlords introduce tractors in place of tenants. If we want to save the family-sized farm something must be done.

On the other hand, when the farmer buys he buys largely in a market that is controlled by the people that sell to him. His railroad rates are fixed by the Interstate Commerce Commission, his implement costs by one of our largest monopoly corporations, and so on.

Thus farm prices drop below the level of industrial prices and we have not only distress and loss of homes and farms, but a whole economic system thrown out of gear.

Farmers by themselves, except in the few cases where strong cooperatives have been formed among fruit growers, cannot do anything about this situation. That is the reason for farm legislation.

But it does not answer the question: What kind of farm legislation?

One thing is certain: Since already 300,000,000 acres of America's fertile topsoil have been washed away or otherwise destroyed, one feature of farm legislation has got to be a soil-conservation program. We have that now, and I believe the new bill improves it. Beyond that, what our farmers need and should have is a fair price for what they sell in the domestic market. We cannot do anything about world prices, of course.

One way to get higher farm prices is to try to regulate production. Another way—and, to my mind, a better one—would be to put a floor under farm prices, directly protect farmers from the manipulations of the speculative market, and say that below a certain fair price farm commodities could not be bought or sold on the domestic market. We do this for coal and for railroads. I hope we are going to do it for wages in the wage-hour bill this week. Why, then, not for the farmers? Had we that kind of program, no Treasury payments would be needed nor any production restriction except for soil-conservation purposes. We would need a Government corporation to take the surplus over and above domestic needs. The farmer would take receipts from this corporation for his surplus and take his chances on the price at which it could be sold on the world market. Some of this so-called surplus could, under these circumstances, be well and properly used to feed undernourished school children; and I believe if our farmers had price protection for what they sell on the regular market they would be the first to want to see this done.

And that brings me to the real point of what I wanted to say about this farm problem. For the farm problem is really one of developing the American market by doing the things that will enable Americans to buy what they really need of the farmers' crops.

The production planning section of the Department of Agriculture has made a careful study of the number of million acres now devoted to growing our various crops and of the amount of acreage that would be required to supply the American people with what they really need and would buy if they could. When I tell you that millions of families in America, lots of them in the heart of the Cotton Belt, cannot afford either cotton mattresses or cotton sheets, you will get some idea of the evident truth of my statement when I say that we would increase our consumption of cotton in America by at least 50 percent if our people had adequate buying power for even the basic necessities of life. These Department of Agriculture figures reveal, moreover, that we would need about 40 percent more poultry, 40 percent more dairy cattle, over twice as much acreage devoted to fruit, almost twice as much devoted to truck crops, about 50,000,000 more acres of harvested food crops, and 40,000,000 more acres of feed grains in order to produce enough food to give the American people a liberal diet.

Indeed, the farmers' problem would be solved if all the American people had adequate, steady buying power.

But they haven't. And until we adjust our national life to this machine age, it is just as unfair to expect the farmers to make all the sacrifice while we do nothing to keep the speculator from ruining him with his own abundant production as it is to expect the unemployed to make all the sacrifice while we do nothing but save money in order to reduce unpopular taxes.

So the constructive thing for Congress to do is to tackle this problem of providing an even flow of consumer buying power in the Nation. My own belief is that this problem has three main parts: First, establishment of a sound monetary system; second, development of a complete, adequate social-security system; third, emancipation of the Nation from the hold monopoly now has over it, and institution of a careful plan to bring about increased production of wealth. I do not believe any one of these measures will suffice. I think we need all three. And I believe they will mean more, not less, true freedom for the people of this Nation.

In this speech I do not propose to discuss our monetary problem except to say that the right to create money or extend credit on the basis of partial reserves is a sovereign right of the Government and ought to be used to maintain a stable price level for the benefit of all the people, instead of being unconstitutionally farmed out to manufacturers of check-book credit, which appears and disappears from circulation in a most disastrous fashion. Nor am I going to speak this afternoon about the Industrial Expansion Act, introduced last session in the House, which some of us believe is the answer to our need for increased production.

I do want this afternoon to discuss for a few moments the necessity for Congress pushing forward with the development of a system of social security and old-age pensions which will blanket the country. I have introduced an amendment to title II, the contributory old-age annuity section of the Social Security Act, which amendment provides for starting payments under that title in 1939 instead of 1942, and further provides that no monthly check to anyone who has made contributions to the fund through payroll taxes shall be less than $25. Admitting that this is by no means an adequate answer to our problem, it would help, because it would mean that after July 1, 1939, half our people, approximately, would receive as a matter of right, directly from the Federal Government, an old-age pension of between $25 and $85 monthly, depending on the size of each individual's contributions to the fund. The next two steps need to be, first, to blanket in all the rest of the population into this system; and second, to reduce the age of retirement to 60 years.

Now, I have no quarrel with the idea of a reserve fund, for with this reserve fund we could buy back our national debt and pay interest to our old folks pension fund instead of to holders of tax-exempt bonds. The second reason I believe a reserve fund, of reasonable size, is important is because it is necessary in times of depression to pay out more money than you are taking in, in order to stop the depression. If you have no reserves you cannot do this, and your taxes to support the pension payments will go down at the very time you need more money. My amendment would, of course, reduce the reserve fund somewhat, which I think would be a wise move. For, although I believe we will always need some reserves, I think we have to come a lot closer to a pay-as-you-go system than our present act provides. This is especially true since the taxes now come out of some of the very people's pay who ought, for national welfare's sake, to have more money to spend.

Now, suppose we look at the thing this way. If taxes were paid by all the people of America in accordance with ability to pay and then immediately paid out again to all the people's aged relatives or widowed mothers on a pro rata basis, there would not be a single bit of reduction in the Nation's buying power. On the other hand, there would be true security and a better distribution and all our farmers and our business would benefit as well as our people who now, after a long life of service to the Nation, find themselves in destitute dependence. I think the rest of the people of America could be blanketed into the system on some such basis as this, all taking their chances on receiving their share of whatever this special tax brought in. In effect, this is what the General Welfare Act proposes. I don't think people would feel about these taxes like they do about some other taxes. For these taxes for old-age and mothers' pensions and health purposes would just represent the spirit of the American people saying: "We are all in the same boat." People could honestly feel

that they were contributing to a great national insurance fund which would help not alone themselves some day but everyone in the whole country.

And this brings me to the last subject I want to discuss today, which is taxes. There are two ideas abroad in the land which I believe ought to be corrected. One is that most of America's taxes come out of wealthy people. And the other is that most of America's taxes go to the Federal Government. Neither of these statements is true. The reason we hear so much of these two ideas is that local taxes and State taxes fall on everyone very much more equally than Federal taxes do, and therefore people who are better off in our country and hence better able to make their voices heard feel Federal taxes most and have the biggest interest in seeing Federal taxes reduced. Another reason is that most of the taxes that poor people pay are hidden taxes and not direct taxes so that neither they nor anyone else knows they are paying them.

First, let me lay down a few principles of taxation which I believe are sound. The first is no government, Federal, State, or local, has a right to tax and then waste the money; but any government has a duty to tax in order to furnish such things as schools, education, police, or G-men protection, necessary public works, health service, or any one of a thousand things which government can furnish to the people cheaper than anyone else can do it. The second principle is that, so far as possible, whenever anybody pays a tax he ought to know he is paying it. The third principle is that taxes should be light on the consuming power of the people, light on active, competitive business, and heavy on idle money, on over-large accumulations of either individuals or monopoly corporations, and on values created by society as a whole rather than by the owners of those values. City land values fall in the last class. Buildings and improvements don't.

Americans pay about $12,000,000,000 a year in taxes. Of this amount the Federal Government gets about $5,000,000,000 and State and local governments the rest. These are rough figures, of course, but the 5:7 proportion holds good in any case. Furthermore, a great many of the most expensive governmental functions which used to be cared for entirely by State and local governments are being taken over by the Federal Government. Among these are the catching of criminals, some of our most basic public works like sewers, school construction and roads, unemployment relief. Every dollar the Federal Government now pays toward social-security benefits is a new kind of Federal expense never before undertaken. So I think I am safe in saying that the taxpayer gets a lot more for his Federal tax dollar than for any other tax dollar he pays.

Furthermore, as Fortune Magazine says in its excellent article on page 107 of the December issue, and I quote: "The stock cartoon of the spindle-legged taxpayer staggering under a tremendous tax burden usually refers to the Federal tax burden. The implication is that if the United States citizens' tax burden is to be measurably lightened, Federal taxes will have to be cut. But such a notion amounts to arrant self-deception."

The article points out that there are 175,000 local taxing bodies, aside from the States, in this country, many of them overlapping in their functions, and that the main hope of sensible tax reduction lies in coordination of local governmental bodies and their functions and simplification of the whole tax system. And the conclusion is drawn, and I quote again, that: "No intelligent appraisal of United States tax problems can fail to note that the biggest of these problems—from the standpoint of keeping the tax load as light as possible—are presented by the wasteful confusion of State and local tax systems."

Now, Congress does not want to levy any unfair taxes. For this reason the undivided-profits tax, which has perhaps been unfair to small corporations with heavy debts, will no doubt be modified to exempt such corporations. But neither do we want to repeal any taxes which are fair and just and which fall on just such large accumulations as helped to cause our 1929 depression. And if we do repeal such taxes, then we will be shifting the burden onto someone else, and it is likely to be the small local property owner or the consumer. Personally I believe we could well raise our inheritance-tax rates. But we won't gain anything as a nation by having the Federal Government cut its taxes and making the 175,000 local taxing bodies increase theirs. And the taxpayers will get less for their money, and the poor people will pay a bigger percentage of tax if we should make that mistake.

One more thought and I am through. An idea is going about that the Nation is divided between two groups—taxpayers and people living off the taxpayers. This is not true. Every person that rents a house or an apartment pays his share of the landlord's taxes. The workman with an annual income of $500 may well pay close to $100 in hidden taxes if he lives in a State that has a sales tax, and if he buys gasoline or tobacco. As a matter of fact, W. P. A. workers, especially in States that have sales taxes, have a perfect right to attend taxpayers' meetings and to raise their voices about the tax burden. But it is cruel, unfair, and absolutely untrue for the impression to be given that the poor people of America don't pay taxes. The only thing is they don't know it, and the people who do know don't tell them. We're all taxpayers, and we pay taxes for the privilege of living in a nation that is struggling—and I believe successfully—to keep her democratic life and also to solve by democratic means the basic economic problem of enabling everyone—yes; assuring and guaranteeing everyone—the right to earn a living.

Why Industry Should Support the Deane Plan

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. ANDERSON of Missouri. Mr. Speaker, in spite of constant discussion as to the rights and responsibilities of industry in our economic life, one thought may have been overlooked, namely, that there is no such thing as industry. There are industries and there are industrialists, but, unfortunately, there is no entity that can function for or which can responsibly represent industry as a whole. When we speak of industry, therefore, we are speaking of that group which comprehends the owners and managers of capital invested in industrial production and distribution as differentiated from other groups, such as labor, agriculture, or the professions.

It may be accepted as a premise that industry in America desires the perpetuation of the profit system. Even though certain elements in industry advocate price control and other arbitrary restrictions to free competition, it is generally accepted that greater economic progress can be made under the competitive profit system than under any other known economic system that might be substituted therefor. Certainly but a very small minority in our Nation desire an overthrow of democracy and the profit system, provided they can be made to function to the well-being of the Nation as a whole.

What conditions, therefore, does industry require in order to make the greatest progress in fulfilling its function in our economic system, bearing in mind that if it is to be assured of the conditions prerequisite to its successful operation, it must assume a corresponding responsibility to the other groups functioning within the system? First, it requires the elimination of all restrictions to the accomplishment of the largest continuous economic profit. This involves the element of time. While it may be possible, under certain conditions, to secure an exorbitant profit margin temporarily, it can be secured only at the expense of continuity. And in order to sustain a consistently satisfactory profit there must exist a steady market for the goods or services produced. Therefore, industry will profit to the greatest extent by supporting methods that will sustain a consistent demand for its products.

In America the demand for products of American industry is a mass demand. Mass production cannot be sustained without mass consumption, which simply means that the purchasing power for the products of mass production must find its way into the hands of the mass consumers of the Nation. The mass consumers represent the largest portion, numerically, of our total population and consist overwhelmingly of those receiving wages and salaries in industry and trade. They function both as producers and as consumers. Therefore, it is to the interest of industry to see that its employees function as consumers of their products and are furnished with adequate purchasing power to absorb the maximum possible industrial production.

The matter of what is or what is not proper compensation for the individual worker can never be scientifically determined, but it is possible to determine scientifically whenever the total buying power of the Nation is insufficient to absorb the maximum possible industrial production of the Nation. And whenever the total buying power is insufficient to cause such absorption, it is to the interest of industry to see that such buying power is supplemented until it becomes sufficient. Otherwise industry cannot continue to produce at maximum capacity.

Whatever amount must be taken out of the total production of the Nation by industry and used to supplement otherwise deficient buying power does not reduce the profits

of industry; rather it sustains its profits at the highest economic level.

If you have an oil well from which you desire to pump the greatest volume of oil in order to make the greatest amount of profit, and you must divert part of the oil to keep up a head of steam under the pumps with which the oil is pumped from the well, the amount of oil which is diverted to run the pumps is immaterial, and the diversion of additional oil in order to maintain the necessary head of steam so as to sustain the pumping at maximum capacity does not reduce the profits of the owner of the oil well. Whatever the necessary amount of oil that must be diverted and used to keep up the head of steam will be the amount necessary to insure maximum production and profits.

A single enterprise or a single industry cannot transfer directly sufficient purchasing power in the form of wages and salaries into the hands of consumers to maintain the maximum market for its products, because an enterprise or an industry does not sell its products primarily to its own employees. Therefore, one industry attempting to stimulate the market for its products by raising the wages and salaries of its employees would accomplish only an indirect effect. But American industry as a whole, by supporting any scheme which would sustain mass purchasing power at all times sufficient to absorb the maximum production of the Nation would automatically assure itself of the opportunity for maximum profits.

These required conditions for the maximum prosperity of industry would be accomplished through the adoption of the Deane plan, which provides, first, a sensitive gage showing at all times the adequacy or inadequacy of mass buying power to absorb the maximum production of the Nation; and second, whenever it was shown that such buying power was deficient, would supplement automatically such mass buying power to whatever extent was necessary to permit of a continuation of maximum production. And this would be accomplished without any arbitrary restrictions as to production, prices, hours of labor, wages, salaries, and so forth. Thus the free competitive status of industry would be maintained.

The Deane plan provides for another prerequisite of industrial success. Free competition implies that the efficient operator will have the maximum opportunity for success. And by the same token, it implies that the inefficient operator will be unable to exist. Under any system of free competition, which implies the automatic elimination of the inefficient operator, the loss of buying power of the employees of the operators eliminated, as well as the lowered buying power of the operators themselves, has a deflationary influence on our economy, which, under certain circumstances, becomes a downward spiral leading into a depression. Under the Deane plan a means is provided to insure work to every individual willing and desirous of working. Coupled with the means provided to sustain the mass buying power of the Nation at all times, the deflationary effect of unemployment would be eliminated, and for the first time in our history, a means would be available of sustaining the purchasing power of the Nation while accommodating for shifts of workers from one industry to another and from one job to another.

Industry, therefore, should support the Deane plan as a practical method of meeting the three prerequisites for its profitable operation. First, guaranteeing it a sustained market for its products. Second, a method of halting, in its incipient stage, the deflationary effect of necessary shifts of workers—consumers—from industry to industry, or job to job; and third, free and unhampered competition.

With these conditions assured, the ultimate result would be the production and consumption of the largest quantity of goods and services at the lowest possible prices. This means the highest standard of living for the Nation as a whole, not only because of the direct effect in increasing the real buying power of industrial workers, but the indirect effect of such buying power in the absorption of agricultural products, and providing the farmer with the wherewithal to absorb the largest possible volume of industrial products. And the farm market, by reason of its size and importance, is a large factor in industrial prosperity.

THE DEANE PLAN AND EXPORTS AND IMPORTS

It has often been said that, as a nation, we cannot prosper unless we maintain a large export trade, the theory being that our producers must have an outlet beyond our shores for so-called surplus production. For instance, it is argued that our cotton farmers in the South cannot prosper unless we can sustain an export demand for cotton which has, up until the last few years absorbed approximately 40 percent of our total cotton production. In the case of a particular industry or a particular product this may be true if it is assumed that we have reached, within the confines of our Nation, the saturation point in the absorption of that particular product up to the total desires of our people. Taking cotton again, as an example, it would appear without going into any statistical analysis that if the mass of our people could increase their purchases of shirts, underwear, sheets, towels, and so forth, up to the point of desire represented by a decent standard of living we could probably double our present consumption of cotton and absorb it all in this country.

But regardless of whether or not the total production of our Nation is sufficient to yield a decent standard of living to the mass of our people, which it never has been in our history, the fact remains that considering our economy as a whole the export of products has no bearing on our economic health, for the simple reason that we cannot maintain exports in the absence of a corresponding volume of imports, as there is no possible means of foreign nations making settlement for our exports in the absence of our accepting goods and services or gold in exchange therefor.

In theory, under the gold-exchange standard, foreign balances could be settled substantially in gold instead of in goods and services, but, because the total amount of gold existing in the world is so small, the use of gold in settlement of balances was strictly limited, even before arbitrary political restrictions to its use were set up. At the present time settlement of balances in gold can be removed from consideration, and it must be accepted as a fact that over a relatively short period of time our imports must balance our exports in terms of goods and services, plus a small amount of capital exported by tourists, ocean freight, and so forth.

This being true, the only effect of exporting is to permit the barter of goods which we produce in excess of the quantity we wish to consume for goods which we do not produce but which we, as consumers, prefer.

For example, if a Nation produces goods and services in the course of a year to the extent of $100,000,000,000 and exports ten billions of such products, one of two things must happen—either we must take back ten billions of their goods and services in exchange, which means that we can consume one hundred billions, an amount equal to our production, or we must accept promises to pay, which, in view of our experience since the war, may be of doubtful worth. If such promises to pay are not met, either because we refuse to accept goods and services in payment or the debtors cannot pay in gold, the effect is simply that our Nation has labored as a whole for 12 months to produce one hundred billions worth of goods. We have made a gift to other Nations of ten billions and have secured the enjoyment from the use of only the remaining ninety billion, which would yield us a standard of living 90 percent as high as it might have been if we had not exported the goods.

This does not mean that we should not strive for the largest possible export trade but it does pose the question as to why it is desirable to promote the largest possible export trade. The answer is that it is not desirable because it increases our production per man-hour of labor, but that it gives us a wider choice of goods and services for a given amount of labor. For instance, a certain group of our people may have the ability to produce automobiles but cannot use all the automobiles they produce, so they trade

their production for laces, perfume, pottery, and other products which workers in foreign nations have the ability to produce and which they wish to trade for automobiles.

It may be argued that even accepting the correctness of the above statement a decline in export demand acts as a disrupting influence on our economy as a whole; that, if we had been exporting say 10,000 automobiles and the demand for them suddenly ceased the workers who had been making them would be thrown out of jobs with the resultant loss in purchasing power of our Nation as a whole. This is only partially true, for if we lose the export market for 10,000 automobiles there will be substituted therefor the demand for an equivalent amount of goods which we were importing in payment therefor, which would require additional labor to produce in this country. What does happen under such circumstances, however, is the creation of a situation requiring the shifting of workers from one industry to another and under our present system, there is no automatic means to facilitate such shifts. Therefore, during the period of adjustment a situation can easily arise which causes loss of employment and purchasing power which will reflect itself throughout our economy and initiate a deflationary movement which, at present, we have no automatic means of halting.

The Deane plan would act as a resistance line against any such deflationary movement in two respects: First, the minute purchasing power fell, it would be supplemented automatically from a central reserve fund which would sustain demand for the total production of the Nation; and, second, those workers who had been thrown out of jobs, if not immediately absorbed into lines of work which they had been following, would be guaranteed jobs on public work during the necessary period of readjustment. For the first time, therefore, we would have as part and parcel of our system an automatic mechanism that would tend to compensate for the constant adjustments that are necessary in our economic life, whether caused by shifts in export and import demand or otherwise, and which would support a consistent demand for the total maximum production of the Nation.

Perhaps one other factor should be mentioned, namely, that, accepting the premise that it is desirable from the standpoint of the greatest satisfaction of our people to promote the largest possible export trade, the way to accomplish such a result is to promote the largest possible import of foreign goods in order to provide the foreign exchange necessary to pay for our exports. The way to permit of the purchase of the greatest possible volume of imports is to sustain the highest possible purchasing power in the hands of our people at all times. This the Deane plan would do.

THE DEANE PLAN AND TAXATION

From the standpoint of the individual, taxes always seem high. This is because of the difficulty of appraising the benefit which the individual paying the taxes receives for his tax expenditures.

Taxes are levied for two purposes: (1) To support services which we recognize as vital to our welfare, such as police and fire protection, water, sanitary services, and so forth, and (2) to support Government organization in the form of compensation and expenses of public servants. The value of the former is more easily appraised than that of the latter. In fact the value of the latter is almost impossible to appraise accurately.

In times of depression when buying power is subnormal, taxes, which are in the nature of fixed charges, are very difficult to pay. At such times we very seldom find an increase in expenditure for those services the value of which we can appraise. On the other hand, we generally find an expansion of expenditures for Government organization, the value of which we cannot appraise. The psychological effect on the taxpayer is a dual one. First, the taxes are a much greater burden on his current income, and second, he feels that the value received for the taxes he pays has been lessened. In times of prosperity, the reverse is true as taxes do not ordinarily increase in proportion to increased incomes, therefore they become less burdensome.

Since taxes are ultimately reflected in prices—with the possible exception perhaps of income taxes—it follows that, relatively, taxes paid in times of depression tend to increase or uphold prices to a much greater extent than do taxes paid in times of prosperity. From the standpoint of economics, this is exactly the reverse of what should happen. In times of depression every possible means should be adopted for decreasing prices in order to increase effective buying power, whereas in times of prosperity it is desirable that prices increase in order to reduce effective buying power sufficiently to halt an incipient boom. It would be desirable, therefore, to eliminate all taxes in times of depression and tax only in times of prosperity, both from the standpoint of economics and of the psychology of the taxpayer.

One of the unique features of the Deane plan—embodied in H. R. 2464—is that the tax involved would be paid only in times of better than average prosperity and the proceeds of such taxation would be used to supplement declining purchasing power in times of less than average prosperity. This feature in itself is an innovation in taxation which should be most acceptable to the country at large.

The Importance of Fast Passenger and Freight Refrigerated Commodity Vessels Now in Intercoastal Shipping to the American Merchant Marine and National Defense

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. WELCH. Mr. Speaker, events during the past few weeks should drive home to every American citizen the necessity for adequate naval protection on the Pacific coast of the United States. I have repeatedly called the attention of the House of Representatives to the lack of proper facilities on the west coast for the maintenance of our merchant marine and naval forces in time of national peril.

A large part of our merchant marine activities is the intercoastal traffic of both passengers and commodities. To carry on a part of this trade some of the finest vessels in the American merchant marine were built. They are ships capable of making 19 knots an hour or better, equipped to carry passengers, freight, and perishable commodities in refrigerated compartments. Notwithstanding the fact that under conditions as they have existed for many years these routes were maintained at a financial loss and they were maintained on regular schedule by several different operators.

During the last session of Congress legislation was enacted to equalize the Panama Canal toll charges between different classes of merchant vessels. We were told at that time that the passage of this measure would not work a financial hardship, but that such increased toll charges as might result would simply equalize the tariffs between the various classes of vessels.

In actual operation, however, this law has placed such a serious financial burden upon the operation of fast merchant ships of the type most needed for naval defense in time of emergency that one company has already withdrawn all of its passenger, freight, and refrigerated vessels from this service. It is very certain that other operators will be forced to suspend their operations of this particular type of vessel for the same reason. This is nothing short of a calamity to our intercoastal merchant shipping, which is an important factor in all Pacific coast merchant marine operations.

In its Economic Survey of the American Merchant Marine—House Document 392—the United States Maritime Commission, as late as November 10, 1937, stated:

> Even more important, perhaps, than its role in the development of commerce is the vital relationship that exists between the merchant marine and national defense.

It further says that shipping requirements—

> Place the merchant service in a position second only to that of the armed forces in the maintenance of an adequate defense establishment.

National naval defense, as I have repeatedly stated, is composed of a chain of three links, each interdependent upon the other and each of equal importance. They are the Regular Navy, the merchant marine, and shipbuilding and ship-repair facilities. The Pacific coast of the United States, aside from being the most probable place for armed conflict if that ever comes to this country again, is the most vulnerable to naval attack. It is, therefore, of utmost importance that our merchant marine on the Pacific coast be maintained at the highest point of efficiency possible and that we encourage private enterprise to reestablish the shipyards for the building and repair of vessels on the Pacific coast.

As a measure in this direction I have prepared an amendment to H. R. 8532, now under consideration by the Committee on Merchant Marine and Fisheries, which will tend to develop this intercoastal trade in fast vessels meeting the requirements of the Navy for national-defense purposes. This amendment will also encourage the building of new ships of this type on the Pacific coast, thus bringing back into existence the shipyard facilities which were at one time available on the west coast. The Navy Department is probably the best judge of the type of vessels best suited as naval auxiliaries needed for national defense, and for this reason the proposed amendment requires the United States Maritime Commission to consult with the Navy Department concerning the construction of such vessels in which the Federal Government might assist.

Amendments to Housing Legislation

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. WOLVERTON. Mr. Speaker, the purpose of this legislation is to stimulate the construction and financing of housing throughout the country.

The bill amends in many particulars the present housing and slum-clearance legislation, now in effect, in an effort to liberalize the conditions under which loans may be obtained for such purposes, and thereby facilitate building construction as a step in the program to meet and solve the "recession" in business now being experienced throughout the country. I am satisfied that the building construction industry presents an admirable field for bringing about a considerable measure of economic recovery through the medium of private capital and Government cooperation.

The report of the Banking and Currency Committee of the House informs us that the Federal Housing Administration to date has insured mortgages under title 2 of the National Housing Act in excess of $1,000,000,000 with only 47 foreclosures, and has insured $640,000,000 of loans under title 1. This record demonstrates that the plan of the act is sound and practicable, and it is felt the amendments to the act, which are contained in this bill, will maintain the soundness of its operations and at the same time stimulate a large amount of new construction, which is such an important concern of industry, labor, and Government alike. It should substantially increase the employment of labor, both in the work of direct construction and among the industries which manufacture and sell building materials, and thus create purchasing power which is necessary in order to bring about permanent recovery.

Under the bill the cost of financing home ownership will be materially reduced and thus bring such ownership within the means of a large part of the people of the country.

In addition to the provisions covering the financing of new construction, the insurance of loans for the repair and alteration of buildings and the construction of small homes, both urban and rural, is revived under title 1 of the National Housing Act, which expired on April 1, last.

It is my hope, although I have some doubt, that the provisions of the bill will prove sufficiently attractive to the banks, insurance companies, and other lending agencies upon whom this bill depends to finance the loans necessary to make the bill effective for the purposes intended.

I am deeply interested in this type of legislation. I have voted for every housing and slum-clearance bill presented to this House during my membership herein. I have done so because of a firm belief that the construction of housing facilities has not kept pace with either the needs or growth of the population and that this condition has had a retarding effect on the recovery of other industries and trades. There is a definite shortage of housing throughout the country, particularly of houses which can be purchased or rented at a price within the means of families of moderate means.

Furthermore, there is a generally recognized need for improved living conditions in the congested districts of most of our cities. The conditions in many such are indescribably bad. The health and morals of those compelled, because of economic conditions, to live under such conditions and in the midst of such surroundings are adversely affected. The need from this standpoint has been so clearly and frequently demonstrated that there is no need for me to further emphasize it at this time. While there has been some advance made in correcting these conditions, yet notwithstanding all the time and effort that has been expended, the conditions to which I refer still continue to exist. This in itself is sufficient to claim my continued interest in seeking to provide every possible means that will help remedy the situation. Consequently, my vote will be cast in favor of this bill.

National Defense Through Patriotic Education

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 8, 1937

ADDRESS OF HON. VIRGINIA ELLIS JENCKES, OF INDIANA, TO THE STATE MEETING OF THE REPRESENTATIVES OF 60 CHAPTERS OF THE D. A. R. IN THE DISTRICT OF COLUMBIA, NOVEMBER 19, 1937

Mr. CANNON of Missouri. Mr. Speaker, when Mrs. Roosevelt said yesterday in a national broadcast that there should be more women in public office I have no doubt that she had particularly in mind the women who have served as Members of the National Congress. When the first woman was elected to Congress in 1916 it was freely predicted that she would be the last, but the number has grown with every session. In all, 25 women have served in Congress, 21 in the House and 4 in the Senate, 10 Republicans and 15 Democrats; and so valuable has been their contribution to the Congress and the Nation and so effectively and efficiently have they served their districts and constituencies that they have established a permanent and increasing ratio in both Houses, and the country is all the better for it.

One of the most distinguished women now serving in the House and one of the most valuable Members of the Seventy-fifth Congress, Mrs. VIRGINIA E. JENCKES, of Indiana, recently

addressed the State meeting of the Daughters of the American Revolution in the District of Columbia. Her address is so interesting and so timely that I ask leave to include it as an extension of my remarks, as follows:

Madam Chairman and friends, I am happy to have this opportunity to meet with the representatives of 60 District of Columbia chapters of the Daughters of the American Revolution and discuss a subject which I know is of great interest to all of us, not only as members of the National Society of the Daughters of the American Revolution, but as women who have assumed leadership in our different communities.

I was asked by your gracious chairman to discuss the subject National Defense Through Patriotic Education.

I agreed to meet with you if I would be permitted to handle this subject frankly and without gloved hands. I asked for that privilege because I have had, as a Member of Congress, an opportunity to observe at close range definite evidences of unpatriotic education or propaganda which will destroy our national defense if not restrained.

Now, right at the start, I want to state that the address I am about to make is not a political speech. If you will consult your dictionary you will find the word "politics" defined as "the science of civil government." That is what politics is: the science of civil government.

I was sent to the Congress of the United States because the citizens of my congressional district were intelligently interested in the science of civil government, and they wanted someone here in the Congress to represent them who would, in a fearless and aggressive manner, stand for those ideals which our forefathers established in the early days of our Republic, and which have guided our American citizens ever since.

My paternal great-grandfather was Capt. Henry Van der Burgh. He was a captain in George Washington's army. After the Revolution, he was appointed circuit judge of the great Northwest. He established his headquarters at Vincennes, Ind., and that is why VIRGINIA JENCKES is a Hoosier from Indiana.

Captain Van der Burgh administered justice in a manner which was an important factor in developing that great area, a most influential section, of our Nation. As circuit judge he maintained those same high ideals which he fought for under the command of George Washington.

And on the wall of my office in the House of Representatives Office Building hangs a photostatic copy of the original certificate of membership in the Society of the Cincinnati, which George Washington issued to Capt. Henry Van der Burgh, and which George Washington personally signed.

That certificate is a constant inspiration to me, as a Member of Congress, to preserve and maintain those ideals established by George Washington and my paternal great-grandfather, Captain and Circuit Justice Henry Van der Burgh.

So you see, I cannot, and I will not, sit idly by and witness or permit the development of unpatriotic and dishonest propaganda which will, if not curbed, destroy those ideals our forefathers fought and died for. And I want the Daughters of the American Revolution to know that I did not inherit my position as a Member of Congress. I had to stand the test of public approval by going through a hard-fought primary election three times, and by campaigning through three general elections. Six times have the citizens of my congressional district spoken for me at the polls, and six times they have approved of my efforts to maintain in the Nation's Congress those same fine ideals which have been responsible for the development of our Nation.

The citizens in every congressional district want those ideals preserved, and the people soon will demand that type of patriotic service from their elected servants, no matter what the political faith of the Representative or Senator may be.

Now, what is national defense and what is patriotic education?

National defense does not consist entirely of a large and efficient Army, Navy, marine, and aviation force. These are only the last resorts of a national defense, and we should always maintain them to the greatest degree of efficiency.

The true and real national defense exists only in the minds and hearts of the people, who appreciate the blessings they enjoy under the form of government established by our forefathers.

The words "As ye thinketh, so it shall be" apply to the development of national defense. We must develop in the thoughts and hearts of the American people a true understanding of national defense by patriotic education in all of its forms.

First, we must maintain respect for the symbol of our form of government.

The American flag, known as the Stars and Stripes, is the symbol of our Government.

Its display is evidence that the Government of the people prevails.

In every crisis our Nation has faced the distressed people have rallied around the flag, standing by our elected and appointed standard bearers until we brought victory to our forces or overcame the crisis which confronted us.

We were taught to love and revere the flag of our Nation, not for its material form, but for what it represents. The flag represents the blessings we enjoy under our form of government. No recipient of those blessings should refuse to salute and revere the Stars and Stripes. Those who refuse to do so are ignorant of what the flag stands for, or else they are creatures of and converts to the subtle propaganda which decreed that the Stars and Stripes on flagpoles on Federal buildings were not artistic and should not be placed on Federal buildings which were built with the taxpayers' money.

This same propaganda also let the three steel flagpoles in front of the Union Station in our Nation's Capital rust and remain flagless for a period of over 6 months, which covered the time I personally observed this unpatriotic neglect. I made inquiry why this condition prevailed and was unable to get any information why those flagpoles were flagless.

I was sent from one executive to another, and finally I found a well-developed arrangement to keep the American flag off public buildings and out of sight of the American people. I denounced this in vigorous terms. I was subjected to ridicule, but I would not quit, and finally the public became aroused; now, the Stars and Stripes are displayed every day on those poles.

That is an example of one woman's efforts on behalf of patriotic education. What could 600,000 Daughters of the American Revolution accomplish, if they would only get active?

Foreign nations are jealous of our prosperity. Foreign philosophies and formulas are being secretly propagated right here in Washington and throughout America, to change our form of government. Foreign governments have paid propagandists active here in Washington. It has been so for a number of years, but now it is highly developed.

We women thrilled and gushed over the beauty of the Japanese cherry blossoms which bloom each spring around the Tidal Basin in Washington. The American people accepted these Japanese cherry trees from the Japanese Government many years ago as propaganda to develop good will toward Japan.

That good will was developed. But now that good will has been violated.

The Japanese cherry tree does not bear fruit. Its blossoms are not as beautiful as the blossoms of the fruit-bearing American cherry trees. Nevertheless we Americans advertised Japan, and every spring our Nation paid tribute to Japan via the Japanese cherry blossoms.

With the Japanese cherry blossoms came the Japanese schoolboy with his camera, photographing everything in sight. We do not arrest or beat Japanese citizens who like to photograph Federal buildings.

Japan became strong. Japanese propaganda won over many unsuspecting Americans. But Japan evidently covets our prosperity and liberty, because Japanese Government agents deliberately bought United States Navy secrets from a miserable unpatriotic ex-lieutenant commander of the United States Navy named Farnsworth. Japanese Government money turned ex-Lieutenant Commander Farnsworth into a traitor to his country.

Yes, he was arrested, indicted, tried by a proper legal court, and sentenced to the Federal penitentiary at Atlanta, Ga., where he is now incarcerated.

Now, here is an open-and-shut case of what foreign propaganda is doing to our national defense. Did the Japanese Government disown this vile act? No, indeed. I was advised by Secretary of State Cordell Hull that Japan did not "make any representations or express any regrets" in connection with this case.

This is a flagrant violation of the friendship we Americans have for the Japanese people.

Now, what are we going to do about it? If we Americans were alert in the maintenance of a true national defense, we would, through proper legal action, root up every Japanese cherry tree on Federal property, saw them up for firewood, and replant them with American cherry trees, whose blossoms are more beautiful, and whose fruit is edible, and might be picked and given to our poor American citizens.

The American cherry tree is a symbol of truth. George Washington is alleged to have immortalized the American cherry tree by admitting the truth to his father when he chopped one down.

The Japanese cherry trees in Washington have developed, through the unfriendly, deceptive activities of the agents of the Japanese Government, into a symbol of deception, traitorism, and disloyalty.

So when the Japanese cherry blossoms bloom next spring, think of ex-Lieutenant Commander Farnsworth, the ex-United States Navy officer, who sold United States Navy secrets to Japan, and who is now trying to get a parole.

Then, ask your friends to stop gushing about a Japanese symbol of propaganda which makes traitors out of weak characters in our citizenry.

It is this same type of propaganda which is causing the Japanese forces to murder defenseless women and children in China. Yes; we women shudder when we see news photographs of Chinese children with their arms and legs shot off by Japanese shells. But remember the beautiful approach to our unsuspecting friendship which Japan made when the Japanese cherry trees were presented to the city of Washington. That was a start; the finish of this propaganda effort is not in the arrest and conviction of traitor ex-Lieutenant Commander Farnsworth; there are hundreds of other propaganda efforts which Japan has no doubt planted in this country and which have not been discovered. Are we going to be blinded into a state of carelessness of our patriotic responsibilities by the alleged beauty of the Japanese propaganda cherry blooms? Just make that a subject for discussion in the 2,500 chapters of the D. A. R. and let's have the answer.

I have a high regard for the Japanese people, but I abhor and detest, and I appeal to every American woman to abhor and detest, those agents of the Japanese Government who made a traitor out of ex-Lieutenant Commander Farnsworth.

I am opposed to boycotts. We American women are the consumers of Japanese silk. Let us not boycott Japanese silk, but let us use more American-grown cotton. American scientists and inventors have made it possible to develop American-grown cotton into fabrics and other materials more beautiful than Japanese silk. Our great humanitarian President, Franklin Delano Roosevelt, has invited the attention of the Congress to the surplus crop of American cotton.

I appeal to the 600,000 daughters of the American Revolution, organized in the 2,500 chapters throughout the Nation, to immediately launch a "Use more cotton" campaign in order to save our cotton growers. This is a form of patriotic education which will really develop our Nation.

Of course, you know that we cannot raise cotton in Indiana, but we women in the non-cotton-producing States want to help our sisters who live in the Southern States where cotton is the principal crop.

If every American woman would use 5 additional pounds of American-grown cotton each year, it would absorb the surplus of American cotton and bring prosperity to Dixie.

As you all know, I am greatly interested in our American school system.

We have a most patriotic and a most efficient school system here in America. Nevertheless, it was necessary to expose the attempts of propagandists to plant the Marxian theory via schoolbooks, and other means, in the public schools in the District of Columbia. A congressional hearing developed the fact that the Board of Education of the District of Columbia employed a "professor" to teach "character education," at $50 per day, who was at the same time associated with the University of Moscow.

Public indignation caused his removal. Communism is contrary to the ideals set up by the founders of our Government. In the constitution of the Soviet Government is a provision which requires all citizens of Russia to practice international propaganda and revolution, in order that the Marxian theory might prevail all over the world.

For many years recognition of Russia by the United States was refused because of this provision.

In addition, the Communists claim that all religion is opium. All industry is nationalized in Russia. Many other provisions in the Communist form of government are contrary to our American form of Government. When Russia was recognized by the United States, it was necessary to exact a promise from Russia that Communistic propaganda would not be practiced in the United States. Also was mentioned in the treaty a small item of the repayment of $400,000,000, which Russia owed the United States. These provisions were put into the treaty. And what has happened? We have not received the payment of the $400,000,000 owed to the United States, and Communistic propaganda has increased in the United States a hundredfold.

Here is where we need national defense. Here is where we need patriotic education. What are the 60 chapters of the D. A. R. in our Nation's Capital going to do about it? What will the 2,500 chapters of the D. A. R. throughout America do about it? That $400,000,000 would feed a lot of our destitute Americans this winter if Russia would pay it instead of using it for ammunition and armaments.

Do not underestimate the viciousness of the Communistic movement here in the United States.

When I became active against the indoctrination of communism in our public schools, I received all sorts of threats against my life by telephone and by mail.

I was told that Communist money would be sent to my congressional district to defeat me at the polls. False stories were circulated among the school teachers in my congressional district. However, these fine school teachers in my congressional district knew me, and they would not turn against me. Then I was advised that the Communist Party was going to send Mr. Browder, the Presidential candidate on the Communist ticket, to my home town of Terre Haute to defeat me. Mr. Browder came to Terre Haute backed up with plenty of money.

But he did not defeat me, because the Democratic and Republican citizens of my congressional district want our American ideals maintained, and they will not be swayed by dishonest propaganda of any kind.

Now, I want to say to this group of Daughters of the American Revolution, that I bear no ill will toward Russia. I accord the Russian people the right to have any kind of government they want to have in Russia. While I regret the violation of the treaty they made with the United States by not paying us that $400,000,000 we need so badly to reduce taxes, yet that is something for our American diplomats to handle.

I also accord the right of any group of American citizens who call themselves Communists, to organize and try to change our form of government in accordance with the Constitution of the United States, and their rights as American citizens. While I differ with them and will oppose them at every opportunity, nevertheless I will defend their right as American citizens to make the attempt in a lawful and open manner.

But what I am most aggressively antagonistic to, is the undercover, subversive propaganda methods which are being used to make our Nation communistic. Of course, they haven't a chance, as long as the people are alert and awake, and as long as we American women exercise our responsibilities to our Government by registering at the polls and voting. Our vote is a national defense of the first line. So let's vote on every issue at every election. We can trust the affairs of our Nation to our American citizens who are patriotic enough to go to the polls and vote.

Of course, the 60 chapters of the D. A. R. in the District of Columbia should also be interested in the defense of your homes in the District of Columbia. One of the most important defences of your home is getting the right to vote for the citizens of Washington. You Daughters of the American Revolution should undertake the task of asking your 600,000 sisters throughout our Nation to demand that the citizens of Washington be given the right to vote, and correct this civic outrage, which should not be tolerated.

Would our forefathers tolerate taxation without representation?

Indeed they would not. Well you do not need to have VIRGINIA JENCKES tell you that the citizens of our Nation's Capital are victims of taxation without representation. It is un-American. It is a vile blot on our form of government. I appeal to the 60 chapters of the D. A. R. in Washington to organize in your chapters a committee to be known as the "representation or no taxation committee." Then appeal to the 2,500 chapters of our great organization to take the necessary action which will give the citizens of Washington the right to vote.

Here is a very definite phase of national defense that we have overlooked, and if we are to maintain the ideals of our forefathers we must become active at once in this cause.

Here in Washington we need another type of defense. I am going to make a personal appeal to the Daughters of the American Revolution in Washington to become active.

We all know that fire and flame are mankind's greatest enemy. We organize paid and volunteer fire departments to combat fires. Here in Washington we have a very fine paid fire department. The efficiency and loyalty of the men in the District of Columbia fire department have saved millions of dollars for our citizens.

Just recently the Congress voted $100,000 for new equipment. I am happy that I had an opportunity to help get this appropriation.

But new equipment isn't enough. We must correct an un-American situation which prevails in the fire department of the District of Columbia.

The firemen are forced to work 75 hours per week. Think of that. These men must be away from their families 75 hours at a time. This long siege of service is most unfair. It is a relic of bygone days. Here we have the Congress discussing a 40-hour week for all workers, yet the District of Columbia government compels these loyal and faithful public servants to stay on duty 75 hours at a time.

No one knew that this unfair situation prevailed. The firemen were too loyal to complain. They subject their persons to all sorts of hardships and dangers in order that our homes and possessions might be protected.

And what do we do for our firemen to show our appreciation?

We compel them to stay away from their families 75 hours at a time, and I feel that this is not fair.

I have introduced a bill which is now before the Congress, which will place these firemen on a more equitable working basis. I am going to appeal to the D. A. R. to become interested. I want you to become interested, from a defense-of-the-home viewpoint. You know, the home is the initial unit of government. If we have good homes, if we have happy homes, if we have prosperous homes, we have a good, happy, prosperous Nation.

Now, let's defend our homes from evil influences of all kinds. Let us surround our homes with every sort of protection. We must reduce the hours of duty which our firemen are subject to, as a defense measure against the enemy of the home—the flame. So, please, as a home-defense measure, get active and help me to enact H. R. 7710, which I have introduced, into law.

Now, in conclusion, the message I want to leave with you is this: Don't wish for a national defense, vote for it.

Remember, American women cast 50 percent of the vote in every municipal, every State, and every national election.

Women are not as partisan as men are when measures affecting the home are considered. What is good for a Democratic home is also good for a Republican home. So let us work for, and vote for, those things which we women hold near and dear—the home and the family.

I thank you.

The Spirit of Christmas

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

RADIO ADDRESS BY HON. EDITH NOURSE ROGERS OF MASSACHUSETTS, DECEMBER 18, 1937

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by me today over the radio:

I am delighted to have the opportunity at the Nation's Capital to greet you who are listening to this program, and to each and every one of you I wish happiness, contentment, and a larger measure of security.

This holiday season is not unlike those of the past few years. We are living in very troubled, trying times, amid seeming disaster, crime, strife, and confusion. Each day seems to bring some new crisis in our national affairs, some seemingly unsurmountable obstacle that must be overcome. Your Representatives and Senators in Washington are deeply concerned in these problems. Each one of them is giving of his best thought and effort toward keeping our country remote from the quarrels and strife of other nations of the world.

The real American spirit of Christmas is an inherent feeling of peace and friendliness for our neighbors of the world. We do not want war. We do not care to flaunt our strength upon any nation. We are satisfied to be left alone, to solve our problems in our own way. We are most tolerant toward others, but we want them to know that we protect our own, and that we are prepared to do so. The true Christmas feeling is to be as helpful and as understanding of others as possible—and in that I am sure you will all concur, for it is typical of America and Americans.

Did you ever stop to think what this life would be with Christmas blotted out from the past, the present, and the future? Think back to your childhood days, and remember the thrills of Christmas morning, when the stockings were opened before the fire. Remember the many happy gatherings of your family at Yuletide, when from far and near came the ones you had not seen for so long a time? Remember the glow of satisfaction that has come to you with the realization that you have helped to make some unfortunate person's Christmas more cheerful? Remember the fine spirit of Christmas shown by our boys during the dark days of the World War? Then you will realize how great and how good a thing is this Spirit of Noel. Without it we would have a drear, unattractive existence. You and I know of persons who plan all throughout the year just for Christmas—their lives point toward this holiday season when they can make somebody happier and more contented. And no sooner has the holiday passed than they are planning for the next—living a life of helpfulness, of consideration for others—and receiving in return the peace of mind brought to them by the knowledge of having done the right, unselfish, useful thing.

Have you ever happened to think that Christmas comes in the darkest days of the year? That just before Christmas the days are shortest and the nights seem endlessly long? That Christmas is the turning point of the year, when the world casts off its somber shroud and turns to face the coming year with a welcoming smile and a happier heart. Just how happy that heart will be this year depends upon you. Wherever we are, in the city or in the country, in tenement house or farmhouse, we have the opportunity to make somebody happier, to lighten somebody's burden. It need not be by a gift—a helping hand over some difficulty is worth just as much—a kind word, a helpful thought, often is worth more than presents. Consideration for the feelings of others, understanding of their problems, tolerance of their ideas—that is all that is necessary to make this holiday season better.

As you and your family get together at this Yuletide, I want to take this opportunity to ask you—all of you—to pray for peace—to devote just a little of this Christmas time to a plea for better understanding among nations, and among the people who go to make up these nations. Never has there been more need for fervent prayer than now. The terribly anxious, heartsick days of the great World War are all too fresh in our minds to want war—or anything that resembles war. To appreciate this, we have only to visit one of the many veterans' hospitals and see the patients there—men who are still suffering from the wounds of battles of the last war, and who will suffer until they die. Ask any one of them what he thinks of war. The answer is obvious.

Whenever a bill affecting peace or neutrality is brought before the great Committee on Foreign Affairs of the House of Representatives, of which I have the honor to be a member, I feel the tenseness of responsibility which comes over everybody on that committee. There are no political party lines when the Nation's safety is at stake. Every one of us wants to do the best possible thing for our country. We want our Nation to be respected among other nations, yet we want it to be tolerant and understanding of the problems of our neighbors. We have never waged a war of aggression—and we never will. We have never flaunted our strength nor bullied smaller nations to submission—and we never will. We have, and we shall, demand and expect other nations to respect our rights and the privileges of our citizens. No true American would expect less than this. We can and must have peace without subservience to the will and demand of other nations. Firmness will bring about the same result. Only by adequate preparedness can we enforce that peace. We can have peace with dignity, without loss of respect, without cringing. That is the kind of peace that is due America, and that we intend to have.

As we look about us we rejoice in our form of government, our liberties, our privileges. We are proud that our Government, by its Constitution, protects it inhabitants, whatever their race and nationality. We are glad in the thought that those of every religion are free to worship as they desire.

In these days of stress and strife we are thankful and happy to be Americans, free to speak and free to think and act according to our beliefs. The thought of the restraint placed upon the citizens of other countries makes us realize how fortunate we are to be living in a country whose ideals are high and whose laws are just. Ours is the greatest and fairest Nation in the world. We must strive with all our might to keep it so. Your legislators have a vitally important task to bring about legislation to improve the conditions of the people of their country, to take care of the unemployed and put them back to work. Never before has there been so great a need for wise counsel and strong determination. It is a time when we must look forward for the good of the many. It is a task that requires much of the Yuletide spirit of deep understanding of the problems of others. We need your help, your suggestions, your cooperation. With it the task will be so much easier.

In this brief message, I bring you of the North, the South, the East, and the West my sincerest hopes for tolerance, for broadness of thought, for freedom from bigotry, for understanding. In other words, I bring you the earnest desire for peace on earth, good will toward men.

I thank you.

Amendment of the Federal Housing Act

EXTENSION OF REMARKS

OF

HON. EDWARD L. O'NEILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

ARTICLE FROM THE NEWARK EVENING NEWS, DECEMBER 18, 1937

Mr. O'NEILL of New Jersey. Mr. Speaker, under leave to extend my remarks I include the following article from the Newark Evening News of today, indicating the experience of a financial institution in New Jersey in their operations under the National Housing Act. I am sure that it is indicative of the general experience under this act throughout the Nation. The amendments we have just passed will broaden the scope of the activity of the Federal Housing Administration and result in further benefit to the Nation:

PROSPECT PARK BANK REPORTS NO F. H. A. LOSS

The Prospect Park National Bank reports out of a total of 314 F. H. A. loans aggregating $1,224,932 there were not only no defaulted cases but "not even a single threat of loss."

This record indicates, in the opinion of Thomas E. Colleton, State F. H. A. director, that "the factors relative to the credit reputation of the application considered by the F. H. A. before insuring a loan are vitally pertinent to successful mortgage experience." He points out that the average loan insured by the Newark office has been about $4,500.

"Our mortgagors for the most part," said Colleton, "are men and women who have been attracted by the rent-like monthly payments which include taxes and insurance. They want to be able to budget their expenses according to their income and experience with these mortgagors is definite proof of the credit acceptability of the average citizen. We believe that this F. H. A. experience emphasizes the soundness of Mr. Average Man as a credit risk and fully justifies the confidence that the mortgagees are willing to place in him. Not only lending institutions but business interests as well, seem to be favorably impressed by applicants receiving F. H. A. credit approval and consequently F. H. A. approval often proves helpful to the mortgagor in business transactions other than the mortgage itself."

F. D. and Congress on a Teeterboard

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

STATEMENT BY JAMES MORGAN IN THE BOSTON GLOBE OF NOVEMBER 28, 1937

Mr. CONNERY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement

from the Boston Globe of November 28, 1937, by Mr. James Morgan, one of my constituents:

[From the Boston Sunday Globe, November 28, 1937]

F. D. AND CONGRESS ON A TEETERBOARD—THE PRESENT RIVALRY FOR CONTROL BETWEEN WHITE HOUSE AND CAPITOL IS AS OLD AS THE CONSTITUTION

(By James Morgan)

Some of the good people who were troubled a brief while ago by what they called the abdication of Congress and the dictatorship of the President may be somewhat bewildered now by the scenes at Washington since the opening of the special session 2 weeks ago. It should reassure them to know that whatever confusion there may be is strictly constitutional. The two Houses, in trying to get back to the Constitution, have found the checks but still are fumbling for the balances which that great charter is supposed to have provided for our Government.

The independence of the legislative and executive departments and the separation of their powers is the oldest myth in the amazingly extensive mythology that our young Nation has accumulated. Realists that they were, the founding fathers themselves must have been well aware that is was a fable—that Congress or the President would have to take the initiative, take the lead in order to make the scheme of government work. But they also knew that they could not agree which it should be. Even if they could have decided the issue, the decision could not have been written down in black and white without dangerously exalting one department and perhaps fatally depressing the other.

A LONG DUEL

The question was treated at the Philadelphia convention with what Edmund Burke termed a wise and salutary neglect. It remains a fighting question after 150 years. Congress and the President ever have been engaged in a struggle for leadership, except in a few blank and unhistoric intervals. It has been a long duel between opposite ends of Pennsylvania Avenue, with each trying to get the drop on the other and impose its mastery.

That is what we are seeing these days, and we can watch the conflict with an understanding patience if we remember that the framers of the Government planned it so. It is a vulgarity to reduce to the terms of a transient quarrel between the Capitol and the White House and of a mere brawl between personalities this ancient and irrepressible controversy bequeathed by the Constitution itself.

It has been a determined and often an embittering struggle this, which our institutions impose. The more masterful Presidents, beginning with Washington, nearly all those who look down upon us from the walls in the gallery of fame, won the battle. The others in the Presidential line who lost it lost their liberty of action and remained subordinate to Congress.

Most of this group received the Presidency on terms that required their subordination either to the Legislature or to more powerful leaders. Madison and Monroe were the appointed executors of Jefferson's political estate and Van Buren of Jackson's. Tyler, Polk, Taylor, Fillmore, Pierce, and Buchanan were only regents for the slave-holding oligarchy. Grant, Garfield, Benjamin Harrison, and Harding were the chosen instruments of politically stronger men.

A MODERN INSTANCE

A more recent example to the same point is offered by Taft. The melancholy fate of his Presidency was not so much in himself as in his stars. Theodore Roosevelt chose him as a deputy to carry out "my policies"; but Presidents are born, not made.

Among the defects of T. R.'s qualities was his reliance on his own strength to bend men to his will. Almost all the abler men of his administration and of Congress in his term were inherited by him as legacies of the McKinley-Hanna regime, and he coaxed or drove them to serve him. He did not raise a crop of new men. Root, Knox, Cannon, Aldrich, Penrose, and leaders of that stamp never were for him, but in his love of the strenuous life he rejoiced to make them do his bidding.

When the big stick was no longer over their heads, inevitably those men returned to their native bent. And they carried Taft with them into what amounted politically to a counter revolution. With them also went the Republican Party, and that relapse into standpatism a quarter of a century ago and more is what ails the party today.

INVISIBLE GOVERNMENT

With Speaker Cannon the czar of the House and Senator Aldrich, of Rhode Island, "the manager of the United States," we had what was called an invisible government. Indeed, we had been for much of our national existence under the leadership of unseen and irresponsible men behind the throne and the closed doors of committee rooms, representing not always the public interest but more often powerful private interests.

Even when Presidents led, their sway over Congress generally was exercised clandestinely. They were careful to keep up an appearance of respect for the constitutional fiction of the separation and independence of the Executive and the legislature.

The same situation existed in the governments of our States and of our cities. Everywhere leadership was hidden as a guilty thing, and it operated by subterfuge and stealth. In the period of moral decadence following the Civil War it was taken entirely out of the hands of our elective officials, legislative and executive, in some States and in many municipalities. It was seized upon by strong-jawed and strong-armed bosses and boodlers, who built up political organizations and machines which made a mockery of elections.

The bidding of those bosses was done by puppet legislatures and councils, Governors, and mayors. Selling franchises and other special privileges in statehouses and city halls and protection and immunity at police headquarters and even in the courts they converted government into a racket. It was the first great American racket on which the swarm of crooks, thugs, and big shots of our time patterned their racketeering in private business.

A YOUNG MAN'S DISCOVERY

A lean, studious young man of the generation which saw that monstrous evil rise and flourish like a cancerous growth in our body politic decided to make a study of its pathology while he was taking a postgraduate course at Johns Hopkins University in boss-ridden Baltimore. He published his findings in 1885, under the title of "Congressional Government," and it was the thesis on which he won his degree of Ph. D. the next year. He announced the discovery that committees, machines, and bosses had only rushed in to fill a vacuum created by our constitutions and city charters.

In Europe the executive and the legislature are one and the same thing. Here they are separated, with neither and no one authorized to direct the Government as a whole. Consequently the headless affair in Washington, in State capitols, and city halls had fallen under an unauthorized, irresponsible bossism of one kind or another. The conclusion of the youthful discoverer was that a President, a Governor, a mayor, as the only elected official known and responsible to all the people, must lead if that necessary job were not to be left to some party machine or managing politician in the control of selfish private interests.

WILSON'S TEST OF HIS THEORY

After somewhat more than a quarter of a century the author of that theory was himself President of the United States and in a position to subject it to the supreme test. It worked most successfully. He regularized, rationalized Presidential leadership. Woodrow Wilson is among the three or four original political thinkers that we have had in the Presidency, but he never afterward out-thought himself in that academic essay, which he wrote when he was 29.

With the advent of Wilson at Washington, the relations between the Executive and the Legislature ceased to be surreptitious. Presidents had been keeping away from the Capitol, except when summoned there for an hour to sign the last-minute business of an expiring Congress. The rest of the time they carried on a more or less back-stair diplomacy with the lawmaking branch a mile away, as if it were some rival power in Europe.

Going in person to deliver his message to Congress, as no predecessor had done in a century, Wilson assumed the attitude of a Member at large of both Houses. From time to time he sauntered unheralded into the seldom-used room of the President in the Senate wing, where he talked over pending problems with his party leaders.

He brought into the open the necessary task of coordinating two coordinate branches of the Government. The Federal Reserve System, the Federal Trade Commission, the Clayton antitrust law, the Child Labor, the Seamen's, the Farm Loan, and the Federal Aid for Good Roads Acts are among the products of that teamwork in his first administration, before the World War threw his Presidency off the track of progressive legislation.

After the Senators had overthrown Wilson on the issue of the League of Nations, they took control of the Presidency with their nomination of Harding. Coolidge did not attempt to recapture the leadership. Nor did Mr. Hoover grasp the reins at the outset of his term, when the Smoot-Hawley tariff was in the making. That omission doomed his administration even before the depression came to crown its misfortunes.

THE TEETERBOARD

Our Government, as it was left by the Constitution, may be likened to a teeterboard. At one end is the huge bulk of Congress and at the other is the President alone. To the naked eye that looks like an unequal game, with one man pitted against 531 Senators and Representatives. But he is weighted with the prestige and the patronage of his office, which keeps officeholders and office seekers pulling for him. Indispensable to him is the weight of public opinion. There the single man in the spotlight of the White House has an advantage over a multitudinous Congress, enveloped in a cloud of the dust of its own raising, and prone to degenerate into a leaderless mob.

The present uncertainty about leadership at Washington is due to the people having got off President Roosevelt's end of the teeterboard on the court issue, which left him up in the air. If and whenever they show unmistakable evidence of returning to him in behalf of any program, Congress will be up in the air.

The President has yet to raise an issue that will rally the people to him again impressively. True, the Gallup poll serves notice that he has suffered no net loss of popularity since his landslide victory in 1936. But Congress doubts if his program is as popular as the author's personality. It is distracted by the business recession and fearful of the political consequences of that slump. This may be Mr. Roosevelt's opportunity to get the reins firmly in hand again and unify his party and the country. Meanwhile the weather-wise at the Capitol are anxiously searching for signs in the horizon as they approach the midterm election in 1938.

The Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. MICHENER. Mr. Speaker, in a speech made earlier in the week on the wage and hour bill, I stated the reasons why I could not support this legislation. Among other things, I called attention to the fact that the enactment of the President's bill, now before the House, would absolutely ruin many small industries throughout the country.

I have received a letter from the American Boiler & Foundry Co., of Milan, Mich., which letter is pregnant with information applicable to this discussion. Upon my request, Mr. F. E. Ross, the president of the company, has given me permission to make the letter public. Milan is a splendid village of more than 2,000 inhabitants, and is typical of the small towns throughout the Middle West where small industries flourish, where the workingmen own their own homes, are the best citizens in the community, and whose real purpose in life is to be good citizens, own their own homes, and send their children to school. The residents of the small towns and the countryside are the bulwark of our social and economic stability. In these circumstances it is well that Congress has the benefit of just how a small industry can be operated under existing law. Mr. Ross' letter is in part as follows:

We employ 150 men, most of whom are skilled to some extent. These workers receive from $6 to $10 per day for 8 hours' work.

We have felt right along that the solution to our present problem (the depression) is not a high hourly scale, a high daily rate, a high weekly pay, but a high yearly income for our men, so we attacked the problem from this angle. How well we have succeeded is evidenced by the number of weeks we have been able to operate our plant at full production.

Since September 1935 we have not had a shut down. We ran at full production from September, following Labor Day, to December 31, 1935, at five 8-hour days per week. Beginning then, we went on a 6-day schedule and operated on this schedule almost the entire year 1936, giving our men 290 working days for the year. This year we have worked every week, 6 days per week, until October 15, or rather the third week, when we went to a 5-day schedule for the balance of the month. November our schedule was 3 days. The latter part of November we made contracts so that we are now back on the 6-day schedule, 48 hours per week, and will operate on this basis for the next 6 months and in all probability will continue for the balance of the year 1938.

In taking business such as we do, we must meet competition and at the same time deliver the goods to the customer. With all the taxes that are piled on us, such as social security, employment insurance, and the hidden taxes, we are fortunate if we make a profit. For the past 2 years we have made a little over $50 per day for every day that we have operated. Now, if we have to pay time and one-half for all extra hours over 40, and as our pay roll is nearly $1,000 per day, you can readily see that it would be pointless to run our plant any hours over 40 or the minimum allowed. Our profit is more than lost if we operate 6 days, or 48 hours per week, and if we don't, we can't take care of our customers, so we lose the business; so in any event we are more or less between the devil and the deep blue sea, providing the wage and hour bill passes as set up.

Due to our method of handling men and our manner of giving them steady employment, they are with us 100 percent. We have had absolutely no labor trouble during all the labor turmoil that has been going on all around us. Our men are putting their trust in the management, and we can't let them down. If for any reason the present fine balance between orders and production is disturbed, the chances are our men will be in the same boat that a great many other men are who work a few weeks and then are laid off for weeks without pay.

It may occur to you that due to having such a fine operation we could add 20 percent more men and work our men 5 days per week instead of 6. This is not so easily done as a certain amount of skill is needed to do our work and we find it hard to pick up the skilled workmen. Another drawback is lack of buildings to house the men and since the surplus law has been passed we have not been able to sow back any of the small profits we have made into our business. We are badly cramped for room as it is.

When we cut our employees' working hours from 48 to 40 we are cutting his pay one-sixth. Are they going to be satisfied with a weekly pay check and a yearly pay check 16⅔ percent less than they have been receiving? We are paying top wages in our industry. No manufacturer of boilers, tank heaters, or furnaces is paying a higher daily wage than we are, and our yearly wage greatly exceeds any of them. Our men even tell us that our wage scale is the highest in the State for our industry. We hope that when the bill passes the House will see to it that the blow that will surely fall on small industry will be cushioned to a point that a knock-out will not be administered.

The United States needs more communities like Milan and more institutions like the American Boiler & Foundry Co. Here peace and harmony prevail. The man in the office and the man at the bench have a common problem, and are attacking that problem with a common viewpoint. Cooperation and mutual benefit is the objective. This Black-Connery-Norton wage and hour bill would put institutions like the above company out of commission. It must not pass.

Banquet of Young Democratic Clubs at Baltimore, Md.

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ADDRESS OF CHAIRMAN JAMES A. FARLEY, OF THE DEMOCRATIC NATIONAL COMMITTEE, AT THE ANNUAL BANQUET OF THE YOUNG DEMOCRATIC CLUBS OF MARYLAND, BALTIMORE, MD., NOVEMBER 17, 1937

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the Appendix a very interesting and instructive speech delivered by Hon. James A. Farley at the annual banquet of the Young Democratic Clubs of Maryland, Baltimore, Md., on November 17, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is something about the atmosphere of Maryland in general and Baltimore in particular that makes a Democratic speaker feel at home. I know you have your local rows and intraparty quarrels and that you are as emphatic in fighting out these discords as if the fate of the Nation was dependent on the success of your individual faction.

Doubtless, you think that your State is peculiar in this regard. Now I have just returned from a journey from one seaboard to the other, so I feel that I am in a position to tell you that I did not find a State where the same condition did not prevail—and has always prevailed.

Because you are young Democrats and, because, as in all enthusiastic organizations rivalries and differences may arise among you, I am going to talk to you briefly on the subject of political family feuds.

My first injunction to you is not to take these things too seriously.

As chairman of the national Democratic organization I am a political pacifist. It is part of my job to try to compose differences and promote harmony, but do not think that I am unaware that healthy rivalry among State leaders has its advantages. The stronger men and women feel about political developments within the party the better qualified do they become for the big battles that are truly national.

I have frequently stressed the necessity, if our country is to have the sort of government we desire, of a sturdy minority party. The reasons for this are obvious. No group or organization is good enough or wise enough to administer the affairs of this great country without the spur of constructive criticism. Our Government, as you are so often reminded, is a government of checks and balances. My belief is that this principle should be in just as full effect in politics as in government.

We want the Democratic Party to be always on its toes; we want to give our country the best officials that can be selected, to insure that our candidates when elected shall always administer the direction of affairs—national, State, and city—in the best interests of the people. In the long run, this policy is the only one by which democratic rule can be perpetuated. Whenever this policy is departed from by reasons of apparent expediency, or because of the selfish purposes of individuals or groups, we get into trouble. The people have an uncanny way of discovering what is going on

and taking their own means of remedying the fault. So there is little of evil and much good in the existence of a stout minority, watching the majority, criticising it when it falls down, holding it to the strict performance of its duties and obligations.

That is all right, provided the friction does not extend beyond the primary battles or convention fracases. You may be sure that the opposition party will not fail to make the most of it, if we do not keep our house clean. It is better politics to have the bad spots, if there are any, pointed out by Democrats, and corrected, than to leave a dump of political ammunition handy for the enemy when it comes to the real battle at the polls.

This philosophy is as applicable to Young Democratic clubs as to old Democratic machines.

I am not speaking of Maryland especially, but of the whole sisterhood of States. Commonwealths and communities do not often change administration without a definite reason. I have observed very many elections won and lost, but rarely has a change occurred unless the party in power has failed to give the sort of administration the people desired.

It is no part of my job to act as referee in party disagreements or discords. Every community knows its own problems and must judge for itself as to the qualifications of candidates. The sole task of the Democratic national organization is to give what help it can to the men and women chosen by their own constituencies to represent them at the polls and later in the Government.

Our task is easy if the people chose the right sort of candidates; it is most difficult if they chose unwisely.

Let me say this for your great State. It has had its full share of factional difficulties, but its history is illuminated by the names of the illustrious men it has picked to serve it at home or at the National Capital. I will not undertake to read the long roll of the great statesmen Maryland has contributed to the public service. You know your own political family tree far better than I could picture it.

The fact that Maryland has had so many splendid public servants is in itself evidence that its people have usually realized the principle I have been talking about, but still I hope you will bear with the sermon I seem to be preaching.

Factional differences are nothing new. Practically every one of the distinguished men on the roster of your history was the center of an intense political struggle. That result alone, I think, bears out my theory that out of local strife emerges national fame; out of the welter of bickerings about candidates and party leaderships, comes most frequently harmony and public service at its best.

Your State has a marvelous tradition of dignity and wideness of vision. It is up to you young Democrats to carry on this tradition. Ever since Revolutionary days this principle has survived and I know of no Commonwealth that exceeds Maryland in the respect it merits and enjoys throughout the Nation. You are conservative without being reactionary; progressive without being radical. You have kept pace with the ever-advancing sentiment of true democracy.

Men and women cannot become wrapped up in local contests without becoming concerned with the broader politics. Here you find less of that spirit which elsewhere is so prevalent of ignoring politics except, perhaps, 'on election day. I do not recall ever hearing in Baltimore a successful man boasting that he neither knew nor cared anything about politics. I have frequently heard that sentiment expressed elsewhere. It is as if the business of choosing our form of government, and the officials who administer that government, was something undignified if not absolutely reprehensible. Politics, like every other form of human activity, is as good or as bad as people make it. Those who are content to leave it in the hands of others have little right to complain if things go contrary to their desires. Actually politics is every person's business. The habit of your Maryland men of affairs in carrying out the example of their ancestors—and really taking part in politics and government—is, I believe, one of the reasons that your State stands so high. I wish that the Maryland policy was general throughout the Union.

Now, let me talk a little about national matters. In the past year I have been in nearly every State. I have talked with our own leaders and, in fact, with the leaders of almost every branch of society. I am prepared to report to you that the present administration at Washington is as popular today as it was a year ago, when Roosevelt and the Roosevelt policies carried every State but two.

Of course, there are some grouches. There are bound to be. But I think you will find that all, or nearly all, of the opposition that is making so much noise is confined to the group that has always opposed the President. I mean by this, individuals and groups like the Liberty League, now masquerading as the League to Uphold Constitutional Government, who think that any change is an evil and any effort to improve the condition of the great mass of our population is in some way prejudicial to their own interests. Now, mind you, these men are not all conscious that that is their motivating thought. Even the most extreme reactionary may be quite sincere in his belief. He may seriously figure that a system that empowers him to make greater and greater profits, regardless of his employees or any other element of the population, should be the aim of our Government. There is no use to argue with this particular group. You may point out with all the economic statistics that can be gathered that their prosperity cannot be real or permanent unless the whole country is prosperous.

You may prove that a low standard of wages means a lack of purchasing power; that farmers struggling against bankruptcy cannot buy the things the sale of which is the basis of the great fortunes. There always remains the group which considers an increase in wages as a calamity and almost a personal affront.

They are inclined to believe that the great depression came like a change in weather, without any cause that could be calculated, and with no degree of responsibility attaching to them. The actual and simple fact was that the farm population had fallen out of the purchasing class. As the farmers were able to buy less, mills had to manufacture less. So began the era of unemployment. And with every new batch of employees laid off from their jobs business plunged further and further downward. In other words, it was completely demonstrated that great fortunes for the few and near starvation for the many was an impossible situation.

It was this administration's job to straighten things out and get our commercial and industrial machinery functioning again. And I think you will all agree with me that it was a successful job. Unfortunately, some of these people conceived that the whole purpose of the New Deal system was to put them back to their old eminence of income and nothing else.

Yes; I ran into quite a number of eminent citizens who seem to have forgotten where they were 7 or 8 years ago as contrasted with where they are today. All they can think about is how much it has cost and is costing.

There is no question that it has taken a great deal of money to accomplish the change. But what is that compared with what it it would have cost had the Roosevelt administration followed the lines of the preceding regime and done nothing? Does anybody suppose that 10,000,000 unemployed and their families would have starved patiently and peacefully? Does anybody think that had the do-nothing policy been proceeded with these businesses, that are again flourishing and paying dividends, would have survived the convulsion of another year of unrelieved misery?

The Budget was out of balance when Franklin D. Roosevelt came to the White House. It is more out of balance now. I marvel if any thinking person can sincerely compare the inconvenience of an unbalanced Government Budget with what might have happened had things been allowed to drift indefinitely.

Well, the expenses of the Government must be brought back within the bounds of the Government's income, and the only way the Government can raise its revenue is through taxes. It may not be necessary, and probably will not be necessary, for taxes to be increased. Congress is now in session and will wrestle with that very problem. I am quite sure that if the people with the largest incomes will quit their complaining and do their legitimate share of paying for the processes that have kept them economically alive, not only will the Budget be balanced within a comparatively short time but that we will enter into an era of steadily diminishing tax rates.

Leaving out the mourners and wailers, I found in every State that I went into abundant confidence within our party and unshaken faith in our President. The effects of the rising or falling of the stock market diminishes as you go West. In New York, for example, every Wall Street tremor is regarded as a major happening. In most of the Western States the people do not even read the stock market reports. They are content to know that their own business is moving along at a fair pace, and that the farmers are getting reasonable prices for their produce. They are willing to believe that, just as the administration has met the problems of the past, it will meet the problems of the future.

That the Democratic Party will remain in power for a long time is regarded as a certainty not worth arguing about. We must realize that it is our party that will handle the serious domestic and foreign questions at present or that may arise. And it has got to do it all alone. No help is to be expected from the Republican Party, for that party has no program and no policy. Its daily prayer is that something may turn up that the Democrats are unable to solve and that they then may profit by our embarrassment. They had some sort of convention in Chicago a week or two ago and the only decision of that G. O. P. gathering was to keep on doing nothing for another year or so. Presumably then they will try to patch up some kind of declaration which they hope will give the people the semblance of an idea of their intentions. It is not difficult even now to forecast about what this declaration will amount to.

They will deplore whatever the administration is doing, will view with alarm what they expect it is going to do, and wind up by assuring the people that only in a return to power of the Republicans lies the slightest chance for national salvation. This, of course, will be preliminary to nominating Mr. Hoover, or Governor Landon, or Senator Vandenberg, or somebody else on that order to go through the motions of a campaign in 1940.

I know there are some people who cling tenaciously to the belief that because public questions stir up opposing interests and bring to light conflicting views, the practical course is to sidestep the issue and to seek popular approval by the simple process of avoidance.

Despite the wish that it might be so, political problems rarely dissolve from inattention. If portents of danger are ignored too long, the situation may become aggravated to an alarming degree.

In any event, the Democratic administration could not, if it wished, adopt such a policy. The problems are here; they are on our doorstep. Congress is now in session, studying a tax bill with a view to straightening out certain phases of the measure that have been found fault with. It has before it a wage and hour

bill, a bill for crop control, and various acts dealing with conservation, and simplification of our processes of government. Whether we like it or not, these things have to be handled. Some means must be found by which the recurring conflicts between capital and labor may be minimized, if they cannot be prevented. Some method must be devised to avoid the destruction of the purchasing power of the farmers, because if we learned anything through the last depression, it was that farm bankruptcy meant national bankruptcy, and so on down the line.

Now, nobody presents these measures for enactment for the fun of the thing. It is simply that the Democratic administration believes that evils are not cured by delay, and these measures are forced upon us by necessity.

It will be the task of Congress to pass the laws in workable shape. In whatever form they issue, you may count on their being subjected to frantic assault by the foes of the administration. It is always doubtful if any legislation when first enacted into law is perfect. Every public policy can be improved upon after it has been in operation long enough to demonstrate its strength and its weaknesses.

One thing is certain—that there is nothing in the prospective measures, any more than in those which have been put into effect during the past 5 years, to frighten anybody. Up to date, each succeeding law that went on the statute books, since President Roosevelt's advent to the White House, has been hailed by his enemies as promising certain destruction to all our American institutions. And yet, year after year, our conditions have improved and the good old country has wagged along, getting closer to comfort and content.

That is why I am able to tell you young Democrats and old Democrats tonight that in every section of the country the New Deal maintains its popularity. The people are grateful to our President and thankful that his industry, wisdom, and courage have transformed a Nation in despair into the happiest, freest, least-fearing state on the entire globe.

Dedication of American Kemmel Memorial Near Ypres, Belgium

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ADDRESS OF THE HONORABLE BRIG. GEN. J. B. P. CLAYTON HILL, D. S. M., FORMER REPRESENTATIVE OF MARYLAND IN THE CONGRESS OF THE UNITED STATES OF AMERICA, MEMBER OF THE AMERICAN BATTLE MONUMENTS COMMISSION, NEAR YPRES, BELGIUM

Mr. GIBSON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by the Honorable Brig. Gen. J. B. P. Clayton Hill, D. S. M., a former Representative of Maryland in the Congress of the United States, at the dedication of the American Kemmel Memorial near Ypres, Belgium, August 8, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of the American battle areas in Belgium was near battle-wrecked Ypres, where the Twenty-seventh and Thirtieth Divisions participated in an advance in the opening phase of the Ypres-Lys offensive of August 1918.

These two divisions served throughout their stay in Europe with the British Army. During the summer of 1918 they were trained at the front by attaching small units to British organizations, and about the middle of August they assumed complete charge of adjoining divisional sectors in the line just south of Ypres.

On the 30th it was discovered that the Germans were retiring from the Lys salient and the British reoccupied Mont Kemmel. The Twenty-seventh Division was directed to move forward the next day in cooperation with a like movement by the British units on its right, while the Thirtieth Division was to advance the southern portion of its front to capture Voormezeele and keep abreast of the left of the Twenty-seventh.

Both divisions pushed forward to their objective before daylight of the following day, and the Twenty-seventh continued to make small gains until September 2, during which time it had captured Vierstraat Ridge and pressed the Germans back about a mile.

The Twenty-seventh Division was relieved on the night of September 2–3, and the Thirtieth on the night of September 3–4. Both divisions entered the line again about 3 weeks later north of St. Quentin in the fierce battles for the possession of the Hindenburg line.

When on April 16, 1918, General Pershing discussed with General Foch the organization of an American Army, General Foch remarked that the enemy was very aggressive, and referred to his severe attack against the British on the Lys between Lens and Ypres, which began on April 9 and was still in progress on the 16th. General Pershing said, "The German offensive in the Lys was another formidable attempt to break the British lines. The attack was made up the north and south of Armentières on a front of 24 miles by 27 German divisions." It was during this April German offensive that Marshal Haig issued his order of April 11. "Three weeks ago today the enemy began his terrific attacks against us on a 50-mile front. His objects are to separate us from the French, to take the Channel ports, and destroy the British Army." Marshal Haig concluded the order with the following words: "There is no other course open to us but to fight it out. Every position must be held to the last man; there must be no retirement. With our backs to the wall, and believing in the justice of our cause, each one of us must fight on to the end. The safety of our homes and the freedom of mankind alike depend upon the conduct of each one of us at this critical moment."

"The freedom of mankind." That is what the Second American Army Corps, comprised of the Twenty-seventh Division and the Thirtieth Division, fought for here.

General Pershing decorated the Chief of Staff of the Fourth British Army, Maj. Gen. Archibald A. Montgomery, with our D. S. M.; and General Pershing's citation of the now field marshal, Sir A. A. Montgomery-Massingberd, expresses what the Twenty-seventh and Thirtieth Divisions did here, as well as what the Thirty-third division did. General Pershing's citation of Field Marshal Montgomery-Massingberd was, "As Chief of Staff of the Fourth British Army he directed the operations of the Second American Army Corps with distinguished ability, displaying military attainments of the highest order. The officers and soldiers of the Twenty-seventh, Thirtieth, and Thirty-third United States Divisions are justly proud of having served with their English comrades against the common foe and of having shared with them in the successes which were due, in no small degree, to his capable direction."

Our soldiers who fought here fought under the inspiration of Pershing, Haig, and Montgomery, and at all times there was, like an aura, about them the spirit of Albert, King of the Belgians, that great knight of right, and his Queen. General Pershing recorded in his diary at Chaumont, Wednesday, January 2, 1918: "Visited King and Queen of Belgium and their army at Adinkerke on Saturday." Of this visit General Pershing has recorded, "During my visit I got a much clearer notion of the spirit of the Belgian Army and of its tenacious resistance, which had been of such importance to the Allies by delaying the German advance." General Pershing has also said, "During my brief visit I was particularly impressed by the extreme simplicity of the home life of the King and Queen, living there, as they were, in a very modest country place within sound of the enemy's guns and almost within range. The Queen often went into the trenches to cheer the troops, and the fine bearing of Their Majesties through it all made them outstanding heroic figures of the World War."

Unfadable glory for the Second Corps to have served in Belgium, the land of King Albert and Queen Elizabeth, those outstanding heroes of the World War.

Action of Courts on Decisions of National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

STATEMENT IN REFERENCE TO THE DECISIONS OF THE NATIONAL LABOR RELATIONS BOARD WHICH HAVE BEEN PASSED UPON BY THE COURTS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement in reference to the decisions of the National Labor Relations Board which have been passed upon by the courts, showing that the courts have upheld 18 out of 20 decisions of that Board which have been submitted to the courts.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COURTS UPHOLD N. L. R. B. IN 18 OF 20 CASES

In connection with the announcement of the latest decision of the circuit courts of appeals upholding an order of the Board under the National Labor Relations Act (*N. L. R. B.* v. *Carlisle Lumber Co.*, decided Dec. 13, 1937 (C. C. A. 9th)), the Board issued a summary of litigation under the act.

The Board's orders have been substantially or fully upheld in 18 out of 20 cases heard by the courts and fully decided on the merits thus far under the procedure of the statute, after hearings by the Board, including three cases decided by consent decree.[1] In the 18 cases in which the Board's orders were upheld, the courts ordered reinstatement of some 740 employees, some 414 with back pay.

In not a single case have the Board's fact findings been reversed in whole. The Board's findings of fact were modified in only one case, as to three of the employees involved, but were affirmed as to four others in the same case, and the company required to bargain collectively with the complaining labor organization (*Agwilines, Inc.*, v. *N. L. R. B.*, Dec. 22, 1936 (C. C. A. 5th)).

In all five of the cases upholding the constitutionality of the Wagner Act in April 1937, the Supreme Court also found that the Board's findings as to unfair labor practices were supported by substantial evidence.

Since the Supreme Court decisions, there have been 10 rulings by circuit courts of appeals. Of these, five affirmed the Board's orders in whole, three affirmed Board orders subject to modification as to certain aspects of the affirmative relief granted; one set aside the Board's order in whole, on an issue of law depending upon facts arising subsequent to the Board's original decision (*N. L. R. B.* v. *New Jersey Ferry Co.*, June 18, 1937 (C. C. A. 3d); one, by a divided court, refused enforcement of the Board's order requiring the reemployment with back pay of five persons who had gone on strike (*N. L. R. B.* v. *Mackay Radio & Telegraph Co.*, Oct. 19, 1937 (C. C. A. 9th)). The result in the case last referred to is opposed by that reached by different judges of the same court in the Carlisle Lumber case.

In no cases have the Board's orders been set aside because of defects in the Board's procedure. In the Jones & Laughlin case the Supreme Court said of the statute:

"The procedural provisions of the act are assailed. But these provisions, as we construe them, do not offend against the constitutional requirements governing the creation and action of administrative bodies. See *Interstate Commerce Commission* v. *Louisville & Nashville R. Co.*, 227 U. S. 88, 91. The act establishes standards to which the Board must conform. There must be complaint, notice, and hearing. The Board must receive evidence and make findings. The findings as to the facts are to be conclusive, but only if supported by evidence. The order of the Board is subject to review by the designated court, and only when sustained by the court may the order be enforced. Upon that review all questions of the jurisdiction of the Board and the regularity of its proceedings, all questions of constitutional right or statutory authority are open to examination by the court. We construe the procedural provisions as affording adequate opportunity to secure judicial protection against arbitrary action in accordance with the well-settled rules applicable to administrative agencies set up by Congress to aid in the enforcement of valid legislation."

Forty-four cases are now on file with various circuit courts, brought by the Board for enforcement or by the employer involved for review. The Board contemplates authorizing additional enforcement proceedings in other instances where its orders have not been complied with.

Following is a summary of the individual cases passed on by the courts under the act:

N. L. R. B. v. *Associated Press.* Order affirmed, United States Supreme Court, April 12, 1937. One employee ordered reinstated with back pay.

N. L. R. B. v. *Washington, Virginia & Maryland Coach Co.* Order affirmed, United States Supreme Court, April 12, 1937. Eighteen employees ordered reinstated with back pay.

N. L. R. B. v. *Jones & Laughlin Steel Corporation.* Order affirmed, United States Supreme Court, April 12, 1937. Ten employees ordered reinstated with back pay.

N. L. R. B. v. *Fruehauf Trailer Co.* Order affirmed, United States Supreme Court, April 12, 1937. Seven employees ordered reinstated with back pay.

N. L. R. B. v. *Friedman-Harry Marks Clothing Co.* Order affirmed, United States Supreme Court, April 12, 1937. Nineteen employees ordered reinstated with back pay.

N. L. R. B. v. *National N. Y. Packing & Shipping Co.* Order affirmed, second circuit, November 2, 1936. Five employees ordered reinstated with back pay.

Agwilines, Inc. v. *N. L. R. B.* Order modified and affirmed, fifth circuit, December 22, 1936. Board's findings of discrimination against four employees affirmed; further proceedings directed for clarification of order for reinstatement with back pay. The company was also required to bargain collectively with a labor organization designated by its employees. Board's order set aside as to reinstatement of three other employees.

N. L. R. B. v. *Tidewater Express Co.* Order affirmed, fourth circuit, May 10, 1937. Two employees ordered reinstated with back pay.

Renown Stove Co. v. *N. L. R. B.* Order affirmed, sixth circuit, June 2, 1937. Two employees ordered reinstated with back pay.

N. L. R. B. v. *Alaska Juneau Mining Co.* Consent decree entered, fourth circuit, May 26, 1937. Company ordered to cease and desist from dominating or interfering with any labor organization of its employees or from contributing financial or other support to it; to reinstate 11 employees with back pay; to offer reinstatement to a maximum of 116 employees who had been on strike; and to withdraw all recognition from and completely disestablish its relations with a company-dominated labor organization.

N. L. R. B. v. *Penna. Greyhound Lines.* Order modified and affirmed, third circuit, June 15, 1937. Company ordered to reinstate five employees with back pay; to cease and desist from dominating or interfering with an employees' association and contributing financial support to it; and to cease and desist from urging, persuading, or warning its employees to refrain from joining the labor organization of their choice. The Board's order was set aside insofar as it required disestablishment of employees' association. Petition for certiorari granted November 8, 1937.

N. L. R. B. v. *Delaware-New Jersey Ferry Co.* Order that respondent bargain collectively with a labor organization set aside, third circuit, June 18, 1937. Petition for certiorari denied November 8, 1937.

Jeffery-DeWitt Insulator Co. v. *N. L. R. B.* Order affirmed, fourth circuit, June 16, 1937. Company ordered to bargain collectively with a labor organization designated by its employees and to offer reinstatement to a maximum of 129 strikers in preference to those hired during the strike to the extent of available jobs. Petition for certiorari denied October 18, 1937.

Clinton Cotton Mills v. *N. L. R. B.* Consent decree entered, fourth circuit, July 3, 1937. Company ordered to cease and desist from discrimination, from requiring its employees as a condition of employment to join a company-dominated labor organization, from checking off dues of such organization and allowing organizing in its behalf on company time and property without according similar privilege to another bona fide labor organization, and from dominating or interfering with the formation or administration of any labor organization or contributing financial or other support. The company was also ordered to offer reinstatement with back pay to 96 employees, to withdraw all recognition from a company-dominated labor organization, and to disestablish it as representative of its employees, and to announce that a closed-shop contract made with such organization is void and of no effect.

N. L. R. B. v. *Pacific Greyhound Lines.* Order modified and affirmed, ninth circuit, July 16, 1937. Company ordered to reinstate two employees with back pay; and to cease and desist from interfering with its employees in their self-organization, from urging, persuading, and warning them to refrain from joining the labor organization of their choice, and from dominating and interfering with a labor organization and contributing financial and other support to it. The Board's order was set aside insofar as it directed the company to disestablish an employees' association. Petition for certiorari granted November 22, 1937.

N. L. R. B. v. *Bell Oil & Gas Co.* Order affirmed, subject to further proceedings, fifth circuit, July 21, 1937. Board's finding of discrimination against one employee affirmed; further proceedings directed for clarification of order for reinstatement with back pay.

N. L. R. B. v. *Santa Cruz Fruit Packing Co.* Order affirmed, ninth circuit, July 31, 1937. Thirty-one employees ordered reinstated with back pay. Petition for certiorari granted December 6, 1937.

N. L. R. B. v. *Mackay Radio & Telegraph Co.* Petition for enforcement of the Board's order denied, ninth circuit, October 19, 1937. The Board's petition for a writ of certiorari is pending.

N. L. R. B. v. *Alabama Mills, Inc.* Consent decree entered, fifth circuit, November 5, 1937. Company ordered to cease and desist from discrimination; to offer immediate employment to 38 employees who had been on strike and to offer employment as positions were or became available to 92 other such employees; and to pay upon the order of the Board's regional director $31,000 in back pay to the employees.

N. L. R. B. v. *Carlisle Lumber Co.* Order affirmed, ninth circuit, December 13, 1937. Company ordered to cease and desist from discrimination; to cease and desist from dominating and interfering with an employees' association or any other labor organization of its employees and contributing financial or other support to it; to offer reinstatement with back pay to some 150 striking employees in preference to persons hired during the strike, to the extent of available jobs, the employees whose labor was not needed to be offered employment before any new employees were hired; to bargain collectively upon request with a labor organization designated by its employees; to withdraw all recognition from an employees' association as representative of its employees; and to inform each employee who had entered into a "yellow dog" contract that such contract was invalid under the act and that the

[1] In one case not included, the circuit court set aside the Board's order wholly on constitutional grounds prior to the Supreme Court's decisions in April upholding the Wagner Act (*Foster Bros. Mfg. Co.* v. *N. L. R. B.*, Oct. 6, 1936 (C. C. A. 4th)). The Board's subsequent petition for rehearing was denied on the ground that it was filed too late.)

company was therefore obliged to discontinue such contract and to desist from enforcing it. The court granted 20 days in which either party could apply for leave to adduce additional evidence before the Board or its agency with respect to the amount of back pay.

In addition to the foregoing decisions on final orders to cease and desist and to take appropriate affirmative action, the courts throughout the country have established the Board's right to proceed with hearings and elections free from injunctions. Since the fall of 1935, out of a total of 95 suits to enjoin the Board or its officers from proceeding in accordance with the act, in only three, all in the first circuit, do restraining decrees remain outstanding. In every other circuit (except the third, which has not passed on the issue) and in the District of Columbia, the courts of appeals have held that in view of the adequate remedies provided in the statute, equity lacked jurisdiction to grant an injunction. In a number of these cases the circuit court of appeals reversed decrees of the district courts granting temporary injunctions. The Board's petition for writs of certiorari to review the adverse decisions of the Circuit Court of Appeals for the First Circuit was granted by the Supreme Court on October 11, 1937; *A. Survey of Business Conditions

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ARTICLE FROM THE NEW YORK TIMES

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an article dealing with a survey of business conditions in the United States by Fred Y. Presley, president of the National Industries Corporation, published in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From New York Times]

PRESLEY EXPECTS REVIVAL IN SPRING—FINDS FACTORY OPERATIONS BELOW SALES TO CONSUMERS, WITH STOCK REPLACEMENT NEAR—AN "INVENTORY RECESSION"—HEAVY BUYING EARLY IN 1937, DUE TO STRIKE FEARS, HELD CAUSE—NEW DEAL ABSOLVED

It seems tolerably clear that the present decline in business is primarily an inventory recession, although there have been other less important contributing influences, according to Fred Y. Presley, president of the National Investors Corporation, who has just completed a comprehensive survey of conditions.

It is common practice for business to accumulate excessive inventories in anticipation of higher prices, and it is not unusual, following such junctures, for periods of expanding economic activity to be temporarily arrested, he said.

The building up by business generally of inventories substantially in excess of current or near-term consumptive requirements in the early months of 1937 was not motivated by advancing commodity prices, Mr. Presley finds, but was largely the result of apprehension lest threatened strikes would interrupt the operations of leading industries supplying them with materials and merchandise.

VARIOUS FACTORS INVOLVED

"Business came into the fall months heavily over-inventoried in the face of rapidly declining commodity prices," Mr. Presley said. "At the same time, stock prices were declining precipitously, there was considerable fear of possible adverse developments arising out of the Oriental and Mediterranean situations, there were increasing misgivings concerning Government interference with private enterprise, and it was becoming evident that the optimistic forecasts of a large autumn business would not be realized.

"With recollections of their plight of 1930 still fresh in their memories, when they continued to operate at high levels despite declining orders and declining commodity prices, business acted immediately to reduce inventories by sharp curtailment of production programs. A virtual moratorium on buying by manufacturers and distributors enveloped the country, out of which developed a decline which in intensity is unprecedented in this country under conditions which obtained.

"The present decline in business should not run beyond the spring months of this coming year on the basis of fundamental economic conditions, although it is virtually impossible to forecast within such narrow time limits, in view of the fact that the rampant optimism which usually obtains when business is expanding and the unreasoned fear which prevails when business is contracting tend to defer turning points in economic activity.

INVENTORIES RUNNING DOWN

"Factory operations throughout industry are running substantially below sales to the consuming public. Consequently, a period is being approached where it will become necessary to replace depleted inventories, at which point the recovery of business which began in the summer of 1932 should be resumed.

"It is unreasonable to attribute this decline in business to Government interference and regulation. It is obvious that certain legislation, more particularly the undistributed-profits tax which has operated to restrict replacement and expansion, has proved unwise and unsound, and business has a right to expect early modification of reforms which have adversely affected industry.

"The relation of capital and labor is at the very root of the present period of business unsettlement, and the reestablishment of a healthy and sustained period of economic prosperity is heavily dependent upon recognition of each other's inherent rights under our existing social and economic system."

Mr. Presley pointed out that the present decline in business did not develop out of the same set of circumstances that preceded and accompanied previous periods of major economic depression, since money rates are low and bank reserves enormous; prices of high-grade bonds have declined only slightly from the record levels reached a year ago; general wholesale commodity prices have risen only moderately from the depression low levels, although certain leading raw-material prices advanced sharply and were approaching untenable levels; there has been virtually no new-issue market; and industrial production was only beginning to get back to normal levels in the spring and summer of this year, following 7 consecutive years of decidedly subnormal industrial activity.

California Gas Rates—Argument Before Supreme Court of the United States

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

SUMMARY (BASED ON TRANSCRIPT) OF ORAL ARGUMENT OF OSWALD RYAN, GENERAL COUNSEL OF THE FEDERAL POWER COMMISSION, DELIVERED BEFORE THE SUPREME COURT OF THE UNITED STATES ON NOVEMBER 11, 1937, ON BEHALF OF THE FEDERAL POWER COMMISSION, AMICUS CURIAE, IN THE CASE OF THE *PACIFIC GAS & ELECTRIC CO.* v. *RAILROAD COMMISSION OF CALIFORNIA*

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a summary, based on the transcript, of the oral argument of Oswald Ryan, General Counsel of the Federal Power Commission, delivered before the Supreme Court of the United States on November 11, 1937, on behalf of the Federal Power Commission, amicus curiae, in the case of the Pacific Gas & Electric Co. against Railroad Commission of California.

There being no objection, the argument was ordered to be printed in the RECORD, as follows:

The interest of the Federal Power Commission in this case, as counsel for the California Railroad Commission has indicated, arises from the fact that the Pacific Gas & Electric Co., appellee, charges that the California Railroad Commission denied the company due process of law when it fixed a rate for its gas service in California without taking into consideration evidence of the cost of reproducing the utility property. The three-judge district court apparently agreed with the company's contention.

The Federal Power Commission, under the 1935 Utility Act, was granted jurisdiction to fix the rates of electric energy sold at wholesale in interstate commerce. Some of the magnitude of the task thus given to the Commission may be seen from the fact that more electric energy is transmitted today in interstate commerce than was generated in the entire United States in 1913. About 1,511 electric utilities, with capital assets estimated at $17,000,000,000, are operating today in the United States. Of those companies, 300, involving assets in the approximate amount of $10,000,000,000, are clearly within the jurisdiction of the rate-making power of the Federal Power Commission, while 261 of additional companies, with assets estimated at $3,000,000,000, have been classified by the Commission as indeterminate, and may upon investigation be found to be subject to the Commission's jurisdiction.

The Federal Power Commission has been moved to appear in this case because of its conviction that if the rule of law laid down in *Smyth* v. *Ames* is to be a limitation upon the Commission's rate-making power, the effective administration of this important power, which the Congress has committed to this Commission, will be well-nigh impossible * * *.

The rule of rate making which requires consideration of reproduction is administratively, economically, and legally unsound. It has placed upon regulatory commissions, State and Federal, the most burdensome, complex, expensive, and futile task imposed in the history of public regulation in this country.

The experience of public regulatory bodies proves that the matter of determining reproduction cost in a rate case is nothing more than dignified guesswork, involving not a rational judgment by the Commission but a guess based upon the independent guesses of two or three sets of appraisal engineers who have reached their conclusions by elaborate, hypothetical calculations applied to tangible and intangible property. A study of the record, set forth in our brief of 123 rate cases reported through the years 1928 to 1933, inclusive, shows that in those cases there was an average variation in the reproduction cost estimates of 51½ percent. In several instances the utility's appraisal was 100 percent in excess of the Commission's appraisal, and in one case the utility's appraisal was 450 percent in excess of the estimates of the Commission's engineers.

Such a method of ratemaking has at times led to results which were glaringly inconsistent with the facts of the company's financial record. Under the rule of *Smyth* v. *Ames*, public utility rates may be legally confiscatory no matter how successful or prosperous the company may be, if the rate fixed is less than a fair return on the "fair value" of the property. No more fatal indictment can be presented against that method of ratemaking which requires consideration of reproduction cost as a cardinal element in the rate base than that which is offered by the strange spectacle of successful and prosperous utilities claiming to be the victims of legal confiscation. The minority report of the New York Commission on the revision of New York Public Service Commission law, issued in 1930, tells us that the presidents of two highly prosperous New York utilities testified that it was the policy of their companies to charge rates lower than those to which they were constitutionally entitled.

This Court, in its notable decision in *Lindheimer* v. *Illinois Bell Telephone Co.*, was confronted with another such claim of confiscation under the rule of *Smyth* v. *Ames*. You found in that case that the company's record of successful and prosperous operation did not sustain the claim of confiscation. But this Court had the benefit of 12½ years of experience of that company's operation under the challenged rate when you applied the test of actual experience to that rate. The regulatory commission in the ordinary rate case does not have the benefit of such evidence of experience. Denied the aid of experience, it must be guided by theoretical computations which the facts of experience, had they been available to the Commission, might have shown to be at war with realities.

The so-called fair-value rule of rate-making, with its emphasis on reproduction cost, is productive of enormous expense and delay. The Illinois Bell case required 12½ years. The recent case of the *Ohio Bell Telephone Co.* v. *Public Utilities Commission of Ohio*, decided by this Court in the last term, was in process 14 years.

It cost the Interstate Commerce Commission and the railroads something like $178,000,000 to partially fill the requirements of this valuation process. I hesitate to estimate the size of the appropriation the Federal Power Commission will be compelled to ask of the Congress if this Commission, in fixing the rates of electric energy sold wholesale in interstate commerce, is to be governed by the same rule of law laid down by this Court in *Smyth* v. *Ames*.

A number of the State commissions have become so discouraged with the valuation process, which has been made necessary by this rule of law, which requires consideration of reproduction cost that in many instances they have abandoned the regular procedure of formal rate-making in an attempt to accomplish adequate results. They have resorted to rate-fixing by informal negotiations—the plan of conference, compromise, and bargaining. The New York Commission, in its 1931 annual report, stated that: "Consumers have appreciated that it is better to secure a reduction in rates promptly, even though it may not be as large as should be made, in their opinion, and even though it may not be as large as might be ordered by the Commission after a rate case had been conducted, extending over months and perhaps years, and possibly to be litigated in the courts * * *."

The basic legal defect underlying a rule of rate-making which lays emphasis upon the reproduction cost of a utility property is that such method fails to recognize the object sought to be attained—reasonable rates to the consumer and just compensation to the utility on its investment in property dedicated to the public service. A method so inaccurate and speculative in its results is not a means which bears a real and substantial relation to the end here sought to be attained. The prudent investment method of rate-making supplies such a means.

The method of rate-making which seeks a fair return upon prudent investment or historic cost is administratively sound and workable. When *Smyth* v. *Ames* was decided in 1898 there were no available accounting records on which this court could have relied to determine the actual investment in the property. Nor was there any public control over the company's capitalization. This court had no practical opportunity at that time to apply the rule of historic cost or prudent investment.

But the past 39 years have brought us a long way from that day when the financial transactions of public utilities were subject to no public regulation and were shrouded in mystery. Today 39 States, in addition to the District of Columbia, have provided accounting control over electric and gas utilities and the Federal Power Commission prescribes the accounts of all electric utilities which own or operate facilities for the transmission or wholesale sale of electric energy in interstate commerce. Today 32 States of the American Union, in addition to the District of Columbia, have jurisdiction over the securities issued by these public-utility companies. Thus we now have upon our statute books the implementing measures which make the prudent investment rate base administratively as practicable as it is economically sound. We now have the opportunity to establish a rate base based upon recorded facts instead of speculative opinions.

We submit that the rule of *Smyth* v. *Ames*, however much it may have been justified when applied to the facts of another generation, has no justification in economics or in law when applied to the realities of the present day. In the recent case of *Nebbia* v. *New York*, this honorable Court gave us the criteria of due process of law within the meaning of the Constitution. The Constitution, the Court said, demands that the statutory enactment shall not be unreasonable, arbitrary, or capricious, and that the means selected shall have a real and substantial relation to the object sought to be attained. We submit that the prudent investment method of rate making fully complies with the due process of law test which was laid down by this Court in that case. It is reasonable. It provides as a definite rate base the prudent investment of the company in the utility property; and it permits a rate which will preserve that investment and provide a compensation for its use.

In the course of Mr. Ryan's argument, he was questioned by Mr. Justice McReynolds with regard to his position. Mr. Ryan stated that he did not contend that the method of applying a fair return upon prudent investment was the only constitutional method, but that such method was a constitutional method.

"Mr. Justice McREYNOLDS. Do you want this Court to overrule a decision going back 39 years and accept the prudent investment theory for valuing this property? * * * I am asking you: Do you want us to throw out these series of 39 years of cases?

"Mr. RYAN. Exactly so.

"Mr. Justice McREYNOLDS. That will upset everything that has been done. What do you mean by "prudent investment"?

"Mr. RYAN. The actual money investment made in the property used and useful in the public service.

* * * * * * *

"Mr. RYAN. If your Honor invests $100,000 in a public-utility enterprise, you are entitled under the fourteenth amendment to a return on that $100,000 sufficient to preserve that investment intact and sufficient to pay you for the risk involved in the enterprise.

"Mr. Justice McREYNOLDS. Well, that seems to me to be merely assumption. The owner of a utility is entitled to the value of his property, just like a house. How are you going to determine the value of a house that is condemned, for instance?

"Mr. RYAN. I think the difference between your Honor and myself is that you are assuming this to be analogous to condemnation. I do not understand that this is in any way like a case of condemnation under eminent domain. Your $100,000 is being dedicated to public service. This is not property that the public is taking. The investment is being dedicated to a public function—a function which this Court in the Moffatt Tunnel case called a 'function of the State * * *.'"

Unveiling of Bust of John Marshall

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HON. J. F. T. O'CONNOR, COMPTROLLER OF THE CURRENCY, AT HUNTINGTON, W. VA., JUNE 3, 1937

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an unusually able address delivered by Hon. J. F. T. O'Connor, Comptroller of the Currency, on the occasion of the unveiling of the bust of John Marshall at the Centennial Anniversary Celebration of the

founding of Marshall College at Huntington, W. Va., June 3, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to participate with you in celebrating the centennial anniversary of Marshall College. The few who assembled here to establish a school for their children builded better than they knew. It was called Mount Hebron during its infancy, and when it reached its majority in 1858 the name was changed to Marshall College. The lamp of learning lighted at Mount Hebron 100 years ago has never been extinguished. Its rays have penetrated the fogs of ignorance and superstition. The sons and daughters of this great Commonwealth have benefited from the sacrifice of the early fathers. Those who have contributed to the success of this college appreciated the fact that if a democracy were to succeed it must be based upon the intelligence of its citizens.

The name of John Marshall was a proper selection. His family was a part of your own soil. Thomas Marshall, John Marshall's father, was born 100 years before Mount Hebron was founded. John was born in Germantown, Va., in 1755, the oldest of 15 children, and in those adverse circumstances he showed an early love for learning, especially English literature, poetry, and history, and at the age of 12 he knew large portions of Pope's writings and was familiar with Dryden, Shakespeare, and Milton. At the school of the Messrs. Campbell in Westmoreland County he became acquainted with James Monroe, a fellow student. After his enlistment in the Army expired in 1779, he returned to Virginia and attended law lectures delivered by Chancellor Wythe, of William and Mary College, and he was admitted the following year to the practice of law. He won immediate recognition at the bar, and his early efforts in the courts attracted the attention of the great lawyers of his day.

The General Assembly of Virginia passed an act during the war which provided that Americans in debt to British creditors might be absolved of their indebtedness by paying the amount of their debt into the State treasury. The treaty of 1783 provided that creditors on either side should meet with no lawful impediment to the recovery of the full value in sterling money of all subsisting bona fide debts theretofore contracted. The validity of the act was challenged in *Ware* v. *Hilton*, and the case was argued in the circuit court of the United States in Richmond before Chief Justice Jay, Judge Iredell of the United States circuit court, and Judge Griffin of the United States district court. The American debtors were represented by Patrick Henry, John Marshall, Alexander Campbell, and James Innes, attorney general of Virginia, while Andrew Roland, John Wickham, Star, and Baker were counsel for the English creditors. The arguments were reduced to writing and have been preserved. Marshall stated: "The case resolves itself into two general propositions: First, that the act of the Assembly of Virginia is a bar to the recovery of the debt, independent of the treaty. Secondly, that the treaty does not remove the bar. That the act of the Assembly of Virginia is a bar to the recovery of the debt introduces two subjects for consideration: First, whether the legislature had power to extinguish the debt? Secondly, whether the legislature had exercised that power?" He further contended: "It will be allowed that nations have equal powers; and that America, in her own tribunals, at least, must, from the 4th of July 1776, be considered as independent a nation as Great Britain. Then what would have been the situation of American property had Great Britain been triumphant in the conflict? Sequestration, confiscation, and proscription would have followed in the train of that event; and why should the confiscation of British property be deemed less just in the event of the American triumph? The rights of war clearly exist between members of the same empire engaged in a civil war." Marshall contended that Virginia had the power of confiscation and had exercised it. He then pointed out that at the time of entering into the treaty of 1783 the defendant owed nothing to the plaintiff and that the treaty did not revive the debt in favor of the plaintiff.

At the session of 1782, Marshall took his seat in the General Assembly of Virginia as a member from Fauquier County. Cornwallis had surrendered at Yorktown in 1781 and all of the intricate problems which follow in the wake of a disastrous war were present. One of these problems was the payment of salaries to officers and soldiers about to be disbanded. There was no money in the Federal Treasury, the States were little better supplied, and public credit was at an exceedingly low point. The failure of the various States to comply with the request of Congress for voluntary contributions for the relief of the situation would indicate to all students of government the necessity for a strong central authority. Some of the States which had made great sacrifices to pay their quota of the contributions to the public service had resorted to issuing paper currency for this purpose and their own immediate wants. More than $300,000,000 in paper money issued by the Continental Congress became worthless—"not worth a Continental." The expression applied to this paper money has survived 150 years.

Marshall was reelected to the General Assembly of Virginia in 1784 and 1787, and was a member of the Convention of Delegates at which the Constitution was submitted for ratification in Richmond on June 2, 1787. Marshall was one of the strongest supporters of this new Constitution. It is interesting to observe that during the debate he proclaimed a doctrine, which he afterward expounded as Chief Justice of the Supreme Court of the United States, and which is recognized as one of the most important decisions in constitutional law. In his debate in the convention of Virginia urging the adoption of the Constitution, Marshall said: "If they (referring to Congress) were to make a law not warranted by any of the powers enumerated, it would be considered by the judges as an infringement of the Constitution which they are to guard. They would not consider such a law as coming under their jurisdiction. They would declare it void."

None of the States battled over the adoption of the Constitution more vigorously than Virginia. Virginia's first senators, William Grayson and Richard Henry Lee, were both opposed to its adoption, and the Virginia delegates took a like position in the Philadelphia Convention, notwithstanding the fact that Virginia was the birthplace of Washington and that Washington himself presided over the Convention. Virginia did not give its approval to the adoption of the Constitution until after it had received news that 9 out of 13 States had already given their consent. The controversy did not end with the adoption of the Constitution and the establishment of the Federal Government. The State which should have been first in its allegiance to the great Virginian opposed almost every important measure of his administration and was one of his bitterest critics.

The next great service rendered by Marshall to his country was as one of the Envoys Extraordinary and Ministers Plenipotentiary to France, together with Charles Cotesworth Pinckney and Elbridge Gerry. This Commission was appointed by President Adams. They arrived in Paris October 4, 1797. Corruption permeated the French Government from the highest to the lowest places, and it was fortunate that a strong delegation had been selected. Premier Talleyrand did not receive the delegation but sent a representative, who stated that the Directory was much exasperated at some parts of the address of President Adams, which must be softened and changed before the envoys could be received; and in addition a sum of money would be required for the use of the Directory, which would be at the disposal of M. Talleyrand; and also a loan from the United States to France would be insisted upon. It required the greatest sagacity, self-restraint, and courage to deal with the situation, but our envoys were equal to the task. When Talleyrand discovered that they could be neither bullied nor bribed, he received them and listened to their mission. This gave a new character to international diplomacy.

In 1799 Marshall took his seat in the United States House of Representatives. His first act was the sad task of announcing the death of George Washington. As a Member of the House, he opposed the Livingston resolution, which would have condemned President Adams for surrendering to British authorities, under the terms of the Jay treaty, Thomas Nash claimed as a British subject upon a charge of murder on the high seas aboard an English frigate. Nash falsely claimed to be an American citizen. Marshall contended that the case properly came under the terms of the treaty; that the act was properly an executive act and not a judicial act, and therefore did not interfere with the judicial department of the Government. He also voted to repeal the second section of the alien and sedition laws.

Congress adjourned May 14, 1800, and Marshall resigned his seat to accept the appointment of Secretary of State 1 month later. As Secretary of State he promulgated a vigorous and sound foreign policy. In a dispatch he said to Minister King: "The United States do not hold themselves in any degree responsible to France or to Great Britain for their negotiations with one or the other of those powers but they are ready to make amicable and reasonable explanations to either. The aggressions, sometimes of one and sometimes of another belligerent power, have forced us to contemplate and prepare for war as a probable event."

While Marshall was Secretary of State the country entered into one of its bitterest political campaigns, and the precedent established has been faithfully followed ever since.

The star of Thomas Jefferson was then appearing on the horizon, rising toward the Presidency. Alexander Hamilton and Thomas Jefferson were leaders of the two opposing philosophies of government. Marshall was a supporter of the Hamiltonian theory. A reading of Marshall's letters would make it appear that they might have been inspired by jealousy. In a letter to Hamilton, Marshall said: "To Mr. Jefferson, whose political character is better known than that of Mr. Burr, I have felt almost insuperable objections. His foreign prejudices seem to me totally to unfit him for the Chief Magistracy of a nation which cannot indulge those prejudices without sustaining deep and permanent injury." The opposition and seeming bitterness of President Adams and Marshall toward Jefferson perhaps accounts for one of the most important events of our history.

Chief Justice Ellsworth was in failing health, and it was known he could not serve during the next Presidential term. At the request of Adams he submitted his resignation, and Marshall was appointed Chief Justice of the Supreme Court on January 31, 1801, thus defeating Jefferson, the incoming President, in his desire to make the appointment. Marshall took office February 4, 1801, but continued to act as Secretary of State until March 5.

Time will not permit a review of all of the important decisions written by John Marshall while Chief Justice of the Supreme Court. A few should be mentioned. Perhaps one of the most celebrated is the decision in the case of *Marbury* v. *Madison*. Just before his term of office expired President Adams appointed, and the Senate confirmed, 42 justices of the peace for the District of Columbia. When Jefferson was inaugurated he directed Madison, as Secretary of State, to issue commissions to 25 of those appointed, but to withhold the other 17. Four of these brought suit

before the Supreme Court to compel the delivery of their commissions. When the case came to trial, the appointees had practically lost interest in the case; the terms had nearly expired; and a number of the appointees had declined to act. Yet out of this unimportant case, the issues of which had largely become moot, Marshall seized the opportunity to announce one of the most far-reaching principles of constitutional government ever rendered by our highest Court. Marshall held that the delivery of the commissions was not necessary to the consummation of the appointments; secondly, he decided that section 13 of the Ellsworth Judiciary Act of 1789 was unconstitutional, and he pointed out that the Court was given nothing but appellate jurisdiction. Marshall, however, omitted the words and immediately follow the same sentence: "With such exceptions * * * as the Congress shall make."

This language had for 14 years been constructed to mean that while Congress could not take from the Supreme Court original jurisdiction in the cases especially named in article 3 of the Constitution, Congress could add other cases to the original jurisdiction of the Supreme Court. In declaring section 13 unconstitutional, the Court held that the application of Marbury and others must be dismissed.

While there is no authority in the Federal Constitution giving the Supreme Court of the United States power to decide an act of Congress unconstitutional, the Court assumed this power and made this case one of the most important decisions ever rendered by the Supreme Court. The case was interesting from another angle. First, Marshall, as Chief Justice, had passed upon his own act of omission or negligence while he was acting as Secretary of State and Chief Justice of the Supreme Court. Secondly, he decided a controversy on its merits and decided that the appointees were entitled to their commissions notwithstanding his failure to deliver them. Thirdly, he decided that section 13 of the Judiciary Act of 1789 was unconstitutional, although none of the attorneys raised this question in their briefs, and finally the Court really passed on a moot question. The ethics of the legal profession have changed considerably, and no judge today would pass upon his own act. In this instance it would seem that Marshall was both judge and jury, and, after determining the issue, he held the question was not properly before the Court because the section was unconstitutional.

Another great opinion rendered by Marshall was in the Dartmouth College case, in which the facts were these: A charter was granted to Dartmouth College in 1769 by the Crown, on the representation that property would be given to the college if chartered; and after the charter was granted property was actually given. In 1816 the Legislature of New Hampshire passed three acts amending the charter, which amendments the trustees would not accept. They resorted to the aid of the State courts, where judgment was given against them; then they appealed their case to the Supreme Court. Marshall said in part: "This is plainly a contract to which the donors, the trustees, and the Crown, to whose rights and obligations New Hampshire succeeds, were the original parties. It is a contract on the faith of which real and personal estate has been conveyed to the corporation. It is then a contract within the letter of the Constitution and within its spirit also." In this case Daniel Webster appeared as one counsel.

Another point of constitutional law was raised in the celebrated opinion rendered in the case of *McCulloch* v. *The State of Maryland*. The constitutional power of Congress to incorporate a national bank was before the Court. It was true the Constitution contained no such specific authority, but its advocates contended that Congress had the authority to make all laws that were necessary and proper to carry into effect the powers enumerated in the instrument. The Bank of the United States was incorporated April 1816 and the following year a branch was established at Baltimore. In 1818 the Legislature of Maryland passed a law taxing all banks or branches thereof which were not chartered by its legislature. The branch bank refused to pay this tax, and McCulloch, the cashier, was sued for it. Judgment was rendered against him in the Maryland courts, whence the case was carried before the Supreme Court, and the decision of that tribunal was looked for with great interest. Marshall said, in part: "Although among the enumerated powers of government we do not find the word bank or incorporation, we find the great powers to lay and collect taxes, to borrow money, to regulate commerce, to declare and conduct a war, and to raise and support armies and navies." Marshall's famous statement with reference to the power of the State to tax is set forth in these words: "That the power to tax involves the power to destroy; that the power to destroy may defeat and render useless the power to create; that there is a plain repugnance in conferring on one government a power to control the constitutional measures of another, which other, with respect to those very measures, is declared to be supreme over that which exerts the control, are propositions not to be denied. If the States may tax one instrument employed by the Government in the execution of its powers, they may tax any and every other instrument. They may tax the mail, they may tax the mint, they may tax patent rights, they may tax the papers of the customhouse, they may tax judicial process, they may tax all the means employed by the Government to an excess which would defeat all the ends of government. This was not intended by the American people. They did not design to make their Government dependent on the States."

Those who gave the name of Marshall to this college ought to be commended. There is no better way to commemorate the services of great men and women of this country than to link their names with institutions of learning. The services of Marshall will always remain as an inspiration to young America as well as to the older generations. He stands as an example of courage, perseverance, and self-sacrifice. He ranks high among the founders of the Nation; he early formed definite habits of thinking which crystallized his character. To these principles he remained adamant. As a lawyer he knew the drudgery incident to the careful preparation of an argument in court. As a legislator he studied the fundamental principles upon which a democracy must be founded. As a Member of Congress he rose to the defense of a President who was carrying out the duties of his office. As an envoy he outwitted the craftiest statesmen of France. As Secretary of State he gave the first outlines of a strong foreign policy. As Chief Justice of the Supreme Court of the United States he rendered decisions which have influenced and molded the character of the American Nation. John Marshall, born of humble parentage in Virginia, rose to a position of power and prominence equal to that of the Presidency. These are some of the thoughts that the unveiling of his bust a few minutes ago have inspired in me. His memory will be an inspiration in the years to come to the thousands of students of this college, who will take with them into the world the influence of this great American which is still a vital living force in our Nation.

The Regional Conservation Authority Proposals

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

SPEECH OF JOEL DAVID WOLFSOHN, EXECUTIVE SECRETARY, NATIONAL POWER POLICY COMMITTEE, BEFORE THE NATIONAL RECLAMATION ASSOCIATION, CASPER, WYO., OCTOBER 14, 1937

Mr. PIERCE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following speech of Joel David Wolfsohn, executive secretary, National Power Policy Committee, before the National Reclamation Association, Casper, Wyo., October 14, 1937:

With the help of water you are pioneering in its effective conservation and utilization, maintaining and expanding the fertile domain of our Nation and continuing an increasingly efficient activity in a development which has a far-reaching effect upon the rest of the people. Reclamation as it was envisioned by your western leaders when the first laws were enacted on the subject represents more than merely providing water for irrigation of new lands. It was in reality a first step toward regional planning, its objective being maximum utilization of land and water resources.

Regrettably, many people do not have as clear an understanding and appreciation of the importance and significance of reclamation as is desirable. However, I believe you will agree with me that there is an increasing interest in this field, a growth of sympathy and a realization that a nation such as ours needs fruitful utilization of all its resources if our people are to enjoy a sound and wholesome standard of living.

It is superfluous for me in your presence to remark upon the splendid work of the Bureau of Reclamation, now so ably captained by Commissioner John C. Page. Because the Bureau has established and maintains an excellent record of achievement, reclamation has made progress and has earned the good will of the people, particularly those who understand the problems of conservation.

In the old days when reclamation was in its infancy, though it has been a fast-growing child, water-use projects were, generally speaking, local or private enterprises. They were relatively simple in their development. However, as time went on the projects grew not alone in complexity, but in the extent and nature of their influence.

It was realized that making arid or semiarid land productive was an end in itself but that the means to that end, namely water, had more than one use. And, further, that its use had a direct relationship to the development of the watershed from which the nourishment for the soil was taken. Thus, there grew up a feeling that direct utilization of water included not only planning for a reclamation dam and canal, but also the enhancement of the area served by the river. Then, too, when it became necessary because of elevation to pump water to the lands which were to benefit therefrom it came to be realized that hydroelectric energy might be the major byproduct of an irrigation system. Water that had been passed through the turbine of a power plant was still good for the irrigation canal.

Local projects touched on broader fields with increasing importance in problems of a social and economic nature. Men of

vision began to realize that all of this activity had to be intelligently direct and coordinated, lest mere enthusiasm and submission to local demands result in economic waste. Although we are a nation of tremendous natural resources, nevertheless, it became evident that these resources, even as one's personal resources, are not inexhaustible, and that conservation must be intelligently planned. There was a further realization that the very magnitude of the contemplated projects was such that they could not be accomplished by cities or States or water districts alone. Cooperation was called for, and cooperation was secured. It became increasingly evident that we had gone beyond even the broad boundaries of State lines.

In many other branches of our national life we have realized the necessity for regional controls. I need not enumerate the compacts that have been entered into between States for various purposes and the cooperative arrangements that exist, nor yet the divisions into which our Federal Reserve System and our Army Corps, aye, even our judicial system, is subdivided. Suffice it only to refer to the Colorado River with its compact between the States for the development of that basin; and the Pacific Northwest, where the States of Washington, Oregon, and Idaho have joined forces for planning and development.

Within the Reclamation Bureau there is a long-established record of cooperation with other branches of the Government and with the States in an effort to achieve a common purpose, namely, the enhancement of our national life through the aid of water and proper land utilization.

Generally speaking, however, water development throughout the United States has been haphazard and without apparent long-range plan. The result has become noticeable in various penalties and defects which might perhaps have been avoided by careful planning. Increasingly it has become evident to us that water is a precious natural resource and that depending upon what control we assert, it may be valuable or costly. The National Resources Committee, established by President Roosevelt under the chairmanship of Secretary of the Interior Harold L. Ickes, approached this problem with full realization of its importance, seeking to develop a policy which would promote public safety and health, the economic welfare of the people, and further the establishment and maintenance of a high standard of living. Its endeavor was to lay down a pattern for the maximum integrated use of water while observing the rights of the several States and of the Nation.

As a result, and it is an example of cooperation between State and Federal Government, the National Resources Committee in February of this year made public its drainage-basin study, a report of some 500 printed pages, filled with its findings regarding the Nation's water problem. Obviously, this was not intended to be nor could it be an answer to all the questions raised, but it was a start. One of its principal purposes was to focus the attention of the people on the problem to stimulate thinking.

It drew the conclusion that: "No fixed or final water plan is possible. Future water requirements in most areas can be estimated only approximately and for comparatively short periods. They will be affected by changes in density of population, in land use, in industry, and in social conditions. * * * Any water plan, no matter how frequently revised, must remain forever incomplete. Continuous planning is necessary. * * * Nevertheless, a framework of a national water plan is proposed that will permit early constructive action on sound lines along a broad front; a plan, moreover, that can be adjusted, filled in, and extended to meet changing conditions. A beginning has been made; the end can never be reached." It now is reviewing this first report with a view to submitting a revised program to the President prior to January 1938.

The National Resources Committee has not confined itself to water alone. It has demonstrated that land use requires planning; that mineral resources must be considered from the long rather than the short or immediate view; that production, transportation, consumption, science, technology, and population are intertwined in the development of America as a nation. They found that local media often are too close to their own problems to realize their relationship to broader aspects, but, that only through regional coordination and planning would it be possible to establish any sort of workable and feasible program for the conservation of the Nation's resources of whatever kind.

I think you will grant that these questions are no longer to be surrounded by boundaries of a municipality or a township or a county or even of a State. And, although a number of agencies, both Federal and State, are engaged in the field of water and soil conservation, coordination was not complete or fully effective, particularly in the field. From this grew the feeling that the vastness of the empire which is the United States demands regional treatment. And the regions must be flexible, depending upon their subject.

This view was crystallized in the message which President Roosevelt sent to the Congress on June 3 of this year, urging the establishment of national planning on a regional basis for the prudent use of our resources. In that message he declared that—

"Taking care of our natural estate, together with the stopping of existing waste and building it back to a higher productivity, is a national problem. At last we have undertaken a national policy.

"But it is not wise to direct everything from Washington. National planning should start at the bottom; or, in other words, the problems of townships, counties, and States should be coordinated through large geographical regions and come to the Capital of the Nation for final coordination. Thus the Congress would receive a complete picture in which no local detail had been overlooked.

"It is also well to remember that improvements of our national heritage frequently confer special benefits upon regions immediately affected, and a large measure of cooperation from State and local agencies in the undertaking and financing of important projects may fairly be asked for.

"Any division of the United States into regions for the husbandry of its resources must possess some degree of flexibility. The area most suitable as a region for the carrying out of an integrated program designed to prevent floods is the basin including the watersheds of a pivotal river. But other problems dependent upon other combinations of natural economic and social factors may require a somewhat different area to permit the most effective functional program.

"Neither the exact scope nor the most appropriate administrative mechanism for regional husbandry can at the start be projected upon any single blueprint. But it is important that we set up without delay some regional machinery to acquaint us with our problem.

"Such regional bodies would also provide a useful mechanism through which consultation among the various governmental agencies working in the field could be effected for the development of integrated programs of related activities. Projected programs would be reported by the regional bodies annually to the Congress through the President after he has had the projects checked and revised in the light of national budgetary considerations and of national planning policies. When the national planning board is established, I should expect to use that agency to coordinate the development of regional planning to insure conformity to national policy but not to give to the proposed national planning board any executive authority over the construction of public works or over management of completed works.

"Projects authorized to be undertaken by the Congress could then be carried out in whole or in part by those departments of the Government best equipped for the purpose, or if desirable in any particular case by one of the regional bodies. There should be a close coordination of the work done by the various agencies of government to prevent friction, overlapping, and unnecessary administrative expense, and to insure the integrated development of related activities. There should be the closest cooperation also with the developing State and local agencies in this field, particularly the State, regional, and local planning boards and the commissions on interstate cooperation which work through interstate administrative arrangements. And provision should be made for the effective administration of hydroelectric projects which have been or may be undertaken as a part of a multiple-purpose watershed development. The water-power resources of the Nation must be protected from private monopoly and used for the benefit of the people.

"This proposal is in the interest of economy and the prevention of overlapping or one-sided developments. It leaves the Congress wholly free to determine what shall be undertaken and provides the Congress with a complete picture not only of the needs of each one of the regions but of the relationship of each of the regions to the whole of the Nation."

In response to this suggestion there has been introduced in the Senate one bill known as S. 2555 or the Norris bill, and in the House of Representatives, Mr. RANKIN, of Mississippi, has introduced the same bill with only one change. Congressman MANSFIELD, of Texas, also has presented a regional conservation plan which differs substantially from the Senate proposal. Each of these measures is aimed at the same goal—national planning for the prudent use of our natural resources. And by prudent use is meant the greatest benefit to the largest number of the people.

Under the Norris bill, corporate authorities would be set up along the line of the T. V. A., which would have comprehensive planning powers to formulate projects. These projects may be undertaken by existing agencies, or Congress may direct the authority to execute them. Congressman RANKIN'S bill adheres to the Norris measure on all points, except that it proposes a single administrator, rather than a board, direct the regional work. Under the Mansfield bill, it is contemplated that the so-called regional planning agencies will have only planning powers. Under the Norris bill, the regional authorities have planning powers but are so organized that the Congress may use them as well as existing agencies to build and carry out the projects.

The director to be appointed under the Mansfield bill would have an indefinite term, just like the Commissioner of Reclamation. The members of the Board under the Norris bill would serve for 9 years. Each of the bills provides for cooperation with States; grants consent to State compacts in order to further the purposes of the act; requires the inclusion of adequate foundations, penstocks, etc., for power in all dams unless shown to be not necessary. Of course, the bills contain similar general provisions regarding employee compensation, civil service, etc.

Both bills are alike substantially with regard to the generation and transmission of electric power, and in that respect follow rather closely the provisions of the Bonneville bill (Public, No. 329) which was approved by the President on August 20, with this major change; both bills contemplate that one agency shall operate the transmission lines and powerhouse. In brief, these provisions are that surplus power generated at irrigation, flood-control, or navigation projects shall be sold with priority and preference to public bodies, under contracts which, with renewal periods, will

aggregate not more than 20 years each. Rates are to be kept as low as may be, based, however, upon the return of the investment to the Government within a reasonable period of years. It is suggested in each bill that rates may be made uniform through prescribed transmission areas so that decentralization may be encouraged as explained by the President in his recent speech at Bonneville.

The proposed bills provide for the creation of seven regional agencies, broadly, as follows: (1) Atlantic Seaboard Planning Agency, for the drainage basins of the rivers flowing into the Atlantic Ocean and of the rivers flowing into the Gulf of Mexico, from the east, below the basin of the Suwannee River; (2) Great Lakes-Ohio Valley Planning Agency, for the drainage basins of the rivers flowing into any of the Great Lakes and of the Ohio River, except those of the Tennessee and Cumberland Rivers, and of the rivers flowing into the Mississippi River above Cairo, Ill., from the east; (3) Tennessee Valley Planning Agency, for the basins of the Tennessee and Cumberland Rivers, of the rivers flowing into the Mississippi River below Cairo, Ill., from the east, and of the rivers flowing into the Gulf of Mexico east of the Mississippi River, except the rivers below the basin of the Suwannee River; (4) Missouri Valley Planning Agency, for the basins of the Missouri River and the Red River of the North, and of the rivers flowing into the Mississippi River above Cairo, Ill., from the west; (5) Arkansas Valley Planning Agency, for the basins of the Arkansas and Red Rivers and the Rio Grande, and of the rivers flowing into the Gulf of Mexico west of the Mississippi River; (6) Southwestern Planning Agency, for the basins of the Colorado River and the rivers flowing into the Pacific Ocean south of the California-Oregon line, and the Great Basin; and (7) Columbia Valley Planning Agency, for the basins of the Columbia River and the rivers flowing into the Pacific Ocean north of the California-Oregon line. The bill does not disturb, however, the present functions and activities of the Mississippi River Commission of the War Department.

These regions have been delimited to include the watersheds of pivotal rivers. They form the most suitable areas for the carrying out of an integrated program to prevent floods and to promote other water uses. But as President Roosevelt indicated in his message: "Other problems dependent upon other combinations of natural economic and social problems may require a somewhat different area to permit the most effective functional program." For that reason it is provided that in case of plans which involve integrated developments traversing the geographic region of two or more agencies the President may assign the working out of such plans to any one regional agency.

This flexibility will permit subdivision of work for varying functional purposes or for different river basins within the jurisdiction of a single authority. This has the advantage of permitting gradual development of integrated activities within natural subdivisions of a region. Obviously, it is certainly desirable at the start to avoid setting up an excessive number of regional agencies which might entail excessive overhead and administrative expense to the Federal Government.

The function of the regional agencies, either under the Norris or the Mansfield plan, will be to develop integrated over-all plans which will conform to national policy. These will be submitted annually to the President or such agency as he designates. These plans will contemplate the construction and undertaking of projects for the promotion of reclamation, the control and prevention of floods, the safeguarding of navigable waters, and the promotion of navigation. They involve conservation and prudent husbandry of water, soil, mineral, and forest resources, including the prevention of waste, either from drought or wind, dust storm or soil erosion, and the control and retardation of water run-off and the restoration and improvement of the absorption and infiltration capacity of the soil.

But all these plans are to be proposed only after development through study and investigation in cooperation and consultation with Federal, State, and local agencies.

After these plans have been submitted to the President and have been gone over by a central reviewing or planning agency set up by him, he will submit the plans to Congress with his recommendations. This affords a means, therefore, of bringing to Congress plans for useful Federal works necessary to preserve our natural resources, and Congress will then be able to authorize carrying out of such projects as it deems necessary and for which it makes appropriations. Congress will determine which department or agency shall be used to carry out the projects, and it is to be expected that most of the plans would be entrusted to those agencies which now are preeminent in special fields as, for example, the Bureau of Reclamation in the field of irrigation.

Chairman Mansfield, in a statement explaining his bill, pointed out that the reason that power was separated from other parts of his proposal is that the development of electric energy at Federal sites has created a new problem relating to the generation and marketing of public power so as to encourage the widest possible economic use thereof. It is believed that special attention is needed for this problem. To market power in the Tennessee Valley, the Congress in 1933 created a special authority. On recommendation of the National Power Policy Committee, Congress this year did likewise for Bonneville. The effective administration of important public-power projects, it would therefore appear, requires a special administrative set-up. Under the Norris bill the directors of the authority might be authorized by the Congress to handle power marketing. Under the Mansfield bill, the President would be authorized whenever he deemed it necessary in the public interest to set up a regional power authority to administer Federal hydroelectric developments in any region.

Experience has shown that unless our great river systems are controlled they are a menace; that exploitation of water for private gain has not protected the people; that the interest of the Nation demands prompt realization of the need for planning to remedy damage already begun and stop it from growing more disastrous. There is no question here between private and public ownership or control. The problem is greater than private agencies can encompass. In short, the future of the Nation is the Nation's problem. It is the responsibility of all the people and, because it is so broad, it must be given broad treatment.

It all comes down to one thing—conservation. The days of our exploiting pioneer have passed. We must conserve the heritage which Nature has bestowed upon us so that all of our people may have the benefit of an improved and constantly bettered standard of living.

Conservation requires that projects which may serve a multiple rather than a single purpose be treated with that in mind. Purposes which heretofore were deemed incompatible may, under favorable conditions or with proper planning, be reconciled for the benefit of a larger number of the people.

The conservation authorities proposed by the bills now pending and the creation of a conservation department headed by a Cabinet officer will be a most significant step toward a proper conservation program and will result in incalculable benefits to the Nation.

Navy Day Address

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

RADIO ADDRESS OF HON. FRANK CARLSON, OF KANSAS, OCTOBER 27, 1937

Mr. CARLSON. Mr. Speaker, under permission to extend my remarks, I am enclosing a radio talk delivered over radio station KSAL, Salina, Kans., on Navy Day, October 27, 1937.

Friends of radio station KSAL, I assure you it is a pleasure to speak to you this evening, and I want to express my appreciation to Mr. C. E. Rackley, of the United States Recruiting Service in Salina, for making the arrangements, and radio station KSAL for the opportunity.

Today we observe nationally what is known as Navy Day, and also observe the birthday anniversary of a great American, the late Theodore Roosevelt, former President of the United States. The Navy League of the United States inaugurated the observance of Navy Day in 1922 in tribute to the heroes of the United States Navy. It is the one day in the year that the Navy is at home to the public. The date of October 27 was selected for this annual observance because it was the birthday of the late President Roosevelt who founded the modern Navy of the United States and bent his every effort to the establishment of a sound naval policy for this Nation. It is also interesting to note that October is the month in which the original United States Navy was founded by the Continental Congress in 1775. The Navy is always ready to render aid, ashore and afloat, to our own citizens and to those of other nations when disaster occurs, and continues to be a friend of peace and an instrument of mercy, as well as a first line of national defense.

It would be a pleasure indeed to devote the entire 15 minutes to the biography of Theodore Roosevelt, but this evening I am going to discuss only his connection with, and interest in the United States Navy.

Among all the great Government departments there was none of greater interest to President Roosevelt than the Navy. To begin with, he believed firmly in our national need of a navy; he felt that without a well-organized, well-trained navy we could never take our proper place among the powers of the world, and he was determined to leave nothing undone that might enable us to take that place. His whole career proves this. He first became closely associated with the service as Assistant Secretary of the Navy. He was serving in this capacity at the outbreak of the Spanish-American War, and as Assistant Secretary he was a little too aggressive for the then Secretary of the Navy, and within a short while he was lifted out of his chair in a Washington office and sent off to Cuba with his famous Rough Riders. But going into the Army did not seem to make him lose any of his interest in the Navy. If it did, this interest immediately returned to him when he came back to Washington as Vice President and later as President following Mr. McKinley's death. It was then that he became a real builder of the Navy, a strong supporter of naval appropriations which were

asked of Congress, and a very warm friend to every officer and enlisted man in the service. Theodore Roosevelt has been spoken of as carrying a "big stick." Translating this into his naval policy, it meant something like this: "It would be a pity ever to have to shoot at an enemy ship. But, if you do have to shoot, then you must shoot well. For the ship that makes the most hits with each gun in every minute will be the ship that wins the fight." Or, as the President himself put it, "The only shots that count are those that hit." That sentence has been a great slogan in our Navy.

Colonel Roosevelt was a very strong believer in naval tradition. He felt that the Navy should, as far as possible, be handed down to the care of those who had been born and raised in it or near it. To carry out this idea he did all he could. By law the President was allowed to appoint a certain number of young men to be midshipmen at the Naval Academy. The object of this law was to provide appointments for the sons of naval officers who, because they are being constantly ordered about all over the world, seldom have any permanent home and, therefore, no proper representation in Congress. The President insisted during his administration that only sons of naval officers secure his appointments.

While I am discussing appointments to the Naval Academy, I want to mention that the Sixth Congressional District has sent a number of young men to this academy and they are now serving in the Navy with credit to our district and Nation. I have in mind at this moment Capt. Nat Pitman, of Concordia; Lt. Comdr. Russell Sturgess, of Concordia; and Lt. Howard Yeager, who has many friends in Salina. Last year Albert Waugh, of Mankato, graduated from the Naval Academy and is now assigned to duty on the Pacific Coast. At present the Sixth District has three young men attending the Naval Academy, Larry Geis and Niel Harkelroad, of Salina, and Vincent Muirhead, of Norton. The academy is located at Annapolis, which is about 30 miles from Washington, and therefore I have the opportunity of visiting with these young men from time to time. These boys are a credit to the district and I am certain we will be proud of them in the future. The Naval Academy furnishes a wonderful opportunity for a limited number of young men in the United States. It has been my policy since representing this district in Congress to fill the vacancies by competitive examination and the boy receiving the highest grade is the one who receives the appointment.

Navy Day was instituted for the purpose of bringing before the American people the importance of the United States Navy as the first line of defense of their country. One of the outstanding facts of the United States history is that whenever war has come upon us the American people have been quick, though late, to realize the vital importance of the Navy in our scheme of defense. However, it is a matter of history that following every war our Nation has immediately neglected the Navy. This happened after the War of the Revolution, after the War of 1812, the Civil War, and was especially true at the conclusion of the World War.

During the 7-year period from 1922 until 1929 this country did not build a new battleship or cruiser. From 1932 until 1937 the United States had a naval building program of 117 vessels. Of these 117 ships, 35 have been delivered and 82 are in various stages of construction. When these ships are completed our Navy will be up to the strength permitted under the Naval Limitations Armament Treaty of 1922.

The United States ranks fourth in tonnage of ocean-going vessels, being superseded by, first, Great Britain; second, Japan; and third, Germany. Few people realize that the defense of our coastwise seagoing commerce is fully as big a problem as the protection of our sea-borne commerce with foreign nations. It will be a surprise to many to learn that our merchant ships plying from coast to coast and other shore points carry more freight tonnage than the tonnage carried by ships from our shores to other countries. The Navy renders valuable service to this large volume of shipping, both in protection and during times of distress.

For the few remaining moments I want to discuss the international situation. At present our Nation is retreading the steps of 1916. In that year our Nation was prospering from a war-trade boom. This same thing is happening in 1937. We are exporting millions of dollars worth of munitions and articles of war. Normally we export 730,000 tons of scrap steel. This year from January until May we exported 1,250,000 tons of this steel. During the month of May we exported 750,000 tons of which Japan purchased 540,000 tons of this metal to be made into shells and other implements of war. In 1916 we loaned our allies and other foreign countries large sums of money with which to purchase articles of war. This year we are not making extensive loans, but are purchasing gold from every country that cares to sell it to us, for which we pay $35 an ounce for gold that has a market value of $20.50 per ounce. This gives foreign countries an opportunity to purchase war material in this country at a great advantage. From May 1 until August 1 Japan shipped us $130,000,000 worth of gold in gold bars, for which we paid $35 an ounce. In 1916 the country was flooded with propaganda that we must enter the World War in order to end wars. You will remember that was to be the last war. This year we are hearing that this is to be the war to save democracy and that our country should be one nation that would be willing to help in this great cause.

It seems to me if we are to keep out of this war, Congress should immediately pass legislation taking the profit out of war. When the boys returned from France in 1918 they were met by our citizens and acclaimed as great heroes, but they were also met by 22,000 of our citizens who had arisen from financial obscurity during the 18 months of war to millionaires and multimillionaires. It seems to me this is a blot on the fair name of America.

Another piece of legislation in which the American people are much interested is the Ludlow resolution which would permit the citizens to vote upon whether or not we should enter a foreign war. This legislation would not apply in case of invasion. One of the ironies of war is that those who declare it rarely fight. Our Nation should not forget the good advice of our first President, George Washington, who said that we should beware of foreign entanglements.

In conclusion I wish to state that the spirit of America is for peace. We hate war. Especially is that true of those who remember so distinctly the sufferings of the past war, and on this Navy Day it seems to me we should insist on an adequate national defense plus legislation we might enact which will keep us out of war.

Thank you.

State Control of Water Vital to Irrigated-Land States

Congress long ago established and has repeatedly reaffirmed as a fixed national policy that the respective States shall determine the control, appropriation, use, and distribution of water within their borders.

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

LETTER SIGNED BY ALL 14 REPRESENTATIVES FROM THE 8 STATES OF THE ROCKY MOUNTAIN REGION, TOGETHER WITH A MEMORANDUM TRANSMITTED WITH THE LETTER TO THE COMMITTEE ON RIVERS AND HARBORS OF THE HOUSE OF REPRESENTATIVES

Mr. LEWIS of Colorado. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter signed by all 14 Representatives from the 8 States of the Rocky Mountain region, together with a memorandum transmitted with the letter to the Committee on Rivers and Harbors of the House of Representatives:

HOUSE OF REPRESENTATIVES,
Washington, D. C., December 13, 1937.

COMMITTEE ON RIVERS AND HARBORS,
House of Representatives, Washington, D. C.

DEAR COLLEAGUES: In our irrigated-land States of the West the primary essential to our growth and development—indeed, to our very existence—is water. Our entire economic structure and life is based on this indispensable resource. Our water supply is limited.

Our pioneers found from experience that the common-law rules in regard to water were not applicable to our peculiar conditions, and therefore they developed a system of local rules, customs, and laws adapted to and conforming with those conditions. These rules, customs, and laws have been fully elaborated in decisions by our Territorial and later by our State courts, and have been codified in statutes providing for the control, appropriation, use, and distribution of water in our respective States.

Beginning from a time long before any of us were born and continuing down to the present, the Congress of the United States has recognized and approved by repeated statutes such local rules, customs, laws, and decisions of courts. The Supreme Court of the United States has repeatedly upheld these Federal statutes. All of the executive departments up to the present have unquestioningly conformed their activities to the mandate of the Congress.

In the attached memorandum we have referred to some of the more important acts of the Congress and decisions of the United States Supreme Court.

We emphatically assert that any legislation which would tend to interfere with the supremacy of our State laws in respect to the control, appropriation, use, or distribution of waters within the borders of our respective States would not only be a complete reversal of the policy of the Federal Government but also would constitute a major disaster to the economic and social structure of the irrigated land States. Some provisions in the bills now before your committee threaten, if they do not actually destroy, this control by the respective States of the waters within their borders.

Memorandums presented by Congressman EDWARD T. TAYLOR, of Colorado, by Governor Leslie E. Miller, of Wyoming, and by various organizations in the irrigated land States have pointed out in

detail the particular portions of these bills which constitute such threat to the State control of our waters and reversal of the heretofore uniform policy of the Federal Government.

We hasten to add that we understand it is the intention of your committee to reframe these bills in order to avoid any such unfortunate and revolutionary change in our national policy. In making such changes we believe the attached memorandum may be helpful to you. You may rely on the fullest cooperation of each and all of us in reframing the bills now before your committee.

In any event there should be embodied in the bill or bills as rewritten a section in language similar to the following, to wit:

"Nothing in this act shall be construed as affecting or intended to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal use or for any other uses whatsoever, or any vested right acquired therein; and nothing in this act shall be construed as affecting or intended to affect or in any way to interfere with such rights as the respective States now have to adopt hereafter such policies and to enact such laws as they may deem necessary with respect to the control, appropriation, use, or distribution of waters within their borders, except as modified by compacts between the States, or other interstate agreements. All officers and agencies of the Federal Government in carrying out the provisions of this act, shall proceed in conformity with such State laws now or hereafter enacted and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream, or the waters thereof."

We call attention to the fact that the language above suggested is strictly in accordance with and largely a copy of sections contained in the Reclamation Act of June 17, 1902; in the Federal Water Power Act of June 10, 1920; and in the Boulder Canyon Project Act of December 21, 1928. The sections in these acts are quoted in the attached memorandum.

Sincerely yours,

John R. Murdock, of Arizona; Edward T. Taylor, Fourth District, Colorado; Lawrence Lewis, First District, Colorado; Fred Cummings, Second District, Colorado; John A. Martin, Third District, Colorado; D. Worth Clark, Second District, Idaho; Compton I. White, First District, Idaho; James F. O'Connor, Second District, Montana; Jerry J. O'Connell, First District, Montana; J. G. Scrugham, Nevada; John J. Dempsey, New Mexico; Abe Murdock, First District, Utah; J. W. Robinson, Second District, Utah; Paul R. Greever, Wyoming.

MEMORANDUM

(The Congress and the Supreme Court of the United States have repeatedly recognized and approved the validity of local rules, customs, laws, and court decisions in respect to appropriation, control, use, and distribution of water)

Seventy-five or eighty years ago, when agriculture was first undertaken by American settlers in regions now included in those Western States where irrigation is practiced, it was realized that the common-law "doctrine of riparian rights" in regard to the waters of natural streams was not applicable to conditions in those regions. Consequently the common-law "doctrine of riparian rights," or "riparian doctrine," that a riparian landowner is entitled to have waters of a natural stream continue to flow as they had flowed from time immemorial, subject to the reasonable uses of other riparian landowners, was rejected, and there was formulated and adopted the "doctrine of prior appropriation," or "appropriation doctrine," under which he who first diverts the water of a natural stream and applies such water to beneficial use, regardless of the locus of such application to the beneficial use, acquires a prior right or "priority" to the extent of such use against all subsequent appropriators up and down the stream.

As was stated by the United States Supreme Court in *Clark* v. *Nash* (1905) (198 U. S. 361, 370), in language subsequently emphatically approved by the United States Supreme Court in *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (1935) (295 U. S. 142, 165):

"The rights of a riparian owner in and to the use of the water flowing by his land are not the same in the arid and mountainous States of the West that they are in the States of the East. These rights have been altered by many of the Western States, by their constitutions and laws, because of the totally different circumstances in which their inhabitants are placed, from those that exist in the States of the East, and such alterations have been made for the very purpose of thereby contributing to the growth and prosperity of those States arising from mining and the cultivation of an otherwise valueless soil, by means of irrigation. This Court must recognize the difference of climate and soil, which render necessary these different laws in the States so situated."

Very early in the period of initial settlement of the region now comprised within the so-called irrigated-land States of the far West, the Congress recognized and approved, as respects the public domain, "so far as the United States are concerned, the validity of the local customs, law, and decisions of courts" in respect to appropriation of water and to its control, use and distribution. This recognition and approval has been repeatedly reaffirmed by subsequent acts of the Congress and by opinions of the United States Supreme Court:

ACTS OF THE CONGRESS

Act of Congress of July 26, 1866 (14 Stat. L. 253, ch. 262, sec. 9; as amended by act of July 9, 1870, 16 Stat. L. 218, ch. 235, sec. 17; U. S. C., 1934 edition, title 43, sec. 661);

Desert Land Act of March 3, 1877 (19 Stat. L. 377, ch. 107, sec. 1; U. S. C., 1934 edition, title 43, sec. 321);

Reclamation Act of June 17, 1902 (32 Stat. L. 390, ch. 1093, sec. 8; U. S. C., 1934 edition, title 43, sec. 383);

Federal Water Power Act of June 10, 1920 (41 Stat. L. 1077, ch. 285, sec. 27; U. S. C., 1934 edition, title 16, ch. 12, sec. 821);

Boulder Canyon Project Act of December 21, 1928 (45 Stat. L. 1065, ch. 42, sec. 18; U. S. C., 1934 edition, ch. 43, sec. 617q).

UNITED STATES SUPREME COURT CASES

Gutierres v. *Albuquerque Land Co.* (1902), 188 U. S. 545, 552–553;

Kansas v. *Colorado* (1906), 206 U. S. 46, 94;

Clark v. *Nash* (1905), 198 U. S. 361, 370;

Wyoming v. *Colorado* (1921), 259 U. S. 419, 465;

Nebraska v. *Wyoming* (1935), 295 U. S. 40, 43;

California Oregon Power Co. v. *Beaver Portland Cement Co.* (1935), 295 U. S. 142, 154–165.

By way of example:

The Reclamation Act (act of June 17, 1902, 32 Stat. L. 390, ch. 1093, sec. 8; U. S. C., 1934 edition, title 43, sec. 383) expressly provides:

"SEC. 383. Vested rights and State laws unaffected by chapter: Nothing in this chapter shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder; and the Secretary of the Interior, in carrying out the provisions of this chapter, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof."

The Federal Water Power Act (act of June 10, 1920; 41 Stat. L. 1077, ch. 285, sec. 27; U. S. C., 1934 ed., title 16, ch. 12, sec. 821) provides:

"SEC. 821. State laws and water rights unaffected: Nothing contained in this chapter shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein."

The Colorado River compact, the negotiation of which was authorized by act of Congress approved August 19, 1921 (42 Stat. L. 171, ch. 72) and which was signed at Santa Fe., N. Mex., November 24, 1922, provides, in article IV, paragraph (c), as follows:

"(c) The provisions of this article shall not apply to or interfere with the regulation and control by any State within its boundaries of the appropriation, use, and distribution of water."

This compact was expressly approved by the Congress in the so-called Boulder Canyon Project Act (act of December 21, 1928; 45 Stat. L. 1064, ch. 42, sec. 13; U. S. C., 1934 ed., title 43, sec. 617 (1)).

This action by the Congress was an approval of each and every provision in the Colorado River Compact, including the provisions of article IV, paragraph (c) hereinabove quoted. But the Congress in this same Boulder Canyon Project Act went further and strongly reemphasized in an additional section the principle that the Federal Government would not interfere with the regulation and control by any State within its boundaries of the appropriation, use, and distribution of water.

Section 18 of said Boulder Canyon Project Act (45 Stat. L. 1065, ch. 42, sec. 18; U. S. C., 1934 ed., ch. 43, sec. 617q) is as follows:

"SEC. 617q. Effect of chapter on authority of States to control waters within own borders: Nothing in this chapter shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River Compact or other interstate agreement."

In *Gutierres* v. *Albuquerque Land Co.* (1902) (188 U. S. 545) Mr. Justice White said in delivering the opinion of the Court (pp. 552–553):

"* * * We think, in view of the legislation of Congress on the subject of the appropriation of water on the public domain, particularly referred to in the opinion of this Court in *United States* v. *Rio Grande Irrigation Co.* (174 U. S. 690, 704–706), the objection is devoid of merit. As stated in the opinion just referred to, by the act of July 26, 1866 (ch. 262, sec. 9, 14 Stat. 253; Rev. Stat., sec. 2339), Congress recognized, as respects the public domain, 'so far as the United States are concerned, the validity of the local customs, law, and decisions of courts in respect to the appropriation of water.'"

In *Kansas* v. *Colorado* (1906) (206 U. S. 46) Mr. Justice Brewer, in delivering the opinion of the Court, said (p. 94):

"It [each State] may determine for itself whether the common-law rule in respect to riparian rights or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation shall control. Congress cannot enforce either rule upon any State."

In *Wyoming* v. *Colorado* (1921) (259 U. S. 419) the Court says, at page 465:

"But here the controversy is between States in both of which the doctrine of appropriation has prevailed from the time of the first settlements, always has been applied in the same way, and has been recognized and sanctioned by the United States, the owner of the public lands. * * * Nor is the United States seeking to impose a policy of its choosing on either State. All that it has done has been to recognize and give its sanction to the policy which each has adopted."

In the recent case of *Nebraska* v. *Wyoming* (1935) (295 U. S. 40, at p. 43) the Supreme Court held:

"2. The motion asserts that the Secretary of the Interior is an indispensable party. The bill alleges, and we know as a matter of law, that the Secretary and his agents, acting by authority of the Reclamation Act and supplementary legislation, must obtain permits and priorities for the use of water from the State of Wyoming in the same manner as a private appropriator or an irrigation district formed under the State law. His rights can rise no higher than those of Wyoming, and an adjudication of the defendant's rights will necessarily bind him. Wyoming will stand in judgment for him as for any other appropriator in that State. He is not a necessary party."

In the recent case of *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (1935) (295 U. S. 142 supra) the United States Supreme Court held, among other things, as summarized in headnote 8 of the official edition:

"8. Following the Desert Land Act of 1877, if not before, all nonnavigable waters then a part of the public domain became publici juris, subject to the plenary control of the designated States, including those since created out of the Territories named, with the right in each to determine for itself to what extent the rule of appropriation or the common-law rule in respect of riparian rights should obtain" (p. 163).

In this case the United States Supreme Court elaborately outlines the history of the development of the law in relation to waters in the irrigated-land States of the West, refers to and discusses the several acts of the Congress and the uniform line of decisions of the United States Supreme Court.

An important footnote appended to this case in the official reports (p. 164 of 295 U. S.) is as follows:

"In this connection it is not without significance that Congress, since the passage of the Desert Land Act, has repeatedly recognized the supremacy of State law in respect of the acquisition of water for the reclamation of public lands of the United States and lands of its Indian wards. Two examples may be cited:

"The Reclamation Act of 1902 (c. 1093, 32 Stat. 388), directed the Secretary of the Interior (section 8) to proceed in conformity to the State laws in carrying out the provisions of the act, and provided that nothing in the act should be construed as affecting or intending to affect or in any way interfere with the laws of any State or Territory 'relating to the control, appropriation, use, or distribution of water used in irrigation.'

"The act of June 21, 1906 (c. 3504, 34 Stat. 325, 375), made an appropriation for constructing irrigation systems to irrigate lands of the Uncompahgre, Uintah, and White River Utes in Utah, with the proviso that 'such irrigation systems shall be constructed and completed and held and operated, and water therefor appropriated under the laws of the State of Utah,' etc. This was amended by the Indian Appropriation Act of March 3, 1909, c. 263, 35 Stat. 781, 812, which again recognized the supremacy of the laws of Utah in respect of appropriation, and provided that the appropriation should 'be used only in the event of failure to procure from the State of Utah or its officers an extension of time in which to make final proof for waters appropriated for the benefit of the Indians.'"

It thus appears that by repeated acts of the Congress a definite national policy from which there has never been the slightest deviation, was long since determined upon, to wit, that the Federal Government shall proceed in conformity with "the local customs, law and decisions of courts" of the respective States in relation to the control, appropriation, use and distribution of water within their borders.

STATE CONSTITUTIONS

Furthermore, in the respective constitutions of the several irrigated-land States, which constitutions were submitted to and approved by the Federal Government prior to the admission of these States to the Union, the same principle of control by each State of the waters within its borders was strongly emphasized.

For example: Before Colorado was admitted to the Union on August 1, 1876, its constitution was approved by the Federal Government. Sections 5 and 6 of article XVI of the Colorado Constitution, then were and still are as follows:

"'SEC. 5. Water, public property: The water of every natural stream, not heretofore appropriated, within the State of Colorado, is hereby declared to be the property of the public, and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided.

"SEC. 6. Diverting unappropriated water; priority: The right to divert the unappropriated waters of any natural stream to beneficial uses shall never be denied. Priority of appropriation shall give the better right as between those using the water for the same purpose; but when the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes."

Before Wyoming was admitted to the Union, July 10, 1890, its constitution was submitted to and approved by the Federal Government. Section 31 of article I, being a part of the "Declaration of Rights" in this constitution, was and still is as follows:

"SEC. 31. Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channels, its control must be in the State, which, in providing for its use, shall equally guard all the various interests involved."

Article VIII was and still is as follows:

"Irrigation and water rights.

"SECTION 1. Water is State property: The water of all natural streams, springs, lakes, or other collections of still water, within the boundaries of the State, are hereby declared to be the property of the State.

"SEC. 2. Board of control: There shall be constituted a board of control, to be composed of the State engineer and superintendents of the water divisions, which shall, under such regulations as may be prescribed by law, have the supervision of the waters of the State and of their appropriation, distribution, and diversion, and of the various officers connected therewith. Its decisions to be subject to review by the courts of the State.

"SEC. 3. Priority of appropriation: Priority of appropriation for beneficial uses shall give the better right. No appropriation shall be denied except when such denial is demanded by the public interests.

"SEC. 4. Water divisions: The legislature shall by law divide the State into four water divisions, and provide for the appointment of superintendents thereof.

"SEC. 5. State engineer: There shall be a State engineer who shall be appointed by the Governor of the State and confirmed by the senate; he shall hold his office for the term of six (6) years, or until his successor shall have been appointed and shall have qualified. He shall be president of the board of control, and shall have general supervision of the waters of the State and of the officers connected with its distribution. No person shall be appointed to this position who has not such theoretical knowledge and such practical experience and skill as shall fit him for the position."

Similar provisions were embodied in the constitutions of other irrigated-land States, which constitutions were submitted prior to their admission to the Union and were approved by the Federal Government. Such provisions still remain in these constitutions. For example:

Section 15 of article III, Constitution of Montana, admitted to the Union November 8, 1889.

Article XV of the Constitution of Idaho, which State was admitted to the Union by act of Congress July 3, 1890.

Article XVII, Constitution of Utah, which State was admitted to the Union January 4, 1896.

Sections 1, 2, and 3 of article XVI, Constitution of New Mexico, which State was admitted to the Union January 6, 1912.

Sections 1 and 2 of article XVII, Constitution of Arizona, which State was admitted to the Union February 14, 1912.

From the foregoing it is manifest that one of the conditions upon which the people of the irrigated-land States assumed the responsibilities of statehood, was that the respective States should have the right of control, appropriation, use, and distribution of waters within their borders, in conformity with their local customs, laws, and decisions of their courts. This was part of the solemn covenant entered into between the Federal Government and the people of the respective irrigated-land States. Any departure therefrom would constitute a breach by the Federal Government of such solemn covenant.

It is vital to the welfare of the irrigated-land States that care should be taken, in revising the so-called regional-authority bills, to make sure that there shall be no departure therein from the national policy, long since established and in reliance upon which the West has been settled and developed, viz: That the control, appropriation, use, and distribution of the waters within those States shall be subject to their local customs, laws, and the decisions of their courts.

The Farm Bill

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ARTICLE BY DOROTHY THOMPSON IN THE NEW YORK HERALD TRIBUNE DECEMBER 20, 1937, ALSO EDITORIAL FROM THE WASHINGTON POST DECEMBER 19, 1937

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Dorothy Thompson dealing with the farm bill, published in the New York

Herald Tribune of December 20, 1937, and also an editorial dealing with the same subject, published in the Washington Post of December 19, 1937.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, December 20, 1937]

ON THE RECORD

(By Dorothy Thompson)

THE FARM BILL

On Friday the Senate of the United States passed a bill abolishing the American farmer and substituting in his place a "cooperator." The cooperator, lest one becomes confused, is not one who cooperates with fellow producers but one who cooperates with the Federal Government and brings the production policy of his individual farm into line with the Government's program. The German Nazis have invented the perfect description of it: "Gleichschaltung." The American farmer is to be "gleichgeschaltet."

States, counties within the States, and county committees on which the county agent will be an ex officio member will decide the quota that each farmer may devote to the production of marketable commodities. This quota will, of course, determine the value and price of the farm—this quota, and not the farmer's individual enterprise, competence, energy, and what he produces with them. The committee that determines this quota will hold the power of economic existence over the individual farmer. That committee would not dream, of course, of influencing the farmers' vote! There are in these committees, with power of life and death over the individual farmer, no opportunities for political corruption! Oh, yeah?

For thus making himself an employee of the Federal Government and surrendering his rights to control his own farm, the cooperator is, of course, to be remunerated by subsidy. If he obeys the rules, he gets a bribe. If he disobeys, he pays extremely heavy penalties.

To be sure, a plebiscite is provided for before allocations become effective. If one-third of the farmers in a given area vote against the allocations, then the program is overridden. Is there any possibility of one-third of the farmers using this "democratic" instrument?

At a meeting of the Tennessee Farm Bureau Federation in Memphis on October 29, 1937, Mr. Oscar Johnston, special representative of the Department of Agriculture, made a little speech. Mr. Johnston is a cotton farmer; he is, that is to say, the very efficient manager of a huge cotton plantation owned by British interests, which has been a large beneficiary of subsidies from the Federal Government. Mr. Johnston made it clear that nobody needs to worry about the few rugged individuals who might possibly want to remain farmers and not become "cooperators" or who might possibly disagree with the allotments of quotas.

"Cotton growers want acreage control of production," he said. "I don't care whether we have compulsory control or not. Because if we can get 75 percent of the farmers to join, the program will become compulsory. That 75 percent would not stand by and see the minority chisel. If they can't make them cooperate by legislation, they might by Ku Klux Klan or night riders. I believe that a control program will become compulsory."

Thank you, Mr. Johnston. But I recommend the brown shirt, riding breeches, and boots or puttees, rather than the more flimsy and impracticable costume of the Ku Klux Klan. That, after all, was designed for an illegal coercive organization. A coercive organization which has the backing of Mr. Johnston, "special representative of the Department of Agriculture," wouldn't need masks and nightgowns. Any simple, practical uniform, worn by the right persons, would have the effect of making a farmer look like one of his own sheep.

Funny. We used to picture Uncle Sam as a farmer.

Do the farmers want this bill?

They do not. They want help. They want compensation for the disadvantageous position they suffer under the tariff and relief from an overwhelming burden of debt and taxation. They want help so badly that they are being persuaded to sign on the dotted line. The mortgage has been the farmer's curse eternally. He has just been asked to sign collectively the biggest mortgage in the history of the United States—a mortgage on his independence.

Does the Senate believe in the bill it has just passed?

It does not. Any number of Senators who voted for this bill are extremely queasy about it. Why did they do it? Because the farmers want help; they are expected to pass a bill at this session; the whole question of farm relief is enormously complicated. It might be well to make some concession to the President. The wage and hour bill will make more trouble for them, etc.

Will this bill solve the farmer's problems?

Come back in 5 years and ask. The compensations provided under it are totally inadequate to compensate the farmer for the discrimination brought about by the necessity of selling his goods in a free market and buying them in a protected one, behind a tariff wall which adds 50 to 100 percent to his costs.

I will go into the prophecy business and say that for the cotton farmer the bill will be disastrous. The tariff and artificial control methods in America have already made it more profitable for the foreign consumers, who once bought half our cotton crop, to buy elsewhere, from those who are willing to sell in a competitive world market. We have already lost half of our export trade, and we have now passed a bill to lose the rest of it.

And the farmer who doesn't grow cotton mustn't grow anything else for the market that might compete with what the farmers of the Middle West already grow in too large quantities.

Well, you and I are not farmers, and it doesn't matter to us. Does it?

We are going to reduce cotton acreage. A single bale of cotton takes 200 to 250 man-hours of human labor to produce. We contemplate reducing the crop by 8,000,000 bales, which means doing away with 1,800,000,000 hours of labor. At present W. P. A. costs, work relief for this displaced labor will cost $700,000,000. And we will all pay for it.

The President wanted the cost of this bill set. No human being can set the cost of this bill. The cost of the subsidies and the administration will be a mere bagatelle in the total cost.

But the cost is not the most important thing about it. Whatever we did for the farmers, and something has to be done, would cost money. If we paid them a direct subsidy, estimated to equal unfair tariff discrimination against them on that portion of their production domestically consumed, and then let them compete with the rest of the world on the open market—that would cost a great deal of money.

But it wouldn't establish a balanced-parity-ever-normal system of farmer peonage.

And that is what this bill does.

[From Washington (D. C.) Post of December 19, 1937]

A LEGISLATIVE MONSTROSITY

From almost any angle of approach, passage of the farm bill by the Senate is an astounding performance. Few more sweeping measures have ever emerged from an American legislative chamber. Yet of those casting the final votes, probably only a handful understand all the complex features of the bill. The usually sober and deliberate Senate has been stampeded into approval of a measure with unpredictable consequences for both our economic and political systems.

Throughout its consideration of the farm bill Congress has been under pressure. Committees in both the Senate and House reported out bills before they had been carefully analyzed or properly drafted. Debate at both ends of the Capitol was hurried, confused, and inadequate. Such vital questions as the constitutionality of the measure were passed over with the briefest comments, as though the majority of legislators were afraid to submit the bill to that test.

When the final vote came on Friday Senators were still clamoring to be heard. But Vice President Garner drove the measure through by refusing to recognize appeals for further debate. Numerous Senators must have voted to please farmer constituents regardless of the specific terms of the bill or of personal convictions. The result is a monstrosity which, in some respects, has aroused the strong opposition of even the Secretary of Agriculture.

From the fiscal viewpoint the bill either makes a mockery of professed desires to balance the Budget or is a fraud upon farmers. In one section it sets up a policy of regulating commerce in cotton, wheat, corn, tobacco, and rice "to the extent necessary" to provide "parity of prices" and "parity of income" for producers of such commodities. And it authorizes expenditure of "such sums as are necessary" to carry out this purpose.

No one can foresee what the cost of such a program would be. It has been variously estimated at from $750,000,000 to $1,500,000,000. Farmers have been led to believe that the funds will be forthcoming regardless of how much money is needed. But another section of the hodge-podge bill requires the Secretary of Agriculture to scale down payments to farmers on a pro-rata basis, so that total outlays will not exceed the funds available. Under that provision the entire question of costs would be determined by the size of the appropriation granted each year.

These ambiguous provisions indicate that the hopes of beneficiaries are likely to be disappointed. Congress has made a pretense of being generous without providing the necessary funds. There is not the least expectation that new taxes to support a billion-dollar farm program will be voted. And if Congress attempts to spend more than $500,000,000 through this bill, without providing additional revenue, President Roosevelt is virtually committed to a veto.

From an administrative viewpoint the bill imposes an impossible task upon the Secretary of Agriculture. He must supervise production on almost every American farm. For he is instructed to deny benefit payments to farmers who use acreage taken out of cultivation of basic crops for the production of commodities to sell on the market.

This amendment is designed to protect the dairy industry. It represents a logical extension of the theory that farm prosperity is to be obtained by curtailing output to raise prices. Yet Senator POPE, coauthor of the bill, points out that such policing of every farm will be impossible and that it may result in a break-down of the entire program.

From the constitutional viewpoint, the bill sanctions an incredible invasion of personal rights. Production quotas are to be assigned to every farm. And in periods of surplus production coercive penalties will be applied to every farmer marketing wheat, cotton, corn, tobacco, and rice against the instructions of the Secretary of Agriculture. To hang such a drastic regulation of

individual farms upon the interstate commerce clause of the Constitution is plainly absurd.

It seems incredible that the Senate should have followed its courageous fight for constitutional government in the Court-packing issue with such reckless disregard of the limits on its own legislative powers. By such irresponsible action it is inviting another adverse decision from the Supreme Court if the President permits this irrational measure to become law.

Mr. Roosevelt could scarcely be expected to veto the bill because of its constitutional weakness. But the impractical administrative provisions and the grave threat to a balanced Budget will give him ample reason to exercise his veto power if this monstrosity emerges from conference in anything like its present form.

Tax-Exempt Salaries and Securities—A Reexamination

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, December 20 (legislative day of Tuesday, November 16), 1937

ARTICLE BY JOSEPH L. LEWINSON IN THE AMERICAN BAR ASSOCIATION JOURNAL FOR SEPTEMBER 1937

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the American Bar Association Journal for September 1, 1937, entitled "Tax-Exempt Salaries and Securities—A Reexamination," by Joseph L. Lewinson. I have secured the estimate required by the rules, and therefore ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX-EXEMPT SALARIES AND SECURITIES: A REEXAMINATION

(Doctrine of instrumentalities as applied to national taxing power calls for "fresh consideration"—does not go back to Marshall's celebrated judgment in *McCulloch* v. *Maryland*, but was originated, amplified, and fortified in later cases. Underlying question is as to proper canon for construction of powers expressly conferred on Congress by Constitution. Present doctrine, expressed by Chief Justice Hughes in Wagner Act case, is that such powers must not be exercised in a way which will disturb proper balance between State and national powers, and the question is necessarily one of degree. It cannot be said that history shows that implied absolute limitations on either National or State taxing power are necessary for preservation of Federal system, etc.)

(By Joseph L. Lewinson, member of the Los Angeles Bar)

I

The immunity of instrumentalities from taxation, it is said in the leading case of *Collector* v. *Day*[1] "is upheld by the great law of self-preservation." But, in order to preserve the Federal system is it necessary to have a rule of absolute prohibition? Or may nondiscriminatory taxes be permitted to stand? In short, would the Federal system fly to pieces if income, derived from State and municipal bonds, were taxed on the same basis as earned income? Or if State and municipal salaries were taxed on the same basis as other salaries?

In *Brush* v. *Commissioner*,[2] the latest case on the subject of immunity of instrumentalities (decided March 15, 1937), five justices, speaking through Justice Sutherland, held that the salary of an employee of the New York City water system was not subject to Federal income tax. Justices Stone and Cardozo concurred in the result on the ground that the petitioner had "brought himself within the terms of the exemption prescribed by Treasury Regulation 74, article 643"; and, as the validity of the regulation had not been challenged by the Government, they expressed no opinion "as to the need for revision of the doctrine of implied immunities declared in earlier decisions." Justice Roberts, in a dissenting opinion, concurred in by Justice Brandeis, said that the former decisions had "not furnished the executive a consistent rule of action." Justice Roberts also said: "The need of equitable and uniform administration of tax laws, National and State, and the just demand of the citizen that the rules governing the enforcement of those laws shall be ascertainable require an attempt at rationalization and restatement."

While the views of the four Justices are arresting, in the light of *Helvering* v. *Powers*[3] (which held that trustees operating the Boston Elevated Railway under a public trust must pay Federal income tax on their salaries) the decision in *Brush* v. *Commissioner* seems "progress backward."

Besides, the Justices have divided 5 to 4 or 6 to 3 in cases other than those involving municipal salaries.[4]

And while under existing decisions, Congress may not levy a tax on income derived from State or municipal securities, Congress, by levying an excise measured by income, may reach corporate income derived from State or municipal securities, and individual income derived from capital gains on municipal securities; and the several States by a similar device—or shall we say fiction—may reach corporate income derived from United States securities or copyrights or patents, or individual income derived from lands administered by an "instrumentality" of the United States.[5]

Again, there has been an irreconcilable difference of opinion as to the principle of necessity supposed to underlie the doctrine of instrumentalities. The application of the principle has been explained by Justice Butler (with Justice Cardozo alone refusing assent), as follows:

"Its application does not depend upon the amount of the exaction, the weight of the burden, or the extent of the resulting interference with sovereign independence. Where it applies, the principle is an absolute one wholly unaffected by matters or distinctions of degree."[6]

On the other hand, in an attempt at rationalization and restatement, Justice Roberts, speaking for Justice Brandeis and himself, has said:

"It seems to me that the reciprocal rights and immunities of the National and a State Government may be safeguarded by the observance of two limitations upon their respective powers of taxation. These are that the exactions of the one must not discriminate against the means and instrumentalities of the other and must not directly burden the operations of that other."[7]

And speaking for the whole Court, Chief Justice Hughes has cautioned:

"It must be remembered that we are dealing not with any express constitutional restriction, but only with an asserted implication."[8]

In his argument in the Pollock case, Joseph H. Choate thought it worth while to denounce the income-tax law "as communistic in its purposes and tendencies." And Justice Field echoed the sentiment in his opinion. "The present assault upon capital," said the distinguished justice, "is but the beginning." These utterances indicate the state of economic opinion at the time. The change in economic opinion since the Pollock case has been not less than the change in social thought since the Bakeshop case.

From this unsatisfactory state of the authorities and by reason of "the economic conditions which have supervened"—to apply the criteria applied in the Washington Minimum Wage Case—it appears "not only appropriate but * * * imperative" that "the subject should receive fresh consideration."[9]

A "fresh consideration" of the doctrine of instrumentalities will show (1) that the doctrine as applied to the national taxing power does not go back to the celebrated judgment of Chief Justice Marshall in *McCulloch* v. *Maryland*,[10] but was originated in *Collector* v. *Day*,[11] amplified in *Pollock* v. *Farmers' Loan & Trust Co.*,[12] and fortified in *Evans* v. *Gore*,[13] and (2) it is not too much to say there is no sound theoretical basis for "an asserted implication" of absolute limitations upon the Federal taxing power any more than upon other powers expressly granted to the general government by the Constitution; and (3) the experience of this country, as well as that of the Dominion of Canada and the Commonwealth of Australia, have shown that a Federal system is not balanced on a fulcrum of implied absolute limitations on Federal taxing power; and (4) the Supreme Court might well recede from the position taken in Evans against Gore that the sixteenth amendment gave no power to Congress to reach income not otherwise taxable; and (5) at least in the absence of special and extraordinary circumstances, nondiscriminating Federal taxes, including taxes on State and municipal securities as well as salaries, should ordinarily be held constitutional.

II

The tax held bad in *McCulloch* v. *Maryland* was a stamp tax, and applied only to note issues of banks operating in the State and not chartered by the State legislature. The tax was, therefore, discriminatory and obviously designed to drive the Bank of the United States out of Maryland. But Chief Justice Marshall was more concerned with forging a weapon against nullification sentiment,

which was rampant, especially in Virginia, than with deciding the case before the Court.[14] So Marshall departed from the case and wrote an essay on national power. He took the position that, by reason of the supremacy of the National Government within its sphere, the States were forbidden to interfere in any way with any agency or instrumentality of the United States. Hence he held that any State tax on the functions of the Bank of the United States, whether discriminatory or not, would be unconstitutional. It was in that connection that he said, "The power of tax is the power to destroy," and the "States have no power, by taxation or otherwise, to retard, impede, burden, or in any manner control the operations of the constitutional laws enacted by Congress to carry into execution the powers vested in the General Government." Marshall, however, was at pains to indicate that the converse was not true. In meeting the contention that "every argument which would sustain the right of the General Government to tax banks chartered by the States would equally sustain the rights of the States to tax banks chartered by the General Government," he said that "the two cases are not on the same reason" because the "people of all the States, and the States themselves, are represented in Congress, and, by their representations, exercise this power."[15] It should be added that Marshall upheld the nondiscriminatory State taxes levied on the real estate and other property of the bank.

While in Marshall's time the Union was endangered by nullification sentiment, it is worth remembering that in 1871 many thoughtful citizens believed the Federal system was threatened by schemes to aggrandize national power. In fact, only 2 or 3 years before the decision in *Collector* v. *Day* judicial review of the findings of the military tribunals set up in the South had been prevented by the expedient of repealing the appellate jurisdiction of the Supreme Court under the Habeas Corpus Act.[16]

Collector v. *Day* held that the Civil War income tax, which was, of course, nondiscriminatory, could not be collected on the salary of a State probate judge. The Court undertook to apply to the national power the doctrine of absolute prohibitions laid down in *McCulloch* v. *Maryland*, as applicable to State power. Referring to *Dobbins* v. *Erie County*[17] (in which it had been held that the States were prohibited from taxing the salary of an officer of the United States), the Court said it would "upon the same construction" of the Constitution "and for like reasons," show that the Government was "prohibited from taxing the salary of the judicial officer of a State." In undertaking to make that showing, the Court said:

"The supremacy of the General Government, therefore, so much relied on in the argument of the counsel for the plaintiff in error in respect to the question before us, cannot be maintained. The two Governments are upon an equality, and the question is whether the power 'to lay and collect taxes' enables the General Government to tax the salary of a judicial officer of the State, which officer is a means or instrumentality employed to carry into execution one of its most important functions, the administration of the laws, and which concerns the exercise of a right reserved to the States."[18]

Pollock v. *Farmers' Loan & Trust Co.* held that (1) a tax on incomes derived from property was a direct tax, and under article I, section 8, clause 4, to be constitutional, had to be apportioned, and (2) incomes derived from State or municipal bonds were not subject to national taxation at all. The Court arrived at the first conclusion by tracing income to its source, and holding that if a tax on the source would constitute a direct tax, so also would a tax upon the income. The basis of the second proposition was that a tax on incomes derived from State or municipal bonds was "a tax on the power of the States and their instrumentalities to borrow money, and consequently repugnant to the Constitution."

In *Evans* v. *Gore*, which held that the salary of a United States judge was not subject to Federal income tax, the Court (in undertaking to meet the argument that the sixteenth amendment must be deemed to have authorized such taxation) took the position that the sixteenth amendment overruled only the first branch of the Pollock case, and not the second branch.

III

Whatever one may think of the absolutes in which Chief Justice Marshall undertook to deal in *McCulloch* v. *Maryland*, or of the theory of dual federalism applied in *Collector* v. *Day*, or of the idea of tracing income to its source insisted on in *Pollock* v. *Farmers' Loan & Trust Co.*, or of the cramped construction given to the sixteenth amendment in *Evans* v. *Gore*, no informed person would contend that in the exercise of the judicial power, the postal power, the commerce power, or the bankruptcy power—to say nothing of the war powers—the National Government or its agencies are absolutely prohibited from interfering in any degree with the States or their "instrumentalities."

Permissible interferences with State governments and their "instrumentalities" are, indeed, many and varied.

The Federal courts may by habeas corpus release persons who are in the custody of State officers.[19] Congress may require the State courts to administer the Federal Employers' Liability Act.[20] United States mail trucks may decline to comply with local headlight specifications.[21] Mail-truck operators need not take out local driver's licenses.[22] A public utility acting under Federal authority may construct a dam and flood an area, including a county seat, where the county records are kept.[23] Soldiers in the execution of orders may disregard local speed laws.[24] A State owning and operating a terminal railroad may be subjected to the penalties imposed by the Federal Safety Appliance Act irrespective of whether the State is acting in a sovereign or private capacity.[25]

Does the national taxing power stand on a different footing?

Congress may tax the notes of a bank incorporated under a State law, though the purpose of the tax is to drive the notes out of circulation.[26] Congress may tax the transmission of property by inheritance or will, though the States and not Congress have created the privilege of succession.[27] Congress may tax the enjoyment of a corporate franchise, though a State and not Congress has brought the franchise into being.[28] Congress may impose an import tax on scientific instruments imported by a State agency, though the instruments are to be used in the performance of a strictly governmental function.[29] Congress may impose a tax on State banks, measured by the average amount of their deposits, though deposits of State funds are not excluded.[30]

And despite the supremacy clause in the Constitution, a State in the exercise of its taxing power may enter the domain of the National Government. A State may tax a corporation engaged almost exclusively in interstate commerce and measure the tax by net profits derived from interstate commerce.[31] A State may impose a tax on corporations, measured by income, without allowing deductions on income realized from the United States Government bonds or from United States patents or copyrights.[32] A State may tax the income of an Indian derived from oil lands administered by an "instrumentality" of the National Government.[33]

Up to within a twelvemonth the doctrine of instrumentalities had not been held applicable to national powers other than the taxing power.

In *United States* v. *California* it was argued that a terminal railroad owned and operated by a State was not subject to the Federal Safety Appliance Act because the railroad was a State instrumentality. But Justice Stone, speaking for the whole Court, said:

"The analogy of the constitutional immunity of State instrumentalities from Federal taxation, on which respondent relies, is not illuminating. That immunity is implied from the nature of our Federal system and the relationship within it of State and National Governments, and is equally a restriction on taxation by either of the instrumentalities of the other. * * * But there is no such limitation upon the plenary power to regulate commerce."[34]

In *Ashton* v. *Cameron, Etc., District*,[35] however, it was held that the doctrine of immunity of instrumentalities limited the bankruptcy power of Congress. Speaking for the Court (Hughes, C. J.; Cardozo, Brandeis, and Stone, JJ., dissenting on the application of the doctrine to the Municipal Bankruptcy Act), Justice McReynolds said:

"The power 'to establish * * * uniform laws on the subject of bankruptcies' can have no higher rank or importance in our scheme of government than the power 'to lay and collect taxes.' Both are granted by the same section of the Constitution, and we find no reason for saying that one is impliedly limited by the necessity of preserving independence of the States while the other is not."

And in the Wagner Act cases, speaking of the commerce power, in the majority opinion, Chief Justice Hughes said:

"Undoubtedly the scope of this power must be considered in the light of our dual system of government and may not be

extended so as to embrace effects upon interstate commerce so indirect and remote that to embrace them, in view of our complex society, would effectually obliterate the distinction between what is national and what is local and create a complete centralized government."[39]

It would appear, therefore, that the underlying question is as to the proper canon for the construction of powers expressly conferred on Congress by the Constitution.

During the 150 years of our national life different canons have competed for supremacy. Marshall rejected the theory of "implied prohibitions" upon the express powers altogether, and insisted that the commerce power "like all others vested in Congress * * * acknowledges no limitations other than are prescribed in the Constitution."[40] Taney brought forth the theory of dual federalism, under which national powers are limited by the powers reserved to the States. That theory was knocked in the head at Appomattox. It was, however, revived in *Collector v. Day*, but after a time it again went down.[41] Indeed, at the turn of the century, Marshall's canon (with its corollary, the discretion of Congress is not reviewable by the courts) was regarded as necessary if this were "to remain a government of laws and not of men."[42] But Marshall's canon itself again went down in the First Child Labor case and the A. A. A. case.[43] The present doctrine as expressed by Chief Justice Hughes in the Wagner Act case is that expressed powers of Congress must not be exercised in a way that will disturb the proper balance between State and National powers, and "the question is necessarily one of degree."[44] And, as suggested by Justice Cardozo in the Social Security cases, in order to transcend the national taxing power an act of Congress must "call for a surrender by the States of powers essential to their quasi-sovereign existence."[45]

IV

While the application of the doctrine of instrumentalities has withdrawn billions of dollars from taxation, has led to municipal extravagance, and has slowed down industry, it cannot be said that our history shows implied absolute limitations on either the National or State taxing power are necessary to the preservation of the Federal system—in other words, that taxes imposed by one government, which in some degree hamper the other but do not discriminate against it, are necessarily unconstitutional.

In unanimously holding that the States and their "instrumentalities" are not entitled to import articles duty-free, the Court, speaking through Chief Justice Hughes, said:

"The principle invoked by the petitioner, of the immunity of State instrumentalities from Federal taxation, has its inherent limitations. * * * It is a principle implied from the necessity of maintaining our dual system of government * * * Springing from that necessity, it does not extend beyond it. * * * The fact that the State in the performance of State functions may use imported articles does not mean that the importation is a function of the State government independent of Federal power. * * * It is for the Congress to decide to what extent, if at all, the States and their instrumentalities shall be relieved of the payment of duties on imported articles."[46]

In upholding a State corporate franchise tax measured by income, including income on Government bonds, Justice Stone, speaking for the Court (McReynolds and Butler, JJ., dissenting) said:

"Thus, in our dual system of government, action of the one government in the proper exercise of its sovereign powers, regarded as innocuous and permissible notwithstanding its incidental effects on the other, may become offensive and be deemed forbidden if it discriminates against the other. State taxes which, if nondiscriminatory, would be upheld, even though they reach or affect those engaged in interstate commerce, are condemned if they discriminate."[47]

In upholding a use tax on "any article of tangible personal property" purchased in a State not having a sales tax, Justice Cardozo, speaking for the Court (McReynolds and Butler, JJ., dissenting), said:

"Things acquired or transported in interstate commerce may be subjected to a property tax, nondiscriminatory in its operation, when they have become part of the common mass of property within the State of destination. * * * This is so, indeed, though they are still in the original packages. * * * For like reasons they may be subjected, when once they are at rest, to a nondiscriminatory tax upon use or enjoyment. * * * The privilege of use is only one attribute, among many, of the bundle of privileges that make up property or ownership. * * * A State is at liberty, if it pleases, to tax them all collectively, or to separate the faggots and lay the charge distributively * * *.

"Equality is the theme that runs through all the sections of the statute * * *.

"When the account is made up, the stranger from afar is subject to no greater burdens as a consequence of ownership than the dweller within the gates."[48]

In upholding a State tax on net income of domestic corporations, including net income derived from interstate commerce, it was said by Mr. Justice Pitney in a leading case:

"Such a tax, when imposed on net incomes from whatever source arising, is but a method of distributing the cost of government, like a tax upon property or upon franchises treated as property; and if there be no discrimination against interstate commerce, either in the admeasurement of the tax or in the means adopted for enforcing it, it constitutes one of the ordinary and general burdens of government, from which persons and corporations otherwise subject to the jurisdiction of the States are not exempted by the Federal Constitution because they happen to be engaged in commerce among the States."[49]

In holding the property of the Union Pacific Railroad (although chartered by Congress for the carriage of mail, troops, and war supplies) was subject to State taxation, the Court said, in the leading case of *Union Pacific Railroad Co. v. Peniston:*[50]

"But it is often a difficult question whether a tax imposed by a State does in fact invade the domain of the General Government or interfere with its operations to such an extent or in such a manner as to render it unwarranted. It cannot be that a State tax which remotely affects the efficient exercise of a Federal power is for that reason alone inhibited by the Constitution. To hold that would be to deny to the States all power to tax persons or property. Every tax levied by a State withdraws from the reach of Federal taxation a portion of the property from which it is taken, and to that extent diminishes the subject upon which Federal taxes may be laid. The States are, and they must ever be, coexistent with the National Government. Neither may destroy the other. Hence the Federal Constitution must receive a practical construction."

The experience of Canada also shows that "the great law of self-preservation" does not require that Federal and State Governments be prohibited from imposing nondiscriminatory taxes on "the instrumentalities" of each other.

In 1887 a nondiscriminating tax levied by a Province on a bank chartered by the Dominion Government was upheld by the Privy Council.[51] In *Forbes v. Attorney-General for Manitoba,*[52] decided January 15, 1937, it was held by the Privy Council that provincial income tax was collectible on the salaries of civil servants of the Dominion. And in *The Judges v. Attorney-General for Saskatchewan,*[53] decided March 12, 1937, the Privy Council upheld provincial income taxation of the salaries paid the judges by the Dominion Government.

In *Forbes v. Attorney-General,* the subject was reexamined on principle and authority:

"The appellant's second contention was that it is incompetent for the Provincial Legislature to tax the income of a Dominion civil servant. Why so? 'Any person found within the Province may legally be taxed there if taxed directly' (per Lord Hobhouse in *Bank of Toronto v. Lambe* (3), The Times, L. R. 742, at 743; 12 App. Cas. 575, at p. 584). The appellant's argument is that the tax offends against the exclusive legislative authority of the Dominion Parliament in the 'fixing and providing for the salaries and allowances of civil and other officers of the Government of Canada' under section 91 (8) of the British North America Act. If, he says, the Provincial authorities can tax at the rate of 2 percent, the salary which he receives from the Dominion to enable him to live in the Province and discharge his duties there, they can tax his salary to such an extent as to render it impossible for him to live and perform his duties. A similar argument in terrorem was advanced and rejected in *Bank of Toronto v. Lambe* (3 The Times, L. R. at p. 743; 12 App. Cas., at p. 586): 'It is suggested,' said Lord Hobhouse, 'that the legislature may lay on taxes so heavy as to crush a bank out of existence, and so to nullify the power of Parliament to erect banks. But their lordships cannot conceive that when the Imperial Parliament conferred wide powers of local self-government on great countries such as Quebec, it intended to limit them on the speculation that they would be used in an injurious manner. People who are trusted with the great power of making laws for property and civil rights may well be trusted to levy taxes.'

"The validity of imposing direct taxation by Provincial legislation on a Dominion official has been expressly established by authority in *Abbott v. City of St. John* (40 Can. S. C. R. 597), which was approved by this board in *Canon v. The King* (40 The Times L. R. 874); (1924) A. C. 999). Lord Phillimore, in delivering the judgment of the board, quoted this passage from the judgment of Mr. Justice Davies in Abbott's case (40 The Times L. R. at p. 875; (1924) A. C. at p. 1005): 'The Province

does not attempt to interfere directly with the exercise of the Dominion power, but merely says that, when exercised, the recipients of the salaries shall be amenable to Provincial legislation in like manner as all other residents.' Dealing with the suggestion that Provincial taxation might paralyze the Dominion civil service, Mr. Justice Davies added that 'if, under the guise of exercising power of taxation, confiscation of a substantial part of official and other salaries were attempted, it would be then time enough to consider the question and not to assume beforehand such a suggested misuse of the power.' It should perhaps be explained that in *Caron's* case (*supra*) the validity of the Dominion Income War Tax Act, 1917, as affecting the salary of a minister of a provincial government was upheld. The present case is the converse. In their lordship's opinion the appellant's second contention must share the fate of the first." [51]

The experience of Australia is even more instructive.

Australia first undertook to apply *McCulloch* v. *Maryland* in all its rigors.[52] But in 1907 on a direct appeal from the State of Victoria, the Privy Council held that state was entitled to collect income tax from a federal postmaster.[53] For a time the high court of Australia (as it was entitled to do) declined to accept the decision of the Privy Council as the law governing immunity of instrumentalities.[54] In 1920, however, following several changes in personnel, the high court reexamined the subject in *Amalgamated Society of Engineers* v. *Adelaide Steamship Co.*[55]

The Engineers case involved the question whether or not a steamship line operated by one of the states was subject to the jurisdiction of the federal arbitration court. The high court held in favor of the jurisdiction. The high court accepted the rule laid down by the Privy Council, that legislative power is to be ascertained by the language of a written constitution read in accordance with the ordinary canons of construction, and when so ascertained "it is not for any court of justice to inquire further." "Possible abuse of powers," declared the high court, "is no reason in British law for limiting the natural force of language creating them." On this reasoning the high court overruled the earlier decisions on the immunity of state instrumentalities and repudiated "the doctrine of 'implied prohibition' against the exercise of a power once ascertained in accordance with the ordinary rules of construction."

Five years later in *Pirrie* v. *McFarlane* [56] the high court gave the doctrine of immunities the coup de grace by holding a member of the Royal Australian Air Force, driving a car under the order of a superior officer, guilty of violating a State drivers' license law.

Speaking of the American authorities, the high court said in the Engineers case:

"Those who rely on American authorities * * * would find in the celebrated judgment of Marshall, C. J., in *Gibbons* v. *Ogden*, two passages militating strongly against their contention. One is at page 189 in these words: 'We know of no rule for construing the extent of such powers, other than is given by the language of the instrument which confers them, taken in connection with the purposes for which they were conferred.' The other is at page 196, where, speaking of the commerce power, the learned Chief Justice says: 'This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitation, other than are prescribed in the Constitution.' " [57]

Referring to the principle of "necessity" supposed to underlie the doctrine of instrumentalities, the High Court said:

"From its nature, it is incapable of consistent application, because 'necessity' in the sense employed—a political sense—must vary in relation to various powers and various States, and, indeed, various periods and circumstances. Not only is the judicial branch of the Government inappropriate to determine political necessities but experience, both in Australia and America, evidenced by discordant decision, has proved both the elusiveness and the inaccuracy of the doctrine as a legal standard." [58]

V

While the high court of Australia was engaged in overthrowing the immunity of instrumentalities as an implied prohibition on national power, our Supreme Court was occupied in restricting the scope of the sixteenth amendment.

In *Evans* v. *Gore*, the majority, speaking through Justice Van Devanter, said:

"The purpose of the amendment was to eliminate all occasion for such an apportionment because of the source from which the income came—a change in no wise affecting the power to tax, but only the mode of exercising it. The message of the President recommending the adoption by Congress of a joint resolution proposing the amendment, the debates on the resolution by which it was proposed, and the public appeals—corresponding to those in the Federalist—made to secure its ratification, leave no doubt on this point. * * *

"True, Governor Hughes, of New York, in a message laying the amendment before the legislature of that State for ratification or rejection, expressed some apprehension lest it might be construed as extending the taxing power to income not taxable before; but his message promptly brought forth from statesmen who participated in proposing the amendment such convincing expositions of its purpose, as here stated, that the apprehension was effectively dispelled and ratification followed.

"Thus the genesis and words of the amendment unite in showing that it does not extend the taxing power to new or excepted subjects, but merely removes all occasion otherwise existing for an apportionment among the States of taxes laid on income, whether derived from one source or another." [59]

Mr. Justice Holmes, speaking for Mr. Justice Brandeis and himself, dissented.

It is submitted that the "words of the amendment" do not show that the amendment "does not extend the taxing power to new or excepted subjects." Indeed, it is hard to imagine more comprehensive words than "from whatever source derived."

It is also submitted that the intentions of the President and Congress are immaterial, first, because the amendment is unambiguous;[60] and, secondly, because it is the intention of the ratifiers and not the framers that becomes material when a constitutional provision is not clear on its face.[61]

But was Justice Van Devanter right about the genesis of the amendment?

It is true that in a special message to Congress delivered June 16, 1909, President Taft said:

"Although I have not considered a constitutional amendment as necessary to the exercise of certain phases of this power, a mature consideration has satisfied me that an amendment is the only proper course for its establishment to its full extent. I therefore recommend to the Congress that both Houses, by a two-thirds vote, shall propose an amendment to the Constitution conferring the power to levy an income tax upon the National Government without apportionment among the States in proportion to population." [62]

But President Taft's message was sent to Congress in opposition to an amendment to the tariff law, then before Congress. The amendment provided for a uniform income tax in the hope that, with the changes in personnel, the Supreme Court would reverse the Pollock case. As to this, President Taft said in his message:

"For the Congress to assume that the Court will reverse itself, and to enact legislation on such an assumption, will not strengthen popular confidence in the stability of judicial construction of the Constitution." [63]

The sixteenth amendment as proposed by the House did not include the words "from whatever source derived." Those words were added by the Senate Committee on Finance; and the proposed amendment, with the above words included, passed both Houses practically without debate.[64]

When the amendment was before the New York Legislature for ratification the present Chief Justice, then Governor of New York, sent a message, in which he said:

"It is to be borne in mind that this is not a mere statute to be construed in the light of constitutional restrictions, express or implied, but a proposed amendment to the Constitution itself which, if ratified, will be in effect a grant to the Federal Government of the power which it defines. The comprehensive words, 'from whatever source derived,' if taken in their natural sense, would include not only incomes from real and personal property but also incomes derived from State and municipal securities." [65]

After Governor Hughes' message, Senator Borah expressed the opinion in a speech delivered in the Senate, that the proposed amendment would not enlarge the national taxing power; [66] and Senator Root expressed the same opinion in a letter to a New York State senator.[67]

The Governors of Florida, Missouri, North Dakota, and Oklahoma, however, all agreed with the construction placed upon the amendment by Governor Hughes, and advocated its ratification.[68]

Governor Dix, who succeeded Governor Hughes, sent a message to the speaker of the New York Assembly urging him to press the amendment. Said Governor Dix:

"Indeed it seems to me that if the words 'from whatever source derived' would leave the amendment ambiguous as to its power to tax incomes, from official salaries and from bonds of States and municipalities, the amendment ought to be opposed by whoever adheres to the democratic maxim of equality of laws, equality of privileges, and equality of burdens * * * It is impossible to

conceive of any proposition more unfair and more antagonistic to the American idea of equality and the democratic principle of opposition to privilege, than an income tax so levied that it would divide the people of the United States into two classes." [66]

It is significant, it may be added, that as a matter of historical sequence, ratification by New York did not follow the speech of Senator Borah or the letter of Senator Root, but it came on the heels of the message of Governor Dix.

VI

Prior to the ratification of the sixteenth amendment in 1913, the Supreme Court had handed down a decision which lifted the subject into the realm of metaphysics.

In *Flint* v. *Stone-Tracy Co.*,[70] the court upheld the Federal Corporation Tax Law of 1909, which imposed an excise upon the carrying on, or the doing of, business in a corporate or quasi-corporate capacity, measured by the entire net income received by it from all sources without allowing the deduction of income from State or municipal securities. That celebrated case and recent cases upholding State corporate franchise taxes measured by net income without allowing deduction for income derived from Government securities, or from the licensing of patented articles or copyrighted works,[71] have nullified the doctrines of the Pollock and Gore cases at least as far as they relate to corporate incomes.

In a speech delivered in the House of Representatives by Hon. W. D. McFARLANE on June 3, 1937, it was said:

"In 1934, a subcommittee of the Ways and Means Committee was appointed to investigate tax avoidance schemes. Consideration was given to methods of curtailing the amount of tax evasion due to tax-exempt securities. In the report of the subcommittee there is an opinion by counsel of the committee suggesting a method by which he says 'most of the income from tax-exempt securities could be reached.' Under this method there would be reached an excise tax upon the carrying on or doing business by corporations, measured by the net income from all sources, including interest from the so-called tax-exempt securities, and a similar excise tax on individuals engaged in any trade, avocation, or employment. As pointed out by one of counsel of the Joint Tax Committee on Taxation, this method of reaching tax-exempt securities is constitutional under the decision of the Supreme Court in the case of *Stone-Tracy Co.* v. *Flint* (220 U. S. 107). Furthermore, it appears that some of the States have used this method for taxing income from Federal securities, and this method has been upheld by the Supreme Court (*Pacific Co.* v. *Johnson*, 285 U. S. 480; *Educational Film Co.* v. *Ward*, 282 U. S. 379." [72]

The cases cited by Congressman McFARLANE involved corporate incomes.

But the authorities do not preclude the same conclusions in cases of individual incomes.

In *Willcutts* v. *Bunn*,[73] the Supreme Court unanimously held that the gain derived from the sale of municipal bonds not issued at a discount may properly be subjected to Federal income tax, in the absence of a showing that any appreciable burden was cast thereby on the State's borrowing power. In the opinion by Chief Justice Hughes, it is said:

"The tax upon profits made upon purchases and sales is an excise upon the result of the combination of several factors, including capital investment, and, quite generally, some measure of sagacity; the gain may be regarded as 'the creation of capital, industry, and skill.' * * *

"That a transfer of Government bonds is not inseparably connected with the exercise of the Government's borrowing power so as to make the transfer per se immune from taxation is clearly demonstrated by the decisions upholding nondiscriminatory taxation laid upon the transmission of such securities upon the death of the owner." [74]

It is true that the Chief Justice recognizes the second branch of the Pollock case as binding. But the same thing is done in the Stone-Tracy case. It is also worthy of note that both cases go on the theory that an occupation tax measured by income is good as an excise. And does it not require much the same "measure of sagacity" to select bonds in the first instance, as to pick out the time at which to sell them at a profit? The Chief Justice distinguishes the cases holding that a State could not impose an occupation tax on the operations conducted by lessees upon Indian lands. But since the decision in the Willcutts case it has been decided that a State can reach the income received by an Indian from lands operated by a Government "instrumentality." [75]

Instructive in this connection is *Peck & Co.* v. *Lowe*,[76] in which it was held that a corporation was not entitled to deduct that portion of its income derived exclusively from its export business, although taxes on "articles exported" are expressly prohibited by article I, section 9, of the Constitution. Speaking for the whole Court, Justice Van Devanter said:

"The tax in question is unlike any of those heretofore condemned. It is not laid on articles in course of exportation, or on anything which inherently or by the usages of commerce is embraced in exportation or any of its processes. On the contrary, it is an income tax laid generally on net incomes. And while it cannot be applied to any income which Congress has no power to tax, * * * it is both nominally and actually a general tax. It is not laid on income from exportation because of its source, or in a discriminative way, but just as it is laid on other income. The words of the act are 'not income arising or accruing from all sources.' There is no discrimination. At most, exportation is affected only indirectly and remotely. The tax is levied after exportation is completed, after all expenses are paid and losses adjusted, and after the recipient of the income is free to use it as he chooses." [77]

If the power to tax prevails over an express prohibition found in the Constitution itself, why should it not prevail over "an asserted implication"?

Practical considerations point the same way. State and municipal securities are held to a very great extent by insurance companies, savings banks, trust companies, and individuals with exceptionally large incomes. How would it disturb the balance of the Federal system to reach bond interest in the hands of individuals of great wealth any more than to reach bond interest administered by great fiduciary corporations largely for the benefit of the humble?

The taxation of State and municipal salaries presents somewhat different questions.

In his dissenting opinion in *Brush* v. *Commissioner*, Justice Roberts said:

"In reason and logic it is difficult to differentiate the present case from that of a private citizen who furnishes goods, performs work, or renders service to a State or a municipality under a contract or an officer or employee of a corporation which does the same. Income tax on the compensation paid or the profit realized is a necessary cost incident to the performance of the contract, and as such must be taken into account in fixing the consideration demanded of the city government. In quite as real a sense, as in this case, the taxation of income of such persons and, as well, the taxation of the corporation itself, lays a burden upon the funds of the State or its agency. Nevertheless, the courts have repeatedly declared that the doctrine of immunity will not serve to exempt such persons or corporations from the exaction.

"The importance of the case arises out of the fact that the claimed exemption may well extend to millions of persons (whose work nowise differs from that of their fellows in private enterprise) who are employed by municipal subdivisions and districts throughout the Nation, and that, on the other hand, the powers of the States to tax may be inhibited in the case of hundreds of thousands of similar employees of Federal agencies of one sort or another. Such exemptions from taxation ought to be strictly limited. They are essentially unfair." [78]

Justice Roberts spoke with reference to municipal officers and employees engaged in work that competes with private work. But the observations of Justice Roberts, if not applicable to State officers, we submit, should be held applicable at least to municipal officers generally without regard to the distinction between governmental and proprietary functions. For, as Justice Cardozo (speaking for Hughes, Chief Justice, and Brandeis and Stone, Justices, as well as himself) said in the Municipal Bankruptcy case:

"In the public law of the United States a State is a sovereign or at least a quasi sovereign. Not so a local governmental unit, though the State may have invested it with governmental power. Such a governmental unit may be brought into court against its will without violating the eleventh amendment. * * * It may be subjected to mandamus or to equitable remedies. * * * 'Neither public corporations nor political subdivisions are clothed with that immunity from suit which belongs to the State alone by virtue of its sovereignty.'" [79]

VII

Regardless of its want of theoretical basis and its inability to control the decision in cases where the necessity for revenue has been exigent, the doctrine of implied absolute prohibitions on the exercise of the national taxing power is still tenacious of life. But how much longer can it persist? It has involved, and still involves, the law in uncertainties and subtleties and has led, and still leads, to sharp differences of opinion among the justices, to conflicting decisions and judgments that appear unfair. On the other hand, our experience with nondiscriminatory State taxes on national banks, on interstate commerce, and on Government securities, as well as Canadian and Australian experience with the taxation of official salaries, shows that a Federal system is not balanced on a fulcrum of absolute prohibitions. And while the Federal corporation tax law of 1909 was in force "our flag was still there." So we make bold to assert there is no longer a place in our constitutional law (if, indeed there ever was) for a dogma which condemns Federal taxes regardless of whether or not, as a

matter of fact, such taxes substantially impede State governments in the performance of their essential functions.

As is said in the leading case of *Union Pacific Railroad Co.* v. *Peniston*: "It is often a difficult question whether a tax imposed by a State does in fact invade the domain of the General Government, or interfere with its operations to such an extent, or in such a manner as to render it unwarranted. * * * Hence the Federal Constitution must receive a practical construction." And, as suggested in the Social Security cases, a Federal tax should be upheld unless it calls "for a surrender by the States of powers essential to their quasi-sovereign existence." Tested by such criteria, nondiscriminating Federal taxes should rarely be held unconstitutional. And with a frank recognition of such criteria as controlling, it would no longer be necessary, in order to reach just results, to endeavor to distinguish between the property of a corporation and its functions, between the subject of a tax and its measure, between governmental functions and proprietary functions, between governmental functions as they existed in 1789 and as they exist today, between officers and independent contractors, and between full-time employees and those rendering services requiring only part time. The principle of equality in taxation would be more nearly observed and Federal relations would be on a more realistic basis.

The question, as we have said, is, at bottom, one of Federal relations. With the increased demands on Government and society—especially as the doctrine of instrumentalities has been carried over to the bankruptcy power and the commerce power—it will be increasingly difficult to take refuge in phrases like "the power to destroy," "the complexity of our dual system," and "the preservation of the States and the maintenance of their governments." "Catchwords and labels," Justice Cardozo tells us, "are subject to the dangers that lurk in metaphors and symbols, and must be watched with circumspection lest they put us off our guard."

The Supreme Court is not likely to follow the high court of Australia in renouncing altogether the doctrine of "implied prohibitions" on the exercise of express powers; but a disavowal of the doctrine of implied absolute prohibitions would call only for an obvious application of the philosophy of Federal relations underlying the Wagner Act cases and the Social Security cases.

In the quest for additional sources of revenue, the Treasury might well take the hint given by Justices Cardozo and Stone and recast the regulations; and Congress might do worse than pass legislation which would present the doctrine of instrumentalities for fresh consideration.

National Association of Manufacturers Meet at Jade Room, Waldorf-Astoria. Want Ancestral Caves and Machine Guns. Some of Their Stupidities

---

EXTENSION OF REMARKS

OF

HON. MAURY MAVERICK

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

COLBY CHESTER, JEFE SUPREMO OF MANUFACTURERS, BLAZES WITH STUPIDITY

Mr. MAVERICK. Mr. Speaker, the National Association of Manufacturers held a meeting recently in the Waldorf-Astoria Hotel in New York. It must have been a stupid gathering, or else the leadership must have been terribly stupid. There is a story about it in the December 22 issue of the New Republic, entitled "The NAM Through the Ages." It shows that their president, Colby Chester, literally blazed with stupidity, and so I insert the article here.

Indeed, to sum up what they had to say was principally to the effect that if the Government of the United States and the various State governments would just stop governing the people all together, and just furnishing enough Federal troops to protect the manufacturers so they could do as they pleased, that everyting would be all right. That, of course, is a conclusion of mine, but I do not believe that it overstates the real wishes of the association.

The National Association of Manufacturers, in effect, want the National Labor Relations Act to be repealed or made a nullity; they want labor organizations at the mercy of the big employers; they want to be relieved of taxation—and let alone to do exactly as they please. According to them that would bring prosperity to the country.

SECESSION—THE CONFEDERATE MANUFACTURERS OF AMERICA

These men who assembled there, or whoever happened to be their bosses, were much more ignorant than the slave owners who insisted on the institution of slavery and seceded from the United States of America in order to perpetuate that system. The Manufacturers Association want to secede—obey no laws, except of their own choosing, setting up the law to themselves, in order that they can carry on their business as the Confederate Manufacturers of America.

Their statement, reflecting their attitude, is one of the most shocking examples of a lack of morality in certain high places that I have ever witnessed. This amazing lack of common ordinary fair play is not all; they show the deepest and most contemptible ignorance.

Business, business. Yes, I favor business; I have sense enough to know, and so does every other Congressman have sense enough to know, that we physically live by business. But there is a psychology developing, which if not stopped, will surely destroy this country.

It is the same psychology that brought on the Civil War. Indeed, Jeff Davis and hundreds of other very able men said: "All we ask is to be let alone"—the Supreme Court said they were right in the Dred Scott decision—and that is the psychology of some big-business men today.

BIG SLAVE OWNERS OF '61 AND BIG INDUSTRIALISTS OF '37

This NAM is also fooling some business men who are not big business men, just as the big slave owners fooled some of the white people who did not own any slaves. In any event, many self-deluded big business men, the National Association of Manufacturers and a few other organizations of its kind, are doing for business what the slave owners did to their own white people—they are building a Tower of Babel that will topple over themselves.

If this group of men—great producers that they are—had the foresight, common sense, or the unselfishness, to see that the American people want to cooperate with them they could save themselves. They could continue to make money, be prosperous, and have contented employees. But they do not want their employees to have dignity or self-respect—the right to join a labor organization, just as a manufacturer has the right to join the National Association of Manufacturers. This, of course, is gradually bringing deep resentment in the people to the manufacturers, and should they be destroyed it will be through their own ignorance of humanity.

GOOD GOVERNMENT—SQUARE DEAL FOR BUSINESS AND LABOR

It seems to me that the thing we Americans should strive for is good government—a government in which everyone gets a square deal; and that would, of course, include business as well as labor. But some big manufacturers, and a group of others, say that they should be let alone—they want it all. What does this mean?

It means that they want independent baronies, machine-gun kingdoms, where the persons living within their boundaries would be completely at their mercy. If we are honest representatives of the people we cannot permit this.

The Government, after all, ought to be the instrumentality of the people. And the people certainly have a right to protect themselves in certain minimum standards—their civil, religious, and educational rights. For the Government to retire and leave great business corporations to govern the citizens at their pleasure, would be for the Government to retire from its duty to the people.

The article to which I referred, and which appeared in the New Republic of December 22, 1937, entitled "The NAM Through the Ages" is as follows:

THE NAM THROUGH THE AGES

The annual conclave of the National Association of Manufacturers has come and gone, leaving us somewhat sadder but not much wiser. All week the Jade Room of the Waldorf-Astoria in New York City rang with denunciations of labor and the administration as conspirators in the recent murder of business prosperity.

Then at the final banquet, President Colby M. Chester extended a friendly hand to the guilty ones: Let bygones be bygones, he said,

let's all work together "to get the old Ship of State back on her keel. * * * Is our program fair, social, constructive? Is it liberal?" Obviously Mr. Chester's 5,000 colleagues thought it was. We must register a reluctant dissent.

MANUFACTURERS WANT ANCESTRAL CAVES AND MACHINE GUNS

Underscoring a traditional primary concern with labor—the one factor of production that stubbornly resists the eternal laws of economics—the country's leading industrialists last week took their stand on an 18-plank platform of employment relations: Collective bargaining, purely a "local" and "internal" affair, is "proper" only when "individual contact between executives and employees becomes difficult"; Government should remain strictly neutral, guarding workers from "coercion from any source" but primarily protecting "the right to work"; employers should disregard unions in hiring; no closed shop, no check-off, no compulsory arbitration; Government must protect industrial property; Government should regulate unions to keep them free of "fraud or coercion"; the Wagner Act should be amended to outlaw nine types of strikes, including the sit-down, sympathetic, general, violent, "quickie," strikes in violation of contract, and—who says capitalists lack a sense of humor?—strikes "to prevent the use of materials, equipment, or services"; workers participating in such strikes should be barred from collective bargaining and in effect blacklisted; repeal all anti-injunction laws; make unions and their agents suable without limit; forbid interstate movement of strikers and pickets; and, finally, prohibit political contributions "by both unions and business corporations."

Supplementing this design for a return to ancestral caves, the Nation's most powerful union of industrialists outlined its idea of sound employment procedures, in a statement notable chiefly because it contains no suggestion of the fact that labor unions have something to do with employment policies in 1937.

Perhaps we betray a woeful lack of "perspective" in implying that the manufacturers have failed to keep step with the rest of the country. After all, it's only 34 years since this program was formulated. In those days Presidents of the United States spoke softly and used Federal troops to break important strikes. Why should we expect epochal events in the interim—the passing of the frontier, the World War, the tremendous growth of monopoly power and practices, the advance of mechanical production, the banishment from our economic society of millions who can't find jobs, the coming of the New Deal, the awakening of organized labor; to upset the considered attitude of those who, in their own words, "are responsible for the welfare of millions. * * *"? Let the mountain come to Mohammed.

Back in 1895, when the NAM saw the light of day, "employment relations" were happily too quiescent to merit attention. Tariff, taxation, and trust busting furnished the headaches then. The rise of the I. W. W. and "Teddy" Roosevelt's method of settling the anthracite strike of 1902 revealed its true vocation to the association; "* * * the molding of public opinion * * * to make the wage earner realize the important truth that his interests and those of his employers are identical; that there is no sense in ruining the enterprise that gives them both their livelihood. * * *"

NAM TELLS "MIDDLE CLAWSSES" HOW TO THINK

In 1910, better to bring the light to the "great middle classes," the NAM resolved to place its literature in libraries throughout the Nation. A letter from the Los Angeles Public Library brought encouragement: "The Open Shop Encyclopedia has proven so successful in the main library that we would like to have 25 copies for our largest branches."

America's entry into the war stimulated manufacturers to demand longer hours (50 hours a week at least), less taxation of business and businessmen, and a funding of the cost of war to let posterity pay it. Their plan for social security ran like this: "It is a moral responsibility of the private employer to encourage, assist, and inspire his employees with the importance and necessity of ways and means for making provision for the contingencies of life. * * *"

By 1918 the industrial-conservation movement had become the rage, first as a means of winning the war and then to put America at the top of the heap when it was over. "When the war came with its changes * * * we recognized that patriotism must be the dominant keynote; that it was the duty of everybody, out of patriotic considerations rather than for selfish reasons, to acquire efficiency in industry." The association demonstrated its patriotism by dropping its fight with labor: "No word of fault-finding have we ever uttered against organized labor. * * * But we have said that labor organizations must turn themselves to the betterment of industry * * * rather than to exploitation. We have talked with them (workers) in appeals to let down the bars of selfish unionism; we have talked to them of the new era of brotherhood."

LONGER HOURS, HIGHER SPEED, LESS WAGES NAM DREAM

What did all this come to? Longer hours at higher speed: "* * * not 'how many hours must we labor' but 'how much labor can we put into the hours.'"

The following year brought recommendations for the extension of the piece-work system, laws to make unions "responsible" in court, balancing the Budget, lower taxation on "individual initiative"; and a remarkable sermon on the lessons of the war: "If the World War has taught us anything it has taught us the danger of having in our midst un-Americanized aliens and even un-Americanized natives."

Suceeding years have not diminished the altruism of the NAM's motives or the glory of its intellect: There must be no child-labor amendment, no centralized social-security system, no realistic food and drug legislation.

All these would lead to bureaucracy and the destruction of individual liberty. In 1934 the solons of industry brought forth this puzzler on the question of relief: "Taxpayers' money should not be used in such a way as to encourage or incite strikes, by financing those voluntarily quitting their jobs. Subject to this exception, the existence of a strike should not alter in any way the operation of basic relief principles."

Does the NAM seriously believe that anybody with reasonable intelligence could fail to see through its hypocritical Indian-giving? We think not; its leading spirits must be talking for the benefit of the remainder of the population. The Senate civil liberties committee ought to expose the inner workings of this organization to the public.

Some Implications of the Ludlow Resolution

EXTENSION OF REMARKS

OF

HON. ROBERT L. BACON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

ARTICLE BY MR. WALTER LIPPMANN

Mr. BACON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Mr. Walter Lippmann, entitled "Mr. LUDLOW Prepares for War." This article raises questions and suggests implications that must be seriously considered.

MR. LUDLOW PREPARES FOR WAR

(By Walter Lippmann)

The required 218 Representatives having signed the petition, the House will, within the next few weeks, vote on the Ludlow resolution amending the Constitution. If two-thirds of the House and of the Senate were to adopt the resolution, it would then be submitted to the States. If 36 States ratify it, Congress will no longer have power to declare war, "except in the event of an invasion of the United States or its territorial possessions and attack upon its citizens residing therein"—unless the declaration of war is confirmed by majority vote in a national referendum.

There is probably not 1 chance in 10,000 that the Ludlow resolution will in fact become part of the Constitution. But the mere fact that a majority of the House have at this moment signed a petition which brings it to a vote is in itself of considerable importance. The President is engaged in the delicate task of convincing the Japanese Government that the American protests are serious. There is grave danger that the signing of this petition might be misunderstood by the Japanese military as signifying that the President may be disregarded because he does not have behind him the support of the people.

It is to be hoped that Ambassador Saito and the Japanese newspaper men in this country will do everything in their power to dispel such a dangerous delusion. They cannot make it too plain to their Government and to their people that the action of the House on the Ludlow resolution has no practical significance whatever in determining what the President can or will do, what Congress and American opinion can or will support.

Now that the Ludlow resolution is to be brought to a vote, the best thing to do with it is to subject it to democratic debate and if its unsoundness can be demonstrated, to defeat it decisively by a vote. We need not shrink from such a test. It is not difficult to demonstrate the fallacy of the scheme and to show that though the sponsors of the resolution have the best intentions, the resolution would, if adopted, enormously increase the chances of America's being drawn into a great war.

The effect of the Ludlow resolution would be in essence to forbid the President to use diplomacy to prevent war. If the constitutional amendment were adopted, he could do nothing about any attack on American citizens or American property or American national interests in any part of the world or on the high seas. He could perhaps plead with the aggressors to desist; he could appeal to their better natures, but he would have always to admit that he could do no more than that. Thus he would merely be airing his personal views. When he made his protest he would not be speaking officially as the Chief Magistrate of the American Nation but as a private individual. No one could speak to a foreign power in the name of the American people. For the President could never know, and the foreign power could never know, how eventually the referendum would decide.

Under the Ludlow resolution diplomacy in time of peace would be unconstitutional.

Mr. LUDLOW might presumably retort that he does not think diplomacy prevents wars, that it is too dangerous to let the President write diplomatic notes backed by the threat that the Nation would fight to make them effective. No doubt there is some danger that a headstrong President might abuse this power. But, unfortunately for Mr. LUDLOW, his resolution does nothing whatever to clip the power of such a warlike President.

Suppose, for example, that instead of wanting to prevent a war, Mr. Roosevelt wanted a war with Japan; what could he do under the Ludlow resolution? He could do what Japan has done in China, what Italy did in Ethiopia and in Spain. He could go to war without asking Congress to declare war. There is nothing in the Ludlow resolution to stop him. He could still break off diplomatic relations. He could still mobilize the American Navy across the Japanese trade routes. He could land more marines at Shanghai. He could send warships up the Yangtze River. He could fire on Japanese airplanes. How would Mr. LUDLOW prevent that? Did not President Wilson bombard and seize Vera Cruz; did he not send an army under General Pershing deep into Mexico, all without a declaration of war by Congress, much less a popular referendum?

If an American President wants to go to war, he can go to war no matter what the Ludlow resolution says.

But, an American President who wanted to preserve the peace would become hopelessly ineffective. For with the Ludlow amendment in effect such a President would naturally be too scrupulous to go to war without a declaration of war. And since he could not know what the referendum would show, a peaceable President could take no step whatever to restrain attacks on Americans before they had reached a point where the public was so excited that it would surely vote for war. He could not now say to Japan, for example, that the *Panay* affair really must not be repeated. All he could say would be that the Japanese military must decide for themselves how many Americans they may kill, how many American ships they may sink, before a referendum would declare war.

Thus instead of permitting the President to use diplomacy to prevent the repetition of such outrages, the Ludlow resolution would invite all foreign powers to see how many feathers they can pluck from the tail of the eagle before he gets angry. Can anyone imagine a device more calculated to induce reckless adventurers to take long chances, such long chances that in the end they would have done such intolerable things that a complete bitter-end Ludlow war would be absolutely inescapable?

Instead of permitting a preventive diplomacy, the Ludlow scheme would require the American people to stand by helplessly until they were so infuriated that there was no holding them. Nothing could be done to stop a war until the outrages had reached a point where it was impossible to stop a war. So if what Mr. LUDLOW wants is to keep the American temper peaceable, he should be told that his scheme is a device for sitting on the safety valve until the boiler explodes.

Not only does his plan invite the foreign powers to proceed unchecked from outrage to outrage, thus insuring eventually an explosion of American resentment, but it provides that when at last the country does go to war anyway, it shall find itself in the worst possible position. Under the Ludlow resolution the cardinal principle of our foreign policy would be that only the actual invasion of American territory was a justifiable cause of war.

Thus Mr. LUDLOW, whether he realizes it or not, would abolish the Monroe Doctrine. For in the spirit of his resolution the President could not object seriously if an Asiatic or a European power occupied Canada, or Mexico, or Brazil, or if it established, by lease or by treaty, naval and air bases within striking distance of this country. Our foreign policy under the Ludlow plan would be to permit all that until we were actually invaded, bombarded from the sea, or bombed from the air. Then, according to Mr. LUDLOW, we would fight. But Mr. LUDLOW would have arranged the war so that when we had to fight we would start at the greatest possible disadvantage. Whereas today all foreign powers know absolutely that they cannot establish their military power in this hemisphere; under the Ludlow plan they would be invited to take a chance.

No doubt Mr. LUDLOW does not mean to produce such fantastic consequences. He sincerely does not want war. But to attain his end he has started from the fallacy that war can be prevented if nobody knows whether or not we might go to war. Yet just that uncertainty would increase greatly the likelihood of war. It would render the President helpless to prevent war in its early stages. It would invite foreign powers to gamble on our pacifism. And it would make it ever so much more likely that finally, when the provocation has become intolerable, there would be no remedy except a total war fought when we were at the greatest possible disadvantage.

If Mr. LUDLOW doubts the force of this objection, let him try an experiment. Let him pass an ordinance in his home town, repealing the laws against pickpockets, hold-ups, highway robbery, and all forms of assault and battery provided they take place on the streets and in other public places; then let him stipulate that robberies and murderers shall not be touched by the police until they commit robbery and murder in a man's bedroom. This would make just as much sense as his plan to prevent war.

Wage and Hour Legislation

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

TELEGRAM FROM RHODE ISLAND TEXTILE ASSOCIATION, AND MY REPLY THERETO

Mr. FORAND. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a telegram that I received from the Rhode Island Textile Association, and my reply thereto.

DECEMBER 16, 1937.

Hon. AIME J. FORAND,
House Office Building, Washington, D. C.:

We have had no reply to our telegram of December 11. The press reports that local units of the T. W. O. C. oppose wage differentials, as does this association. We note that Congressman CONNERY, Democratic, and Congressman MARTIN, Republican, both from Massachusetts, are vigorously opposing wage differentials. Where do you stand? Is it possible that you will deliberately work against the interests of your own constituents by failing to oppose wage differentials which will favor southern mill owners as against your own State? This should not be a political matter. May we hear from you promptly by wire?

RHODE ISLAND TEXTILE ASSOCIATION,
E. F. WALKER, *Secretary-Treasurer.*

DECEMBER 17, 1937.

E. F. WALKER,
Secretary-Treasurer, Rhode Island Textile Association, Providence, R. I.

MY DEAR MR. WALKER: This will acknowledge receipt of your telegrams of December 10 and 16 relative to the wage and hour bill now pending in the National House of Representatives.

I regret that the rush of business prevented me from acknowledging your first telegram before I received your second, and I must say that your messages, together with hundreds of others, have had to wait until I could find a few moments to answer them.

I deemed it of greater importance to be in the Chamber of the House during the discussion of this piece of legislation than to be in my office replying to protests against wage and hour legislation that came to me from individuals and organizations that I know from past history always to have been opposed to wage and hour legislation, both locally and nationally.

I shall answer the questions which you propound in the order in which they appear in your telegram.

Question 1. Where do you stand on this legislation?

Answer. My answer is, foursquare behind the platform plank of the Democratic Party for a wage and hour bill, on which I was elected.

Question 2. Is it possible that you will deliberately work against the interests of your own constituents by failing to oppose wage differentials which will favor southern mill owners as against your own State?

Answer. No; it is not possible for me now or at any time in the future, any more than in the past, to work against the interests of the people I represent. I voted for the amendment which would prevent differentials, but that amendment was defeated by a vote of 162 to 131. Failing in our efforts to eliminate differentials, I deem it my duty to support the wage and hour bill reported by the Committee on Labor, because even though this bill may contain authority for differentials, it will in no way change the differentials situation that has always existed not only between the North and South but also between industries in our own State. The differentials situation will not be aggravated by the passage of this act, but the wage earner now forced to work abnormal hours for subnormal wages will be benefited at least to some degree by the passage of this measure.

No manufacturer or businessman who is paying reasonable wages and working his employees reasonable hours need have any fear of this legislation. Only the chiseler and the sweatshop operator needs to fear the passage of a Federal wage and hour bill at this time.

Therefore, if the members of the association you represent are not chiselers or sweatshop operators, they have no reason to fear this bill.

I would be interested to know when the manufacturers decided to fight the battle of the employees such as would appear in the campaign they are now waging against the wage and hour bill. Their arguments are too transparent to be impressive. Their fight against the passage of this wage and hour bill is not being waged because of a sincere desire to protect the workers from differentials but it is being waged in the hopes of preventing passage

of a wage and hour bill that will benefit some 12,000,000 workers who are now striving to exist on the mere pittance they receive for the excessive hours of labor that is sapping the very lifeblood of their existence.

Trusting that I have made my position clear to you, I am

Sincerely,

AIME J. FORAND.

P.S.—You may release this to the newspapers as you did your telegrams before they were even received by me.

Tin in Alaska

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

Mr. DIMOND. Mr. Speaker, yearly the United States imports about 70,000 tons of tin. It produces about 200 tons. All of the tin now produced in the United States is taken from the ground in Alaska. For us tin is a deficiency metal. Although widely used and vitally necessary in industry and for national defense, we produce only the very small amount of tin which comes yearly from Alaska and which in 1937 amounted, as above stated, to about 200 tons. If we were entirely cut off from the world supply of tin the result would be well-nigh ruinous.

And yet, so careless are we, that no substantial effort is being made to find out how much tin exists in the United States or to develop the production of the tin that we have.

Sometime ago Mr. J. W. Farrell, of Hot Springs, Alaska, sent me a copy of an article which he had written and which was published in the Fairbanks Daily News-Miner of February 3, 1937, about the potentialities of tin production in Alaska. The article is so well thought out and so well written that I offer it for incorporation in the CONGRESSIONAL RECORD as an extension of these remarks. The article is as follows:

ALASKA TIN DEPOSITS—GOVERNMENT AID MUCH NEEDED NOW TO MAKE MINERAL MARKETABLE—INTERESTING REVIEW OF CONDITIONS—TERRITORY DECLARED ONLY UNITED STATES POSSESSION HAVING TIN

(By J. W. Farrell)

Last year the Federal Government seemed very much interested in the development of the tin deposits and lodes of Alaska. Some of the Federal bureaus and a delegation of Senators and Congressmen on a visit to Alaska to investigate other matters gave much publicity throughout the Territory and emphasized the fact "that the Nation was in dire need of tin mines." Alaska being our only possession that had tin in commercial quantities, it was stressed upon us "that it would be greatly appreciated if the Alaska miners would devote more time to the development of our tin resources."

It was pointed out "that the Government wished to be independent of outside sources of tin; for in the event of war we may possibly be cut off from supply, as commercial tin comes to us from distant alien fields." With many well-wishes, and appealing to our patriotic zeal and such, the ballyhoo died down and nothing much of anything has been done about it since.

If our Government is really interested in the development of our tin resources; it should make the commercial price of tin profitable to mine. With the market price of tin around 45 cents per pound, the Government could hardly expect miners to produce tin, at a loss, by appealing to their patriotism.

The tin that is produced each year in Alaska, with the exception of one company in the Cape York district, which is struggling to get by, is recovered as a byproduct where it is associated with placer gold.

Tin recovered in this manner is considered a nuisance by most operators, as it fills up and clogs the riffles, and interferes with gold recovery. In the Hot Springs mining district, where placer tin is perhaps in greater quantities than in other camps of Alaska, operators of placer make no special effort to save the tin rock concentrates. Their set-up is solely for gold, and it is only incidental that the tin recovered in the clean-ups with the gold is separated and saved.

The commercial price of tin fluctuates like other base metals on the market. At times when it is up to a selling margin, more or less of a perfunctory effort it made for its recovery. But then, the marketing of the product is very unsatisfactory. We have no smelters in the States equipped to treat the ore. We have to sell our product abroad. It is shipped to Singapore, in the Straits Settlements, for reduction and refining. We buy it back from the London market.

It would take a Philadelphia lawyer to make out an assay and report sheet of the Singapore smelter. It is cluttered up with penalties, taxes, customs, exchanges, and what not. It sounds more like an indictment, than a pay envelope.

Any operator in the Hot Springs mining district, will tell you that, from one-half to three-fourths of the tin goes through his sluice boxes into the tailings. The expense of a double set-up for its complete recovery, while not great, does not justify the effort. During the World War when the price of tin was around the dollar mark, operators here equipped their sluices to recover all the stream tin. The records of production for those years show quite an item of value. Snipers made big money in working over the old tailing piles for the tin only.

If the Government would pay a production price of $1 on domestic tin, provide its own market and smelter, you would soon see throughout the placer camps in Alaska, where tin is an accessory with the gold, a production of tin, the tonnage of which would be amazingly large, and an activity in opening up new fields that would be far reaching in extent. Many of our alluvial fields have more tin than gold. With dollar tin, these areas could be brought into production on a big scale.

It is not generally known or realized the extent and the possibilities of the tin deposits of Alaska. Not having all the bulletins issued by the Geological Survey that treat on the tin deposits of Alaska at hand, I can only give a summary of the vast area which has been covered by these geologists. Enough, however, to touch on the high lights and give the reader a cross-section of the extent that tin, technically known as cassiterite, has been observed by the Government engineers on their reconnaissance trips in Alaska.

GEOLOGICAL REPORTS

The exploitation of tin on the Seward Peninsula has been carried on more or less since the beginning of the century. Reports of geologists and prospectors indicate that stream tin is dominant throughout the peninsula. In the Cape York, Port Clarence, and Kougarok mining districts, tin has been found in commercial quantities and has been mined desultorily for the last 35 years. Repeated interruptions in its production have been caused solely on account of the market price. It is the old story again, we cannot compete with foreign products, with their cheap wages, and low standard, unless we are subsidized or protected. It is in the York district where the most tin is mined. It is only those deposits of easy access and economically situated that can be made to pay under the existing conditions.

YORK DISTRICT

Near Tin City in the Cape York district a dredge was operated for the recovery of tin alone. It has been in disuse now for many years. Not because of the lack of tin ore to dig, for there are vast tracts of it, but the market price of the product did not justify continuing its operation. In this district tin has been found in the lode or bedrock source also. But owing to the great expense of exploration work on quartz prospects, especially on a metal of such low value, prospectors were not interested.

RUBY-POORMAN AREA

Eastward from the Seward Peninsula is the Ruby-Poorman mining district. Tin occurs in most all of the placer gold creeks in this camp. Only in a few instances has there been tentative shipments of tin to the market. There is, however, in this district, many tributaries of the Sulatna River that throw more tin than gold, and the tin content is of sufficient quantities to be a prolonged producer if the price were right.

Further eastward again is the Gold Hill mining district. Grant Creek and Mason Creek are said to contain large deposits. These two creeks will soon be in placer-gold production on a big scale. Whether it will justify the operators to save the tin it remains to be seen.

HOT SPRINGS TIN

Next comes the Hot Springs mining district. This camp and the Cape York district have been the greatest units in producing over a million dollars' worth of tin for the world's market. Please note, I say "world's market," for our big Nation has no market. In the Sullivan-Tofty area of this district placer-gold mining is being carried on of late with modern mechanical equipment. Last season this section was a big factor in the output of the Territory. Over tracts of placer ground that will be worked drill holes show that the tin content is more constant than the gold.

The estimate of the tin values in this area run into the millions. Whether the operators will make any special effort to recover the tin or let it be swept away into the tailings is problematical.

IN OTHER AREAS

The cassiterite pebble occurs in the Rampart district, in the Tolovana and the Faith-Hope-and-Charity country. It is found in the Circle diggings and the Forty Mile country right up to the international border.

Between the sixty-fourth and sixty-sixth parallels and from the border to Cape Prince of Wales, approximately 800 miles as the crow flies, embraces a vast area of territory that can really be called a "tin belt."

There are many other localities outside of this belt that give great promise in potential tin resources. Among them are the Tolstoi, in the Ophir mining district; the Reglagalik River, in the Kuskokwim delta; and on Cache Creek and Willow Creek, tributaries of the Susitna River.

Most of this information comes from just a few of the many bulletins issued by the Geological Survey and covers but a small number of the creeks throughout the territory that have been explored by the geologists. From the facts that I have mentioned and from knowledge that I have read but unable to quote at this time, I am convinced that in Alaska there is a veritable storehouse of tin that awaits development. And that development will come only whenever it is made possible for the miners to exploit it at a profit.

A subsidized price on domestic tin would not only bring an immediate supply from the placer deposits, but it would be a great incentive for the prospectors to seek the lodes. Placer tin, like placer gold, originates in the lodes. In the uneroded mountains near the placer camps untold fortunes await.

PHILIP SMITH ON TIN

In conclusion I wish to quote an item on tin taken from Bulletin 868–A, Mineral Industry of Alaska in 1934, by Philip S. Smith:

"For many years Alaska has been a small but regular producer of tin, and in the course of 30 years since tin minerals were discovered in Seward Peninsula and later elsewhere in the Territory it has shipped tin worth more than a million dollars. In 1934, however, according to such records as have been received by the Geological Survey, the tin ore mined in the Territory was only 8,275 pounds of metallic tin. This output marks some slight renewal of activity in the industry, because in 1933 the quantity of metallic tin in the ores mined in the Territory was only about 5,800 pounds. The decline in Alaska tin mining in the last few years by no means indicates that the known tin deposits have been exhausted, but is believed to have been caused by the extremely low prices offered for the tin—an average of about 22 cents a pound in 1932, 39 cents in 1933, and 52 cents in 1934—and the fact that some of the former Alaska shippers of tin ore had not sold all the ore that they had produced and shipped in earlier years. The Alaska ore requires smelting to yield its tin in a metallic form, and as there are no smelters in Alaska or even in the States that make a practice of treating ore of this sort, most of it is shipped to Singapore for reduction.

"Resumption of tin mining in Alaska, when conditions of world business improve, can be predicted wih assurance. Already the increased price paid for tin is beginning to stir up renewed inquiries regarding the known deposits and some premonitory moves are already being taken looking toward bringing property owners and capital together in possibly much more extensive development of the deposits.

"Tin lodes that have been mined have long been known in the western part of Seward Peninsula near York and Tin City, but the bulk of the past production has come from placers, in which the tin minerals, because of their weight, have been concentrated. Most of the placer tin that has been mined in the past has come from the York district, in western Seward Peninsula, and from the Hot Springs district in the Yukon region."

Filth In Broadcasting

REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. O'TOOLE. Mr. Speaker, the broadcasting companies of this country are allowed the privilege of using the air merely by sufferance of the Government. Since they are given this privilege, there is an implied agreement with the people that their programs at all times shall be entertaining, instructive, and in good taste.

Up until a short time ago, this seemed to be the aim of both the broadcasters and their commercial sponsors, but within the last few months, whether it is due to the close competition between the various broadcasting companies, or whether it is due to the fact that the commercial sponsors are endeavoring by daring acts to attract more listeners to their programs, the character of the programs have been slipping into a lower level.

The climax was reached on the evening of December 12 between the hours of 8 and 9 p. m. On that evening, over the network of the National Broadcasting Co., there was given a program sponsored by the Chase & Sanborn Co., a program that reached an all-time low in this particular field. The principal performer was a certain so-called actress who has served in the past a jail sentence for giving an indecent theatrical performance in New York City. I do not care to mention the lady's name as she has already been entirely too much publicized. She is probably of the same school as the notorious gentleman of many years ago who said, "I don't care what they say about me as long as they publish my name." This lady has been known for her fine portrayals of disreputable female characters. In fact, there is some question as to whether it is a portrayal.

The lady played opposite a gentleman who has become known for his ability to transmit his voice to a dummy. His ability in this respect is so surprising that the public have now acquired the idea—especially after the performance of December 12—that the dummy possesses a better sense of taste than his sponsor.

These parties were assisted by another gentleman whose characterizations and work on the radio have always been of the highest type, both as to entertainment value and as to purity of expression. Yet on this evening he, too, took part in this gutter drama.

Within 20 minutes after the broadcast I sent a telegram to both the National Broadcasting Co. and to the Chase & Sanborn Co. protesting against the degrading and obscene matter that they had sent into every corner of the country over air which they did not own, but which belonged to the people of this country. Like most others who have done something that is shameful when an accusation is made, they did not reply. I then addressed the following letter to the Federal Communications Commission in Washington, D. C.:

DECEMBER 17, 1937.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission,
Washington, D. C.

MY DEAR MR. SLOWIE: It is my desire to most vigorously protest against the actions of the National Broadcasting Co. in allowing the Chase & Sanborn Co. to broadcast over their networks the filthy and indecent program that was given last Sunday night between the hours of 8 and 9.

The featured performer was a certain Mae West, who served a jail sentence in New York City for presenting an indecent theatrical performance. She was assisted in a later part of the skit by Edgar Bergen.

The radio, entering as it does into the homes of millions of our citizens, must at all costs give clean, decent, and high-class entertainment.

To date every father and mother felt that it was perfectly safe to turn the radio on in the presence of their adolescent children. After last Sunday night, no such feeling of freedom can exist.

I wonder if the persons responsible for this program are accustomed to staging such entertainment in their own homes before their own children. Frankly, I believe them capable of stomaching most anything.

It is my intention to force congressional action on this matter.

Very sincerely yours,

DONALD L. O'TOOLE,
Member of Congress.

On Saturday, December 18, a Mr. Berkley, who professed to be an official of the National Broadcasting Co., informed me by telephone that his organization was very sorry that a program of this type had been sponsored and that it would not happen again. He further said that they had no idea that the broadcast was to be so salacious.

This explanation is indeed a shoddy one. Anyone familiar with the technical side of broadcasting, as many of the Members of this House are, is fully aware that all script must be read by an official of the broadcasting company before it is allowed to go on the air. It is also common knowledge that, due to the great number of programs that must be broadcast in the course of an evening, that all individual skits must be rehearsed so that the proper timing can be worked out. These broadcasts of large commercial acts are not helter-skelter affairs. Furthermore, the broadcasting company and the sponsor were placed on their guard by the contracting of the lady whom I mentioned before, as her reputation is well known to everyone in the entertainment field and almost equally well known to the public at large. In fact, it is proper to say that they were no doubt attracted to hire this woman by reason of her reputation—whatever that might have been.

Mr. Speaker and Members of the House, it appears to me that this skit was to be a "feeler." In other words, if this indecent program did not receive too many protests, it would be followed in the future by similar sewage. If the volume

of protests was great, then an apology could be made, or parties could disclaim responsibility even though the parties controlled the vehicles through which the program emanated, and the blame be placed on an advertising agency.

It is common knowledge that the stage and the motion-picture field in days gone by both became so loose in the performances that they allowed that it was necessary for the public to censor in one instance and the individual States to censor in the other field.

There are very few people in this country who like the idea of censorship, but if a company that is granted a privilege by the Government has not sufficient sense, taste, or intelligence or faith with the people to allow a program such as the National Broadcasting Co. allowed to be broadcast on the evening of December 12, then some type of censorship must be placed on broadcasting.

I think it might be fitting and proper for this House to investigate the entire broadcasting field. It seems to me very strange that two large companies should have such a strangle hold on the air. Why should two companies have all of the better wave lengths throughout the breadth and scope of the land? How has this come about? Let us look into the various angles of this gigantic new business which brings millions of dollars into the pockets of two large corporations, which use the God-given space that is just as much a natural resource as our native water power. Let us find out whether or not there is any connection between these companies and their subsidiaries and any other groups which might have reason to desire to control the air as they slowly, but surely, have taken control of the press. Let this House go thoroughly into the entire make-up, both in respect to stock organization, the membership in the board of directors, outside holdings, management, income, and every other particular that relates to their business.

Since these companies engage in interstate commerce, and since they have reached the point where they now may nearly be classified as public utilities, I think that the people of the United States, in order that they may be assured of decent, clean, and entertaining programs, programs without bias, programs which are not attempting to sell certain propaganda should have the benefit of an investigation by this Congress.

It is my intent in the next session to propose action along these lines. If these companies are interfered with, they have themselves to blame.

Dedication of the Church Street Postal Annex and Federal Building in New York City

EXTENSION OF REMARKS

OF

HON. JOHN O'CONNOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

ADDRESS OF HON. JAMES A. FARLEY, POSTMASTER GENERAL, AT THE DEDICATION OF THE CHURCH STREET POSTAL ANNEX AND FEDERAL BUILDING IN NEW YORK CITY, OCTOBER 4, 1937

Mr. O'CONNOR of New York. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, Postmaster General of the United States, at the dedication of the Church Street Postal Annex and Federal Building in New York City, October 4, 1937:

Today we are assembled to formally open to the people of New York City this magnificent Church Street Postal Annex and Federal Office Building. With the completion of this unit there is added another major link in the chain of public buildings which have been provided by this administration for the comfort and convenience of the public in Greater New York.

The postal activities carried on for so many years in the building on City Hall Square will be housed in this new structure, and office space is provided for the Internal Revenue Bureau, the War Department, the Navy Department, and many other Government agencies. The building is fireproof, modern in all respects, and equipped with up-to-date mechanical devices.

This site, which is bounded on the north by Barclay Street, on the west by West Broadway, on the South by Vesey Street, and on the east by Church Street, was purchased under congressional act of July 3, 1930, at a cost of more than $5,000,000. Title of the land was vested in the Government on September 15, 1934. Under act of June 19, 1934, $6,200,000 was allotted for the erection of this building. Subsequently, there has been appropriated and allotted additional amounts which have made available for construction more than $6,700,000.

The Treasury Department selected Cross & Cross and Pennington, Lewis & Mills as architects: Construction was by James Stewart & Co., all of New York City. I want to take this opportunity to express my warmest congratulations and appreciation to the architects, the builders, and to their employees.

The growing needs of the public service have already indicated that additional space will be required in this building. More than $2,600,000 has been allotted for this purpose. The same architects who planned the present building were employed to provide for six additional stories and a contract has been awarded to the Millinoff Construction Co., of New Jersey, for the construction of the addition.

The erection of buildings of this character throughout the city of New York and throughout the Nation indicates progress and offers ample evidence of the Government's interest in business and in the welfare of its people. Construction projects like this give employment to thousands of workers and have a wholesome effect on business generally. Accomplishments of this kind also indicate that the Federal Government is conscious of the needs in all sections of the country, and is providing facilities which are adequate for the public service.

Of course, these establishments are set up to house all of the activities of the Federal service; but, speaking generally, the principal use of most public buildings erected by the National Government is by the Postal Service. The necessity for locating stations to meet the postal needs of the people has governed to a large extent the location of Federal buildings. For example, in the New York City postal district there are 73 postal units, including the general post office and 72 stations and annexes. Twenty-three of these units, including the one we are dedicating today, are located in Government-owned buildings. Eighteen have been constructed during the present administration. Plans are in course of preparation for a new building to be known as Canal Street Station, and preliminary work has been started with a view to erecting buildings for the accommodation of Station J and Wakefield Station.

The growth of the Postal Service in the United States has been phenomenal and that growth is reflected to a marked degree in the post office of New York.

The earliest record of the New York post office in the ledger of Benjamin Franklin discloses that Ebenezer Hazard was postmaster on July 5, 1776. He was still holding that office on May 7, 1777, but the exact dates of Mr. Hazard's service are not available. Ledger A of the Post Office Department indicates that William Bedlow was postmaster in New York from April 5, 1784, until he was succeeded by Sebastian Bauman on October 3, 1789. There have been 24 individuals who have served as postmaster of New York City. However, there is a great difference in the responsibilities carried by Messrs. Hazard, Bedlow, and Bauman and in the responsibilities of the present postmaster, Albert Goldman.

The earliest record of receipts shows that in New York City in 1791 the revenues were $3,788.84, while in the fiscal year ended June 30, 1937, Postmaster Goldman collected and accounted for postal revenues amounting to more than $76,000,000, which were approximately 10 percent of the postal receipts of the entire Nation. Some of the more important postal stations in this city, such as Wall Street, Times Square, and Madison Square, have receipts that are in excess of the postal revenues collected in some of the States of the Union.

Back in 1791 the business of the New York post office was a little more than $300 a month, and in all probability Postmaster Bauman handled the affairs of his office with little or no help. Today the receipts average in excess of $6,000,000 a month, and Postmaster Goldman has an army of employees numbering more than 20,000.

In the early days there was little need for speed, as transportation was limited and the postal requirements of the people were few and easily met. Today there is a vastly different situation. With mail being transported in and out of New York by plane, railroad, steamship, steamboat, and every known means of conveyance, the task to be performed is far more complex and intricate; yet it is accomplished with such ease and efficiency that the average citizen considers it quite commonplace and is indeed surprised at the few instances of delay and inconvenience caused by irregular mail service. There is no other agency of Government, and certainly no private agency, that renders individual personal service to the people of the Nation that in any way compares with the service rendered by the post office.

In the 4½ years that I have been privileged to serve as Postmaster General I have learned of the fine loyalty and efficiency of the postal workers, and I know that Postmaster Goldman joins with

me in expressions of deepest gratitude to the supervisors, clerks, carriers, railway postal clerks, rural carriers, substitutes, laborers, motor-vehicle employees, and the custodial employees who work day in and day out in their ceaseless efforts to maintain the service at its present high standard of efficiency. We in the Department fully appreciate that our efforts to maintain a businesslike administration in the post office would not be successful but for the fine loyalty displayed by those who actually do the work in New York and in all of the post offices throughout the country. I consider it a distinct honor to be permitted to serve with the people in the Postal Service who have made such a marked contribution to the recovery of the Nation from the effects of the depression.

Much has been accomplished in the Postal Service since March 1933. To illustrate: The net deficit for the fiscal year 1932, which was the last full year of operation under the previous administration, was more than $152,000,000, and there was a net deficit in the fiscal year 1933 of more than $50,000,000—notwithstanding that in the beginning of that year the postage rate on all first-class mail matter was raised from 2 to 3 cents. The fiscal year 1934 was the first full year of operation under this administration. At the beginning of that year the postage rate on local first-class matter was reduced from 3 to 2 cents, and yet a net postal surplus of more than $12,000,000 was shown. In 1935 a net postal surplus of approximately $5,000,000 was accomplished, and in the fiscal year 1936, although a shorter workweek law was granted to the employees and the custody of the post-office buildings was taken over from the Treasury Department, we ended that fiscal year with a net postal deficit of less than $17,000,000. I am confident that when the books are balanced for the fiscal year 1937 another net postal surplus will be shown.

Some critics always point out that while surpluses are shown in the operation of the Department, yet substantial sums are withdrawn from the Treasury to meet expenses. Let me remind you that such withdrawals from the Treasury are made to cover the cost of services rendered by the Department under law, free or at less than cost, or to pay aviation and merchant-marine subsidies which the law required to be paid by the Post Office Department. After taking credit for such items the previous administration showed deficits, and after taking credit for such items in identically the same manner this administration has shown net surpluses for each full year of its administration with the exception of the fiscal year 1936, which was the year that the shorter workweek law was provided and the maintenance of Government buildings was taken over from the Treasury. However, by the adoption of sound business principles in the management of the affairs of the Department, with the increase in business due to recovery, and with the wholehearted support of our personnel, I am confident that we have again attained a balance between receipts and expenditures with respect to that part of our service which we render to the public for hire. This has been accomplished without impairment of service. As a matter of fact, the service has been improved in many respects. It has been accomplished without adversely affecting the employees. On the contrary, their working conditions have been improved, and liberal personnel policies have been followed.

All of these things are in keeping with the policies of the Roosevelt administration, which, stated simply, mean that the Government shall be operated in the interest of all the people. Franklin D. Roosevelt will go down in history as one of our greatest Presidents, and one who has fought steadfastly to maintain our Government and our American institutions in accordance with the rule of the majority. By his bold and courageous leadership he saved the banking system of this country which was on the verge of collapse. He brought about reforms in the banking laws which ended the use of deposits in speculative gambling and provided an insurance for your savings. He found millions of citizens threatened with starvation and caused the Government to perform a nation's duty when he fed them. He found that the spirit of millions of Americans had been broken due to lack of gainful employment, and he launched and carried out a program of public works, of which this building is a striking example, and thus restored millions of breadwinners to self-respecting toil. He found workers in industry threatened with the denial of their right to collective bargaining and gave them a new charter of human rights. He launched a social-security program to insure the workers against unemployment and poverty in old age.

Franklin Roosevelt is a great humanitarian. His accomplishments thus far are sufficient to assure immortality to any man in any nation, and he is continuing to carry on the wisest, bravest, and most constructive fight for the preservation of liberty and democracy of any leader the Nation ever had. The people are with him because he keeps pace with the times and because he is not afraid to go ahead in spite of the criticism of those who are serving selfish interests.

You may be assured that this administration of your Government will progress and keep step with the business and social needs of the Nation and will continue to offer evidence of its stability and soundness by providing public improvements that benefit all on an equal basis.

In conclusion, then, let me again offer my congratulations to the architects, to the builders, to the citizens of New York generally, and to the officials and Government workers who will render service to the public from this splendid establishment.

APPENDIX

(Appendix to the speech of Postmaster General James A. Farley delivered at the dedication of the Church Street Postal Annex and Federal Building in New York City October 4, 1937.)

LIST OF POSTMASTERS, NAME, AND DATE APPOINTED

Ebenezer Hazard, August 5, 1776.
William Bedlow, April 5, 1784.
Sebastian Bauman, October 3, 1789.
Theodorus Bailey, January 2, 1804.
Samuel L. Gouveneur, November 19, 1828.
Jonathan J. Coddington, July 5, 1836.
John L. Graham, March 14, 1842.
Robert H. Morris, May 3, 1845.
William V. Brady, May 14, 1849.
Isaac V. Fowler, April 1, 1853.
John A. Dix, May 17, 1860.
William B. Taylor, January 16, 1861.
Abram Wakeman, March 21, 1862.
James Kelly, September 19, 1864.
Patrick H. Jones, April 27, 1869.
Thomas L. James, March 17, 1873.
Henry G. Pearson, March 22, 1881.
Cornelius Van Cott, April 5, 1889.
Charles W. Dayton, June 5, 1893.
Cornelius Van Cott, May 12, 1897.
William R. Willcox, December 7, 1904.
Edward M. Morgan, August 14, 1907.
Thomas G. Patton, March 16, 1917.
Edward M. Morgan, June 23, 1921.
John J. Kiely (acting), January 23, 1921.
John J. Kiely, January 22, 1925.
Albert Goldman (acting), August 31, 1934.
Albert Goldman, January 16, 1935.

Postal receipts

1791	$3,788.24
1827	114,388.31
1835	221,022.99
1855	492,972.46
1885	2,837,709.41
1895	7,138,943.00
1900	9,272,177.00
1910	23,378,062.00
1920	53,318,639.00
1930	75,696,569.00
1931	69,021,779.00
1932	63,347,428.00
1933	60,080,045.00
1934	61,137,464.00
1935	64,770,332.00
1936	73,237,286.00
1937 (fiscal year)	76,217,096.33

GOVERNMENT BUILDINGS

There are 73 postal units in the New York postal district, including the general post office and 72 stations and annexes.

Twenty-three of these units are located in Government-owned buildings. Included among the Government-owned post-office station buildings are the following which have been constructed in New York City during the present administration:

Station and cost

Church Street Annex	$11,782,746
B	264,000
Boulevard	95,000
Bronx	1,375,000
College	153,104
D Annex	410,000
H	334,017
Inwood	130,183
M	134,000
Madison Square	850,000
Morris Heights	124,389
O	438,000
T	106,400
W	323,000
Washington Bridge	148,500
West Farms	112,000
X	166,100
Y	370,150

In addition to the units listed, $900,000 has been allotted for the acquisition of a site and the erection of a Federal building to house a postal unit of the New York Post Office, to be known as Canal Street Station. Plans for this building are now in course of preparation, the building to be erected on property located on the corner of Canal and Church Streets.

Under the public-building authorization contained in the act of August 25, 1937, funds have been allotted for two additional station buildings in New York—Station J, to be located in the vicinity of West One Hundred and Twenty-fifth Street and St. Nicholas Avenue, and Wakefield Station, to be located in the vicinity of East Two Hundred and Thirty-third Street and White Plains Avenue.

New York City

Regular postal employees:	
Supervisors	782
Clerks	10,038
Carriers	3,557
Laborers	1,542
Cleaners	180
Total	16,099
Substitute postal employees:	
Clerks	1,400
Carriers	1,002
Laborers	359
Total	2,761
Motor Vehicle Service:	
Total number of employees	661
Total number of Government-owned trucks in service	555
Custodial employees	1,673

Railway Mail Service

Second Division, Railway Mail Service, New York:	
Number of employees	2,641
Number of trains carrying mail into New York City daily	263
Number of trains carrying mail out of New York City daily	305
Number of air-mail dispatches daily	53
Number of mail-car loadings annually	20,000

Foreign Mail Service

Number of vessels that will carry mail leaving the port of New York for the month of October:	
Trans-Atlantic	81
South and Central American	113
Total	194

Idle Money Census

EXTENSION OF REMARKS

OF

HON. EDWARD A. KENNEY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

Mr. KENNEY. Mr. Speaker, the President in his message to the special session of the Seventy-fifth Congress referred to the necessity of capital and labor both being employed. Pointing out that the continued and complete success of our people depends on a wider distribution of a greatly enlarged national income, he emphasized that such enlargement presupposes full employment of both capital and labor.

The first long-range step looking to a permanent solution of the unemployment problem has been taken by a census of the jobless from which it will be known how many are unemployed and at what they are willing, able, and anxious to work.

But there is another essential step because it will not be enough to ascertain data of the unemployed unless, having it, some definite idea exists as to how and in what circumstances capital will go to work to furnish employment. The only way that can be adequately determined is by a census of idle money. It should be taken without delay. Then and only then will it be known whether there is in fact idle capital and at what and under what conditions the men with capital will use it to put men and women to work.

It has been intimated that many corporations have idle money which they will invest for expansion purposes or new enterprises, if certain things are done by the Congress, although there has been no definite information as to the number of people that will be employed in the work that is said to be held in abeyance.

Business concerns are said to be ready to put idle money to work but there is no available data as to whether in fact employment will ensue; then there is the claim that banks and insurance companies have oceans of money to loan to those needing capital but are holding back. Individuals with large amounts of money, it is said, are anxious to enter enterprises increasing employment. It is suggested, however, that there are conditions precedent which the owners of idle money require to be met.

At a recent luncheon of businessmen one of them told me that a friend had $2,000,000 to put to work which he was parking in idleness. That was followed by a statement that there was another who had $5,000,000 to invest in an enterprise but was keeping his money idle.

If it be so that there be a vast amount of idle money available for investment which will give employment, something should be done, it would seem, to find out just who has the money to invest in or with business and how many men and women that idle money, if employed would engage, and just what the reason is that the money is held back and idle, and just what would induce those with idle money to release it for business enterprise.

On November 24, 1937, I introduced H. R. 8506, a bill to provide for the taking of a census of idle money, unemployed capital, and needed capital, and for other purposes. A census of idle money is just as necessary and more so, in my opinion, than was the census of unemployed, for more was and is actually known about unemployment than is known about the facts surrounding idle money, said to be so desirous of going to work.

I believe the information called for by my bill should be gathered, and by leave of the House I here include the provisions of the bill, H. R. 8506, a bill to provide for the taking of a census of idle money, unemployed capital, and needed capital, and for other purposes:

Be it enacted, etc., That to provide information concerning the numbers, classes, and geographical distribution of persons and corporations and banking institutions in the United States, and concerning the amounts of idle money, unemployed capital, and needs for capital, to aid in the formulation of a program for unemployment, unemployment relief, durable-goods production, and expansion of industrial activities, the President shall cause to be taken on or before April 1, 1938, a census of persons, corporations, money, capital, and capital needs, and including such other related information as shall be deemed in the public interest, in the 48 States and the District of Columbia and the Territories of Hawaii and Alaska. The questions to be included in this census and the detailed information to be enumerated shall be determined upon by a committee consisting of the Secretary of Commerce, the Chairman of the Central Statistical Board, and the Director of the Census, or their authorized representatives.

SEC. 2. The provisions, including penalties, of the act approved June 18, 1929 (46 Stat. 21; U. S. C., 1934 ed., title 13, ch. 4) except sections 9 to 11, inclusive, thereof, shall, so far as not inapplicable, apply to the taking of the census provided for in section 1 of this act: *Provided, however*, That temporary personnel required to carry out the purposes of this act shall be appointed without regard to the Classification Act of 1923: *Provided further*, That the administering agency is authorized to call upon the other departments or agencies of the Federal Government for information relating to, and for assistance in connection with the census herein provided for; and the administering agency is authorized to cooperate with and to use the information secured by such State and local agencies as may have data pertinent to this census.

SEC. 3. To meet the expenses of this act the Secretary of the Treasury is authorized to make available from the Emergency Relief Appropriation Act of 1937 such an amount as the President may determine to be necessary.

SEC. 4. The President is authorized to make such rules and regulations as are necessary to carry out the provisions of this act and such provisions of the Census Act of 1902, as amended, as are applicable.

On the subject of idle money the Washington Herald of today prints an editorial wherein it refers to the "strike of capital," stating that a strike does exist.

Let us act to take a census of idle money. Then, if the strikers are honest we will know how much money is striking to the detriment of labor and the reason for it and having determined that and having the data of the census of the unemployed already taken, the President and the Congress will be irresistibly guided in the effort to bring about full employment of both labor and capital.

By leave of the House the editorial referred to is here included:

IDLE MONEY

There has been much talk about the "strike of capital," which has surely emphasized the recent decline in business.

We know the strike exists because most of us have been in it ourselves. Have we not been more apt to keep money in the bank than to spend it?

What we would really like to know is whether the strike has been a deliberately organized affair or whether it results involuntarily from a mere instinct of self-preservation.

If we can find out where the big masses of idle money lie we may arrive at some opinion in this matter.

Much talked about is the cash in the treasuries of the big investment trusts who, in a falling security market, like to keep large cash reserves so that they may finally jump in and buy stocks at the bottom.

But this isn't such an enormous factor. Perhaps 200,000,000 in round figures.

Then, there are the banks with a huge excess of reserves, which means idle cash.

But the banks, by and large, can only use up this money by lending it out. If business won't borrow, or if the banks think the security offered isn't good enough, the money continues to lie idle. You cannot force people to borrow against their will.

Next comes the insurance companies. Here we find nearly $1,000,000,000 in cash, which for one reason or another, the management of the companies will not invest.

Here is by far the largest factor in the present capital strike.

The hoarding of nearly a billion is doubly harmful because, as the money mostly lies in the banks in the shape of demand deposits, the banks are obliged to keep enormous reserves intact in order to meet any sudden demand for the withdrawal of these deposits.

It can only be deliberate choice dictated either by fear or by some other motive that keeps the management of insurance companies from investing their idle money; for neither the companies nor the policyholders can profit by this refusal to put all this money to work.

It would be interesting to know what holds these companies back.

Why the Wage and Hour Bill Was Recommitted

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

EDITORIAL FROM THE WASHINGTON NEWS

Mr. JOHNSON of Oklahoma. Mr. Speaker, since the House of Representatives a few days ago recommitted the so-called wage and hour bill to the Committee on Labor, many newspapers have commented editorially concerning this action on the part of the House. Among the editorial comments coming to my attention is that of the Washington News, a Scripps-Howard publication that is well known for its liberal and progressive policies.

The editorial is as follows:

Blame for the demise of the wage-hour bill rests chiefly, we believe, with the nature of the bill itself, its manner of birth, and its manhandling at the hands of its friends.

The Black-Connery bill, you will recall, sprang from nowhere last May all written and done up in ribbons by "brain trusters" with a flair for legalistic jargon. Its humane and public-spirited objectives were simple—to put a bottom to wages and a top to hours in interstate industries. These objectives could have been set down in 100 simple words of American. Instead, the proposed law contained 11,000 words. And, instead of merely outlawing wages and hours that no decent American employer has a right to demand of workers, the bill set up a bureaucratic board and endowed it with powers to invade the higher wage and hour brackets at their will. Like N. R. A., it meant well, but it was too ambitious.

Well, when it got to the House in a somewhat simplified form and was hung up in committee by southern and A. F. of L. opposition, its new mother, Representative MARY NORTON, brought in 129 last-minute House Labor Committee amendments, further confusing its purpose and meaning. Finally, in a desperate and log-rolling effort to pass it at any price, its sponsors agreed to exempt mining, milling, smelting, oil, agriculture, and what not, making the whole thing a sorry joke on the workers whose living standards it was designed to raise. And when it went to a vote it was a mush of concession and a shining example of how not to prepare and pass Federal law.

Why, we wonder, did not the administration pave the way for this highly important reform as it paved the way for the Social Security Act of 1935? Then the White House called in the Nation's best economists, actuaries, and other experts and let them sit for nearly a year before they recommended a bill. The measure the White House sent to Congress may not have been perfect, but it passed without delay or confusion—and it's working. England, too, does better with its expert royal commissions which help frame important social and economic reforms.

Had the administration followed the same formula it did in framing social-security legislation, we believe the wage-hour bill would have had easy going in Congress.

May I add, Mr. Speaker, that it is well known that I personally favor a reasonable and fair wage and hour bill. I have so stated on many occasions. During my many years in public life I have consistently supported labor, organized and unorganized. It is my desire to better living conditions of the workingmen, women, and children. I am unalterably opposed to child labor with its sweatshops and starvation wages, and I was hopeful of being able to support the wage and hour bill when I voted to take it away from the Committee on Rules and consider it.

When the Committee on Labor presented the House with 129 last-minute amendments, few of which originated in or with that committee, and when it had grown to an 11,000-word, meaningless monstrosity, I decided that the only practical and sensible action to take was to send it back to the committee and give Members time to work out a simple, constructive measure that members of the Labor Committee, as well as other Members of Congress, could understand, and when passed could reasonably be construed and enforced.

It is to be hoped that a sane, reasonable wage and hour bill will be presented to the Congress in the near future. I shall gladly support such a measure.

Rolling Our Own Logs

EXTENSION OF REMARKS

OF

HON. HENRY G. TEIGAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

ARTICLE BY HON. HENRY G. TEIGAN, OF MINNESOTA

Mr. TEIGAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following magazine article written by myself:

ROLLING OUR OWN LOGS

(By Representative HENRY G. TEIGAN)

"Farmers and workers are both members of the producing class. Both are exploited by organized wealth, and an injury to one is an injury to the other." In these words a North Dakota farmer once described to me the economic situation as he then saw it. It seemed strange, though interesting, to me at the time, but as time passed on and I began to delve into books on economics, this farmer's view began to look like a prophecy.

Thus it is not altogether a coincidence that a farm bill and a bill regulating wages and hours in the interests of industrial workers should be up for consideration in Congress at the same time.

On December 2, Members of the House of Representatives were debating the farm bill, otherwise known as the Agricultural Adjustment Act of 1937. But while we talked about farmers, we were worrying about workers. Eight signatures were still needed to release the wage and hour bill from the stranglehold of the Rules Committee. Eight signatures and only 48 hours to go.

Everybody now knows what happened; the two hundred and eighteenth signature to the petition to discharge the Rules Committee at long last set the House free to consider a measure which already in the last session had the support of a clear majority. When the last name was appended to the petition on the Speaker's desk, the House broke into spontaneous applause. That applause was echoed by thousands of trade-unionists throughout the country, and by thousands of poorly paid workers still unorganized.

In that session on December 2 something happened which was of historic importance to American workers and farmers. The fight for the farm bill and the fight for the wage and hour bill had become one. "Logrolling! Horse trading!"—so the gentleman from New York, Mr. HAMILTON FISH, charged.

When the House convened at noon, Mr. FISH introduced a resolution calling for an investigation of charges that "everything has been swapped but the Capitol." The gentleman from New York, moreover, called the newspapers on what Mr. DIES, of Texas, and Mr. ROBERTSON, of Virginia, had said.

The terms "logrolling" and "horse trading" do not sound good to the average American's ear. In years gone by it has meant the trading of votes in Congress by the gentlemen of big business in their efforts to improve their methods of plundering the people. Now the so-called "logrolling" and "horse trading" was being done by Members from rural districts and those from industrial districts. That is to say, the workers' representatives and the farmers' representatives were getting together in their common objective to get away in some measure from the plundering of organized wealth. The reactionaries in and out of Congress were appalled, shocked, and amazed at the unholy performance. They "had never seen anything like it before."

It was quite true; they never had. Old hands at barter, accustomed to seeing the rights of workers and the rights of farmers gambled away in a series of "trades" that benefited only their common enemies, they were seeing something new under the old capitalist sun. They were seeing the practical beginnings of farmer-labor unity.

It wasn't a "trade" that won votes for the farm bill and signatures for the wage and hour bill. It was united support for two measures inseparably important to the welfare of those who till the soil and turn the wheels of industry. Without some kind of farm aid, workers would lose a large part of their rural market. Without a floor for wages and a ceiling for hours of work, farmers would feel the burden of "surplus" food which workers had no money to buy. It wasn't workers against farmers and farmers against workers, each trying to drive the sharpest bargain. It was workers and farmers together against the profits of trusts and middlemen. It was workers and farmers against the very voices which shouted "horse trading."

Minnesota is a Farmer-Labor State, and so this question of cooperation between farmers and workers is not a new one to our congressional delegation. We have been watching the country for signs of its growth. And we have seen the signs. There was the convention in Denver last summer, where cannery, agricultural, packing, and allied workers, including the sharecroppers, formed the United Cannery, Agricultural, Packing, and Allied Workers of America. There was the statement of John L. Lewis, addressing himself to the working farmers:

"If the working farmers of America have a great stake in the C. I. O.'s crusade to raise the level of living of the working people of this country * * *. Only when the industrial workers, steadily marching toward higher standards of living, can buy the farm products they need, will the farm problem be solved."

Labor, organ of the railroad brotherhoods and other railway organizations, has for years championed the cause of the farmers in their fight for legislation at Washington. And in Minnesota the entire trade-union movement, including the State federation of labor, has consistently supported legislation in the interests of the farmer.

Farmers have responded warmly to the proffered friendship of organized city workers. In Oklahoma City the Farmers' Union at its recent national convention expressed support for the workers in their struggle for a decent living, while preparing to engage in a similar struggle in the interests of the toiling farmers. In South Dakota the other day a conference on progressive legislation brought together representatives of both farm and labor groups. In Montana, in Pennsylvania, in Alabama, the Farmers' Union conventions have helped to break down the boss-made barriers which too long have separated farmers and workers.

On October 4 of this year Governor Benson called the Minnesota Farm Conference at St. Paul, to which flocked more than 1,000 of Minnesota's dirt farmers. The conference program states the case:

"In Minnesota the farmer and the worker have cooperated to win many victories. The practice should be extended to the whole Nation, for the cure for agriculture's ills must be brought about mainly on a national scale. Propaganda of the big newspapers and others trying to show that the farmer and worker have little in common should be promptly exposed. Figures show that farm income rises with income of the industrial worker, and vice versa."

These were some of the straws that showed us that the wind was blowing from the direction of growing farmer-labor unity. It takes quite a breeze out through the country to stir the air in Congress. But in this special session, for all its efforts to stifle the popular voice, the air is beginning to stir with fresh currents. The merging of the farm bill and the wage and hour bill into one issue—the issue of all the people against their oppressors—showed that this is true.

Farmers and workers put the heat on. That's why the wage and hour bill was dragged away from the Rules Committee and why the farm bill passed. It was a new kind of heat. Workers plugged for farmers, farmers plugged for workers. That was the kind of heat they put on me. Nine farm organizations from six States wrote me urging support of the wage and hour bill. They said:

"We deplore and condemn any attempt to divide the forces of farmers and labor. We particularly condemn attempts to make it appear that farmers are opposed to Federal legislation establishing minimum wages and decent working standards."

Gov. Elmer A. Benson, of Minnesota, sent me a telegram on the pending bill. I cherish that telegram because it expresses the philosophy of a great statesman, a Governor who serves a Farmer-Labor State by fully representing the interests of all its people. In part Governor Benson's telegram said:

"The community of interest of farmer and wage earner makes it imperative that both groups and their congressional representatives work in the closest cooperation. I urge that you do everything possible to prevent predatory interests who oppose both farmers and wage earners from creating friction and discord in farmer-labor relationships."

That was the kind of heat the folk back home put on me. It's the kind of heat that warms a Farmer-Labor Congressman's heart. It's the kind of heat that must radiate from every part of the country if we are to defeat the attacks now being made on the living standards of the whole population.

Farmer-labor unity is on the way, but it isn't here yet. Passage of the wage and hour bill and of a real farm bill which—which I fear won't happen at this session—will represent a victory for the beginnings of this unity. Full unity, with the incomparably greater strength it would bring to our whole people, could achieve far more than these inadequate measures. For, just as unity is now only embryonic, the farm and labor bills for which we struggle are only half measures which fall far short of the people's need. The farm bill, in addition to its faults of complexity and administrative difficulty, perpetuates the philosophy of scarcity and destroys food while millions hunger. Its benefits will not filter down to the lowest strata of farmers, and the old inequities made familiar by the A. A. A. will still oppress sharecroppers and tenants. The wage and hour bill excludes millions of needy and underpaid workers from its benefits.

Obviously these bills do not solve the economic problems of our country. Solution must wait on the maturity of that cooperation between workers and farmers, between town and country, which has just begun to flower. Unity must broaden as well as deepen before we can press on to more complete solutions of our problems than are contemplated by this Congress. Small-business men and professional people must join with workers and farmers, awakening to the common dangers which threaten us all.

Meanwhile, there are other things to be done first. Progressive groups throughout the country have the task of nurturing and strengthening the lusty infant of farmer-labor unity. Their success will help us in Congress to carry out the President's legislative program, to stop threatened relief cuts, and Budget balancing. Our small victories will, in turn, stimulate the drive for greater unity outside of Congress. The release of the wage and hour bill, won during farm debate, should provide a lesson for any who doubt that it is unity which decides.

Our enemies called it logrolling and horse trading. But this collective action of workers and farmers had nothing in common with the shady transactions of slick politicians. Workers and farmers made not a trade but a partnership. No wonder the tories lamented and deplored. They never saw anything like it before. But they are going to see more of it in the time to come, and the more they see the less they'll like it. It isn't horse tradings, it's putting your horses in double harness and driving a team. It's the way to get places. Workers and farmers are on their way.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

Mr. FORAND. Mr. Speaker, the wage and hour bill, one of the greatest pieces of humane legislation ever to come before the Congress of the United States, was during the past week slowly dismembered and, finally, on last Friday evening was given its death blow. This action by the House of Representatives is most regrettable.

The Congress was called to meet in special session on November 15 by our great President, Franklin Delano Roosevelt, for the purpose of enacting legislation that would have proven of great benefit to that underprivileged class of our people who for long years and still are working extremely long hours for wages that are disgraceful to a great country such as ours. Early last spring, on May 24, 1937, the President sent to the Congress a message in which he requested that legislation be enacted that would protect a large number of our people, estimated at some 12,000,000, who were employed under substandard labor conditions; and when we

failed to enact such legislation before adjournment of the regular session on August 21, he deemed it not only desirable but necessary, because of existing conditions, to call us back for an extraordinary session of the Congress.

The enactment of wage and hour legislation would have been a step forward in our efforts to remove from our economic system part of the condition of serfdom and slavery which still remains, but it would also have been a redemption of the pledge made by our great party at its national convention held at Philadelphia in June 1936.

Mr. Speaker, I have no quarrel with the opponents of this legislation who are sincere in their belief that it is not good legislation or that it would not accomplish that which we, the supporters of this bill, believed it would. I have no patience, however, with the outside influences which waged such a bitter campaign against this humane legislation under the guise of being the friends of labor, while in reality being its enemies. Past history reveals that most of those who sponsored the campaign of opposition were the same people who fought such legislation in their home States. The force of their attack was based publicly against differentials, but the real reason for their fight was that they are opposed to wage and hour legislation in any form.

Mr. Speaker, I am opposed to the idea of differentials because I believe that regardless of the section in which a worker may live that worker is entitled to a living wage and not to sweatshop wages of two, five, or eight dollars a week for anywhere from 48 to 60 hours of labor. It has been said many times during the debate on this legislation that approximately 12,000,000 persons would be benefited by this type of legislation, which to me means that there are many of our countrymen who are now engaged in employment by employers who do not seem to realize or do not want to realize that they are dealing with human beings.

I voted for the American Federation of Labor amendment to wipe out differentials, but that amendment was defeated by a vote of 162 to 131. Failure to eliminate differentials did not give us license to destroy the legislation. I believe that a half of loaf is better than no bread at all, and for that reason I voted against the motion to recommit because I realized that a vote to recommit was a vote to kill the bill.

I sincerely hope, Mr. Speaker, that when Members of Congress go home during the holiday season and meet their constituents they will be made to see what a grave error they committed and that when we meet again for the regular session in January they may have a change of heart and support a new wage and hour bill.

It is most regrettable that while pretending to be friendly toward labor the members of the Republican Party voted almost to a man to kill the bill, only five of them having the courage to vote against recommittal.

O Mr. Speaker, how true is that Biblical quotation, "By their acts ye shall know them."

Merry Christmas

EXTENSION OF REMARKS
OF
HON. DUDLEY A. WHITE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, December 20, 1937

Mr. WHITE of Ohio. Mr. Speaker and ladies and gentlemen of the House:

Christmas is here
And another year
Is just around the corner.
But ere this one ends
Your scribe extends,
Tho' time is fleeting,
A word of greeting
To friends around the corner.

Recent months have been bad,
But why be sad,
With prosperity around the corner?
Oh, how we'll shout
When it comes out
From its place of hiding
To the waves we're riding—
As we anxiously watch the corner.

Pa's been broke,
Which is no joke—
No matter what the corner;
But the kids are well,
And that is swell,
So we still can look
For the pleasant nook—
Around that elusive corner.

Our pants are thin;
The breeze comes in
From every windy corner.
It gets our goat,
But we're in the same boat,
As you and I suffer
Like every poor duffer—
Standing on the wrong corner.

It's fun to live
And great to give
Our share in finding the corner.
And we'll find it sooner
If we keep a sense of humor,
For isn't life "the berries,"
Or maybe a "bowl of cherries"—
Regardless of any old corner.

We've gained in friends
And it makes amends
For sharp points of the corner.
They give us a smile
That shortens the mile,
And eases the load,
As we seek the road—
That leads around the corner.

God has been good
With health and food,
As He helps us nearer the corner.
And if we help too
In the year that's new,
He may point the way
At an early day—
Taking us around the corner.

So Merry Xmas to you,
And happiness too,
Good friends this side of the corner.
May the fates be kind
To your dear ones and mine—
It's the best we can ask
As we face our task
Of getting them 'round the corner.

Elmer Lewis

EXTENSION OF REMARKS
OF
HON. SAMUEL B. PETTENGILL
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, December 20, 1937

ARTICLE BY WILL P. KENNEDY IN THE WASHINGTON STAR

Mr. PETTENGILL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Star, which contains a very fine tribute to Elmer Lewis, superintendent of the House Document room.

CAPITAL SIDELIGHTS

(By Will P. Kennedy)

"Elmer" is a name to conjure with at the Capitol—he's a House employee, but called upon for service by most of the Senators and their office help. He was born on a farm near Stoughton, Wis., but for about 20 years has been practically indispensable in helping to put through legislation. Incidentally, he has been an undercover benefactor to most of the high-school and college debaters throughout the country. He has given important service to every State in the Union by helping the Members of Congress do things

for their districts. Although there is today not much "peace on earth," Elmer lives up very religiously to his creed of "good will toward men."

Elmer Lewis, superintendent of the House document room, is well worth the study of psychiatrists and psychologists, pathologists, and others of such breed, for he has a peculiar gift or ability. He describes himself as "just a freak of nature." He has a card catalog mind—more than that, he has a number-registering mind. It's absolutely uncanny the way he can give you the number of any bill or report without stopping to think, and invariably he will look it up in his card catalog and cross index, which always confirms his mind record. Veteran Members and employees frankly admit that they have never known Elmer to give a wrong number.

For two decades he has given intensive study and drudgerous routine work, fitting himself for the exacting duties of his office. He is a walking encyclopedia on legislative measures. Not content with merely storing bills and documents and passing them out on request, Elmer has been studious how that office can give more helpful service, and has thought far ahead of the Members. His domain is a labyrinth of between the walls passages, caverns in the cellar of the Capitol, alcoves on the terraces—all sorts of cubbyholes and niches. There is nothing efficient about the layout of his quarters. All the efficiency there is was Elmer-made. One of his first innovations was the grouping of laws on every subject so that they are now ready for access.

In his pigeonhole office just off Statuary Hall he sits on a revolving desk chair and can place his fingers unerringly on a card reference to any law or legislative proposal, reports thereon, and related information. He has more right in his mind on any particular piece of legislation than a trained research student could gather elsewhere in a whole day's work. Thus he has made himself one of the most important cogs in the legislative machinery—and few days pass but some Member in the heat of debate on the floor sends an SOS to Elmer for hurry-up information essential to the cause for which he is forensically battling. He has had an important part in engineering some of the most important measures in the past decade—but always stays modestly in the background, but always ready when needed.

Some of the treasured records in his office date back 150 years—documents of the Eighth and Ninth Congresses—1803 to 1807—and some House records that go back to 1780. In one small circular room he has assembled all laws dating back to the Forty-fifth Congress. He does his own typewriting and answers personally all calls from any of the 96 Senators, 435 House Members, four nonvoting Delegates or Commissioners, and their entire entourage. He has large envelopes filled with all available data on the major measures under consideration or of timely importance ready to be delivered to Members as they seek information on those subjects. He has developed a system of collecting speeches and other valuable information on current subjects, so that when a Senator or House Members get requests from high-school or college debaters, Elmer can immediately hand them the best material on both sides of the given question.

Elmer is always pleasant, courteous, willing, helpful, efficient, and unhurried. He knows all the answers—and the numbers.

Wages and Hours

EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

Mr. DUNN. Mr. Speaker, when the Senate and House Labor Committees held a public hearing on the wage and hour bill, many people from different parts of the country testified before the joint committee. One of those who testified was an outstanding economist who maintained that if the wage and hour bill should be enacted into law, about one and one-half million people would be given employment. I asked Mr. Henderson, the economist, "If we should enact into law a 5-day 30-hour workweek bill, how many people would be given employment?" He stated "about seven and a half million."

If the wage and hour bill will abolish sweatshops, child labor, and the slum districts in our country, no one should hesitate to vote for such a constructive, progressive, and humane piece of legislation.

I hope that the time is not far off when we shall enact into law legislation which will give permanent employment at a living wage to all of the people who are physically able to work. There is not any reason why any person who is mentally and physically fit to work should be deprived of employment. There is plenty of work to do for every one in our country. It is estimated that the value of all our developed possessions in this country amounts to about $350,000,000,000. This figure appears to be large, but it is small when compared with the value of our undeveloped resources which amounts to trillions of dollars. If Congress would pass legislation to give employment to the millions who are now out of work and see to it that every person who is employed obtains a saving wage, there would not be such a thing as poverty in the United States. People would not be compelled to live in slum districts and the Government would not be spending $15,000,000,000 annually for the enforcement of law in order to protect society against criminals. Slum districts are, to a large extent, responsible for a great deal of the crime which is existing in our land today. [Applause.]

Letter To Hon. Frank R. McNinch, Chairman, Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. CONNERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by me to Hon. Frank R. McNinch, Chairman, Federal Communications Commission, and wish to say, Mr. Speaker, that I was glad to note in the press of December 19 that apparently my letter to Chairman McNinch resulted, in part, to influencing this derelict body known as the Federal Communications Commission to at least pretend that they are serving the American people by asking for a script of the obnoxious Mae West program broadcast over the network of the National Broadcasting Co. on December 12.

Mr. Speaker, it should be evident to every Member of the Congress that the American people will be forced from time to time to tolerate the continued ravishing of the ears of our people so long as we indolently or for some unknown reason fail to function in making a thorough investigation by the Congress of the activities of this lobbyist and vested interest controlled so-called public-service body. I am hopeful that the Congress will soon act favorably on one of the many resolutions pending in the Rules Committee for a congressional investigation of the Federal Communications Commission and the radio industry.

MY DEAR CHAIRMAN: During the past week I have received a volume of complaints from people of my district protesting against the indecency resorted to by the National Broadcasting Co. in its efforts to enlarge the sales opportunities of Chase & Sanborn's coffees. These complaints substantially indicate that your Commission has been derelict, to say the least, in its enforcement of section 326 of the Communications Act of 1934, which section directs your Commission to prevent the broadcasting of radio programs which are indecent, profane, or obscene.

While it is common knowledge in the Congress of the United States that the radio lobbyists, maintained at tremendous expense by the licensees of your Commission, have all but run the Commission, it seems to me that when your Commission permits the ravishing of the American home by the pouring into the ears of millions of decent God-fearing, law-abiding American people a program so indecent that it violates the sensibilities of even those who are familiar with the burlesquing of historical events, I think it time that your Commission should either function in the interests of the American people or admit your incompetence and permit the President of the United States to place men on your Commission who will function in the interest of and for the benefit of the American people rather than to the satellites acting for the additional enrichment of a privileged few.

My brother, the late Congressman William P. Connery, Jr., realizing the conditions existing in radio, has pending before the Congress a resolution calling for a congressional investigation. It is my intention in the early days of the regular session of Congress to urge the passage of this very much needed legislation solely in the interest of the American people.

Despite the desire of Congress for a thorough investigation of the unsavory conditions existing within and on the part of your Commission, I sincerely trust that your Commission will at least indicate its own sense of honor by revoking the license issued by your Commission to the radio station which originated this, to say the least, indecent radio broadcast.

Incidentally, may I inquire if it is true that the president of the National Broadcasting Co. personally authorized in advance the broadcasting of this program, knowing it to be of a lewd and lascivious character?

I will appreciate an early response to this protest and inquiry.

Very truly yours,

LAWRENCE J. CONNERY.

The Washington Herald of Sunday, December 19, quotes a comment given out by a Member of the other body, which comment I deem of interest to the Members of the House. I believe the quotation is self-explanatory and needs no comment from me. The article, in part, follows:

Senator WHITE, Republican from Maine, introduced the resolution for the investigation, which was reported favorably by the Senate Interstate Commerce Committee last August and scheduled for early action at the next session of Congress. As a member of the four-man American delegation named by the President, Senator WHITE will be away from this country for most of this session.

RESTS WITH WHEELER

"Whether the radio investigation will be pushed is now up to Senator BURTON K. WHEELER, chairman of the Interstate Commerce Committee," Senator WHITE said yesterday.

"If WHEELER wants to push it, that's all right with me," said WHITE, "but if WHEELER feels he has enough on his hands with the railroad investigation and does not want to take the responsibility, that would be all right with me, too."

Asked whether he thought his appointment to the delegation was an attempt to get him out of the country and sidetrack the probe, White replied:

"Not at all. At least I shouldn't like to think so."

DELAY JUSTIFIED

"Besides," he added, "ever since there has been the change in personnel (referring to the naming of Frank R. McNinch and T. A. M. Craven to the Commission) I have felt there was some justification for the delay."

Last August when a resolution for an investigation of the F. C. C. was introduced in the House, Senator White reiterated his intention of pressing for action on his resolution, saying:

"With two new men joining the Commission now the necessity of such an investigation is greater. The new members should understand fully what has been going on in the Commission."

Federal Incorporation Law

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

RADIO ADDRESS OF HON JOSEPH C. O'MAHONEY, OF WYOMING, DECEMBER 19, 1937

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on Sunday last by the Honorable JOSEPH C. O'MAHONEY, senior Senator from Wyoming, on the subject of a Federal incorporation law. I hope all Senators will have an opportunity to read the address, for I make the prediction that the proposed solution offered by the Senator from Wyoming will soon receive the serious consideration of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Shall we have a Federal incorporation law?

The answer to this question is an emphatic "yes."

We must have a Federal incorporation law if we are to have the slightest chance of achieving permanent prosperity.

There is no other apparent means of liberating private business from the twin evils that beset it—monopolistic interference upon the one hand and Government interference upon the other. Private business cannot thrive against either of these obstacles. The tragedy of our situation—and it is a tragedy—is that although almost every political and business leader acknowledges that there can be no solution of the economic problem until private business has been stimulated to new activity, most of them look either to big business or to big Government for salvation, in complete disregard of the fact that private business cannot long survive under either big business or big Government.

Failure in the past of both business leaders and political leaders to grasp this clear lesson of experience is the principal obstacle to recovery.

I am aware that businessmen look with suspicion on the suggestion that all corporations engaged in interstate and foreign commerce should derive their charters from the Federal Government. They are apprehensive that it would mean more Government interference in private activities, more centralization of power in Washington, more discretion in the hands of Government agents. Not having had the opportunity to examine the proposal in detail, they jump to the conclusion that, if adopted, it would result in making more rigid and more extensive the discretionary controls over private enterprises which we call regimentation.

Nothing could be further from the fact. It is because I want to make business free that I am urging Federal incorporation, and every passing day strengthens my conviction that the only way to save the America of which we have been so proud, the only way to preserve the democratic institutions which we all love, is to adopt this principle.

Let us, however, first analyze the problem and ask ourselves, "Is it national or local in its scope?" The answer will come at once to every tongue. It is a national problem. Commerce spans the continent. From ocean to ocean and even across the seas its influence expands. It overflows State boundaries and even national boundaries. Prosperity or depression, whichever it may be at the moment, is the result of causes that are wholly beyond the power of any mere local authorities to affect. The people have always recognized this fact. They have always held the National Government responsible for results. Every realist knows that administrations which sit in times of prosperity receive popular approval and those which sit in times of depression are punished by popular condemnation.

Indeed, it was a depression—that of 1893—that brought into existence the National Association of Manufacturers, the able president of which, Mr. Warner, will participate in this discussion tonight. He and I are on a national hook-up talking about a national problem, and the national organization which he represents lists among its stated objects—

(1) The promotion of the industrial interests of the United States.

(2) The fostering of the domestic and foreign commerce of the United States.

(3) The betterment of the relations between employer and employee.

(4) The protection of the individual liberty and rights of employer and employee.

(5) The education of the public in the principles of individual liberty and ownership of property.

(6) The support of legislation in furtherance of these principles and opposition to legislation in derogation thereof.

It must be acknowledged, therefore, that we are dealing with a national issue.

Now, why do I say that we must have a national incorporation law if we are to substitute order for chaos in the industrial and economic field? Because the bulk of this commerce on which our very lives, individually and nationally, depend is carried on by interstate corporations, which, because they are created by the States, are able to escape national responsibility.

The statesman does not live who can lay a permanent basis for national prosperity so long as the States are permitted to issue unrestricted charters to the national corporations which are the most essential instrumentality of interstate commerce.

We are today in as great need of a national rule for national commerce as we were for a national Constitution 150 years ago. It was commercial chaos immediately following the Revolutionary War that led to the calling of the Constitutional Convention. No one can read the Constitution without realizing that it was the intention of the framers to give the Federal Government complete control over national commerce.

They gave to Congress the power to coin money, the measuring rod of commerce, and to fix its value. They gave to Congress the power to establish post offices and post roads, the only means of commercial communication then existing. They gave to Congress the power to pass a uniform national bankruptcy law, because even then the close dependence of national prosperity on local failures was clearly recognized. Finally, in all-embracing terms, they gave Congress the absolutely plenary power "to regulate commerce with foreign nations, and among the several States and with the Indian tribes."

This purpose has been defeated by the modern corporation. At the time the Constitution was drafted corporations were practically unknown. It was not until after the Civil War that these new artificial agencies, created by the States, began to invade the field of interstate and foreign commerce. Their importance to the national life, their power for good and evil, was not fully understood, and Congress made no effort to prescribe their powers and public responsibilities. They were looked upon as local, not national, agencies. When they began to expand, crushing competition and bringing about the concentration of economic power, Congress began to pass antitrust laws and regulatory measures of one kind or another; but these were all ineffective, because the loose incorporation laws of a few States afforded an avenue of escape from every effort of Congress to protect individual private enterprise from the encroachment of big business.

The States, from which the framers of the Constitution had expressly withdrawn all power and jurisdiction over interstate and foreign commerce, began to vie with one another in granting unlimited powers to these artificial agencies to carry on that very commerce.

One corporation, established for the purpose of securing corporate charters in the State of Delaware, and maintaining offices in Europe as well as throughout the United States, a few years ago published a pamphlet to show the advantages, from the point of view of the incorporator, of taking out a Delaware charter. From this document I quote the following summary:

"REASONS FOR INCORPORATING IN DELAWARE

"No requirements as to residence of incorporators or directors.
"A broad charter may be obtained with no undue formalities.
"Organization meetings may be held without the State.
"Voting trusts authorized.
"Capitalization may be any amount not less than $2,000.
"No-par-value shares of any class may be created without indicating a stated capital.
"No State stamp tax on stock.
"Judgment of directors upon issuance of stock is conclusive in the absence of fraud.
"Stockholders' and directors' meetings may be held without the State.
"No complicated State reports or financial statements required.
"Organization fees and annual taxes are less than in other States.
"No State income tax on corporations. Nonresidents are not taxed on their holdings of stock in Delaware corporations.
"No inheritance tax on nonresident stockholders."

Thus, it is unmistakable that the primary purposes of the Delaware incorporation law is to allow incorporators to evade public responsibility. Ninety percent of the corporations of the country may be well managed by honest and devoted men, but while 10 percent may take advantage of laws like that of Delaware there can be no safety for the investor, for labor, or for the consuming public. Even for the small businessman who in every State in the Union finds himself being steadily crowded out of business by national corporations which have received their charters, not from the Federal Government but from the States, there can be no safety. For the well-managed, honest corporation there cannot be that certainty and security which would arise from a national incorporation law. Moreover, for the public at large, for the individual citizen, there can be no protection from the restrictive effects of progressive concentration of economic power so long as we suffer the present lack of an enforceable, uniform, national rule.

The State of Delaware has a population of only 238,000. It creates and projects into the field of national commerce—over which it exercises no jurisdiction—thousands of corporations to engage in that commerce, agencies that intimately affect the lives of millions, millions of employees, and millions of small businessmen, indeed, thousands of small corporations, who cannot protect themselves, because the States in which they live are powerless to shield them against the activities of national corporations created by the States and because the Federal Government does not have a national incorporation law.

The absence of such a law has been the direct cause of the growth of the Federal bureaucracy. The people, resisting the restrictive effects of what we call "big business," demanding that something be done, have turned to Washington, and, beginning with the Interstate Commerce Commission in 1887—50 years ago—they have been multiplying boards and commissions to which have been given greater and greater degrees of discretionary authority over the lives of the people. This cannot be permitted to continue if democratic institutions are to survive. "Big government" tends inevitably to become dictatorial, as developments in other continents demonstrate, and, in the face of dictatorship, liberty disappears. But it likewise vanishes in the face of economic dictatorship.

From these two evils, Federal incorporation offers release. "How can that be so?" someone asks, "Your bill would give the Federal Trade Commission the power of life and death over all business." Not so. That conclusion is the understandable result of habits of thought formed during a generation. Because for 50 years we have been giving boards and commissions discretionary authority, it is assumed that a Federal incorporation law would also clothe the Trade Commission with such power. I can only say that it is not the intention to do so. On the contrary, it is the purpose to withhold discretionary power from the Commission and to prescribe corporate powers so clearly that all doubts would be reduced to a minimum. I would not give the Federal Trade Commission power to lay down a single requirement that was not explicitly set forth in the law. The Federal incorporation system that I envisage would be such that the corporate recipients of a license or charter would know the exact boundaries of their powers, duties, and responsibilities.

The ideal law would be self-enforcing, requiring only clerical or ministerial acts on the part of the Commission and vesting punitive jurisdiction in the courts. Punitive power would never have to be exercised by a commission if corporate charters did not give the corporate power allowed by States like Delaware, by which investors, stockholders, workers, and the general public are alike victimized.

Are you fearful of such a system? Then how about national incorporation of banks? During the administration of Abraham Lincoln a law was passed establishing national banks. There is not a city of importance in this country without a national bank incorporated by the National Government. What bank, what bank stockholder, what bank depositor or investor has ever suffered from the Federal control of national banks? As a matter of fact, the national banking law has been the salvation of banking in this country. A national incorporation law will be the salvation of business.

One thing is needful, a formal national conference, summoned by authority of law, free from partisan influence, in which industry, labor, and the public alike should be represented, and to which should be committed the duty of drafting what might be called an economic constitution to be submitted to Congress. Such a national conference is provided for in the bill which Senator BORAH and I have introduced in the United States Senate. It is the basis on which men of good will in commerce and industry, in labor and government may unite in the common cause of social justice and prosperity.

Ours is an industrial civilization, very different from that which existed during the first century of our national life. The trend of the population has been from the farm to the city where huge numbers are employed by corporations.

The experience of the Works Progress Administration has proved that the problem of unemployment is almost entirely industrial. Less than 7 percent of Works Progress Administration expenditures are in strictly rural areas. In fact, 20 percent of these expenditures are in the five largest industrial cities, and a special study of the relief rolls shows that 88 percent of the persons on relief either came from nonagricultural industries or were made up of inexperienced persons who had not yet had the opportunity to work in industry.

Every year 500,000 young men and women, just reaching working age, pour into the ranks of the huge army available for industry. Unless the door of opportunity is opened to them they will become a liability rather than an asset to the Nation. Sustained upon a security wage, forced to subsist upon the meanest minimum, they will not furnish a market for either agriculture or industry. And we shall find ourselves in a downward spiral that can end only in disaster.

Recognizing that the modern corporation has become the essential instrumentality of modern commerce, that most of those employed in industry are employed by corporations, and that in the absence of a Federal corporate policy, the unrestricted corporation of the Delaware type has been a device by which concentration of economic power and wealth has proceeded at such a pace that Ferdinand Lundberg can write a book to show that 60 families control the economy of the land, how is it possible to avoid the conclusion that to preserve the Nation itself we must write a national rule for national commerce?

Remember "big business" has had its chance to give the country prosperity and has failed. In 1928, before the crash, millions were unemployed and millions of families were compelled to subsist on less than $1,000 a year. For 4 years now the Government has been priming the pump with borrowed money, but unemployment is again increasing. Big Government promises no better results than big business.

Why not give small business a chance? Why not try a really unrestricted competitive system for a change? Why not put an end to private price fixing and Government price fixing, both. Why not write a national corporation law which will free business from both monopolistic manipulation and Government interference?

The brain and conscience of America can do the job.

Federal Incorporation

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

ADDRESS BY WILLIAM B. WARNER, PRESIDENT OF THE NATIONAL ASSOCIATION OF MANUFACTURERS

Mr. O'MAHONEY. Mr. President, this afternoon the Senator from New York was good enough to request unanimous consent for the printing in the Appendix of the RECORD of a radio talk which I made last Sunday night upon the subject of Federal incorporation. Upon the same occasion Mr. William B. Warner, president of the National Association of Manufacturers, also discussed that subject.

While I do not agree at all with Mr. Warner's interpretation of the bill introduced by the Senator from Idaho [Mr. BORAH] and myself, I feel that it would be improper if my talk should be published without his. I therefore ask

unanimous consent that Mr. Warner's address may be published in the RECORD immediately following the address delivered by myself.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel privileged to appear as a cospeaker with Senator O'MAHONEY, and consider it my good fortune that this is not a debate wherein I might be expected to match Mr. O'MAHONEY's skillful oratory. I am just a businessman, and my only excuse for speaking tonight is that the bill before Congress which we are discussing, the O'Mahoney-Borah Federal licensing bill, is directed at business. I do not desire to quarrel with the ideals at which Mr. O'MAHONEY aims in presenting this bill. I recognize the earnestness of his desire and the sincerity of his purpose to make a constructive contribution to the national welfare.

What troubles me is the difference between what the Senator says he wants to accomplish and my understanding of the means he would employ as set forth in this bill, which in its essence marks the end of free American enterprise and initiative. The measure is an umbrella of wishful thinking, raised to shelter the ideals of a Utopia, which in its imaginative creation ignores all existing facts and conditions.

As I read the bill I feel as though I had a copy of some other measure than the one the Senator describes. The Senator's bill is generally regarded as applying only to corporations. But a careful examination reveals that the term "corporations," as defined in the bill, includes not only companies, big and little, and partnerships but any "joint venture" or "other unincorporated venture." Since the term "joint venture" refers to a group action, the term "unincorporated venture" can refer only to individual action. So while the Senator speaks of "corporation," his legislation speaks of individuals—millions of them, small, weak, and struggling, as well as large, strong, and prosperous.

The Senator refers to the bill as being a regulation of interstate commerce. But the bill's definition of commerce does not conform with commerce as the courts have uniformly described it. Its definition is far broader than the word itself. Commerce is defined to include "the collection of raw materials and equipment * * * for the production and the production therefrom of any article or commodity to enter the flow of, or which affects, commercial intercourse with foreign nations or among the several States * * * and the sale or transportation of any article so produced." It seems obvious to me that this is an attempt to regulate all production, both industrial and agricultural, in addition to commerce.

Thus this bill would reach every type of business enterprise, large or small, whether situated in metropolitan New York or in the vast nonindustrial regions of the Senator's own State of Wyoming. And it is not confined to interstate commerce, but covers a variety of other things under its broad definition of commerce. I do not believe one can convert a cow's horns into legs by calling them legs, and I do not believe one can convert local pursuits into interstate commerce merely by calling them such, but that seems to be attempted in this bill.

Now, I trust my auditors begin to realise the tremendous scope of the Senator's measure. It provides for the Federal licensing of corporations as defined in the act. Is the bill mild and persuasive, not drastic, or compulsory? I will answer this with a question: If you as a wage earner were told that the company you work for must go out of business—and your job with it—if it failed or was unable to secure a license, or if its license was revoked for any violation, however trivial, would you regard that as mild, or would you think it pretty serious?

Yet under this bill no business covered by it would be permitted to engage in commerce (including production) if it failed to secure a license, or if its license were revoked. And securing a license is not as simple as getting a marriage license, either, for the bill imposes a large number of conditions or terms. These are among the regulatory provisions that further illustrate the scope of the measure. The umbrella it raises specifically covers existing Federal regulatory fields such as those embraced by the antitrust laws, the labor relations law, the Securities Act, and the Securities and Exchange Act, and others. The bill would put all these under one body—the Federal Trade Commission, to whom you must apply for your license.

By what the Trade Commission puts in the license, it determines the manner in which the enterprise licensed shall conduct its business. Among other things it must promise to accept any congressional regulation of its State charter. It must accept the Commission's regulation of its employment relations. The bill deals with minimum wages; also fair wages. But there is pending in Congress a very far-reaching wage and hour control bill.

One provision of the bill states that licensees shall not engage in dishonest or fraudulent trade practices or in unfair methods of competition, which are already unlawful, or may become so by order of the Commission. This provision is not objectionable in and of itself, but it becomes a dangerous one when coupled with the immediate and drastic license-revoking power proposed for the Trade Commission. The Commission already has jurisdiction over unfair methods of competition, and the legal machinery for eliminating such practices is in existence.

The bill contains provisions headed "Protection of investors." These assume a need for stockholder protection which, in view of already existing State and Federal laws, does not exist. They would substitute the will of the Commission for that of stockholders in the use of property and the disposition of earnings. They would enact a permanent profits-distribution tax such as has been outlawed by public opinion. The policy of attempting to limit the size of corporation surpluses by forcing the distribution of earnings has so clearly appeared to be unwise that it is now in the process of being reconsidered by Congress. In short, this bill represents the ultimate in governmental regulation of business.

We do not defend unfair competitive practices nor do we countenance improper working conditions. We believe in the wise and just enforcement of existing laws and we furthermore believe that the existing laws are entirely adequate. With most of these matters already subject to regulation by various agencies of the Federal Government, what then is the necessity or justification for the Federal licensing bill? Would the existing agencies be abolished or would there be set up under this bill a new and additional superstructure of control?

Into the hands of one Government bureau would be placed the power of life or death over all private enterprise. The scope of the bill is even broader than the National Industrial Recovery Act. Must this great Nation, which has assumed commercial leadership of the world through private enterprise, entrust all its business to a bureaucracy? Are a few men qualified to run our complex, delicate, and infinitely varied American industry? Is our industrial organization susceptible of so simple a handling? I doubt whether you think it is. The Trade Commission would have to employ a veritable army of experts if it takes over the responsibilities and the powers vested in it by this bill.

An entirely new Federal set-up would be required. There is no present constitutional provision for the handling of Federal licensing of all business. It would involve a tremendous amount of physical work in bureaucratic organization and in corporate readjustment. It would break down the present State incorporation system. It would mean the nationalization of industry and substitute political for business management.

There is a vital principle involved in this bill, one close to every American. In its attempt to substitute for private business initiative and judgment a Federal bureaucratic form of operation it deals a direct blow to our American industrial system. That is the most important issue before us.

The anxiety that dominates the American mind today is not mere worry over the Federal incorporation bill or of excessive taxation, grave as those are. It has its root in the question of whether the foundations of the private-enterprise system are secure. People ask themselves, "Are we tending toward the creation of a state which is not the servant of men but which makes men its servants?" They realize the world-wide struggle that is going on between individualism and collectivism.

Are we going to continue to recognize fundamental, inalienable rights, or are we going to create a new society in which any right we may have is conferred upon us by the State, which determines the limitations at the time it makes the gift? That is fundamental. This is the whole difference between the new States that have risen on the social wreckage of the Great War and the American conception.

History has demonstrated time and time again that a people deprived of individual initiative and energy decline.

I would be remiss in my duty if I closed without a word in defense of our American system which has created employment for vast armies of workers, with the best pay and the most favorable hours of any in the world, which has spread the ownership of industry among some 10,000,000 people, which by producing more and better goods at cheaper prices has raised the common standard of living in this country above that of any other in the history of the world.

It is measures such as the O'Mahoney-Borah bill, held over the head of industry, that cause uncertainty and thus paralyze business progress and halt recovery.

British War Debts

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

EDITORIAL FROM THE WASHINGTON TIMES AND A STATEMENT BY HON. HENRIK SHIPSTEAD, OF MINNESOTA

Mr. WALSH. Mr. President, on Friday, December 17, 1937, there appeared in the Washington Times an editorial entitled "British View of War Debts." On Monday, December 20, 1937, the Senator from Minnesota [Mr. SHIPSTEAD] made a very able statement with reference to that editorial. I ask unanimous consent that the editorial and the statement of the Senator from Minnesota may be printed in the Appendix.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Washington Times, Friday, December 17, 1937]

BRITISH VIEW OF WAR DEBTS

Amid the general demand for payment of the allied war debts the question of how these debts can be paid has rarely been considered. Many of us, perhaps, have thought that England or France or Italy could just mail us a check, or box up enough gold bullion and ship it over here.

While the views herein expressed are not our own, we thought it might be interesting to see the other side of the picture. A distinguished British economist who believes strongly in the sanctity of contracts and would like, in the interest of Great Britain herself, to see a satisfactory settlement of an old and disturbing controversy, has written his opinion for the Washington Times.

The language hereafter is that of a clear-thinking economist and is representative of the study given the question abroad:

"If England were now paying the semiannual installments, including interest and amortization fixed by arrangement with Congress, the annual charge would amount to $200,000,000 in round figures.

"This charge has to be met not in pounds sterling but in dollars. For the pound sterling has no current value in the United States.

CHARGE MUST BE MET IN DOLLARS

"There are just two ways in which Great Britain can accumulate dollar balances in this country. She can either ship gold or she can sell the United States goods and services.

"To ship gold to the value of $200,000,000 to the United States every year without taking anything in return is practically out of the question. This country already owns about half the gold supply of the world, and in the ordinary course of events, merely to take care of trade balances, more gold is coming in month after month to such an extent that it is necessary to sterilize it and put it out of action in order to avoid a disastrous wave of inflation.

FALL IN PRICE OF COMMODITIES

"Already this flow of gold to America is causing an artificial scarcity of gold in the rest of the world with the unfortunate result of a fall in the price of basic commodities, which is one of the chief causes of the present recession.

"To accentuate this flow of gold by $200,000,000 a year would further drain the gold resources of Europe, intensify European gold scarcity, and bring on the worst panic of modern times.

"We may, therefore, bar out payments of the debt in gold as being wildly impractical.

"The other alternative is shipment of goods or selling of services.

"England in the past has supplied a good deal of the world's oceanic transportation of passengers and goods. Today she has to face heavily subsidized competition on the part of Germany, Italy, and France. Even the United States insists on owning a merchant marine.

"She cannot hope, therefore, to increase those services except in an infinitesimal degree.

"She can and does ship goods, either from Great Britain itself or from her colonial possessions in the Malay Peninsula and elsewhere, in the shape of rubber, tin, and other useful commodities.

"But England is practically the best customer of the United States, and she has to ship the last possible pound of rubber and ton of tin in order to pay what she is actually buying from the United States in the shape of cotton, wheat, and manufactured goods.

"Therefore, to accumulate the dollar balance necessary for the payment of debt installments there are just two things she can possibly do.

TWO THINGS THAT ENGLAND CAN DO

"She must either sell $200,000,000 worth of goods more than she is now selling this country or she must buy $200,000,000 worth less of this country's goods.

"The first method is at present impossible. The United States does not want the goods and has put up a tariff wall to keep them out.

"The second is possible but not desirable. England could in time manage to grow all the cotton she needs within the empire, and she could put an embargo on American cotton, wheat, copper, and other commodities until she was able to establish a favorable trade balance with the United States to the tune of $200,000,000 a year.

"This could be done. And it is practically the only way, in the opinion of every British economist who has expressed any ideas on the subject, of paying the debt installments.

"What the United States has to decide is, first, Does it want this to happen? or, secondly, Can any other way be suggested?"

ENGLAND CAN PAY

(Senator HENRIK SHIPSTEAD, of Minnesota, gives his views on the editorial which was published in the Times last Friday in which a distinguished British economist set forth the theory that Great Britain cannot pay her war debt to the United States. Senator SHIPSTEAD is a member of the Senate Committee on Foreign Affairs and during his service in that body has gained an international reputation as an authority on economic problems.)

(By HENRIK SHIPSTEAD, United States Senator from Minnesota, Monday, December 20, 1937)

The distinguished economist quoted by the Times has decided that Great Britain cannot sell $200,000,000 worth of additional goods annually to the United States and, therefore, the only way she could pay her war debt would be to reduce present purchases here by that amount and build a balance of trade favorable to herself. This is not all that could be done, however.

Granted that Great Britain cannot meet her war obligations to us through the export of gold, and we would not want her to do so if she could. But that is not the only answer to the dilemma.

In the funding agreement with Great Britain of June 1923 I find that the British Government has agreed to issue "definite engraved bonds in form suitable for sale to the public" in exchange for those issued under the agreement with our Government. These bonds are to be in bearer form and carry the same exemption from taxation as those issued under the existing debt agreement.

NO EFFORT TO DO IT

Why has the United States Treasury never called this alternative into use? The agreement specifically states that they will be issued "at any time" or "from time to time" at the request of the Secretary of the Treasury.

During all the default history of this debt agreement no attempt, to my knowledge, has been made to use the alternative. Yet it is obvious that it might well be used to provide both Great Britain and the United States with a way out of the dilemma in which they now find themselves.

It should not be difficult to imagine what could take place if British bonds "suitable for sale to the public" were made available in this country under this agreement. Placed in the hands of American tourists who spent about $15,000,000 a year in England alone, they could be liquidated and put in the hands of the British people through the normal processes of providing these services. Or given into the hands of American tourists, who spend over $225,000,000 in Canada, the Dominion could provide the mother country with assistance in discharging its obligation.

TRADE RAMIFICATIONS

Then there are the unlimited ramifications of triangular and multilateral trade. Suppose Brazil needs British exchange to buy goods from Britain. Brazil could trade coffee to an American holder of these British bonds and acquire the needed exchange, and thus the debt would be transferred. The Brazilian businessman would use the bond to pay for British goods. That would liquidate the bond and make it unnecessary for England to buy dollars. This is only one example of hundreds that might be cited.

There would be no difficulty in making a transfer of this kind. British bonds and British exchange are salable all over the world.

Such a mechanism might be used to stimulate trade and travel with Great Britain, its dominions, and through the world as a whole. Some special inducement might well be made so as to direct the use of these obligations in these channels. Not only would the Federal Treasury thus be replenished but so would world commerce. In part the success of a plan of this kind depends on its capacity to stimulate international business.

TRANSFER ISLANDS?

If Great Britain is ready to live up to its agreement, if it means what it says, and that it is only asking for someone to point the way out, does not its own sacred treaty of 1923 show it that way?

On the other hand, a few miles from our own coast are the beautiful Bahamas; also Bermuda, with a naval base, close to our shore; Jamaica, Trinidad, and British Honduras, in addition to all these innumerable islands strung along in the sea east of the entrance to the Panama Canal that we are obligated to protect. This group of islands could furnish a base for negotiating with a view to a transfer to the United States in payment of all or part of the debt. England has always paid its debt with interest whenever possible, and here are opportunities for doing so.

If Great Britain thinks so much of the sacredness of its agreements and treaties that she can spend more than a billion dollars a year in preparation for another holy war to enforce the sacredness of treaties, what should it not be willing to do to make good on its promise to us?

Elihu Root

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

ADDRESS BY DR. NICHOLAS MURRAY BUTLER AT THE ANNUAL MEETING OF THE AMERICAN ACADEMY OF ARTS AND LETTERS, NOVEMBER 12, 1937

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the late Elihu Root delivered by the well-known scholar Dr. Nicholas Murray

Butler on November 12, 1937, at the annual meeting of the American Academy of Arts and Letters, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If Pericles delivered the truly great speeches which Thucydides ascribes to him, he was the first in the Western World to achieve greatest eminence both as statesman and as man of letters. This has not often happened in the history of statesmanship and of literature. Caesar was a nation builder and a man of letters, while Cicero was a man of letters and a publicist of highest authority. When our own Nation was in the making, there was an extraordinary revelation of the possibility of combining political insight and public service with literary skill and fine literary form. The writings of George Washington, of the two Adamses, of Jefferson, and of Hamilton demonstrate this beyond peradventure. Burke had already made his mark in both fields of endeavor, and Thiers, Disraeli, and Gladstone were shortly to do the same. Bismarck, although the fact is little recognized, would have been a distinguished contributor to the literature of his people had his literary skill and productivity not been overshadowed by his stupendous achievement in the field of practical statesmanship.

Elihu Root was another statesman of similar type. The far-sighted vision, the human understanding, and the power of interpretation which marked his state papers and his public acts were all revealed in a literary form which has made these a permanent contribution to the literature of our language and which brought him the distinction of membership in the American Academy of Arts and Letters. Literature and literary power are not and need not be something apart from other personal characteristics and attributes, but unhappily they are too often looked upon as such to the disadvantage both of literature itself and to that of achievement in other fields of endeavor.

Elihu Root was one of those fine and rich personalities who would not and could not detach his private pursuits from the public welfare. Before he was a teacher or a lawyer or a statesman, he was a good citizen. He measured his public and professional activities in terms of the highest standard of American citizenship. His attachment to the college which bore the name of his hero, Hamilton, on the campus of which he was born and near the campus of which he lies buried, grew with the years and nothing affected him more directly or more deeply than its welfare and its repute. His reading was of the now unhappily old-fashioned type which included the best that had been written in any language. The ancient classics were familiar to him, as were the outstanding contributions to English, to French, and to Italian literature. He reflected this knowledge not only in his frequent quotations but in his own direct and persuasive literary style. There were few topics upon which he did not touch in the course of his long and active life. Some of these called for charming and tender sentiment, and he furnished it. Some of them called for learning and precise knowledge, and he furnished it. Some of them called for courage and vision and outstanding leadership, and he furnished it.

History will confirm the judgment of Lord Bryce that Root was the greatest Secretary of State in the history of the American Nation among all the long list of names which begins with that of Thomas Jefferson. Of our Secretaries of War, he was easily the most distinguished, and his five reports, made while incumbent of that post, are, as Lord Haldane described them, the last word on the organization and administration of an army in a democracy. That he had no peer as a diplomat was the judgment of Sir Cecil Spring-Rice, which judgment is fully confirmed by his long record of outstanding achievement.

In his adjustment of the difficulties between the United States and Japan, in his work for the pacification of Cuba and the Philippines and their good government, in his emphatic insistence upon upholding our treaty obligations against discrimination in the Panama Canal tolls, in his work at the Washington Conference for the Limitation of Armaments, and in his plan for the Permanent Court of International Justice at The Hague that brought into existence the tribunal which, one of these days, will be looked upon as a ruling influence in the peaceful guidance and development of the world's organization, he made permanent contribution to the history of modern civilization. His letter of instructions to the representatives of the United States at the second peace conference at The Hague in 1907 is a classic document and marks an epoch in the building of the institutional life of an organized family of peaceful and cooperating nations. When the history of the world's difficult and painful struggle to put international war behind it and to establish a peaceful and wisely organized world comes to be written, the name of Elihu Root will lead all the rest.

One must go back across well-nigh a century and a half to find in Alexander Hamilton that American to whom Elihu Root's mind and life and type of public service are most analogous. The truly great oration in which the Reverend Dr. John Mitchell Mason, pastor of the First Associate Reformed Church in the city of New York and later provost of Columbia College, paid tribute to the memory of Alexander Hamilton when speaking before the Society of the Cincinnati at Federal Hall in New York City on July 31, 1804, may be in large part repeated at this hour in memory of Elihu Root:

"One of his [Hamilton's] primary objects," said Dr. Mason, "was to consolidate the efforts of good men in retarding a calamity which, after all, they may be unable to avert; but which no partial nor temporary policy should induce them to accelerate. To these sentiments must be traced his hatred of continental factions; his anxiety for the Federal Constitution, although, in his judgment, too slight for the pressure which it has to sustain; his horror of every attempt to sap its foundation or loosen its fabric; his zeal to consecrate it in the affections of his fellow citizens, that if it fall at last, they may be pure from the guilt of its overthrow—an overthrow, which may be accomplished in an hour, but of which the woes may be entailed upon ages to come.

"With such dignified policy he joined the most intense application to his professional duties * * *. How he resolved the most intricate cases; how he pursued general principles through their various modifications; how he opened the fountains of justice; how he revered the rights of property; how he signalized himself in protecting the defenseless; how judges, and jurors, and counsel, and audience, hung on his accents; let them declare who have entrusted their fortunes to his hand."

With these words of historic judgment called to echo over the greater part of a century and a half, we may leave Elihu Root's well-earned fame to be confided to a grateful people's care.

Power Truce

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

STATEMENT BY J. D. ROSS, ADMINISTRATOR OF THE BONNEVILLE PROJECT IN OREGON

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Power Truce as Administrator of Bonneville Project Sees It," containing a statement by J. D. Ross, administrator of the Bonneville project in Oregon.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the United States News, December 20, 1937]

POWER TRUCE AS ADMINISTRATOR OF BONNEVILLE PROJECT SEES IT

In reply to "The question of the week," "What is the best plan to end the power 'war'?" the United States News on December 13 published a number of statements from outstanding authorities in reply to the following questions:

"(1) Do you think the proposals of Wendell Willkie offers a fair basis of agreement between the Federal Government and the private utility industry? (2) Do you know of any other plan that you believe would be more workable?"

The following statement was received too late for publication in that issue:

J. D. Ross, administrator of the Bonneville project, Oregon, formerly member of the Securities and Exchange Commission specializing on utilities, answers:

"I am positive that the presence of public power from generators to the customer in any neighborhood is the only agency that can ever regulate the price of electricity to the people. State regulation has not done it. Federal regulation cannot do it.

"The recent terrible depression, where millions lost their savings, must be largely laid at the door of private power and their watering of stocks and bonds. This was all under so-called State regulation. It failed utterly.

CAUSE OF UNEMPLOYMENT

"The Federal Government built these plants as a means of feeding the hungry. Thank Heaven that we have a President that has the humanity and foresight to do this constructive work instead of doing like our neighbor nations across the seas. They have as great an unemployment question, but to feed their hungry and prevent internal explosions they spend half their income in destructive war work. When the rest of the people can no longer support such a program, the only alternative left is to go out and loot some other nation, destroying thousands of defenseless women and children.

Unemployment is not caused by any government. Mergers and price fixing have much to do with it.

But the greatest cause of unemployment lies in the tremendous strides in science and invention. The electric age has brought the electric slave that works 24 hours a day, with a speed and accuracy well-nigh human.

Just now depression is accentuated, as a result of the sudden demands of labor with the consequent jump of prices, together with the war scare.

The competition of a public power system reduces rates to a very great degree, but the highest degree of economy is reached

when the public power agency offers the existing private company a fair price to purchase its property before it starts into competition.

Both sides will get a better deal than will ever be possible again, as the cost of construction and operation is doubled, due to duplication and competition. The public must pay them for two plants, and the company must then accept a lower price that is lessened by a share of the losses of duplication.

The same electric science and invention that deprived many of work, should now bring its benefits in the greatest amount, and at the lowest prices, to all humanity alike. Why should its full extension be hampered by any agreement?

THE VALUE OF CONTROLS

Why does private power resist policing by the Securities and Exchange Commission? All the rest of us are policed. The Commission stands ready to encourage the issuance of every bond and stock that has a proper value back of it. These companies ask regulation from the people in one breath and fight it in the next breath.

If private power is backward in development, it is their own fault. Honest stocks and bonds always find a market. If, then, wherever the people want public power, these people are first given a dollar for every dollar of fair value in their power systems, no further agreement is necessary. They had their chance and failed.

It is not any need of an agreement that hampers them now. Their chief trouble is that the public hesitates to believe them sincere after the disasters they brought in the depression.

Conference on Educational Broadcasting

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

ADDRESS OF DR. JAMES ROWLAND ANGELL, EDUCATIONAL COUNSELOR OF THE NATIONAL BROADCASTING CO., BEFORE THE SECOND NATIONAL CONFERENCE ON EDUCATIONAL BROADCASTING, DECEMBER 1, 1937

Mr. WHITE. Mr. President, on December 1 there was held a national conference on educational broadcasting. The conference was addressed by Dr. James R. Angell, one of the outstanding educators of our country. I ask unanimous consent that the address made by Dr. Angell may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with great diffidence that I venture to address this distinguished gathering, for I have had only a few weeks of contact with the problems of broadcasting, and my ignorance of their solution is still profound. I speak as a layman who has spent more than twoscore years in American university education, maintaining a keen and constant interest in primary and secondary education. I came up through the public schools and the State university, and I have spent the larger part of my professional life in the service of our endowed institutions. I may therefore claim direct personal acquaintance with a wide range of the problems and practices of American education and my brief comment will be chiefly concerned with certain educational aspects of radio.

I am not greatly concerned to start with a formal definition of education, although certain of my colleagues seem to think it essential to do this before one can profitably discuss education by means of radio. For practical purposes we can distinguish such radio programs as are intended for immediate use in the classrooms of schools, and possibly colleges, from those which, having potential educational value, are intended for the general public and not primarily for educational institutions. The two types may at times overlap, but in general they represent two reasonably distinct fields for broadcasting and it appears to me that they present quite distinct characteristics to the broadcasting agencies.

Although there is some division of opinion on this matter, it seems to be generally held that broadcasting for schools should attempt only that which it can hope to do better than the teacher in the classroom who is using ordinary methods, and that for the most part it should serve to supplement the regular teaching and to bring a fresh stimulus which the teacher is less able to command. It is in no sense designed to replace the teacher. That such results can be achieved with marked success is abundantly demonstrated by some years of actual experience both here and abroad. The real question today is largely one of ways and means.

So far as I have been able to determine, a regular day-by-day service to the schools of subject matter directly related to their normal curriculum can best be supplied by local stations, whether commercially owned, or owned by the State university, or the State department of education, or by the school system itself. Such local control enables the fullest adjustment of the peculiarities of a particular school system, enables the school officials and teachers to work out the programs most appropriate to local needs, and gives greatest freedom to adjust to changes suddenly precipitated by any one of the dozens of unforeseen accidents which afflict schools. The main defect in the procedure is that it may not always be found possible in a given school system to secure the persons really most competent to prepare and broadcast the programs.

At this point let me say that I think we should do all we can to encourage the preparation of absolutely first-class electrical transcriptions which can certainly in time be secured in adequate variety to care for the needs of practically any school. In a big school system it is often extremely difficult so to adjust the time schedule that broadcasts from a single source can be made available for more than a fraction of the pupils who might profit by them. This is especially true in high schools where the departmental system prevails, as it generally does. The electrical transcription can be used at any time for a group of any size and at any place. The practical convenience thus represented can hardly be exaggerated.

In this connection I call attention also to the as yet only partially explored, but apparently fruitful, field of the talking movie, although this is obviously not the place to enter upon an extended discussion of this device. Furthermore, we may be nearer than we now think to the use of television for school purposes. But that chapter is still on the knees of the gods. Suffice it to say that some of the difficulties which confront the use of television for general broadcasting are presumably less serious in the case of schools, at least those in metropolitan districts.

Does this mean that I think the great chains can do nothing directly for the schools? Not at all. But it does mean that with 48 States and four distinct time zones to be served, each State having its own peculiar problems and prejudices, it is humanly all but impossible for the chains to furnish a regular day-by-day routine service to meet the possible radio needs of the complete school curriculum. They can, as they already have done, offer brilliant supplements to the school program which a local system could rarely or never command. And in certain fields, such as music, literature, social science, and health, they will probably for a long time to come be the only source to which the schools can look for absolutely the best.

Coming to general educational broadcasting, it appears to me at present that we must recognize the diversity of interests which characterize a nation of 130,000,000 people and undertake from time to time to serve the needs of the major groups composing it and the predominant interests in such groups. No one program will please all, or hold the attention of all. Radio practice has long reflected this principle and the only difficulty has been to frame and promote programs of the highest excellence. But with all our proper emphasis on offering the best programs, we cannot forget that there is no single program which is best for all listeners or even acceptable to all. The farmer, the housewife and mother, the mechanic, the merchant, the banker, the school teacher—each shares with the other certain common interests as citizens and each has particular interests peculiar to his or her own occupation. All enjoy amusing entertainment and almost all enjoy music.

It is my impression that our great radio systems with all their defects and shortcomings have met this challenge with steadily improving programs and they may be trusted to go forward to much greater success. I believe this not only because I think the ideals governing the management of most of these enterprises are public spirited, but also because I believe that the ultimate value in dollars and cents which accrues as a consequence of offering programs of high interest and fine quality is sure to be increasingly recognized. Criticism is good for our prevailing system when it is thoughtful and well-founded, and such criticism as we have heard here will doubtless be widely heeded.

I am glad to mark the growing interest in determining listener attitudes, for after all it is not so much a question of what we shall do with radio—the topic on this morning's session—that is of dominant importance as it is what radio is doing to us, not only individually, but as a nation and as members of the human race. Until we have more adequate and reliable knowledge about this, we shall be working, in no small measure, in the dark.

In the meantime no one can question the unparalleled influence which radio exercises over public opinion, public taste, and public attitudes. It is a platitude, but no less true for that reason, that the world has never known any agency of comparable importance for the direction and control of human relations. No one familiar with the use which has been made of radio in the dictator-controlled countries abroad can fail to realize the ghastly power which this device exercises when used for malign and sinister purposes. It is certainly time that we who still believe in democracy awaken to the necessity of meeting propaganda with propaganda and defending to the millions of listeners the world around the merits of a form of government which our ancestors fought through generations to establish and which is now faced by the most unscrupulous forms of attack.

The mere function as a distributor of news which the radio has been taking on in recent years is bringing an entirely new element into the lives of millions of people and at this point, too, those who are in control of the development of the radio have to

recognize a profound social and moral obligation which will tax the wisest and most disinterested intelligence.

I think the time has come when the great radio organizations may be asked and expected to accept once and for all the responsibility for a definite policy of creating the finest programs which can be devised in the general interest of the cultural development of our people. And when I use the word "cultural," I mean nothing romantic and unreal. I mean something homely but immensely important. I mean the steady promotion of those elements which are finest in the human spirit, those things which lie at the root of our civilization. To do those things which lie at the root of our civilization. To do this means seeking a statesmanlike vision of both the present and the future. It means seeking the highest available talent to bring such programs into being. It means the spending of large sums of money necessary to achieve this end and doing it steadily, not sporadically; doing it as a definite and permanent part of a public duty and not merely as some instant opportunity permits. This, I think, the industry is generally ready and desirous to do, and I am, myself, hoping to be of some service to the company with which I am connected in bringing these things to pass.

Japan's Oriental Policy

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

SPEECH OF HON. KEY PITTMAN, OF NEVADA, IN THE SENATE, FEBRUARY 10, 1936

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by the Senator from Nevada [Mr. PITTMAN] in the Senate on Monday, February 10, 1936, on the subject Japan's Oriental Policy.

There being no objection, the speech was ordered to be printed in the RECORD as follows:

JAPAN'S ORIENTAL POLICY

THREAT TO THE UNITED STATES AND CHINESE OPEN-DOOR POLICY

Mr. PITTMAN. Mr. President, there have been a great number of publications emanating from officers of the Japanese Government touching their policy in the Orient as it affects our own foreign policy. I have very carefully segregated and collated these statements for the purpose of having Congress determine exactly what their policy is and, as nearly as possible, how it will affect us in the future. I have condensed my statement as much as possible, I will say to the Senate, and therefore I will appreciate it if I may read the statement before any questions are asked. If there shall be any questions after that, I shall be very pleased to attempt to answer them.

Mr. President, I think it is high time that Congress take cognizance of the Japanese policy with regard to China, and its intended effect upon the United States. I say "Congress," because in the end Congress alone has the power and the duty imposed upon it to appropriate money for the national defense.

The Japanese Government seems very intense in its desire that we should fully understand their foreign policy and its relation to our Government. Let us, therefore, calmly and judiciously accommodate the Japanese Government and consider their policy as evidenced by their frank and bold pronouncements, and substantiated by their acts.

The Japanese Ambassador to the United States, who never hesitates to advise our people as to the foreign policy of his Government as it affects us, and to justify such policy, in his speech before the Japan Society at New York, on January 31, publicly discussed the Japanese foreign policy with regard to China, and for the evident purpose of silencing our citizens, and possibly our Government, with regard to Japan's Chinese policy, intimated that such policy is the same policy as our Monroe Doctrine. Portions of his speech, and subsequently an interview with regard to the intimation above referred to, were published in the press throughout the country.

I will state that I wrote the Japanese Ambassador and asked him if he was correctly reported in the press, and, in answer to my inquiry, he sent me a copy of the speech he had delivered. I find that he was correctly reported in the press.

Here is what the Japanese Ambassador says with regard to our Monroe Doctrine and with regard to Japan's Chinese policy:

AMBASSADOR MISCONSTRUES MONROE DOCTRINE

"Up to the time of the World War all of the great nations of the west possessed territory in east Asia which they had taken from the Chinese or other people near to Japan. These occidental aggressions had caused the Japanese to wage several minor and at least one major war. Naturally our people want no repetition of these western encroachments into their sphere of the world. The United States would countenance favorably none in any part of the Americas from Europe or Asia."

The report of the speech then says that the Japanese Ambassador contended that wherever Japanese have gone "they have enormously improved conditions for the interest and welfare of local peoples." He cited specifically benefits to Formosa, Korea, and Manchuria, and implied that Japan could similarly help China.

We have not forgotten the history of the conquest of Korea, and the conquest of Manchuria is fresh in our minds. That last conquest was in violation of the Covenant of the League of Nations, the Kellogg-Briand Pact to outlaw war, and the nine power pact adopted at Washington in 1922. Japan at the time of such conquest was a party to all of such treaties. We have taken notice of the acts of Japan in North China looking to the consummation of the Chinese policy. We are aware of the three-point demand made by Japan on China; we are aware that the acceptance by China of such demand is a final surrender of her sovereignty. Yes; we fully understand Japan's policy toward China and toward our Government with relation to China.

I am astonished, however, that the distinguished Ambassador of Japan, who is so learned in history and international law, should attempt to create the impression in our country that Japan's doctrine with relation to China is similar to our Monroe Doctrine. Such doctrines may have similarity as to the threat implied against foreign conquest, but under the Monroe Doctrine we did not arrogate to ourselves the right of conquest or domination in the Americas.

We were seeking to preserve the republics of Latin America, not to destroy them.

There is, however, a Monroe Doctrine applicable to China, which Japan, together with eight other governments, including the United States, solemnly agreed to abide by and respect. It is in full force and effect at the present time and has been in full force and effect since 1922. It is known as the nine power pact. It was adopted at Washington at the great conference for the elimination of armament, and for other purposes, held in the years 1921 and 1922.

MONROE DOCTRINE FOR CHINA

Let us see what that doctrine is. I wish the Senate to note carefully this compact. It has been challenged absolutely by Japan and apparently ignored by other members of the compact. I read article I:

"The contracting powers, other than China, agree:

"(1) To respect the sovereignty, the independence, and the territorial and administrative integrity of China;

"(2) To provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable government;

"(3) To use their influence for the purpose of effectually establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout the territory of China;

"(4) To refrain from taking advantage of conditions in China in order to seek special rights or privileges which would abridge the rights of subjects or citizens of friendly states, and from countenancing action inimical to the security of such states."

That is the Monroe Doctrine for China. I wish now to proceed with further evidence.

Now, let us consider the definite and emphatic pronouncement of an even higher Japanese authority. I say "higher" authority because since 1932 the Government of Japan has been dominated by the officers of the Japanese Army and Navy. Vice Admiral Sankichi Takahashi, commander in chief of all of the Japanese fleets, tells us abruptly how the Japanese policy shall affect the United States. I will read the press report of his statement as published in the Washington Post under date of January 23, 1936. I implore the Senate to listen to this authoritative statement of, I believe, the highest officer in the Japanese Government. I read the article exactly as published:

"JAPAN'S THREAT

"A threat that Japan may extend the cruising radius of her Navy in the Pacific waters if the United States does not alter its commercial and naval policies was voiced tonight by Vice Admiral Sankichi Takahashi, commander of the Japanese fleets.

"Speaking before the Osaka Club, Takahashi warned"—

I quote his exact language—

"'Unless America renounces her naval policy aimed at the expansion and protection of her foreign trade, Japan will be forced to extend the fleets' cruising radius to New Guinea, Celebes, and Borneo, and establish footholds in Formosa and the mandated South Sea Islands.'"

That is the end of the quotation of his exact language. The press article continues:

"The only objective of Japan's naval policy thus far, Takahashi asserted, has been the "national defense," and he suggested that the United States confine her naval program to that purpose."

He commands, in language that cannot be misunderstood, that we abandon our naval policy, refrain from expanding our commerce in China, and cease the protection of our foreign commerce. This command is accompanied with the threat that if we do not yield to his demands Japan will increase its fleet and fortify its islands. Is there any doubt as to the meaning of this threat? We are warned that the admiral intends that we shall be unable

to protect our commerce in the west Pacific by reason of the overwhelming Japanese fleet. The admiral should qualify his statement, lest some might be led to believe that it includes our commerce and our relations with the Philippine Islands.

Never in the history of modern times has such an undiplomatic, arrogant, and impertinent statement been volunteered by one holding such a position. That statement has been published around the world for over 2 weeks, and yet no explanation or retraction has been heard from representatives of Japan, or any expression of resentment from any source.

Of course, Congress will not be bulldozed into the abandonment of our national defense, the protection of our legitimate foreign trade, or our commerce with China, a friendly nation that is at peace with us and the rest of the world.

JAPANESE DECEPTIVE PROPAGANDA

The Japanese propagandists are apparently attempting to influence the good, peace-loving people of this country through deceptive articles and threats of war, with the obvious purpose of having public sentiment restrain the proper action of our Government. As an illustration of this false and destructive propaganda, permit me to call to your attention an article published in the Washington Post of January 19 by Mr. K. K. Kawakami. Mr. Kawakami is a learned and distinguished subject of the Emperor of Japan, and an editorial correspondent of the Tokyo Hochi Shimbun, one of the largest papers of Japan, and a supporter of the Japanese military government. This article was published at a very opportune time. The women's great peace society of the United States, the Committee on the Cause and Cure for War, was just assembling in Washington. I hold in my hand this article. It occupies practically one whole page. At the top of the page are three large military pictures showing marching soldiers, airplanes in the air, and great battle fleets maneuvering. These pictures clearly indicate the Japanese military power and are calculated to instill in the minds of the pacifists the dominant feeling of fear. That article was published just as this great convention was assembling.

But let me read some of the false and deceptive statements in this article. I quote from Mr. Kawakami's signed article. Listen to this false statement, intended undoubtedly for deception. I read his exact language:

FALSEHOOD EXPOSED

"At a congenial gathering during the preliminary naval parley held in London a year ago Admiral Standley, so the story goes, gave Admiral Yamamoto a friendly slap on the back and said jokingly, 'We will go over to your side and lick you with our present ratio.' If the Japanese took the joke seriously, it was not because of their proverbial lack of the sense of humor.

"Before that good-natured back slapping at London American admirals, including Mr. Standley himself, had declared solemnly and in no uncertain terms that under the present ratio their fighting fleet was powerful enough to cross the Pacific and engage the Japanese Navy in Japanese waters. They agreed that in the event of trouble between Japan and America the only region where the American Navy expected to confront the Japanese was on the Japanese side of the Pacific. They also agreed that the Japanese Navy under the present ratio could not and would not cross the Pacific to face the American Fleet."

That statement because of its unreasonableness is false upon its face; but I do not depend solely upon that. At my request our Government cabled that statement to Admiral Standley at London. He cabled his reply upon the same day. Here it is:

"I categorically deny statement attributed to me by Kawakami."

That false statement was calculated to influence the peace convention then being assembled and to urge upon it the adoption of a resolution against further naval construction by the United States. Whether such article had its influence or not the fact remains that that women's great peace society did adopt a resolution opposing the further strengthening of our Navy.

But Mr. Kawakami felt impelled to give some excuse why Japan refused our proposal at the London conference to cut all navies 20 percent even if his excuse is inconsistent with his former argument. Here is what he said in this article:

"At London the American delegation proposed that all navies be reduced by 20 percent. The proposal is superficial and impracticable if not deceptive. The 25 percent which the American Navy would scrap would consist of obsolete superfluous ships which it is but too glad to get rid of."

Well our Government knows that we have many obsolete ships, and so does the Japanese admiral; but how did Kawakami get in on this secret? The reasoning leads to the obvious conclusion that Japan has a first-class navy and no obsolete ships. Evidently Mr. Kawakami is in the confidence of high Japanese authorities. He shows no fear of contradiction or of reprimand from that source; and that source does not hesitate to reprimand in no uncertain manner. He speaks freely with regard to both our naval and foreign policies. In his article he declares:

THREATENS OPEN-DOOR POLICY

"To the Japanese, American naval policy, like Janus, has two faces. On the Atlantic side America is determined to pursue a policy of noninterference, so much so that she is ready to renounce her traditional principle of the freedom of the seas, at a sacrifice of billions of dollars in trade. On the Pacific side she insists upon the open door in China, even at the risk of war with Japan, though this open door, in the economic sense, is not an asset but a liability to America."

Well, the United States does not intend to surrender the freedom of the seas, and recognizes no jurisdiction in any government on the high seas beyond the 3-mile limit in time of peace.

The pending neutrality legislation, moreover, expressly reserves and reaffirms all of our rights under international law, even in time of peace. Foreign governments may be warned that any restrictions that the United States may see fit to put upon its citizens in time of war will not constitute any warrant for illegal treament of our citizens by foreign governments, nor deprive our Government of the right to take any action it sees fit, voluntarily, on behalf of its citizens.

But what has Mr. Kawakami or Japan to do with our policy with regard to the freedom of the seas? And, again, what has our policy with regard to neutrality during war got to do with our peacetime trade with peaceful China? There is no question of the freedom of the seas, neutral rights, or contraband of war involved in the relations between the United States and China. China is still an independent sovereign Government, at peace with the world, and desirous of trading with us, and there is nothing in the circumstances that can legally, or long physically, interfere with such trade.

The last sentence in the paragraph just quoted is quite material and interesting. It confirms and clarifies the policy of which the Ambassador and the Japanese admiral spoke. The door of China is to be closed to us, even if war is necessary to accomplish it; this in spite of the fact that Japan, in reply to the mild inquiry of the British Foreign Minister, promised to maintain the open door to Manchuria.

Well, there is no open door in Manchuria—to us! American bankers, importers, and businessmen have been run out of Manchuria and replaced by Japanese. Our educators and missionaries will not long be able to remain. But if the so-called law of necessity, pleaded by every conqueror, justifies the breaking of the solemn promises contained in the treaties to which I have referred, why should Japan worry about breaking a promise to maintain the open door in China?

OBEDIENCE TO TREATIES OR NAVIES

We have a right to worry over the violation of peace treaties. We know that there are only two ways of protecting our peace. One is through respect for and obedience to peace treaties, and the other is through a sufficient Navy and air force. We prefer the former method of maintaining peace. I deeply regret that some of our greatest peace advocates and peace societies, who have given so much to obtaining the execution of these peace treaties, are incomprehensibly silent when they are openly and ruthlessly violated, and their instrumentalities challenged.

Yes; some of these great advocates go even farther, and mercilessly attack those who do protest against the violation of such treaties. Unless the moral sentiment of the world can be brought to bear in condemnation of those who violate peace agreements, those agreements will become inoperative, held in contempt by all the world. Then war, and war alone, will be left as the only instrument to settle international controversies.

At the peace conference held in Washington recently on the cause and cure of war, this subject was discussed most ably and frankly by one of our great peace advocates, and one who has lent his voice and services to the adoption of peace treaties. On January 23, Prof. Grover Clark, of the department of history and political science of Wellesley College, addressed this great peace society, known as the National Committee on the Cause and Cure of War, on the subject of The New Dangers of War. I know that the Senate will be interested in hearing read a few quotations from this great speech. In part, he said:

PROFESSOR CLARK DENOUNCES VIOLATION OF PEACE TREATIES

"We call ourselves civilized. We have built a civilized and adequate paper structure of peace pledges and machinery. We need no more treaties, no more pledges, no more international agencies, to show that we really are beginning to be civilized in our international relations. All we need is the determination to use the machinery we have set up. We can have the certainty of continuing peace whenever we are ready to pay the price of peace—effective insistence on international justice and respect for international pledges.

"In the Far East the danger of war is real today because Japan now is controlled by men who are determined to secure for their country dominance in that part of the world, and because we of the west in effect have told these militarists and all the peoples throughout Asia that we do not take seriously our own peace pledges. By their move in Manchuria in 1931 the Japanese military chieftains created a situation precisely such as our peace machinery was designed to meet. We failed then, and we have continued to fail to make that machinery work.

"The machinery of peace has proven useless, however, not through any internal structural lack. The League Covenant and the nine-power treaty contain provisions entirely adequate for putting an abrupt end to the use of force as an instrument of national policy by the Japanese militarists. The peace machinery did not do that for which it was created simply because we were not sufficiently determined to make it work. The machinery was there. The driving power to make it function was not.

"We also have failed in another vital way. We have failed completely to show by our dealings with this military-dominated Japanese Government that our attitude was in any way affected by the fact that that Government flagrantly had broken solemn international pledges to which it and our own Government were parties. We have continued to deal with this brazenly faithless Government

precisely as though it had remained completely faithful to the pledges which it had made to and with us. We have sent our Ambassadors to it and received its Ambassadors as though we still felt perfect confidence in its good faith. We have exchanged notes and other communications with it, recalling friendly relations in the past and expressing satisfaction that such relations still continued, as though that Government had done nothing whatever to which we had the slightest objection. And finally—crowning mockery—representatives of the American and British Governments have just spent 2 long months in negotiations looking toward a new treaty with the representatives of this military-dominated Japanese Government, which has proved by its acts that even the most solemn treaty pledges mean nothing to it.

"Truly we of the west, by our failure to use the peace machinery when the situation cried out for its use, and by our continued dealing with this Japanese Government as though it were a thoroughly dependable and honorable member of international society, have demonstrated that our desire for peace is of the lips only and our machinery for securing peace is a castle in the clouds of Spain."

Professor Clark performed an invaluable service to this large representative body of women gathered from all over the United States seeking a cure for war. I deeply regret to be compelled to admit that his suggested cure for war—namely, the enforcement of peace treaties—failed to receive official endorsement by the convention.

COMPARISON OF JAPANESE AND AMERICAN NAVIES

I have attempted accurately to give the facts, and fairly to analyze the effect of such policy. It is obvious that it bears directly upon our naval policy. I intend at the proper time to discuss the comparative strength of the navies of Japan and the United States on the Pacific. I may say, however, that it is generally conceded that the United States Navy is not as strong as the Japanese Navy in any operations that might take place in the far Pacific. We have no safe base for supplies and repair west of the Hawaiian Islands. The deterioration of the effective strength of naval vessels attempting to operate 3,000 or 4,000 miles away is too well known to require discussion. I will content myself at present by reading a statement recently made by Admiral Edgar B. Pratt, retired, former Chief of Naval Operations, and an officer who is recognized as one of the greatest naval strategists this country has produced. The statement of Admiral Pratt was published recently, after the statement of Admiral Takahashi, which I have just read. I will not read the entire statement; I will read only a part of it. Admiral Pratt said:

"Japan is doing what every country has done which has had motives other than limitation of arms. Her demand for naval parity means that Japan desires to become excessively strong, for the sum of power is not based on naval limitation alone.

"If Japan were to have a navy equal in size and strength to the United States, her common limit of power would be greater than ours; her Army is superior to ours; her air force is equal to ours.

"The Japanese ask for more than is just. She is seeking to do what Germany did in the years that led up to the World War. Germany sought the greatest army and the greatest navy. The sum of the power factors gave her a "common upper limit" of arms far in excess of other nations."

Continuing, he said:

"So long as we have an adequate navy we are secure from invasion. It is important, therefore, that we keep abreast of every improvement in all branches of naval equipment."

DEFENSE SACRIFICES BY UNITED STATES

No government has made more serious efforts toward the limitation of armaments than the United States; apparently, however, up to the present our efforts have accomplished no beneficial results but have resulted in great and unnecessary sacrifices by our Government.

We cannot forget the great convention held in the United States upon the invitation of our Government in 1921 and 1922 for the limitation of armaments and fortifications. Never was there a stronger appeal made to the conscience and sentiment of the world than was presented by our own delegation upon the opening of that great convention. Our present Chief Justice, as the head of our delegation, boldly and frankly opened the meeting by the proposal that our Government would destroy seven battleships constructed and in the process of construction.

We cannot forget with what acclaim the representatives of other governments in the world approved and accepted this astounding proposition. We destroyed our battleships, and other governments in good faith destroyed their blue prints or obsolete vessels. And, this having been accomplished to our great sacrifice, the convention then refused to limit the construction of cruisers of 10,000 tons and under, submarines, and military airplanes, and the manufacture of poisonous gases.

We did not take advantage of this unlimited power, but other governments did. We did not build up to the limit, but other governments did. And then, to add to the further amusement of the foreign representatives at this great convention, Japan insisted, before even entering this agreement, that the status quo of the insular fortifications in the far Pacific north of Singapore should be maintained.

Well, whom did that hit? It did not strike at Great Britain's plans of fortification at Singapore, its great naval base; it did not touch deeply the Japanese plan of fortification, because that Government, prior to that time, had been feverishly fortifying various of its islands.

By every obligation imposed upon a government it is our duty, in honor and in good conscience, to defend and protect our citizens and those dependent upon us for protection, not only in the far Pacific but wherever they may be. Apparently this cannot be accomplished through treaties; and if that be so, then there is only one answer, and that is dominating naval and air forces.

It is my purpose to continue to give my support to the maintenance of respect for and obedience to peace treaties and the enactment of legislation that will tend to keep us out of war without the surrender of any of our international rights, but until the time arrives when there is universal respect for and obedience to peace treaties I favor and will support the construction and maintenance by the United States of naval and air forces that will be sufficient to protect our citizens, those dependent upon us, and their legal rights.

Mr. LEWIS. Mr. President, I rise to address the Senate in acknowledgement of an indebtedness to the able chairman of the Committee on Foreign Relations, the Senator from Nevada [Mr. PITTMAN], for calling to the attention of this body a state of facts too much ignored by both the Congress and the people. I had not intended in anywise to address this honorable body upon this subject, or this day on any subject, but the address of the able Senator revived to my mind how I had boldly asserted in the Senate but a short while past, in debate in support of the naval bill then before us, that there would arise as menacing the United States from the Pacific coast a situation because of which, did we not now take heed of it in the calm moments when reflection could occupy her office, we would find ourselves, at some serious moment, in a condition when excitement so exaggerated our emotions as to avoid a just measure of judgment. From such inflamed state, danger to our people surely would follow.

Mr. President, I then boldly proclaimed that the time had come when it was evident to me that the policy of Japan was to take charge of all Asia, her policy being upon the theory that she would announce as in emulation of that of the United States to the South American Continent known as the Monroe Doctrine. I said that Japan would go further in the process of her undertaking by announcing the theory of Asia for the Asiatics. Her next step would be the gradual elimination, by such force as she would be able to command, of all the interests of Americans and all the people of America in the Orient. In this departure she would seek to justify herself before the world on the ground that the United States, under our exclusion law, having forbade her people citizenship in this country and limited the number who could be residents, she has the right to exclude Americans from Japan and from the soil of Asia when she is powerful enough to enforce it.

* * * * * * *

The eminent chairman of the Foreign Relations Committee has just alluded to the existence of the Navy, and in his address has spoken of the "absence of proper bases" for the Navy, the lack of which would so separate our Navy to different parts of the seas that to gather itself together to defend our country would be in itself almost an impossible task.

Yet, in face of this fact, this, our Government, out of a specious, and, in my judgment, a mistaken generosity and form of zeal, indulging a Utopian theory under which one thinks of every country but one's own, is now on the eve of abandoning the only real base that America rightfully had as a legitimate ground of concentration for the Navy in order to guard and to prepare against the conditions I suggest and describe; and the existence is proven, sirs, by the events around us and of which established history now recorded affords complete confirmation.

Mr. President, this brings me to the conclusion to which I wish to direct the attention of my able colleagues. I ask, what is the meaning of these institutions throughout our country which have among their number eminent professors of colleges, splendid and noble-minded women, impulsive, and, I know, wholly patriotic men, assembling throughout the land to condemn the Congress for voting appropriations for the support of the Navy? Here we have the accusation that by making modern the Navy and supporting it by fitting guardianship we are inviting conflict. Goodly women, inspired by some sources of wrong guidance, have put the query to us, "Do you expect to drive our sons to war?" They overlook, I fear—not having had time to contemplate the situation—that the only defense of their sons to protect them from going to war is a complete and sufficient Navy. Sirs, the greatest assault that will come on this country is not from within. We are able to guard ourselves against the feared dangers to our country at home. The National Guards of our respective States, sirs, may in emergencies at our doors be called upon in their several spheres for our country's protection. The country may command them if need be. The same thing is true with respect to the police forces of our cities in any eventualities that could explode of local disturbance.

Mr. President, our national danger does not come from sources from within; our peril lies in assault from abroad. But, sirs, with a Navy complete, watching and guarding our shores, we shall be able to see that none shall intrude upon us; that they are not allowed to trespass upon or become possessed of our soil by investing the shores of this our country. That truth, sirs, makes it unnecessary to accumulate great armies within the interior. In that result we protect the sons of the mothers from being drafted and drawn and enlisted into armies. We can, by means of our Navy, avoid the prospects of the country being assailed by a foreign foe to the extent necessary to call upon our whole force of

national defense to rally themselves in the form of protection for America.

Then, Mr. President, I ask the question—and it is for that purpose I rose to supplement the remarks of the able chairman of the Foreign Relations Committee: How can America anticipate the things referred to by the chairman of the Foreign Relations Committee and that which I depict, or how shall our country prepare its defense, if there shall be all around us a spirit that condemns the United States in its effort to prepare for its defense and safeguard America?

We seek no war upon Japan. We seek no war upon any land. We are prepared to do that which the ordinary judgment of mankind approves—to prepare to defend ourselves against a war that is intended against us. It may not be for today; it may not be for tomorrow; but the war we prepare against is a form of war that is to be carried on at once for the purpose of reducing us, in all matters of commercial and industrial competition, to a point where we shall be impotent as against these who are our rivals. This to prevail—even though martial conflict against us becomes necessary to achieve the object.

Mr. President, it is because of that that I summon my colleagues to contemplate whether we should not ask these peace organizations, with their great resources, if they do not realize that in their desire that we should abandon every effort of strengthening the Navy and adding to the defense of our land, by that very course we invite assault upon us. I dare say to this honorable body we never would have been in war with Germany had this country been in such a condition that the German masters of military maneuvers could have seen that their country would have been defeated in its submarine venture had it dared assault us. We never would have gone to war in the mere matter of conflict of France and England with Germany as to the rivalry of economic advantages, commercial monopoly, and territorial aggression, one over the other. Sirs, in that dread day our country would have been wise enough to see the danger arising from the propaganda coming from those seeking to drive us to war. War on our part did not, as is now charged in select sources, come because of President Wilson, nor was it originated by the United States Army. It was instituted by those standing at a distance of superiority, arrogating to themselves that they were purer and nobler in patriotism than the rest of mankind, and charging that all who opposed war lacked true patriotism. These, through their propaganda, characterized the citizens who disagreed with them as wanting in loyalty or respectability. It was they who brought on the war by their demonstration; they now deplore yet condemn the United States for yielding to the propaganda they propagated.

Do my colleagues think if these propagandists were powerful in one instance they would not be equally so in another? And yet note the activity now presented by this group! Let us be frank with ourselves. Do my colleagues in this body fancy that these who discourage the country in its defense may not be stimulated as before by the same propaganda from abroad? And this with purpose to weaken us at home?

Through the cry of the necessity for peace at any price they enable our rivals, whoever they are—our opponents, from wherever they may come—to behold at the proper time the weakness of our Government, the lack of defense and support, and in such an hour to strike. From this phase of danger and destruction we must awake to that fact of peril and realize the duty to overcome it.

Mr. President, I would that my honorable colleagues in this body and those in the other body of Congress should begin to consider the threats by conduct directed to this country, and to know what will be our fate if we fail to advise caution and give consideration to our real situation. Therefore, Mr. President, indulging as I have already too far the generosity of this body in listening to me, I propose that we begin to inform our fellow citizens of the societies which organize opposition against America's national defense of the evils they are bringing on themselves. Let them see the situation of the world as it confronts us; and let them behold the plain, tragic truth, Mr. President—that this, our great America, has not one real friend among the nations of the world. Neither appreciation for our aid, nor gratitude for our sacrifices, has moved those to whom in the World War conflict we gave so much. They will not even, in this hour, recognize the debts growing out of the money they drew from our Treasury. They do not appreciate the sustenance we gave them financially, nor have they gratitude for the sacrifices of our children on the battlefield to fall in death for them. These nations do not acknowledge their debt to us, and far less do they contribute a dollar toward its repayment, as they scoff and smirk at our demand for payment.

Yet, with a spirit of that nature and with the account as given us today by the chairman of the Foreign Relations Committee, we and our country realize that it has in hazard and peril nowhere to go but to itself. In all tribulation it must depend solely on itself. Sirs, the situation must be perfectly apparent to a reflective mind. In the face of this, are we to sit idle and flatter ourselves that all the world is craving to embrace us to its bosom in fraternity under the specious name of world peace? Let there be no further delusion; let us realize that peace with us lies in our being able to compel it, and that the real defense of this country lies in its ability to show before the whole world that we contemplate no quarrel with any people, but that if there be any who contemplate a quarrel with us we are ready to resist the advance, and that this Nation still stands, as it ever must, as Americans in America for America and for the honor of this the United States of America. I thank the Senate. [Applause in the galleries.]

The PRESIDING OFFICER (Mr. GEORGE in the chair). Visitors in the gallery will preserve order.

Mr. BORAH. Mr. President, I wish to ask the Senator from Nevada as to the speech of Professor Clark from which he quoted and which I have never read. In his speech Professor Clark repeats that the machinery was at hand to enforce the peace treaties but that we did not use the machinery. What does he mean by that?

Mr. PITTMAN. I would have to give my own construction of it, of course. His subject, as I said before, was The New Dangers of War, and he took as one of the "new dangers of war" the attitude of the Japanese in China. He referred, of course, to the three treaties, the Kellogg-Briand treaty, the Covenant of the League of Nations, and the nine-power pact.

In regard to the nine-power pact, he called attention to the fact that the United States was a party to that pact. I take it he means that the threat of a new war about which he was talking possibly could be stopped by proper representations made to the Japanese Government by the parties to the nine-power pact.

Mr. BORAH. Mr. President, when gentlemen constantly speak of "the machinery" being at hand to enforce the peace treaties at a time when it is contended that the other parties to the treaties were disregarding them, I do not understand what they mean unless they have in mind the use of force. They were disregarding the treaties, it is claimed, and yet we are told by Professor Clark that "the machinery" was at hand to enforce them. There was no "machinery" at hand to enforce the treaties.

Mr. PITTMAN. I believe that the nine-power pact provides for a conference of the nine powers.

Mr. BORAH. Yes; that pact provides for a conference in contemplation of trouble arising; but here was an instance in which the nine-power pact had been disregarded and the time for a conference was here.

Mr. PITTMAN. There is no doubt in my mind, the Senator will understand, that peace treaties are a snare and a delusion unless obedience to them is enforced. I have said before that I do not think it is always necessary to use the Navy to enforce them or to use other forms of physical force. I think that there are other repressive methods that sometimes succeed and sometimes do not succeed.

Mr. BORAH. What I was undertaking to convey to the able Senator was the fact that, in the last analysis, when they talk about enforcing the peace treaties they mean to use force, because that is the only way. You may discuss situations, you may interchange views, but when you talk about enforcing peace treaties you must mean the use of force; and yet you are advocates of peace.

Mr. PITTMAN. I thoroughly agree with the Senator that those who want peace through treaties will have to enforce the treaties or they will not get peace.

American Forces in the Orient

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

ARTICLE FROM THE WASHINGTON HERALD, DECEMBER 21, 1937

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in today's Washington Herald relative to the maintenance in China of American forces.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Herald, December 21, 1937]

MARCH OF EVENTS

(By Benjamin DeCasseres)

We got out of Nicaragua, Haiti, Cuba, Mexico, and even the Philippines, but why do we still remain in China?

What business have we at the other end of the world that compels us to maintain garrisons at Peiping, Tientsin, and Shanghai? Only the other day American marines in Shanghai, a Chinese city, ordered the Japanese conquerors of that city to "move on" when the latter approached the American part of the "International Settlement."

We are told that we are there for the purpose of seeing that we get our share of customs receipts—forcibly collected installments on money that China owes us.

But the nations of Europe also owe us money—$12,000,000,000—which, from all indications, they have no intention of paying.

Why do we not send marines to London, Paris, Brussels, Rome, and Warsaw and collect our debt right out of their customs and internal revenues as we, and other major powers, do in China?

We have winked at the debt-welshers of Europe, but like the rest of the world are taking advantage of China because she is weak.

Not a pleasing dish for Americans to gulp down.

The Emergency Relief Appropriation Act—Proposal to Amend Act so as to Require Sponsor to Contribute 25 Percent of the Cost of Each Project

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. PLUMLEY. Mr. Speaker, in order to have some kind of a basis on which to form an opinion with respect to justification or practicability or reasonableness for the apparent sentiment of many Members of Congress in favor of a proposed amendment to the Emergency Relief Appropriation Act of 1937, which would require the sponsor to contribute 25 percent of the cost of each project, I made a more or less careful and thorough investigation of the situation and made it my business to make inquiries along several lines, and of some of those people who at least are in a position to know what they are talking about and what the situation is. It seemed to be the consensus among those with whom I talked that such a requirement would be a blow to the administration of relief through the Works Progress Administration, at least in Vermont.

I talked with some of the Members with respect to what I had learned, and the information obtained, and it is at the suggestion of some of them, that such information as I have acquired, may be of use and value to others, who are wondering what to do and how to vote, if and when the question again arises, that I am inserting this statement in the RECORD.

Summarized and briefly, my information is to the effect that, at the inception of the W. P. A. program, a general rule was promulgated in the State which requires the sponsor of each project, whether it be a department of the Federal Government, the State, a city, town, village, school, fire or water district, to furnish all the materials, equipment, and supplies necessary to operate such project. The sponsor is also required to pay the wages of supervisors, unless competent persons to act in that capacity are to be found upon the relief rolls. Few exceptions have been granted to this rule. Some materials were purchased for airport projects, cotton textiles were furnished for sewing projects, travel was paid on nursing projects, and so forth; but aside from these comparatively minor exceptions, project funds allotted to Vermont have been expended for labor only.

This policy was adopted not because the Administrator lacked authority to purchase materials and supplies or rent equipment, but because, as I understand it, he was firmly convinced that if the sponsor was by this method forced to bear a considerable portion of the cost of each project, projects would be more wisely selected and more carefully supervised than if the Federal Government were paying the entire cost. Furthermore, every Federal dollar which would otherwise have been expended for nonlabor costs would be available for the payment of relief labor, which, after all, was the real object to be attained.

As a result of this general rule, sponsors have agreed to contribute well in excess of 30 percent of the costs of projects approved by me.

By this procedure greater facility is obtained. Each sponsor may select such projects as are best suited to its particular situation, both from a physical and financial standpoint. If a municipality's financial condition is such that it can afford to furnish the materials for a building or other project on which other than labor costs are high, it may do so. On the other hand, a municipality, the financial condition of which is not as favorable, may select projects which require less materials, and so forth. One town last year, because it was financially able to do so, selected projects for operation which, due to the high ratio of nonlabor items, cost the town more than they did the Federal Government.

The wide variance in the percentage of sponsor's contributions is illustrated by the fact that a cumulative report of completed or discontinued projects in Vermont through September 30, 1937, discloses that the sponsors bore 49 percent of the cost of bridge projects; 45 percent of public-building projects; 43 percent of sidewalk, curb, and path projects; 42 percent of water-supply projects; and 35 percent of all classes of highway, road, and street projects. At the other extreme, they have contributed 9 percent of the cost of the construction of recreational facilities—exclusive of buildings—4 percent of sewing projects, and only 1.6 percent of professional and clerical, or so-called white-collar, projects.

I append an analysis showing the costs of individual projects selected and operated by my home town of Northfield, which discloses that the town has borne to date 27.1 percent of the cost of construction projects and only 10.7 percent of the cost of those projects operated by the women's professional division. The town's share of the cost of individual projects varies from 79.9 percent of O. P. 65–12–655, a sewer project, and 40 percent of O. P. 65–12–102, a sidewalk project, to no part of O. P. 65–12–983, overseer's assistant's project.

Grand total		63,624.00	19,844.00	83,468.00	76.2	23.8

Were it practicable to include a provision in a future bill that at least 25 percent of the cost of all projects operated in each State should be borne locally without requiring a 25-percent contribution on each individual project there might be no objection to so doing, so far as Vermont is concerned, but there is a lot of food for thought in the statement which was made to me in which one man said:

I cannot conceive, however, how the General Accounting Office of the Treasury Department could set up a system to control expenditures under such a provision. It could never, in my opin-

ion, be certain that the 25–75 ratio was being maintained in a particular State at any time. You know how technical the General Accounting Office is in such matters, and I believe that under such a system pay rolls and other vouchers would necessarily be held up, much distress would be brought to needy persons, and general confusion would result.

Going back to the proposition that 25 percent of the cost of each project be borne by the sponsor, the only conceivable plan through which this could be accomplished would be to require the sponsor of each project to deposit with the United States Treasury 25 percent of the cost when the project proposal is filed, or at least before operations are begun. This would, perhaps, be no hardship if projects were operated under the same conditions as P. W. A. or other contract jobs; that is, work is completed as expeditiously as possible.

In the case of the Works Progress Administration, the primary object is, of course, the employment of relief labor. If an abundance of such labor is available, work proceeds with reasonable dispatch. On the contrary, if conditions improve so that otherwise available labor is absorbed by private or other public employment, operations on W. P. A. projects are curtailed and in some cases suspended.

On March 15, 1937, there were assigned to construction projects 49 Northfield residents. Six months later, on September 13, only 28 were so assigned. At present the number has increased to 43. Monthly and sometimes oftener, as relief conditions demand, local quotas for W. P. A. employment are adjusted upward or downward by the State office. Not only does the number of relief workers available fluctuate rapidly with business conditions, but it often happens that carpenters, masons, and other skilled workers on relief rolls may not be available at all for considerable periods of time. In consequence, operations on a building project might necessarily be suspended and the common labor transferred to a street, sidewalk, or other project not requiring the services of carpenters, masons, and so forth. Under all of these conditions, it is impossible for local or State officials to forecast when a project may be completed. It would be manifestly unfair to require the town of Northfield to deposit and thus tie up large sums of money for the score or more projects of different classes necessary to give the required flexibility in the employment of relief labor, without knowing how many months would elapse before the same would be disbursed, if ever.

If the sponsors' money were deposited with the Treasury and materials, supplies, and equipment purchased and rented through the Works Progress Administration, it would necessarily be done by the Procurement Division of the Treasury Department on bids. This would, in many cases, result in other than local materials and equipment being used. Cities and towns would be deprived of the use of municipally owned equipment, much of which has been purchased by them especially for use on W. P. A. projects.

One of my informants advises that in his opinion—

The object which Congress is striving to achieve—namely, larger sponsors' contributions from certain States—can be accomplished by other means without crippling programs such as are carried on in Vermont and numerous other States. Up to last December 31, sponsors of W. P. A. projects throughout the Nation had agreed to contribute only 13.1 percent of the cost of all projects initiated by them. In February of this year Mr. Hopkins established an administrative policy limiting, so far as practicable, expenditures by State works progress administrations for other than labor costs to $5 per man-month of employment.

Projects submitted since that time show sponsors' contributions averaging over 23 percent. It thus appears that it is possible through administrative action alone to raise sponsors' contributions to a reasonable level. If, however, Congress should feel disposed to write some formula as this into a new bill, I do not see how it could possibly harm the program in States like Vermont.

If the foregoing summation affords basis for an intelligent formation of a judgment or opinion with respect to the feasibility and practicability of writing such an amendment as was proposed into any future relief bill, whether for it or against it, you are welcome to it.

Working of the Pending Farm Legislation as Applied to Wheat

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 21, 1937

RADIO ADDRESS BY HON. JAMES F. O'CONNOR, OF MONTANA, ON DECEMBER 20, 1937

Mr. O'CONNOR of Montana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my address made yesterday over the network of the Columbia Broadcasting System, as follows:

A new farm bill has been passed by the House of Representatives. This bill will be considered along with companion legislation from the Senate by a conference committee of the two branches of the National Legislature. From this conference will come a single measure which will be the basis for a permanent farm program for the United States. Today, I want to set forth some of my views on this legislation, especially as it will concern wheat.

Representing Montana, where wheat is a major crop, I always have particular interest in how pending farm legislation is going to affect wheat farmers.

I wish to call to your attention the importance of wheat in the farm economy of the United States. Wheat is harvested in every State except two. The farm value of wheat produced in the United States amounted in 1935 to $517,000,000. This is about 10 percent of the total farm value of 78 agricultural crops. In my State, the farm value of all crops in 1935 was more than $67,000,000, and more than half of this, or $34,000,000, came from wheat.

From the time that the rolling prairies of Montana were broken up and planted to wheat, wheat production has been one of the most important crops in the State. The acreage increased from a few thousand in 1873 to more than 4,000,000 acres in 1929. Of the total acreage of land available for crops in Montana, more than 25 percent was devoted to wheat. True, since 1929 the harvested acreage in several of the years has been much lower. This has been due almost altogether to drought. But in spite of almost unbelievable hardships our farmers have continued to carry on. They do not think the drought will last forever.

Wheat has always been and always will be a major commodity. What are the essentials of a program for wheat? The first essential, as I see it, is to continue a sound policy of soil conservation. It is a good thing to stabilize the production of wheat and regularly devote a certain proportion of the cropland to soil-conserving crops. Montana farmers well know the disastrous effects of blowing soils and depleted fertility. Grass will protect the soil from wind erosion. We have a duty to ourselves and to posterity to maintain the productivity of the land. We want our children and their children to have a chance to live in comfort. We want them to have a chance for secure incomes and higher standards of living. We want the family sized farm to endure.

I am for a soil-conservation program and for stabilization of production. I favor recognition of the interests of the areas such as cotton, corn, and tobacco and fair treatment of these areas.

A second essential of the program is that it shall allow our wheat farmers to keep their share of the export market and the world trade in wheat. I am for continuation of exports, because I well realize that this year with production of 886,000,000 bushels we are growing far more wheat than this country will use. Export outlets are needed now and will continue to be needed. If we do not have them, all wheat prices, including spring wheat prices, will be affected, even though spring wheat is virtually all used in this country. I believe that most Montana farmers oppose reduction in the acreage of wheat drastic enough to hold production down to domestic needs. A huge expanse of rich wheatland is found in the United States. Naturally our farmers want that land to produce wheat.

It is my belief that ultimately the wheat program should include a provision for payments to wheat growers in addition to those contemplated in the soil-conservation legislation.

What farmers need is Government assistance to offset the effects of the tariff on the products which they buy. The 42-cent tariff on wheat is largely "paper protection." It doesn't help very much when we have surpluses and when help is really needed. Farmers want protection against surpluses. A great many farmers think that a voluntary program operated with the help of payments along the lines of the old A. A. A. would be most practicable. And some believe that instead of coming out of the Treasury, the cost could be borne by wheat itself. A tariff-equalizing tax of 20 cents a bushel on wheat consumed in the United States has been

suggested to finance such a program. That would represent only a third of a cent in the price of a loaf of bread, but the revenue from such a tax would provide enough payments to the cooperating wheat farmer, along with the soil-conserving payments, to maintain his farm and provide a better standard of living for his family.

As was pointed out on the floor of the House by Congressman JONES, "Regardless of how we may view his philosophy of government, Alexander Hamilton, at the time he submitted his report on manufactures, December 5, 1791, when he advocated for the first time in this country the adoption of the principle of protection, and suggested that the farmers be paid a bounty as an offset to the tariff, not as a gift, but as a restitution, said: 'Bounties are sometimes not only the best but the only proper expedient for uniting the encouragement of a new object of agriculture with that of a new object of manufacture.'"

The tariff was later adopted on manufactured articles, but the Government of the United States forgot to carry out Hamilton's other recommendation with reference to the farmer. As the tariff mounted higher and higher in years following, necessarily the burden on the farmer became greater and greater, until today he is upon his back.

The wheat farmers need help now, and may need it still more next year. A sharp drop has occurred in wheat prices. The average farm price for last month was approximately 86 cents per bushel as compared with $1.23 for the crop of 1936. This represents a drop of nearly 40 cents a bushel. If payments equal to the amount which could be secured from a tax of half this amount, or 20 cents a bushel, were now made available to wheat growers, it would mean a farm price of wheat to consumers of only about $1 per bushel. The payment of $1 a bushel to farmers for wheat could not be regarded by anybody as exorbitant. Consumers realize as well as farmers the necessity of farmers having a satisfactory income if farmers are to be able to buy the products of industry. What we need is not only a balanced agriculture but a balance between agriculture and other industries. The wheat farmer wants to be on an equal standing with other farm groups in the United States and with industrial groups in order that he, as well as they, may have an adequate income.

Wheat farmers still remember what low prices mean. During the first years of the drought period, but prior to the incoming of the present administration, our farmers received almost unbelievably low prices for wheat. The average price of wheat received by Montana farmers for the 1931 crop was 50 cents a bushel. The price for the 1932 crop fell to 35 cents a bushel, but in 1933 it had risen to 62 cents a bushel; in 1934 to 86 cents; in 1935 to 92 cents; and for the 1936 crop the average price in Montana was $1.23 a bushel.

Wheat farmers do not want to ever have to go through such a period of low prices again. That is why they want permanent farm legislation and legislation which will offer them protection against the prices of 1932. This brings us to another essential of wheat legislation.

I think that there should be a fourth essential in a long-time program for wheat. Provision should be made to care for large surpluses if and when they occur.

Provision for stabilizing commercial supplies may be made in either or both of two ways. One is through use of ever-normal-granary reserve storage, backed up by marketing quotas which are provided in the pending farm bill. Marketing quotas can be used when the ever-normal granary is running over. The other way is through a crop-insurance plan, which would segregate and use as part of reserves against short crops the wheat paid in as insurance premiums.

The crop-insurance method would afford two kinds of protection. In normal times and in times of surplus wheat may be paid in as the insurance premium. In time of crop disaster the wheat premiums may be released to give a larger supply for the country as a whole.

Now, I want to say a word about the ranchers of the Great Plains. They have given hearty cooperation to the range program established by the Triple A as a part of its soil-conservation plan. Payments available under the range program have resulted in greatly improved grazing conditions on many ranches. There is a broader and deeper understanding of the importance of maintaining the grazing capacity of the range. There is a growing appreciation, too, of the common interests of livestock growers and grain farmers.

In the past the grain farmers of the commercial wheat areas, including Montana, tried to solve the marketing problems by establishing both local cooperative elevators and cooperative terminal marketing associations. These cooperative efforts have been of great help to the farmers and should be amply protected in the future. But the farmers need their national program, too, because some of the problems they face are national and international in scope.

I favor the provisions in the pending bills to continue conservation of our most precious resource, our soil. I favor also the provisions for an ever-normal granary to protect consumers as well as farmers against crop shortage. I favor farm payments to bring farmers nearer to equality of income with nonfarm groups. I favor growing whatever wheat for export that can be sold abroad at a reasonable price. I favor crop insurance because I know so well the tragedy of crop failures beyond the control of the farmer. I favor making the use of wheat-marketing quotas contingent always upon a two-thirds vote of wheat farmers in a referendum.

The present administration has done much to help wheat farmers. It has helped them with the wheat program and the soil-conservation program. The Members of Congress from the West have been a tremendous force in securing legislation favorable to the wheat growers. Notable among these western Congressmen is Congressman GREEVER, of Wyoming. Drought-stricken farmers have been helped with loans to remain on their farms and provide for their families. Our farmers approved the Agricultural Adjustment Act of 1933. They recognized the unity of interests among wheat growers in all areas. Among the important wheat-growing States, Montana stands out in the degree of farmer participation in the adjustment programs of 1933, 1934, and 1935. Ninety-five percent of the wheat acreage was under A. A. A. contract in 1933, 1934, and 1935. And when the Supreme Court, in the Hoosac Mills decision, nullified the adjustment program, our farmers accepted the soil-conservation program. They have been carrying on with it, looking forward to the time when they would secure not only a crop but an adequate price for that crop. They appreciate the understanding that President Roosevelt has of their problem.

Now, as always, the wheat farmer has his face toward the future. What will the new season be? Will there be rain? Will the wheat sprout and grow? Will it survive the hot winds, escape the hail, ripen before it rusts? What will the harvest be, and what the price?

The wheat farmer never knows. But he goes faithfully on, filling year in and year out the bread basket of the Nation. I think the Nation should and will be fair to him.

The Purchase of Silver

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. TABER. Mr. Speaker, since the Executive proclamation of December 21, 1933, supplemented by the Silver Purchase Act of June 19, 1934, and the Executive proclamation nationalizing silver on August 9, 1934, the Government of the United States has tied up in silver, which is in vaults in New York and West Point upwards of one billion ounces of silver. Some of the time newly mined silver has been purchased at 64 cents, some of the time at 78; the foreign silver has been taken in at 45 cents recently; it was taken in some of the time at 50 cents, as old silver was.

The amount mined each year will run up to 70,000,000 ounces in the United States. We are not only taking in all of that but we are taking in all of the silver that is turned in to us. Instead of making a stable market for silver we are destroying a stable market for silver.

Silver on the world market today is worth 41 cents an ounce. The United States has on hand silver dollars and silver bullion representing at a fair estimate at the very least 3,000,000,000 ounces of silver. This silver is absolutely useless to the Government as a medium of exchange or as money, with the exception of the small item involved in fractional silver coin. On the world market this silver is worth approximately $1,200,000,000, but if we started to put it on the market instead of being worth $1,200,000,000 it would not be worth over 20 cents an ounce. It has cost the Government a large sum of money to get it together, and it is costing a large sum to guard it and keep it.

Since this silver-purchase program went into effect we have absorbed upward of a billion ounces of silver. In three and a half years the Government has spent over $600,000,000 upon it, or an average of $171,000,000 a year. This has been distributed to the American Smelting & Refining Co., the U. S. Smelting & Refining Co., and two or three other large refiners. Ultimately some of the money goes to miners for newly mined silver. I would estimate that there are probably, at a liberal figure, 30,000 such miners who have participated to a small degree. This $171,000,000 a year is a direct charge on the United States Treasury, and

if we undertook to dispose of the silver it would bring little or nothing. That silver which is stored in the United States vaults is a menace to the silver industry.

Can the United States Government long continue to pay out $171,000,000 a year for silver for the benefit of four or five big smelting companies and 25,000 or 30,000 silver miners? Thirty thousand silver miners are receiving one-third as much gratuity as the gratuity being paid to 7,500,000 farmers. In other words, we are paying a subsidy of $171,000,000 to 30,000 miners and a subsidy of $500,000,000 to 7,500,000 farmers. The subsidy to the individual miner is at the rate of $5,700 each, and the subsidy to the farmers is at an average of $66 each. When we talk about saving money, why not begin on the worst of our rackets in proportion to the number of people involved and get rid of the silver-purchase racket?

The President of the United States has the power on December 31 to refuse to issue another proclamation for silver purchasing, to refuse to any longer be the goat in handing out a subsidy of $5,700 a year to each miner, if he gets it all. Will he have the courage to save $171,000,000 a year for the people of the United States? If he means to balance the Budget, this would be a good place for the President to show his colors and his sincerity by refusing to issue a proclamation extending the silver-purchase operations.

The Federal Housing Bill

EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. DUNN. Mr. Speaker, I am more than willing to support legislation which will appropriate money for the improvement of property and slum clearance. This kind of legislation is constructive and progressive.

The Federal housing bill has beyond any doubt, since it became a law, accomplished a great deal of good. If we were to appropriate twice as much money as has been required to carry out the provisions of this act, in my opinion, that money would be well spent because it not only gives many thousands of people employment but it also provides for the abolition of the slum districts, which is one of the worst social evils in our land.

Lawlessness in Jersey City

EXTENSION OF REMARKS

OF

HON. BYRON N. SCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE BY WALTER LIPPMANN

Mr. SCOTT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune by Walter Lippmann:

[From the New York Herald Tribune, December 21, 1937]

LAWLESSNESS IN JERSEY CITY

(By Walter Lippmann)

There is a condition of affairs in Jersey City which has a very special claim upon the attention of those who felt deeply about the attempt to pack the Supreme Court of the United States. For at this moment in Jersey City the plainest and the most fundamental and the most ancient of American civil rights are openly suspended by the mayor, Mr. Frank Hague, his police force, and his political henchmen.

The facts in the case are simple. The issue is, I think, perfectly clear. Those of us who opposed the President last winter because we believed his judiciary bill would impair the liberties which depend upon impartial administration of the law cannot now overlook the mayor of Jersey City when he destroys those same liberties by a completely arbitrary use of official force.

For if we meant what we said last winter when the judiciary bill was before the Senate, then we cannot now be silent, acquiescent, or too busy to bother about Mayor Hague and the constitutional rights of the C. I. O. organizers.

Jersey City has an ordinance, passed in 1924, which forbids the distribution in "any street or public place" of "any newspaper, paper, periodical, book, magazine, circular, card, or pamphlet." For violating this ordinance, or even for "consenting to" its violation, presumably by accepting printed matter, a person in Jersey City may be fined $10 or imprisoned for 10 days on the first offense, or both, and fined $25 or imprisoned 30 days, or both, for each subsequent offense.

This is, of course, a most extraordinary law. Under it a man could be clapped into jail for handing to a passerby a circular inviting him to vote for Mayor Hague or to subscribe to a policeman's ball. That the ordinance has been on the books for nearly 14 years can mean, I should suppose, only one of two things—either that in Jersey City, unlike any other spot in the country, no one ever has wished to distribute circulars and advertisements, or that the ordinance has not been enforced except occasionally against individuals or organizations that are too weak to defend their legal rights. For it seems fairly clear that the ordinance is contrary to the principles of constitutional freedom as understood in the United States or in any State within the Union, and that as a matter of fact it is unconstitutional under decisions of the courts of New Jersey.

However, on November 29, seven C. I. O. members or sympathizers were arrested in Jersey City for violating this ordinance. The only charge against them was that they had distributed leaflets on a public street in Jersey City. It was not charged that they had broken any other law or that the circular advocated the breach of any law. Their offense was that they distributed a leaflet. For this they were sentenced to 5 days in jail.

They were refused a jury trial. They were refused a stenographer to make a record. They were refused bail. They were refused a stay of sentence. They appealed immediately. But on the ground that counsel for Jersey City was not present, Chief Justice Brogan, of the supreme court, refused to hear the motion. Finally, on December 9, their petition of appeal was argued, and the district attorney was given 10 days to prepare his brief. The appeal will, however, do them no good. For they have already been compelled to serve their sentences.

Surely these proceedings must be described as an outrage upon the inner principle of constitutional liberty. For an obviously minor and technical offense against an ordinance of extremely doubtful legality these men have been held without bail, convicted, and refused a stay of sentence till they could appeal.

But this does not exhaust the lawless conduct of Mayor Hague's administration. For these seven men were at least arrested and convicted in a police court. But many other men who have wished to distribute leaflets in Jersey City have not even been arrested and convicted in a police court. They have been seized by the police, and without any further legal proceedings, have been by sheer physical force driven out of Jersey City.

This is official lawlessness, naked and unashamed. If there is any ground on which this can be defended, if there is any pretext on which it can be condoned, if there is any reason why it should be tolerated, I do not know what it is.

For no one, I take it, unless it be Mayor Hague himself, will undertake to argue that because they belong to the C. I. O. these agitators are not entitled to the benefits of the Bill of Rights. Perhaps there will be some who think that even though they do not quite like to say so.

They should remember the struggle last winter when the opponents of the court-packing plan were accused of being the mere defenders of predatory and reactionary interests. During that struggle liberal and progressive men were not deterred by that accusation; they fought for the integrity of the Constitution and the independence of the courts regardless of the fact that many would benefit with whom they wholly disagreed.

Now the shoe is on the other foot. Now it is the C. I. O., an organization of the left, that is being oppressed, and now it is the peculiar obligation of conservatives who believed in constitutionalism to go to the defense of these same principles. For the principles they profess are gravely attacked. They are gravely attacked in Jersey City, and the American bar, which was so thoroughly aroused last winter, should become thoroughly aroused once more.

They should be grateful for the chance to prove so clearly that they really meant what they said; they can prove it by insisting on the restoration of law and order in the State of New Jersey.

West Virginia Takes Prominent Place in the First National Rural Arts Exhibition

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. RANDOLPH. Mr. Speaker, the Department of Agriculture and the land-grant colleges have been celebrating their seventy-fifth birthday. The celebration has been scientific and historical in nature, bringing to attention the progress that has been made on the farms and in the farm homes.

The Department and the colleges were not content with that plan, large as it was. They wanted to include in the celebration something that would recognize another kind of activity among rural people—a kind of activity that feeds the spirit at the same time that it expands the pocketbook. They decided on an exhibition of the rural arts as practiced today in rural America.

They asked Allen Eaton, of the Russell Sage Foundation, who had just completed an intensive first-hand study of rural handicrafts, to bring together and display a representative collection. A large number of organizations and individuals interested in reviving and maintaining the rural arts have cooperated in assembling the articles shown. Among these organizations are the Extension Service of the Department, the American Federation of Arts, the American Country Life Association, the Southern Highland Handicraft Guild, Southern Highlanders, Inc., the League of New Hampshire Arts and Crafts, the Boston Society of Arts and Crafts through its rural members, the American Farm Bureau Federation, and many others. Under Mr. Eaton's trained eye the display has taken on a beauty and form that only an artist could give it.

Now, I come from a mountain district where profitable farming is often difficult, and in some localities almost impossible. Under these circumstances the practice of the handicrafts, usually under the guidance of sympathetic and trained agencies, has brought in small but much needed sums to many families. Moreover, the handicrafts have helped to lift these people of my district out of themselves. They have freed these families from much of the oppression which they have felt during lean years.

One of the outstanding examples is, of course, at Arthurdale near Reedsville, W. Va. Most persons are acquainted with the work of relocating there the families from the closed mines of Scott's Run. One of the new means of livelihood for these people is found in the handicrafts. This work at Arthurdale is young. Nevertheless, it was represented at this exhibition by such advanced pieces of workmanship as a ribbon-back chair and drop-leaf and tilt-top tables of such native woods as maple and walnut. There were simpler wooden articles as well. Their metalwork was represented in this Washington exhibition by an iron basket for fireplace wood. Incidentally, pewter candlesticks made at Arthurdale were awarded a prize at the recent International Exposition at Paris.

Some of these Arthurdale workers are members of a league of handicrafters who operate in West Virginia under the name of Mountaineer Craftsmen. Under that name you will find excellent examples of their work on sale in Morgantown, from small, inexpensive articles to reproductions of large pieces of fine, antique furniture, which are made only on order.

The American Society of Friends is the leading private agency guiding this and other handicraft work in the State. The farm security administration directs such work in specific settlements. The State extension service, among its manifold activities, is concerned with standards of quality. Of course, we are all familiar with the aid and encouragement constantly extended to our West Virginia workers by Mrs. Roosevelt.

One unusual rural industry of my State which has attracted attention and enthusiastic comment throughout the exhibit is the glassware of rich coloring and unique design made in the little town of Milton. A leading art critic wrote that one of these articles, a goblet of Venetian red, might well have come from Murano instead of West Virginia. Others said that some of it was amazingly like the well-known glassware recently brought over from Scandinavia and shown throughout this country. To bring the beautiful products of this highly specialized rural industry before the kind of audience that Washington has afforded may be of untold advantage both to would-be American purchasers and to this industry of tender years but ripe accomplishments.

With this explanation of the rural industries and what they mean to our rural people, you will readily see why I can appreciate particularly how symbolic this national exhibition was. It stood for the best that is being done in rural homes. It suggested how widespread and excellent such work is. It signified the recognition by agricultural leaders of its worth to people and Nation. Through the book describing the exhibition and the guides, who were always in attendance, it exemplified the fourfold aspect of the whole handicraft movement—economic, social, therapeutic, and educational.

The money that domestic and rural crafts have brought into remote homes often spells the difference between grinding need and making a go of life. The making of the object, of finish and worth brings pleasure and pride to people usually deprived of such sensations. The preventive and curative effects of handicrafts are now well recognized by institutions, and remarkable instances were cited in connection with some of the most beautiful articles shown. The education by doing, by improvement, by contact, by instruction in this work is of unmeasured value.

The response to this first National Rural Arts Exhibition has surpassed anything hoped for by those who planned it. Of the 21,500 persons who visited it, many returned again and again because of their interest in the objects and the beauty of arrangement.

Then, although this was not originally intended, in answer to continued and urgent demand, the Department finally ascertained the prices for as many articles as possible and sold hundreds of exhibits. Many, of course, were not for sale.

M. L. Wilson, Under Secretary of Agriculture, has well said:

> It is possible that a greater importance should be attached to the human values represented in these country arts than in many things impressively demonstrated in statistical tables. Obviously, human values are the ultimate criteria by which a campaign against Japanese beetles or an inquiry into corn or into cotton prices must ultimately be judged.
>
> We have been too much inclined, however, to look askance upon attempts to deal directly with ultimate human values. The time has come when such human values as those represented by the items included in this exhibit are frankly recognized as worthy of our direct concern.

Many of the visitors expressed the wish, verbally and in writing, that something like this exhibit might be repeated at intervals or could be made permanent. I hope the time will come when the Department of Agriculture can undertake something of the sort. It would bring innumerable benefits. It would encourage and perpetuate individual quality of workmanship through a machine age. It would help to unite the interests of all sections and to unite the people of country and city. It would strengthen the friendly reciprocal relation between remote workers and city buyers that is imperative if the handicraft movement is to reach its fullest usefulness in a period of keen commercial competition.

Stopping the Business Recession

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

RADIO ADDRESS BY HON. HERMAN P. EBERHARTER, OF PENNSYLVANIA, DECEMBER 16, 1937

Mr. EBERHARTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

A week ago I attempted to give a rounded discussion of what I consider the burning question of the hour, the business recession and increased unemployment. In that talk I did the best I could to point the way out. I tried to put forward what government and business should do in the current crisis.

Do not let anybody tell you that it is not a crisis. I am no alarmist, but business is continuing its downward spiral; more men are being laid off in our mills and factories; and relief rolls and relief work are expanding. Phillip Murray, head of the steel workers' organizing committee, tells that organization's convention here that "this is not a recession but a depression."

I repeat that I am not an alarmist, but the signs of alarm do exist. One type of annoyed American sees fascism entering our back door because the President of our sister Republic, Brazil, has the constitution temporarily abrogated. Reported overtures to that nation from Hitler and Mussolini are deplored by this type of American mind for fear such influence might spread in South America, where the Monroe Doctrine is supposed to preserve democratic government under the step-fathership of the United States.

Another species of American spreads the fear that communism is making inroads through the latitude which liberals are allowed as to freedom of speech, of the radical press; and as to the right of organizing for collective bargaining or study of forms of government different from our own. The less-informed wing of this group believes such groundless charges as the one that the Committee for Industrial Organization is dominated by Communists and are exorcised by other red herrings drawn across numerous situations by selfish or uninformed minds.

Neither as a Congressman nor a citizen of Pittsburgh do I share the fears of either of these groups. I know how young and vigorous our country is; I realize what limitless fields for development of our trade and business lie before us, and I understand in a general way what vast improvements can eventually be wrought in our system of distribution and what tremendous relief from unemployment such improvements will bring about.

I have no great fear either that such stimulation and stabilization of employment will not ultimately give us a higher level of general prosperity and well-being that will strengthen and preserve our prized processes of truly democratic government.

Business and Government will surely master the present problem, and what is badly needed is a willingness on the part of both to save the situation right away—to act before the problem becomes greater and more difficult of solution—before more of our valuable workers are put into that terrifying jeopardy of a continued diminishing industrial activity.

Last week there was an attempt on my part to analyze the attitude of business and to point to changes in that attitude which would make it possible for government, meaning Congress, to go forward with the enactment of laws in the current special session and in the regular session which opens in January.

I have said we can lick this present recession. I further believe that we are not going into a major depression. In the first place, the Government today is organized to step in with curative actions as never before; and, in the second place, we do not have today the deplorable conditions of 1929. We do not have scattered through the country a flood of wildcat securities. We have not been exporting billions of dollars to foreign borrowers. We do not have such hopelessly expanded plant capacity and such overproduction of goods.

Our banks in the vast majority are in sound condition, loaded with an excess of cash instead of an excess of questionable securities and frozen assets. Unemployment-compensation system soon will inaugurate disbursements that will help combat deflation.

We can have no continuance of the recession if we do not continue to deprive a large number of our workers of purchasing power by nonemployment of them. We need more goods, but we have not learned to divert the effect of increasing production into living standards. Instead our labor-saving methods have been improvidently creating unemployment. The biggest task before us is the restoration of the unemployed to our exchange system by use of their services in industry.

How can American business help?

It is pretty generally understood that big business put prices up as volume of production began to increase from 1933 to 1937. It acted on the theory that business under the competitive system had the right to charge what the markets could bear. Now, if business is to do its part to stimulate revival, it must boldly reduce prices to the point necessary to cause a normal flow of goods to the consumer. If a man wants to build a house, he must pay more than in 1929 despite the fact that the average income is one-third lower. He must pay 11 percent more for cement; 5 percent more for steel; 4 percent more for lumber now than at that time. For some building materials he must pay 100 percent more. And this is why the Federal Trade Commission is looking into what is known as the Cement Trust.

Business must venture. It is a venture at any time. Business must assume the risks in this policy of price reduction. It has the situation on its hands in any event. But businessmen know that substantial profits can be realized with low prices if volume of production is maintained. And still beyond this, if business holds back from prompt remedial action, production will continue to decrease and unemployment will grow. Responsible democratic government, then, must step in. In doing this it uses tax money. And big business controls half of the Nation's corporate wealth and will bear the brunt of the burden if it is, out of necessity, met by taxes.

If there is any attempted refutation of this proposed lower-price policy, I think it is pretty well nullified by the industrial performance and history of Henry Ford. While other motorcar manufacturers waited for people to get enough money to buy an auto in the early days of that industry, Mr. Ford built one which they already were able to buy. And without regard to any other of his policies or theories, we must agree that Mr. Ford has thus put an immense number of men to work. This policy, as recently adopted by the General Electric Co., takes the label: "More goods for more people at less cost."

Other olive branches have been proffered by business to Government, and I prefer to overlook any thorns thereon. Last week I discussed Mr. Lammot du Pont's proposals for putting 3,000,000 workers back to their tasks or to new ones. And I contend the plan has merit. Some of my colleagues in Washington put the implication on Mr. du Pont's proposal that the Government should forthwith withdraw from relief and public works. I prefer not to believe that his plan by implication embodied this action, which we all realize would produce sudden disaster.

There are many who disagree with me, but I cling to the conviction that business and Government can do parallel planning. The more reasonable men on both sides of our national life should be prominently spotlighted in our efforts to inaugurate such planning, and I feel confident we will get results.

In the foregoing I have sought to describe some things business might do to help.

Now, what can Government do?

It can do some things. Treading a common-sense path, it can give private enterprise all the help and encouragement possible without relinquishing those laws curing social injustices and economic piracy which have braced our hold on democratic processes in the last 6 years.

It can give financial aid by way of insurance and underwriting to help either local communities or private individuals break into new fields. One of these is housing, where a stupendous opportunity awaits our community, what with both the city of Pittsburgh and the county of Allegheny prepared to go ahead with large house-building activities designed to provide dwellings for workers in the low-income brackets. I consider housing as a key piece of assistance proper from Government, because Federal funds are available, and Government can act with the greatest speed. It is widely recognized that in the present recession every dollar expended immediately for alleviation will have an effect equal to the expenditure of $10 six months from now, if the decline in business activity and private employment continues.

Government can correct specific faults in the application of tax laws, some of which I have advocated in previous talks, which will not bring about an abandonment of the American doctrine that taxes are assessed upon the basis of the capacity of an individual, partnership, or corporation to pay.

To business I commend the same attitude in general that I sense among most of my colleagues in Washington. It is most appropriate now because of the season. It is one of good will.

Good evening and a merry Christmas to all of you.

Wage and Hour Bill

EXTENSION OF REMARKS

OF

HON. ARTHUR B. JENKS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

EDITORIAL FROM THE WASHINGTON NEWS OF DECEMBER 20, 1937

Mr. JENKS of New Hampshire. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and include therein an editorial which appeared in the December 20 edition of the Washington Daily News entitled "Why It Died," relating to the wage and hour bill. The editorial is as follows:

Blame for the demise of the wage-hour bill rests chiefly, we believe, with the nature of the bill itself, its manner of birth, and its manhandling at the hands of its friends.

The Black-Connery bill, you will recall, sprang from nowhere last May all written and done up in ribbons by "brain trusters" with a flair for legalistic jargon. Its humane and public-spirited objectives were simple—to put a bottom to wages and a top to hours in interstate industries. These objectives could have been set down in 100 simple words of American. Instead, the proposed law contained 11,000 words. And, instead of merely outlawing wages and hours that no decent American employer has a right to demand of workers, the bill set up a bureaucratic board and endowed it with powers to invade the higher wage and hour brackets at their will. Like N. R. A., it meant well but it was too ambitious.

Well, when it got to the House in a somewhat simplified form and was hung up in committee by southern and A. F. of L. opposition, its new mother, Representative MARY NORTON, brought in 129 last-minute House Labor Committee amendments, further confusing its purpose and meaning. Finally in a desperate and logrolling effort to pass it at any price its sponsors agreed to exempt mining, milling, smelting, oil, agriculture, and whatnot, making the whole thing a sorry joke on the workers whose living standards it was designed to raise. And when it went to a vote it was a mush of concession and a shining example of how not to prepare and pass Federal law.

Why, we wonder, did not the administration pave the way for this highly important reform as it paved the way for the Social Security Act of 1935? Then the White House called in the Nation's best economists, actuaries, and other experts and let them sit for nearly a year before they recommended a bill. The measure the White House sent to Congress may not have been perfect, but it passed without delay or confusion—and it is working. England, too, does better with its expert royal commissions which help frame important social and economic reforms.

Had the administration followed the same formula it did in framing social security legislation, we believe the wage-hour bill would have had easy going in Congress.

On December 16, the day before the vote was taken in the House on the wage and hour bill, I and every Member of the House of Representatives received a telegram from Mr. William Green, president of the American Federation of Labor, reading as follows:

Because the pending wage and hour bill is highly objectionable to membership of American Federation of Labor, I respectfully request you to vote to recommit to the appropriate committee for revision, study, and necessary changes in order to make it a practical and constructive measure.

Here we have something of an anomaly—a paradoxical situation—in a bill supposedly designed for the benefit of labor meeting with the sharp criticism and open opposition of a representative group of labor. Largely due to that fact and the controversy and confusion that developed during the consideration of this legislation on the floor of the House, I concurred in the conclusion reached by the majority of the House that it would be wiser to recommit the bill for clarification and revision rather than pass a measure on which labor itself could not agree and unanimously support.

I am hopeful that during the regular session of Congress a satisfactorily revised wage and hour bill, practicable and workable and meriting the undivided endorsement of labor, will be brought before this House and passed.

"Without Consistency There Is No Moral Strength"—Owen

EXTENSION OF REMARKS

OF

HON. DAVID J. LEWIS

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

ARTICLE BY DR. GEORGE L. KNAPP, OF THE STAFF OF CHESTER M. WRIGHT AND ASSOCIATES

Mr. LEWIS of Maryland. Mr. Speaker, I did not during the main discussion ask the time of the House to present my views on the very important subject of a national housing policy. Nor shall I do so now except to throw a sidelight on the greatly publicized views of a gentleman, Mr. Lammot Du Pont, who has undertaken to advise a government which he greatly disapproves just what it should do to provide employment for the unemployed. The "sidelight" consists of a public information release written by Dr. George L. Knapp, of the staff of Chester M. Wright and Associates, and reads as follows:

DEPRESSION RECORD GIVES NO BASIS FOR THINKING INDUSTRY COULD MAKE GOOD ON PROMISE OF 3,000,000 JOBS

(By George L. Knapp)

WASHINGTON, D. C.—Lammot Du Pont speaking for the (more or less) famous gunpowder clan, says that industry will put 3,000,000 men to work if labor will be good and the New Deal will reduce taxes and stop passing laws.

"The labor situation must be stabilized," he says, and puts strikes among the things that must be abolished. "The legal rules under which it (industry) must operate should be stabilized immediately. As long as the lawmaking mills grind, the fog of uncertainty mocks the industrial planner." And the tax scale, he adds, "stands like a wall in the path of industrial expansion."

Put in plain words, the passages quoted mean that labor must be content with what industry chooses to give it, and that Congress must adjourn permanently—of course, after repealing taxes on wealth.

PROSPERITY PROMISED IF—

Put still more plainly, Mr. Du Pont says that in return for no taxes, no regulation, and no labor demands, industry will make America prosperous.

Hitler has hardly asked for more.

Mr. Lammot Du Pont can hardly object if labor looks around to see what likelihood there is that industry would deliver prosperity if it got the rather large list of favors which he proposes. It is not necessary to look far. In 1929 the regulation of industry had sunk pretty close to zero; strikes were very few; taxes on wealth were very low (the highest surtax on huge incomes was 20 percent); and the surpluses or undistributed profits of corporations were not taxed at all. Congress was in session, to be sure, but chiefly to pass a tariff bill at the strong demand of industry.

WHAT RECORD SHOWS

Under these most favoring circumstances, what did industry do in 1929 and the next few years to give the land prosperity?

Take first—since a Du Pont is talking—the corporation of E. I. du Pont de Nemours.

At the close of 1929 this company had surplus and reserves of $211,814,523, and gave the number of its employees rather vaguely as 35,000.

At the close of 1932 the du Pont surplus and reserves had grown to $261,369,373, but the number of its employees, still vaguely given, was 28,000. It did not say or give any indication how many of these were on part time.

Take next General Motors Corporation, controlled by the Du Ponts.

BIG G. M. EMPLOYMENT DROP

At the close of 1929 the surplus and reserves of General Motors were $577,988,815, and its average number of employees during the year was 233,286. Its pay roll that year was $389,517,783.

At the close of 1932 the surplus and reserves of General Motors were $419,631,074, and the average number of its employees for the year was 116,152. Its pay roll that year was $143,255,070. By comparing this with the figures for 1929 you may know that either a lot of G. M. employment in 1932 was part time or that wages had been cut drastically.

(It should be said here that the reserves of G. M. stated here are only the depreciation and contingency reserves. There were several other reserves, which were not counted.)

RECORD BELIES PROMISE

Is there anything in this record to indicate that Mr. Lammot Du Pont or his family or his associates could, or would, make good on his promise of 3,000,000 jobs, if he got his own way?

From 1929 to 1932 the surplus and reserves of the du Pont Co. increased 23.6 percent, while their employment, making no allowance for part time, decreased 20 percent.

From 1929 to 1932 the surplus and reserves of the Du Pont-controlled General Motors dropped 29 percent. But the employment of General Motors dropped in the same time a little over 50 percent and their pay rolls more than 63 percent.

BIG RESERVES MADE NO JOBS

Mr. Du Pont and his ilk had privileges and power in 1929 which one hopes they never will have again. Their personal power at the White House was so great that the head of the clan in Delaware refused to take a prominent part in Mr. Hoover's emergency relief until he had been assured that income taxes would not be raised. Their companies had enormous reserves and surpluses. Yet the biggest of these companies, General Motors, discharged 117,134 men in the first 3 years of the depression, though it still had more than $419,000,000 of liquid capital available for work.

The Neutrality Act

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. FORD of California. Mr. Speaker, the earlier days of this special session of Congress were devoted to a mass attack by the minority, led by the distinguished gentleman from New York [Mr. FISH], on the President's application of the Neutrality Act of 1937.

Now, I want to make this reasoned and, I believe, irrefutable statement of fact: If the President had, against his own better judgment, and in view of his full possession of all the facts, followed the course which the gentleman from New York insists he should follow, then we would now have on our hands a first-class war.

Now the distinguished gentleman from New York protests vehemently that he is for peace and opposed to war. Being a veteran of the World War, we can readily believe that in this he is entirely sincere. So, my friends, it is not his sincerity that I question. I believe him to be honest. I have a high regard for his integrity. I merely question his judgment, which, I fear, has been or is being unduly warped by his partisan prejudice.

What I cannot understand is how, knowing as he does that the present Neutrality Act sets forth clearly and unequivocally that the President is specifically vested by this act with the discretionary authority to "find" when a state of war exists, he can justify the statements that he has made. The language of the act reads:

> Whenever the President shall find that there exists a state of war between or among two or more foreign states the President shall proclaim * * *.

This language is certainly unambiguous. This language may be compared with that of the original Neutrality Act of August 31, 1935, which read as follows:

> Upon the outbreak or during the progress of war between or among two or more foreign states, the President shall proclaim * * *.

It will be seen that, whereas the previous act served to limit considerably the discretion of the President, the present law, by requiring a definite "finding that a state of war does exist" on the part of the President, emphasizes and underlines the discretionary role which he must play in this connection.

It is therefore clear and indisputable that the intent of Congress to accord the President discretion on this point is removed from the realm of argument by the specific language of the present neutrality act and by the following statement made on the floor of the Senate by Senator NYE, generally the most uncompromising opponent of Executive discretion in matters relating to neutrality:

> I know there are those who insist that our policy in its present form is entirely discretionary; that no neutrality can be invoked without the pleasure of the President himself. That is true; yet it is altogether necessary that the determination as to when a state of war exists be left somewhere. I do not know where else it can be left than with the President of the United States. That discretion is now with him. There can be no exercise of a policy of neutrality without his finding a state of war to exist, and so proclaiming. I do not know how we can escape from that degree of discretion. I am sure it cannot be escaped.

More important than the exact wording and intent of this single act is what the President described in his chautauqua speech of August 14, 1936, as his "primary authority" under the Constitution, "to conduct our international relations." This is the same authority which Mr. Justice Sutherland, in rendering the opinion of the Supreme Court in the Curtiss-Wright case on December 21, 1936, described as—

> The very delicate, plenary, and exclusive power of the President as the sole organ of the Federal Government in the field of international relations—

A field in which, the Justice continued, the Congress—

> must often accord to the President a degree of discretion and freedom from statutory restriction which would not be admissible were domestic affairs alone involved.

The Neutrality Act covers only one phase of our foreign relations. The President, however, in deciding when and how to exercise the authority granted by the act, must consider every phase of our foreign relations. He must take into account the effect which the application of the act would have on the vital interests of this country and on the peace of the world in general. It is one thing for the President, in determining whether or not to invoke the act, to accept the narrow legalistic view based on the circumstance that there are hostilities in progress in China; it is quite another thing for him, in the light of his general duties and responsibilities in the domain of foreign affairs, to proceed with caution in order to avoid our being involved in war and to avoid the dangerous complications that an application of the act would inevitably create.

There can be no doubt that the primary intent of the Neutrality Act is to keep us out of war. Yet we must remember the President's remark when he signed the original Neutrality Act of August 31, 1935, that its inflexible provisions might serve in some cases to have the very opposite effect from that intended. In this case it is evident that the President was forced to decide that there was less risk of war for the United States by not applying the act than by applying the act. The fact is that the conflict in the Far East, though conducted on a large scale, is of a very restricted and peculiar type. Neither side, even that which claims that it has been attacked, is willing to admit that war is in progress; each continues to maintain diplomatic relations with its opponent; neither profits by the wide license which belligerent rights would accord to it in the matter of blockade, treatment of neutrals, and so forth. In other words, for reasons advantageous to both parties to the struggle, it is being conducted on a restricted scale which is also highly advantageous to neutrals. It would have been the height of unwisdom for us to have taken a step which might have terminated these fortunate restrictions on the scope of the conflict.

For example, had the President issued a proclamation under the act, and had his finding been accepted by the parties to the conflict as correctly describing the situation, and had the parties thereupon proceeded to the full exercise of belligerent rights on land and sea, our nationals and our shipping would thereby have been subjected to very great and unjustified annoyance and hazard. When the difficulties in the Far East started, more than 10,000 American nationals were in China. The immediate and pressing problem confronting this Government was and is the protection of the

lives and property of those people, some 6,000 of whom are still in China. No argument is needed to indicate the perils to which our nationals might have been subjected by the application of the Neutrality Act. The difficulty of evacuating and protecting them might have been greatly increased by clothing the contending parties with greater freedom of action and a less degree of liability than now obtains.

Finally, had this Government chosen to state publicly that a state of war existed in the Far East, the difficulties of limiting the struggle in that area to the nations which are already involved might well have been redoubled and the danger to world peace in general greatly increased. Far from contributing to the preservation of the peace of the world, we would have taken a step which might well have intensified in character, prolonged in duration, and extended in scope the very conflict which we sought to appease. The result might have been that the spirit and intent of the Neutrality Act would have been violated by its mechanical and automatic application.

The President, however, through his constitutional authority as the director of our foreign relations, and under the specific terms of the Neutrality Act, preferred to exercise his discretion and to protect the broad, general interests of the United States and its nationals by refusing to base our entire foreign policy on a blind adherence to a purely mechanical theory of neutrality, a theory which it is believed, moreover, is contrary to the letter of and not in accord with the spirit of the Neutrality Act itself.

In other words, if the President had acted in accordance with the views of the minority, as represented by the distinguished gentleman from New York [Mr. FISH], the United States might have found itself in the exact position which the distinguished gentlemen profess to deplore—involved in a war.

It is my idea that the Neutrality Act of 1937 was designed primarily to keep us out of war. The President has by the exercise of his prerogatives wisely, I believe, kept us out of war. For that signal service I for one applaud him.

But let me reiterate and emphasize, had the President, acting under the discretionary power granted him in the Neutrality Act of 1937, seen fit to declare that act in effect we today might have been at war with Japan.

Let me in this connection ask the distinguished gentleman from New York [Mr. FISH] which condition of affairs he prefers—war with Japan or peace with the world?

And, my friends, let me ask the distinguished gentleman the further question—a fair one, I believe: Just what would you have done under similar circumstances?

Would you have weighed all the conditions or would you have unthinkingly plunged this Nation into war?

Nor do I agree that the *Panay* incident, tragic as it is and fraught with such grave consequences, alters the situation in the slightest degree or in any way weakens the President's position; nor does it in any way impair my belief in the wisdom of Congress in passing the present Neutrality Act.

What I am convinced of more thoroughly than ever is that, had the President declared a state of neutrality with all the disabilities that such a condition imposes, the *Panay* incident or one of similar character would have per se forced the United States to have taken action that would have inevitably led to war.

For the reasons heretofore stated, I am still convinced that Congress acted wisely in placing in the President's hands the measure of discretion which the present Neutrality Act grants.

I believe the President has used and will continue to use this discretionary power wisely and in the interest of all the people and of peace.

I am also sure that all peace-loving people in the United States will, while agreeing with and applauding the President, vigorously, and justly so, disagree with you.

Glass Importations Drive Men Out of Local Factories

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 15, 1937

Mr. WHITE of Ohio. Mr. Speaker, the Czechoslovakian trade treaty, now under discussion in the State Department, represents a new demoralizing thrust to American wages, American hours, and standards of living. Right now American working men are being driven out of their jobs in large numbers by importations of foreign glassware. If that treaty, as concluded, further lets down the bars to a flood of products from abroad, it will mean but one thing—an enlarged import flood of glassware and farm products, textiles, and shoes. As a result, a great many more of our own citizens will be deprived of their jobs by cheap competition from abroad.

The whole system of reciprocal-trade treaties is having a ruinous effect on American agriculture, industry, and commerce. Under this misguided policy the United States, with the most efficient agricultural and industrial productive plant in the world, recently has become a nation with a continuous unfavorable balance of commodity trade. This year we have shown an unfavorable balance of commodity trade for successive months—for the first time in 43 years. This is not theory, but fact, demonstrated by the official figures of the Department of Commerce.

I am absolutely opposed to the forfeiture of domestic markets that is taking place under the present reciprocal trade treaty policy. I would like to see this harmful practice completely abandoned. If that cannot be accomplished under the present administration, I certainly believe that, as the next best step, the United States should not negotiate these treaties with any nation in default on its war debts unless some specific provision is made for regular payments on the war debts due us from such nations.

The European nations seem to have plenty of money for armaments, and yet they still say they cannot pay their obligations to the United States. This odd spectacle enforces the demand of our own people that definite action be taken on the debt question. If we are going to have the reciprocal trade treaty agreements at all, they should be used to secure payment of the war debts either in cash or trade for the United States. Under this plan, which is covered in H. R. 5782 and H. R. 8653, which I introduced on March 19, 1937, and December 8, 1937, respectively, the benefits of trade concessions would come in our direction to the advantage of American industries and workingmen instead of flowing in the opposite direction to the detriment of our own people. Under the present policy, foreign nations are getting the trade; and to make matters still worse, they ignore their war debts. My proposal is based on the obvious fact that it would be far better for the United States to be on the receiving end of trade concessions, thereby creating new employment, in exchange for reasonable adjustment on war debt. That is a matter of general policy.

Now let us get back specifically to the contemplated Czechoslovakian trade treaty, in order to see exactly what it does to the American workingmen. The effect of present importations tells the story, except that further concessions to Czechoslovakia will greatly enlarge the harmful results that are already being experienced from cheap foreign competition.

If that treaty goes through, more men will be driven out of employment in our own communities like Tiffin, Rossford,

and Toledo, Ohio, where glass factories and potteries are located. From the beginning I have opposed the forfeiture of American markets and sought to protect our own farmers and factories against their economic invasion. I have filed protest after protest in defense of the farmers and factories of the United States. This expression is another protest, and in this instance I want to particularly show what the Czechoslovakian competition is already doing to our glass industry in this country.

In the course of the recent hearings before the Committee on Reciprocity Information, Mr. Harry H. Cook, of Toledo, Ohio, vice president of the American Flint Glassworkers Union, affiliated with the American Federation of Labor, presented a number of illustrations. He showed actual examples of comparison between domestic and foreign products.

One sample was an American-made double candelabra, on which the design is patented. It is a pressed-ware article, and from the furnace to the annealing over there are 18 workers employed as it passes in its intensely heated state from one operation to another. The retail price is $5 complete. The actual labor cost alone, including the prisms which must be bought by the company, is $1. He then presented a duplicate of this article, made in Czechoslovakia and purchased in one of our large department stores at a price of $1.99 each. Considering that the importer, the retailer, and perhaps others, received a profit, Mr. Cook proved that this article came into this country duty-paid at a cost equivalent to or less than the actual labor cost of the American-made article.

The next example was a single candelabra, made in the United States and purchased here at a retail price of $2.50 each. The actual labor cost, including prisms, is 50 cents each. On the same article, made in Czechoslovakia and sold here in the United States, the retail price is $1. Again the figures clearly indicate that the single candelabra came into this country duty-paid at a price equal to or less than the actual labor cost of the American-made article.

The next comparison was on a blown goblet with pressed stem, cast foot, and deeply etched. The article made in Czechoslovakia retails here in America at 29 cents each and includes the profit of the importer and the retailer and other similar costs. The same article, made here in America, requires an actual labor cost of 13½ cents each.

You can go to almost any store in this country and purchase a blown goblet, made in Czechoslovakia, wi' ast stem and cast foot, for 20 cents. The labor cost alone in this country is 13 cents each.

Mr. Cook also presented a comparison on a piece of illuminating ware, a mission electric shade, 7 by 5 inches, produced in Czechoslovakia. This globe was delivered to a New York retail glass distributor at his place of business at a total delivered cost of less than 12 cents each. The actual labor cost of the same article, produced in an American plant, is 8¼ cents, and this does not allow for any overhead or selling or delivery expense of getting the article into the hands of the wholesaler or even the retailer.

These illustrations are but a few examples. Hundreds of similar comparisons could be cited. They explain why it is that glassworkers in Tiffin, Ohio, for example, find themselves out of work due to imports of comparable or competitive products, made in foreign countries, being sold in America for slightly more, yes, in many cases, less than the actual labor costs of producing competitive American glassware.

Under these conditions, American glassworkers are asked to consider a reduction in tariff rates in order that a foreign monopoly can be further enriched through sales in the American market. American glassworkers, 50 percent or more of whom are now unemployed, are asked to accept continued unemployment in order that workers in a foreign land may produce the articles for sale in the American market, which our own workers can and should make.

The proposed Czechoslovakian trade treaty would be a further encroachment. American farmers and American wage earners should not be placed in unrestricted competition with the lowest living standards in the world.

Future Weather Forecast

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. STEFAN. Mr. Speaker, we from the farming sections are perhaps more interested in weather forecasts than most people. We have been here for many days discussing permanent farm legislation with a view of giving the farmer an equal opportunity with other industry.

After many hours of debate and after listening to voluminous words about what should be done about the farmer, we have come to realize that we cannot legislate to control Nature. We have come to the conclusion that we cannot pass laws to make it rain on time; that we cannot insure the producer of our food that he will gather a bounteous harvest of crops; that we cannot legislate so that the sun will shine; that there will be no more blizzards, floods, tornadoes, or droughts.

We who are from States where we are still suffering from the ravages of drought and insect attacks are appreciative of the advancement of science and the forecasts made by our experts who give us information on probable future weather.

Therefore, I wish at this time to commend the service rendered to us today by these experts, and especially I want to acknowledge with gratitude the dissemination of this information by our great radio stations and our newspapers.

Mr. Speaker, in my district is located one of the pioneer radio stations of this Nation. It is the station owned and operated by the Norfolk Daily News, the world's greatest country daily newspaper. The owner and publisher of this great newspaper and radio station is Mr. Gene Huse, of Norfolk, Nebr., my home town. That radio station is known as WJAG.

This radio station for 15 years has served a great farming country. The country served by this station was once known as the richest 100 miles square in the world, agriculturally speaking. The rich Elkhorn Valley is located in this district. The world's biggest hay-shipping point is located in this district. Some of the finest purebred livestock comes from this district. Until the last year, this district was known as never having experienced a complete crop failure.

This radio station, Mr. Speaker, for 15 years has kept the people in the isolated parts and all of the district informed on the news of the day. It has pioneered in giving the people public service upon which they all depend today. This station has, ever since its inception, kept the people informed on the condition of the weather, the roads, the grain and livestock, and other markets. It has given advance notice of the coming of storms and blizzards and in many instances has saved lives through this information and service. It has brought together lost families and has brought much comfort and happiness to innumerable human beings through this unusual public service.

Because most of the people who listen to this great radio station and who read the columns of the Norfolk Daily News are farming folk, the weather information given out by these two great mediums of information—these spoken and printed words—are of the greatest importance.

Most of you will realize what it means to your farmers to secure advance information about the weather. Only recently, the Norfolk Daily News published a brief statement about future weather conditions. The radio station gave this information to its listeners and hundreds of requests came from farmers for this report. Because of its vast importance to the farming sections, I pass it on to you in order that perhaps it may contain some information which may benefit your own constituents:

The drought period is gone and 1938 should be a better year for agriculture than 1937, according to Selby Maxwell, long-range weather forecaster, in a Chicago dispatch to the Christian Science Monitor of November 27. The drought will not be back until the fifties or sixties, he states.

He makes his long-range forecasts for many commercial organizations, from calculations based on the magnetic attractions of the sun, earth, and moon which he has found chiefly responsible for meteorological variations.

Rain will be well distributed throughout the country in 1938, he states, but will be especially heavy in the western plains where it is most needed. February, March, and June will be the wet months there. Rain may be a bit deficient in the Corn Belt, but it will not be serious and won't burn crops.

Before the spring planting season arrives, most of the country is in for a share of good old-fashioned winter weather.

February, he predicts, will probably be a month of snow blizzards all over the country. The severe cold wave, he states, will extend down into Tennessee and most of the Mississippi valleys and may even reach the Carolinas. The Middle West will have an early spring, he states.

July heat in the eastern and Mississippi Valley regions will be broken by cool weather, he states, with temperature variations ranging from 20 degrees. Most of the country will have a warm May and June. August will probably be the hottest month, and the fall of 1938 will probably be moderate, he predicts.

Mr. Maxwell does not expect severe floods again on the Ohio and Mississippi Rivers, but predicts floods during the coming year on the Missouri, Arkansas, and Red Rivers. Indications show that the next real heavy rains will arrive in the fall of 1939. He also predicts tornadoes in March and April of 1938. It will not be a severe hurricane year, however, he states.

Dr. White on the Japan-Chinese Situation

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

LETTER FROM DR. FRANK J. WHITE

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my own remarks and a letter from a brother-in-law, Dr. Frank J. White, formerly professor and president of Shanghai Baptist College for over 30 years, I am without any comment of my own, and extend his letter of November 15 in the RECORD:

I hope you will lend your influence to help curb Japan's campaign of slaughter in China. I do not believe it is necessary to go to war with Japan. I believe that the only effective way of stopping Japan is by a complete economic boycott of Japanese trade.

If Great Britain, the United States, France, and Russia would do this, it would accomplish the purpose without the other powers, as they are Japan's chief customers. Germany and Italy might sell some, but they could buy little of Japan and so she could not buy without selling.

This need not lead to a war, if we were determined to keep out of war. Japan would hardly be so foolish as to attack these nations and if she did we could simply remain on the defensive with our Navy alone.

This policy, of course, would be a loss to us in trade. But we will lose Japan's cotton and iron trade in a few years if she succeeds in her plan of getting her cotton and iron from China.

But we can substitute our own cotton for Japanese silk and be all the richer.

We can easily do without Japanese manufactures and use our own, and thus give work to our own laborers.

But we would far better suffer a temporary loss of trade rather than to have another world war and bring on another more colossal depression.

Japan's appetite for conquest will never be sated. The only peace she would accept now would be complete domination of the five northern Provinces and the emasculation of the rest of China, so that she could work her will permanently with the whole Chinese nation.

Thus she could use China as a vast reservoir from which to draw raw materials and a market for her manufactured goods.

Given a victory and the resources of China to draw from, Japan is more than likely to become an unbearable neighbor for anyone to live with. Very quickly all Asiatic trade would be lost to us, just as our trade in Manchuria has gone.

Japan should be allowed what she needs but not by enslaving China and permanently jeopardizing the peace of the world.

Business and Jobs Must Be Saved

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. CELLER. Mr. Speaker, representatives of business and industry from all parts of the country accepted an invitation to discuss with me certain proposed changes in the Revenue Act of 1936, incorporated in bills which I had introduced in the Congress for that purpose. Specifically, these bills dealt with the undistributed-profits tax and the capital gains and losses tax.

This group of businessmen from all sections of the country, numbering more than 70, represented small, medium-sized, and large corporations engaged in the following industries: Textiles, hosiery, chemicals, machinery, lumber, paper and pulp, leather, building materials, transportation, petroleum, foodstuffs, rubber goods, sporting goods, development enterprises, securities, and a variety of other lines. They represented a vast investment in their enterprises and employ several millions of men and women. Their importance in the Nation's economic life is compelling.

My remarks to this representative group of businessmen, their resolutions presented to me at the close of the conference, and the bills I have since introduced in the Congress to meet the wishes expressed in these resolutions, follow.

ADDRESS AT MAYFLOWER HOTEL

Several months ago it was apparent to many of those in Congress, as well as to most businessmen, that the capital-gains-and-losses tax and the undistributed-profits tax were obstacles to business progress; that they were holding back recovery and should be removed or substantially modified.

SUMMARY OF WHAT HAS HAPPENED

On May 20, 1937, I introduced a bill in Congress (H. R. 7152) modifying the capital-gains-and-losses tax; and on June 17, 1937, I introduced a second bill (H. R. 7550) amending substantially the undistributed-profits tax. On June 30, 1937, in an address on the floor of the House, I called upon the taxpayers of the Nation to give consideration to these bills and to pass judgment upon them to their Senators and Congressmen. At the time, it was felt that I was much like one who was attempting to stem the tide with a broom. I was called visionary and a star-gazer. But the leaven has indeed spread.

I have made seven radio talks; I have given out numerous press statements; and I have made several public addresses in New York, Chicago, and Philadelphia, presenting my bills to the taxpayers of the Nation. I was on the National Broadcasting Co. network twice, the Columbia Broadcasting System twice, the Mutual Broadcasting System twice, and several times on individual broadcasting stations. Chambers of commerce all over the Nation have gone on record in support of these and similar bills. If the campaign is persisted

in and you do not let up, and you must never let up until you get these reforms, I am quite sure that our efforts will meet with success.

We were the first to take definite action in these matters, and as a result of my appeal to the taxpayers of the Nation Senators and Congressmen have received a veritable deluge of communications from their constituents, giving in detail their actual experiences with these two particular taxes. Never in my many years in Congress—and they number 15—have I seen such generally unanimous conviction that these two taxes must be drastically revised before we can expect business recovery. Now, in many instances the call is that they be entirely removed before we can expect a complete recovery. This is the direct result of my appeal to the taxpayers of the Nation.

TAXPAYERS MUST ORGANIZE AND WORK TOGETHER

I personally have received many letters and communications concerning these bills. As a result I decided to invite a number of you businessmen who have expressed yourselves favorably to these bills to meet in conference here today and to furnish the answer to my inquiry as to whether these bills meet business requirements.

I want to know whether you think the bills as written will give adequate relief and enable capital to function.

I want you to become crusaders and take them back to the taxpayers of the Nation for their approval and endorsement.

I appeal to you as patriotic citizens to do your part in aiding in the passage of these bills—to organize for relief. And, gentlemen, first of all you must organize; you must get together. With reference to these taxes, you must unite and organize for the purpose of spreading the gospel of tax reform. I use the word "organize" advisedly.

Not long ago I visited the Kingsbridge Hospital for the Insane. I saw in a medium-sized room a small, undersized attendant in control of about 50 or 60 demented veterans. They were learning trades, and they had in their hands rather blunt instruments, including hammers, saws, and so forth. I said to this small, undersized attendant, "Are you armed?" He said, "No." I said, "Aren't you afraid that these crazy fellows might organize and do you violence?" He replied quickly, "Never fear; crazy men never organize." Therefore, gentlemen, is the conclusion not inescapable that unless you businessmen organize for the purpose of obtaining these much-needed tax reforms you must be crazy?

GET ACQUAINTED WITH YOUR REPRESENTATIVES

In this connection you businessmen must realize that a little sugar goes a lot further than vinegar in accomplishing the desired results, even with your Congressmen. Your attitude and the attitude of business generally toward Congressmen and Senators is most ill-advised. I will venture the assertion that not 50 percent of the men in this room even know the names of your local Congressmen. I will venture the assertion that 25 percent of you have never seen your local Congressman. This is his fault as well as your own. Oftentimes we do not know what your aims and your aspirations are. We must guess about it or read it in the newspapers, and frequently we get an erroneous conception of what you desire. Seek out your Congressman. Tell him something of your tax troubles and your tax wants, and you will get results. Start even today before you leave Washington.

You would be lax in your duty to yourselves, your colleagues, your stockholders, your stockholders' friends, and your business associates if you did not go out of your way to seek your Senators and your Congressmen. You would also be derelict in your duty if you did not tell them something of your tax needs and desires. Tell them something about what has transpired here today. Take into consideration that many do not see eye to eye with you on this subject. Present to them your arguments forcibly, but briefly. There are many in this Nation who do not believe that what we are trying to do is for the general welfare.

JOINT PRESENTATION OF ARGUMENTS TO TAX COMMITTEES

It is my hope that out of this group meeting there will be developed a plan to make possible a sort of unified presentation of your views to the Ways and Means Committee of the House and to the Finance Committee of the Senate. Scores of organizations and individuals appear for weeks at a time before these committees. Witnesses come thousands of miles and talk and talk, and get nowhere. After listening to the testimony containing much misunderstanding, duplication, omission, and confusion, the patience and endurance of the committee members are pretty well exhausted.

We should, out of this assembly, get several good spokesmen who would present your views before the Ways and Means Committee and the Senate Finance Committee. There should be appointed a sort of advisory committee to develop a modus operandi to carry on the work for you here in Washington after you have gone home.

PROSPECTS FOR RELIEF BRIGHT

Despite all statements to the contrary, the prospects for relief are very good. Many ranking officials of the present administration favor revision and modification of these two taxes and have stated so publicly. I refer particularly to Chairman Eccles of the Federal Reserve Board, to Chairman Jones of the Reconstruction Finance Corporation, to every member of the Interstate Commerce Commission, to Chairman Kennedy of the Maritime Commission, to Senator HARRISON, chairman of the Senate Finance Committee, and to Secretary of Agriculture Wallace. All of these men feel that changes must be made in the capital gains and losses tax and the undistributed-profits tax.

Because of political and practical circumstances it may not be possible to get general tax revision at this special session of Congress. I desire it; so do you. But the administration has apparently negatived that idea, and so have Senators BARKLEY and HARRISON, as well as Congressman DOUGHTON. I firmly believe the President desires tax reform and that he wants to help business.

It is my belief that the business of the entire Nation needs encouragement. In that connection the story is told of an angler who caught a large pike. He took a large fish bowl, filled it with water, and inserted a glass partition in the center thereof. On one side of the partition he placed the big pike and on the other side he placed some small goldfish. The pike immediately darted after the goldfish, a natural prey for him. He stubbed his nose against the partition. He stubbed his nose a second time, and a third, and a fourth. Finally he gave up and remained quietly on his side. The angler then removed the partition, but the pike still remained on his side. He had stubbed his nose so often that he now failed to respond. So it is with business today. Figuratively it has stubbed its nose so often and been hurt so frequently that it remains on its side. It needs a stimulus of hope and confidence.

STABILIZE BUSINESS AND INCREASE EMPLOYMENT

I do not think your approach to Congress should be made with the idea of repealing these taxes for the sake of business, because we are talking about the whole welfare of the country. The right approach to Congress would be that these bills of mine would promote employment and make jobs, and as a result farm prices will be stabilized. My primary interest in these matters is to reestablish employment and stabilize our prices, and you cannot stabilize the price of goods without stabilizing employment.

I believe the undistributed-profits tax has had more effect on the business recession than any other factor that could be mentioned. Industry's purchasing power began to go off last December, and it has been accelerating rapidly during the past several weeks. While business naturally is concerned about this situation and the necessity for changes in the undistributed-profits tax, nevertheless, business should not be the most concerned in this matter. The people who are the most affected are the laborers and the farmers, the latter because the farm income is most affected by industrial

production. Industrial production indicates demand. Demand is a more important factor in determining price than supply. If this be true, anything which is decreasing industrial production is of much concern to the farmer. It comes to rest with the farmer while it just passes through business.

One fact stands out clearly today. The business recession that is under way is bringing in its wake unemployment, distress, and loss. The wound to industry grows deeper every day. The greater the delay, the more heroic must be the remedy. The downward trend must be stopped; otherwise increased appropriations must be made by Congress for unemployment relief, thus throwing the Budget still further out of kilter. This is not a sectional, political, or a partisan matter. It is a national problem.

LABOR MOST ANXIOUS TO STOP BUSINESS TAILSPIN

In the automobile, steel, and numerous other industries, thousands and thousands of workers are being laid off daily. Labor leaders are seeking the causes for such business decline, and wish to remove them. They are more and more realizing that unless business prospers labor cannot prosper. We have a most rational statement coming from the lips of the head of the C. I. O., Mr. John L. Lewis, who recently stated as follows:

> Miners (labor) cannot make money unless mine owners (capital) are making money. And I think that a very large percentage of the mine owners (capital) now not only share that view but will testify to our (labor) willingness—in fact, anxiety—to cooperate with them.

The undistributed-profits tax is a monkey wrench in the machinery of business and must be removed. I am quite convinced that labor realizes this as well as capital. Certainly, when 70 industrialists of great consequence in the Nation's business life take the trouble to assemble in Washington at my behest to petition me and my colleagues to repeal the undistributed-profits tax and pledge themselves to create a million new jobs, the Nation, indeed, must prick up its ears and the administration must give heed.

My primary concern is in safeguarding the jobs of the workers now employed and in providing new jobs for those now unemployed. The repeal of these taxes will put to work immediately many millions of dollars that are now idle. This means new jobs. We need these jobs, and we need them now. The working men and women of this country have a greater interest at stake than capital, because their very existence depends on action by Congress. No good doctor permits his patients to suffer from a malady that may prove fatal when he has diagnosed the case and has at hand a simple remedy that can be applied without difficulty. Why should Congress not act likewise?

THE TAX WITHOUT A FRIEND

The undistributed-profits tax, as it is now constituted, is a thorn in the side of all business, but especially annoying to the small and moderate-sized corporation. This act tends to impede progress, slow recovery, and block the growth of employment. This impediment of business is not only a detriment to the 528,000 corporations in this country, but is equally detrimental to laborers, farmers, and the Government alike.

There is a quaint oriental query: "Which is the happier—he with nine millions of money or he with nine daughters?" The answer is, "The man with nine daughters, because he wants no more." So it is with taxes. We want no more. Especially do we want no more of the type of the undistributed-profits tax.

When the tax was originally presented we were told that it would be a sort of painless tax. Experience has shown us that the Government with this tax is very much like the so-called kind mother who gave her son chloroform before spanking him. This tax had as its avowed purpose the forcing of corporations to pay out their earnings in dividends so that wealthy individuals who own stocks would have to pay higher income taxes. Incidentally, it was also argued that this tax would yield more revenue to the Federal Treasury. Like many other acts designed to accomplish two divergent aims, it has not succeeded in either.

SOUND BUSINESS DEMANDS RESERVES

I believe that it is desirable to permit corporations to put aside part of their earnings in good years to be used as a reserve for bad years. Thousands of years ago Joseph solved this same basic problem by storing wheat. We can help solve our present problem of the business cycle by saving money and capital. Indeed, our whole present Social Security Act is predicated on the fact that there shall be set aside a reserve against unemployment and old age. We should apply the same principle to corporations and capital.

Figures of the United States Department of Commerce show that in the years between 1930 and 1934 the national income paid out exceeded the national income produced by a total of more than $26,000,000,000. That huge sum represented the contribution that business made to emergency relief during 5 depression years. These payments in excess of income were made possible only because surpluses had been accumulated.

I want to impress upon you, and I think it is important that you understand, that the chief victims of the undistributed-profits tax are those included in the so-called submerged one-third of our population. The criticism of this tax is coming mainly from the many, not the few. The lower one-third of businesses that are ill-clad, ill-fed, and ill-housed are the ones who are protesting most. Existing tax policies tend to reduce the opportunities for private employment of the submerged third. A revival of the free flow of capital into productive employment is clearly a prerequisite for improvement in the lot of the submerged third that we are all so anxious and eager to bring about.

PROPOSED TAX CHANGES INADEQUATE

It is reported that tentative agreements have been reached by the tax subcommittee of the House Ways and Means Committee to exempt from the surtax provisions of the revenue measure corporations with earnings up to a certain figure ranging from $5,000 to $25,000 per year. Such treatment is totally inadequate to meet the present situation and is dealing with the subject only by halves. If the principle of the undistributed-profits tax is wrong for some business, it is wrong for all business.

Strangely enough, all statements so far given out have emphasized the high percentage of corporations that will be affected by the changes proposed by the subcommittee. This means very little, if anything, in providing jobs for workers through the expansion of private business. The amount of earnings of a corporation by themselves mean little or nothing so far as they may be used as a test for future capital requirements of the corporation for expansion, replacement of obsolete equipment and machinery, and the creation of new jobs. For example, earnings of $25,000 might represent very large profits for a small corporation and might be more than ample to meet its requirements in the way of surplus or reserve. On the other hand, $25,000 would mean nothing to a large corporation requiring hundreds of thousands of dollars for sound business expansion.

The important thing to remember is not the total number of corporations, but what they do, that counts in determining the good or bad effects of tax legislation. Treasury returns will show that possibly 80 percent of the corporations in this country earn only about 10 or 15 percent of the taxable income. The remaining 20 percent of the corporations earn 85 to 90 percent of the taxable income of American business enterprises.

It is this small percentage of corporations, with large taxable income, that give employment to the masses of the laborers in this country. They not only employ most of the workers, but they purchase most of the raw materials and constitute the most vital factor in the revival of business generally. Therefore, such changes in the laws as have been suggested, which neglect consideration of the corporations providing 85 to 90 percent of the taxable income, and, consequently, providing a greater source of employment, do not recognize the facts and do not meet the situation squarely. We must be fair to business—large and small—if we are to

protect the jobs of those at present employed and to create new jobs for those unemployed.

THE CAPITAL-GAINS TAX

Private industry must lead the march back to complete business recovery. There now seems to be general agreement among legislative leaders, administrative heads of the Government, business leaders, and labor leaders that repeal of the capital-gains tax will open the flood gates of industry and business. Public opinion is so thoroughly aroused over the iniquities of this tax and its damper upon recovery that success of repeal seems assured.

Recently, Secretary Morgenthau, of the Treasury Department, stated:

The basic need today is to foster the full application of the driving force of private capital. We want to see capital go into the productive channels of private industry. We want to see private business expand.

How can business expand, how can private capital go into productive enterprises when the present heads-I-win tails-you-lose policy of the capital-gains tax is continued in force by the Federal Government? Take the case of a man who contemplates investing his money in the stock or securities of a corporation. If the project is not successful, he runs the risk of losing the whole or the greater part of his investment. If the project is successful the Government takes a large part of the gain. How, under these circumstances, can anyone expect private capital to be invested in productive enterprises?

SHORT-SIGHTED TAX POLICY

This short-sighted tax interferes with normal business transactions and accentuates the fluctuations of the business cycle. It forces capital to lie idle. It restricts and hinders both individuals and corporations from selling capital assets and transferring their funds to more productive enterprises. Thus, the number of jobs are lessened. It keeps funds out of new enterprises and, in this respect, it is especially harmful. Why start a new business or expand a growing business when any gains will be taken by the Government but no allowances made for any losses?

It retards the circulation of money and slows down business. Of course, this means that less laborers are employed and less goods are produced for everybody. This is certainly contrary to the administration's basic program of "a more abundant life."

Everyone needs better business; the producer needs it to meet his expenses; the investor needs it to put his money to work; the Government needs it to secure the revenue necessary to meet its operating costs; but, most important of all, the workman needs it to safeguard his job at steady wages. How can we get it unless we revise our tax policies to make such an end possible?

That is the story of the capital-gains tax in operation. It works precisely the same whether it be in Wall Street, in Texas, in Georgia, or anywhere else in the country. And the net result is the freezing of capital that might otherwise be put into some economically remunerative enterprise.

It would seem, therefore, that there is no compelling logical reason for denying a proposal, the need for which is clear, the nature of which is reasonable, and the possibilities of which are almost unlimited.

GOVERNMENT REVENUE WILL INCREASE

The Government will lose no revenue by repealing the unfair provisions of these two taxes. Any temporary reduction in tax payments the first year will be more than made up by the tremendous gains in revenue due to expansion and increase of business operations in succeeding years that would flow directly and indirectly from such tax reforms. Such action would actually hasten the date at which the Federal Budget could be balanced. Such a course of action on the part of Congress would remove the jitters from which the country seems to be suffering, and would be the most decisive step that could be taken to restore waning confidence.

Congress recognized a similar situation in 1921, when it realized that our tax laws not only were preventing normal business transactions, but were also causing a loss of revenue to the Government. Relief provisions were inserted in the tax measure of that year, and revenue from the capital-gains tax alone jumped to more than $300,000,000 in a single year. Compare that figure with the estimated yield of about $50,000,000 for the present year. It cannot reasonably be doubted, in view of the facts, that these relief provisions did bring about transactions which would not have occurred otherwise. It is equally certain, as evidenced by the record, that there also was a large net gain in revenue to the Federal Government.

RESOLUTIONS

At a meeting of representatives of business and industry from all parts of the country, held at the call of Representative EMANUEL CELLER, of New York, on December 1, 1937, at the Hotel Mayflower, Washington, D. C., which was attended by more than 72 individuals, the following resolutions were unanimously adopted:

"Whereas an appeal by Representative EMANUEL CELLER to the taxpayers of the Nation was made on the floor of the House on June 30, 1937, to give consideration to H. R. 7550, relating to the undistributed-profits tax, introduced June 17, 1937, and to H. R. 7152, relating to the capital gains and losses tax, introduced May 20, 1937; and

"Whereas, subsequent appeals were made by Representative CELLER by way of the radio, press, and forum to give consideration to these measures: Now, therefore, be it

"*Resolved*, That the following reply to such appeals be made:

"These recommendations take into consideration the element of time and the effect of these measures upon Government revenues, unemployment of capital and labor, agriculture and business recovery and growth. They are the result of inquiry, study, and decision, arrived at through actual contact with business as applied to the two levies in question.

"We believe that an emergency exists which calls for immediate relief by Congress and one that justifies special consideration at the special session of Congress, independent of general tax revision.

"If Congress will effect the changes here advocated it is our conviction that as a result more than 1,000,000 men and many millions of dollars that are now idle will be put to work; and, furthermore, that the general net revenue of the Government will not be reduced, but, on the contrary, that it will be increased; and the plan of promptly balancing the Budget will not be adversely affected. Lastly, it is our conviction that these changes will greatly aid in restoring the full confidence of business in the Government.

"UNDISTRIBUTED-PROFITS TAX

"We therefore urge that Congress pass not later than December 20, 1937, a joint resolution repealing the corporate undistributed-profits tax.

"EMERGENCY RESOLUTION

"In the event that the desired repeal of the undistributed-profits tax cannot be effected by December 20, 1937, as advocated, we request that the Congress by joint resolution defer to July 1, 1938, the application of the undistributed-profits tax to all taxable years commencing after December 31, 1936, and ending prior to July 1, 1938. Thus corporations would not be penalized by reason of dividend policy in the interim.

"CAPITAL GAINS AND LOSSES TAX

"We further urge that—

"1. The capital gains and losses tax be repealed in its entirety.

"2. In the event that this is not possible, it be amended as follows in the case of both individuals and corporations:

"(a) There be exempted from its application gains and losses resulting from the sale or exchange of capital assets held for more than 1 year.

"(b) With respect to transactions in capital assets held 1 year or less resulting in a net gain, the taxpayer be given the option of adding such gain to his ordinary net income or having it taxed at a flat rate of 12½ percent.

"(c) With respect to transactions in capital assets held 1 year or less resulting in a net loss, the loss be deducted from ordinary net income, with the limitation that the tax otherwise payable on such ordinary net income shall not be decreased by more than 12½ percent of the amount of such net loss.

"3. Such action be taken by Congress not later than December 20, 1937.

"NOTE

"Attention is directed to the fact that according to reliable estimates the present capital gains and losses tax will not yield more than $50,000,000 for the year 1937. The present tax freezes capital in the middle and higher brackets, where there is volume. It reduces most of the other Government revenues by retarding trade and becomes a primary contributing cause of panics.

"The repeal of the capital gains and losses tax will increase the revenues of the Federal Government by an estimated minimum of $250,000,000 a year, as well as stimulate business and decrease unemployment of men and money. The repeal of this tax will discourage panics by permitting immediate buying and selling without prohibitive penalties. It will encourage and promote the building and buying of small homes under the proposed new Housing Act.

"CONSUMER LACK OF CONFIDENCE

"Furthermore, we call to the attention of the Congress the recent development of a marked and serious attitude on the part of the consumers, as reflected by the rapid decline in the purchase of many lines of consumers' goods. We have only to recall the events of quite recent years to know the dangerous implications of a consumers' panic.

"We believe this fear and lack of confidence can largely be dissipated by the adoption of these changes in the tax laws.

"JOINT PRESENTATION

"We approve the suggestion of Representative EMANUEL CELLER that there be a general joint presentation of facts and material in support of the aforesaid changes before the Ways and Means Committee of the House and the Finance Committee of the Senate to avoid the contradiction and confusion usually characteristic of the hearings before such committees, due to the large number of witnesses appearing, many of whom fail to give due consideration to all the factors involved. Furthermore, in this way Congress will have a simple and direct authoritative statement from a widely representative group of taxpayers, embracing employers of millions of men and representing billions of dollars of investments.

"BENEFITS TO LABOR

"With the adoption of these changes in the tax laws there will be such an increase in business that, according to a conservative estimate, more than 1,000,000 jobs will be created. Furthermore, we pledge to do all in our power to create as many new jobs as is possible, and, in addition, will urge other businessmen similarly situated to do likewise.

"On behalf of the taxpayers, employers of labor, and investors in private enterprise, we voluntarily enter into a covenant with Government to use our best efforts to fulfill the obligations set forth in these resolutions."

Joint Resolution 529, providing for the postponement of filing undistributed profits tax returns

Whereas the tax imposed by section 14 of the Revenue Act of 1936 (surtax on undistributed profits) places a burden on legitimate and proper business expansion; is accelerating the business depression that is now under way, bringing in its wake unemployment, distress, and loss; and

Whereas this tax does not allow corporations a reasonable time to appraise their financial and cash position and to prepare their statements; and

Whereas these defects have been discovered and have been recognized in official quarters; and

Whereas no loss in revenue will result to the Federal Treasury: Therefore be it

Resolved, That the application of the tax imposed by section 14 of the Revenue Act of 1936 (surtax on undistributed profits) on corporations be deferred, without penalty, until July 1, 1938, for all taxable years commencing after December 31, 1936, and ending prior to July 1, 1938.

A bill (H. R. 8732) to amend the Revenue Act of 1936 with respect to capital gains and losses

Be it enacted, etc., That section 117 of the Revenue Act of 1936 be amended to read as follows:

"(a) General rule: The gain or loss upon the sale or exchange of a capital asset shall not be taken into account in computing gross income or net income.

"(b) Definition of capital assets: For the purposes of this title, 'capital assets' means property held by the taxpayer (whether or not connected with his trade or business), but does not include stock in trade of the taxpayer or other property of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business.

"(c) Gains and losses from short sales, etc.: For the purpose of this title—

"(1) gains or losses from short sales of property shall be considered as gains or losses from sales or exchanges of capital assets; and

"(2) gains or losses attributable to the failure to exercise privileges or options to buy or sell property shall be considered as gains or losses from sales or exchanges of capital assets.

"(d) Retirement of bonds, etc.: For the purposes of this title, amounts received by the holder upon the retirement of bonds, debentures, notes, or certificates or other evidences of indebtedness issued by any corporation (including those issued by a government or political subdivision thereof), with interest coupons or in registered form, shall be considered as amounts received in exchange therefor."

SEC. 2. Subsection (j) of section 23 and section 116 of the Revenue Act of 1936 are hereby repealed.

SEC. 3. The amendments made by this act shall apply only to taxable years beginning after December 31, 1936.

A bill (H. R. 8762) to amend the Revenue Act of 1936 with respect to the surtax on undistributed profits

Be it enacted, etc., That section 14 of the Revenue Act of 1936 (surtax on undistributed profits) is hereby repealed with respect to taxable years beginning after December 31, 1936.

Homes on a Solid Foundation

EXTENSION OF REMARKS

OF

HON. PETER J. DEMUTH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. DEMUTH. Mr. Speaker, this morning while reflecting upon the problem of helping business in general by stimulating the building industry through H. R. 8730, I received a pamphlet which contained an address by Hon. Homer Cummings entitled "The United States Problem of Monopoly."

There also came to my mind the paragraph in Boeckh's Manual of Appraisals entitled "The Variable Dollar," in which a table shows values that are interchangeable through a dollar, namely, 75 minutes of labor, 2 bushels of wheat, 1½ pounds of wool, 28 miles of railroad ride, 1 inch of advertising space, 30 seconds of broadcasting, $100 used for 2 months, 100 common brick, 20 loaves of bread, 5 gallons of gasoline, 50 newspapers, 2 pounds of candy, three-fourth barrel portland cement, and 20 pounds of crude rubber.

In considering the value of a property you can, no doubt, appreciate the fact that the exchange value of the vast number of products that enter into the value of a home. The importance of a commodity dollar immediately becomes evident as well as a uniform supply of credit money which directly affects the exchange value of our common medium of exchange or common denominator, the dollar.

The building industry represents an exchange of a vast number of commodities affecting the exchange value of goods and services of all labor, be it on the farm or in manufacturing. It has been stated by the Bureau of Labor Statistics "for every dollar spent in the building industry, $2.50 is spent behind the lines by the industries supported by the building industry." Indeed, the various foods consumed by the mechanics in generating the human energy to a great extent was and is supported by the building industries and are part of the exchange value of the finished product, the home.

It cannot be denied that the curtailment of credit money by the private coinage agencies did cause the collapse of our business structure by withdrawing from our people the common unit used in exchange of their products or goods that they had to offer for exchange. If business and industry is ever to be stabilized and let flow at an even and natural velocity for the general welfare of the citizens of our country, it can only be obtained through the establishment of a commodity dollar and by the Government of the United States issuing and controlling the necessary amount of this medium of exchange, the credit dollar.

Even while Mr. Roosevelt, our President, was endeavoring to help the people of our country, our industries, and our financial institutions, the banks continued to, and still are continuing to, work contrary to the interests of our country by continually withdrawing credit money. The bankers continue to threaten and harass mortgagors, and with increased intensity the mortgage is reduced. It may be well to note that when Mr. Andrew W. Mellon, as Secretary of the Treasury, was calling and retiring Government bonds, we were going through a great period of prosperity due to the fact that banks and other financial institutions were compelled to function for the purpose for which they were created by issuing credit to private industry. Today by issuing tax-free Government bonds we are encouraging banks to work against the best interests of our country. Now banks refuse to grant credit to private industries, but prefer to accept welfare by buying tax-free Government bonds. We are abetting and encouraging this practice and in part are to blame for this unhealthy condition.

It is my opinion the value represented in a home which is made up of the goods and services rendered by the vast ma-

jority of the American citizens is of much greater value than the $20 of goods and services rendered by the inhabitants of Africa in mining and refining an ounce of gold. This African gold is sold to the United States Government for a profit of $15 and we then store it under the ground and pronounce the words "hocus pocus, this is now worth $35 of currency," while our own natural resources and the potential services of our mechanics and artisans, made more efficient through our educational system, are of no real value.

Our present monetary system contradicts the statement of our Secretary of the Interior, Mr. Harold L. Ickes, who, in dedicating the Grand Coulee Dam, made the following statement:

> Grand Coulee Dam will endure for many thousands of years; testifying to the imagination, the ingenuity, and skill of this generation. It is not a State or a regional undertaking; it is a national development. The wealth it will produce will be part of our national assets.

Within a few days we will be conveyed to our homes and families by means of our transportation system made up of railroads, air lines, or by automotive power. Transportation is highly developed in this country and to date our transportation system has never collapsed.

Our citizens have been educated and trained to such a large degree and at considerable expense that they are our greatest resource. Our educational system contributes greatly to the potential value of our citizens. Our farmers and our farms produce and raise agricultural products in superabundance sufficient so that no man should ever go hungry. Our industries are more highly developed and capable of manufacturing goods in quantities almost large enough to supply the desires of all those who have other valuable commodities and services to offer in exchange. However, our most vital transportation system, our medium of exchange, has again collapsed. The privately owned system of manufacture of credit money is most certainly in need of reconstruction. Its proper operation is so necessary to the existence of all our people and their general welfare it can no longer be left to the caprice and control of selfish private agencies, to the disadvantage of all our citizens.

By H. R. 8730 we are attempting the impossible by wiring together the superstructure built on an unstable foundation. Failure cracks from time to time are bound to appear. The structure will again fail unless it is built on a firm foundation.

Regionalization of Natural Resources

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

ANALYSIS OF AND COMMENTS ON THE MANSFIELD BILL (H. R. 7365)

Mr. TAYLOR of Colorado. Mr. Speaker, on June 3 last Representative MANSFIELD, the chairman of the Committee on Rivers and Harbors, introduced a bill (H. R. 7365) to provide for the regional conservation and development of the national resources, and for other purposes. The bill contains 53 pages.

There was a companion bill introduced at the same time in the Senate by Senator NORRIS—S. 2555. Those bills are of almost unlimited scope. Their objects are "to develop, integrate, and coordinate plans, projects, and activities for or incidental to the promotion of navigation, the control and prevention of floods, the safeguarding of navigable waters, and the reclamation of public lands, to conserve the waters, soil, minerals, and forest resources of the Nation," and so forth. While many of the main purposes of those measures are laudable, insofar as they apply to the waters of the streams throughout the entire arid region of the West they are in bold violation of, and absolutely destructive of, the vested property rights and the established system of development of any western resources by irrigation and reclamation of our public and private lands. They utterly ignore the doctrine of priority of water rights by appropriation, which is the foundation of all the agricultural development throughout the arid West.

The entire delegation in Congress from 13 of the Western States are unalterably opposed to the measure in its present form and we have appeared before that Committee and presented as forcibly as we could, our objections to it. I made an exhaustive statement myself before that committee about 10 days ago, presenting what I believe are the sentiments and rights of the people of those States concerning the waters within that region. At that time I presented to the committee "An analysis of and comments on the Mansfield bill, H. R. 7365," as it would affect our Western States. That analysis was prepared by the Colorado Water Conservation Board, which is an official organization headed by the Governor and created by law with authority to speak for the State of Colorado. That analysis has been prepared by some half dozen of Colorado's ablest lawyers, including our attorney general and several eminent engineers, including our State engineer. I feel very earnestly that Congress and the country should be fully advised as to the effect that the regionalizing program would have on the West.

By permission of the House I enclose herewith that analysis, as follows:

ANALYSIS OF THE MANSFIELD BILL, H. R. 7365

A bill to provide for regional conservation and development of the national resources and for other purposes

DIVISIONS OF THE BILL

The bill is 53 pages long. One division is title I, another title II, and a third title III. The first states, among other things, the purpose of the bill, and creates seven regional planning agencies which are to be instrumentalities of the Government, and which are to recommend plans to the President and the Congress of projects and activities for the utilization of water, soil, minerals, and forests of their respective regions.

Title II authorizes, among other things, the President to create regional power authorities to construct, acquire, and operate power plants and to sell or distribute electrical energy, and in connection with such operation to serve also the interests of navigation, flood control, and irrigation. Title II does not provide primarily for projects other than for electrical energy.

Title III authorizes the appropriation of such sums from time to time as may be necessary to carry out the provisions of the act.

THE PURPOSES AND CONSTITUTIONAL GROUNDS OF THE BILL

The purposes of the bill and the constitutional grounds specified in support of the purposes are set forth in title I, section 1, and are to control floods, safeguard navigation, reclaim public lands, conserve the water, soil, mineral, and forest resources of the Nation, stabilize and increase employment—all to the end of promoting interstate commerce, the national defense, and the general welfare.

TITLE I—DEALING WITH PLANNING AGENCIES ANALYZED IN GREATER DETAIL

Regional planning agencies

One planning agency is created for each of seven specified drainage basins, to wit: The Atlantic seaboard planning agency; Great Lakes-Ohio planning agency; Tennessee Valley planning agency; Missouri Valley planning agency; Arkansas planning agency; Southwestern planning agency; and the Columbia Valley planning agency (sec. 2). Since drainage basins include both streams and tributaries, it follows that the jurisdiction of the agencies would extend to tributaries. The President may redefine from time to time the territorial boundaries of the seven regions (sec. 2).

Regional directors and committees

Each planning agency is to consist of a regional conservation committee or committees, of which a regional planning director shall be a member and the chief administrative officer. All are appointed by the President, and the appointment of the director is to be confirmed by the Senate (sec. 3 (a) (b)). The regional director carries out the policies of the conservation committee (sec. 3 (c)).

"The regional planning agencies shall be subject to the supervision and control of the President * * * for the purpose of insuring appropriate conformity of regional plans to a national policy and appropriate coordination of regional plans" (sec. 4 (a)).

The most important functions of the planning agencies are to study and to devise and submit plans to the President and to the

Congress for projects whereby to bring about the most economical use of the Nation's water, soil, mineral, and forest resources, including the control of water run-off (sec. 4 (b)). In doing this the agencies are to cooperate in their investigations with other departments of the Government and to have the right to commandeer the latters' services and information (sec. 4 (b)). So, too, the agencies are to cooperate with the States and public and cooperative agencies (nothing is said, however, about cooperation with private agencies that are not organized on a cooperative basis) in accumulating data and development of plans (sec. 4 (c)).

In submitting plans to the President the agencies shall include recommendations conducive to cooperation among State, Federal, regional, and local agencies in carrying out plans, projects, and activities, and also shall include recommendations for legislation to the same general end (sec. 4 (d)).

Submission of plans

Once a year each regional planning agency shall submit to the President plans for the construction and the undertaking during the succeeding fiscal year of projects in line with the purposes of the bill, namely, conservation and prudent use of the water, soil, mineral, and forest resources; also prevention of floods, safeguarding navigation, reclamation of public lands, conservation of the water, soil, mineral, and forest resources of the Nation (sec. 5 (a)).

If the President approves any of the plans, he is to refer them to the Congress with his recommendations, and he may call upon the agencies for plans for such projects as he desires in carrying out the purposes of the act (sec. 5 (b)). When "plans involve * * * integrated developments traversing the geographic region of two or more regional planning agencies the President may assign or reassign * * * to any one of such regional planning agencies as he finds necessary or appropriate to obtain the advantages of natural and economic boundaries in the planning of such integrated developments" (sec. 5 (b)).

Preparation of plans

Plans shall include projects and activities adapted to conservation and integrated development of water, soil, and forest resources, and include "improved methods of soil conservation, utilization of fertilization and cultivation" (sec. 6 (a) (2)).

Plans shall include "conservation of water for power, irrigation, and other beneficial uses," prudent husbandry of natural resources, and the "integration and interconnection of projects and activities" (sec. 6 (b) (1) (2) (4)).

Plans may include projects to be constructed by various departments of Government or by regional agencies or by the States or by the latter's subdivisions and to be financed by the United States or the States (or the latter's subdivisions) or by both (sec. 6 (c)).

Plans contemplate jurisdiction of planning agencies over tributaries as well as main streams (sec. 6 (a) (1) (3)).

Plans shall classify projects in order of urgency to promote employment (sec. 6 (d)).

Interstate compacts

Consent of Congress is given to States to enter into interstate compacts "(1) to further and supplement on behalf of the States the purposes of this act and (2) to carry out on behalf of the States appropriate projects and activities in relation thereto" (sec. 7).

"Any such agreement or compact shall not become effective or binding upon the States party thereto unless and until it shall have been submitted to and approved by the President after consultation with the regional planning agency within whose geographic region the projects or activities contemplated by such agreement or compact are to be carried out" (sec. 7).

Pollution

Unlawful to pollute streams over which the Congress has jurisdiction under its authority to regulate commerce between the States or with foreign nations (sec. 8).

TITLE II—DEALING WITH REGIONAL POWER AUTHORITIES ANALYZED IN GREATER DETAIL

Creation and composition

The President is authorized to create, by Executive order, corporate regional power authorities when and wherever, and as numerous, as he deems best, and regardless of the seven planning regions established by title I of the bill (sec. 201 (a)).

Each power authority is to have an administrator to be appointed by the President and confirmed by the Senate, and a Regional Power Board, whose members (not less than three or more than five, including the director) are to be appointed by the President (sec. 201 (c) (d) (e)). The Board determines policies and the Administrator carries them out (sec. 201 (e)).

Some of powers

The power authorities are to have the right to construct and operate power plants and transmission lines and to sell and distribute energy either at wholesale or retail in the cities and in the country; and to the power authorities the President, if he deems best, may transfer by Executive order already existing plants operated by other departments (Bureau of Reclamation for instance) or agencies of the Government (secs. 201 (a), 203 (a) (c) (d) (e)).

States, districts, municipalities, and cooperatives are to be preferred over others as purchasers of power (sec. 203 (d)).

Rate schedules for the sale of energy must be approved by the Federal Power Commission (sec. 203 (f)).

The rates, having regard to recovery of cost and to appropriate reserves for maintenance and upkeep and amortization of capital investment over a period of years shall be such as to encourage the widest possible use of electrical energy; and where the generation of energy is only one of several purposes of a project, the cost shall be fairly allocated among the purposes to encourage the widest possible use of water for irrigation and of electric energy (sec. 203 (f) (g)).

Reports

Each power authority shall submit to the President and the Congress annual financial reports of their respective businesses and of the status and progress of their projects and activities (sec. 206 (a)). The Comptroller General may audit (sec. 205 (b)).

Injunctions

Injunctions against the authorities or their representatives are made difficult to obtain, and where temporary injunctions are wrongfully obtained by the plaintiff or complainant the damages, including loss of income, may be assessed against the bond right in the same injunction suit (sec. 207 (b) (c) (d) (e)).

Jurisdiction of courts

The Federal courts are given exclusive jurisdiction of all suits against the power authorities or their representatives (sec. 207 (a) (b)).

Condemnation proceedings

The authorities may maintain suits to condemn both real and personal property for the purposes of the act (sec. 208).

Dams of the United States

All dams now being constructed or hereafter to be constructed anywhere by the United States are, where practicable, to be so constructed as to make possible the generation of power, to the end that water may not be wasted; and adverse reports on such practicability shall be submitted to the President for consideration and final decision (sec. 209).

Receipts

Receipts of each authority go to the Treasury of the United States for the credit of "Miscellaneous receipts" (sec. 211).

TITLE III OF THE BILL

Appropriations

There are hereby authorized to be appropriated from time to time such sums as may be necessary to carry out the provisions of this act (sec. 301).

OBJECTIONS TO THE MANSFIELD BILL, H. R. 7365

A bill to provide for the regional conservation and development of the national resources, and other purposes

INTRODUCTION

While there are arguments for a comprehensive and integrated development of a river system as a whole and for plans whereby to bring such a development about in order to conserve the water, soil, mineral, and forest resources of the Nation, yet the opposing arguments as applied to the Mansfield bill are the more weighty. It is the purpose of these comments to state these objections.

The bill erroneously asserts that the ownership or control of the country's waters is in the Federal Government, thus ignoring in its theory the field of ownership or control that is in the States

The bill erroneously assumes, both impliedly and expressly, that the ownership or control of the country's waters is in the Federal Government rather than in the States.

The very plans for the comprehensive development of projects and activities along stream systems, regardless of State lines, and the very prohibitions laid down by the bill upon the States, testify to such an implied assumption without the aid of any express declaration.

The bill contains, however, an express declaration. It provides that whenever, by it or any other act of the Congress, any project or activity within the scope of the plans of the Authority, "is entrusted to an authority, such authority shall construct, operate, and carry out such projects or activities primarily for the promotion of navigation, control, and prevention of floods, safeguarding of navigable waters, and the reclamation of public lands. In order to effectuate such primary purposes with the greatest public benefits, and so far as is consistent with such primary purposes, to avoid the waste of water, water power, and other property of the United States, such authority, except as the Congress may otherwise provide, shall have such powers as may be necessary to operate and carry out such project or activities * * *" (sec. 203 (a)).

Here we have an express declaration that classifies the "water" and "water power" as part of the "property of the United States." What "water" is, needs no explanation. What "water power" is, as the term is used in the bill, is not defined, but it probably means such flows of water that as to volume, fall, and location could be used in the production of electrical energy. The point is that both are expresely said to be the "property of the United States."

Undoubtedly the Congress, under the commerce clause of the Constitution, may regulate and protect navigation where it relates to interstate and foreign commerce, and, where there is such a relation, may include flood control, and do it without asking the permission of the States. The exercise of this right does not, however, exhaust the control of all of the waters of the country's

streams or all that can be done with them. There is a residuum of general ownership or control in the States or in those persons who under State law have acquired rights in respect to the water. The countless instances of the use of stream waters everywhere by owners of riparian lands in the States of the East and Middle West and by the appropriators of water in the States of the West, where the priority or appropriation system of water rights prevails, attest indisputably the existence of this residuum of water ownership or control that is beyond the reach of the Federal Government. This general ownership or control in the States has the support of the highest judicial authority. In *Kansas* v. *Colorado* (206 U. S. 46), which involved the Arkansas River, it was held by the Supreme Court of the United States that where the interstate commerce clause of the Constitution, with its resulting right to protect navigation, is not involved the powers of the States over the waters within their boundaries are supreme just by virtue of their simple statehood as members of the Union. In *Nebraska* v. *Wyoming* (295 U. S. 40), which involved the North Platte, the same Court decided that claims of the Government to water within the boundaries of a State for irrigation are like the claims of private citizens, in that whatever would bind the State and its citizens in respect to the use of water as against another State and the latter's citizens upon an interstate stream would bind equally the United States, just as if it were a private water user, and that in a suit where interstate commerce is not involved the United States is sufficiently represented by the State and cannot intervene as a party to the suit.

In the 17 States of the West where the priority or appropriation system of water law prevails there are 7 that claim that mere admission to the Union itself gives them, except where interstate commerce powers of the Federal Constitution are involved, the right of ownership or control over their respective water—a position approved by the Supreme Court in Kansas against Colorado, above cited.

Then there is the case of *California-Oregon Power Co.* v. *Beaver Portland Cement Co.* (295 U. S. 142), in which the Supreme Court held that the Congress by act of July 26, 1866, which was the act opening up the mineral portion of the public domain to private purchase, and by the Desert Act of 1877, the Congress of the United States had turned over whatever interest it had in the waters to the States. This transfer of ownership or control did not involve, of course, any surrender by the Federal Government of the powers which the Congress has under the interstate commerce clause, but surely this transfer having been made cannot now be recalled.

In the 31 States of the East and Middle West where the riparian system of water law is found, the ownership of the right to water, to the extent not affected by the interstate commerce clause is, under State law, in the owner of the riparian lands bordering upon the streams. In the appropriation States it is, under State law, in the appropriator. Under both systems of water law the general control is in the States. If the United States happens to own land bordering upon a stream in the former case, or is an appropriator in the latter case, then the United States like any private person is the owner of a right to water but holds its right under the law and authority of the State. If in the appropriation or priority States there are waters not yet appropriated, the general right to authorize the appropriation thereof is not in the United States but in the State.

In the section of the bill above quoted (sec. 203 (a)) the "reclamation of the public lands" is one of the declared functions of the authorities. Water to reclaim public lands has nothing to do with functions or objectives relating to interstate commerce either by way of promoting navigation or controlling floods or otherwise. The right of the Government to water wherewith to reclaim its public lands is a good example of a right that, when coming into existence, is created by the State in favor of the United States just as if it would be in favor of any private individual who acquires a right to water to reclaim his own lands.

Neither riparian nor appropriation States are likely to subscribe to the bill's assertion of ownership, control, and disposition in the Federal Government or to the bill's vast plans for any integrated development of the stream system as a whole regardless of State lines and State authority. Rather will the States themselves want to determine their water future and thereby the future of the industries dependent upon it.

The powers the States do not give up they still retain.

Many of the functions of existing Federal agencies would be curtailed or duplicated

The planning agencies are required, after investigation, to formulate plans for the general development of the water, soil, forest, and mineral resources of the country (secs. 4, 5, and 6). This requirement would be at best a duplication of the work of the other instrumentalities of the Government including the Bureau of Reclamation of the Interior Department, the Corps of Army Engineers of the War Department, and the Soil Conservation Service of the Department of Agriculture, which both plan and execute. At its worst, the requirement would indicate that the functions of these other Federal instrumentalities are to be superseded.

In either event the planning functions would be better performed if they could remain where there are now, since they demand a high order of centralized research and experience and also because the present instrumentalities have the country's confidence. Not only would the planning instrumentalities be either curtailed or duplicated, but there would be an abridgment of the functions of the other Federal instrumentalities in respect to the transfer to the power authorities of projects, or parts of projects, that are now or hereafter would be controlled by the other Federal instrumentalities if the bill were not passed (secs. 201 (a), 203 (a) (b)).

Under the present law the Bureau of Reclamation, primarily in charge of the reclamation of lands, frequently generates and disposes of power as a byproduct; and the Corps of Army Engineers in charge of dams for the purpose of navigation and flood control does, and plans to do, the same thing likewise as a byproduct.

By way of further particularity concerning curtailment and duplication, it may be added that under the Mansfield bill the power authorities are given the right to construct and control such "facilities capable of producing hydroelectric power" together with "appurtenant works" as may be entrusted to them by any act of the Congress, the only exception being that if the facilities are in any way associated with the promotion of navigation and have "locks, lifts, fishways and navigable facilities in connection therewith" these latter shall be operated by the War Department (sec. 203 (a) (b)).

The President by Executive order may transfer to such a power authority "facilities capable of producing hydroelectric power (together with appurtenant works constructed, under construction or hereafter to be constructed by, or on behalf of the United States," meaning by any other agency or department of the United States (sec. 201 (a)). "Facilities * * * together with appurtenant works" is a phrase broad enough to include dams, release gates, spillways, penstocks, dynamos—practically the entire control of a dam project—even though the project is one performing the multiple functions such as controlling floods, supplying water for irrigation, and municipal purposes as well as generating power.

The only exception to the control of the entirety of the project by the power authority, as far as concerns the operation of the dam or the impounding and release of water for the various purposes of the project, is that if the promotion of navigation is connected with the project then "locks, lifts, and fishways and the navigation facilities employed in connection therewith are to be operated by the War Department" (sec. 203 (b)). Apparently flood control itself goes along with the "facilities" and "appurtenant works" to the power authorities.

At any rate that particular function is not expressly exempted from the control of the power authorities. Just how it is going to be practically feasible for the different instrumentalities of the Government to impound and release waters at the same time when the functions are various and when they conflict as to their respective necessities, the bill does not explain. Where the generation of power is only one of several functions it should be looked upon as a byproduct as compared with the others and, in the frequent conflicts of exercise, should be subordinated. This subordination would not be any too likely to be given effect when the transfer of the other project is to an unsympathetic power authority whose primary purpose is power generation.

From these considerations it appears that if the bill were passed, the functions of important existing Government instrumentalities, including the Corps of Army Engineers, Bureau of Reclamation, and Soil Conservation Service would be curtailed or duplicated in planning, execution, and administration.

The bill either abridges or authorizes plans which, if executed, would abridge functions of the States or their agencies, either by limitation or duplication

The States could not, if the bill were passed, authorize towns and cities, mines, mills, and factories "to pollute or to make unsightly waters of or flowing into navigable streams or other streams over which the Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several States" (sec. 8). Since most streams, if not themselves navigable, flow into streams that are navigable, the practical universality in effect of such a prohibition is apparent.

State water-administration officials, State planning commissions formulating plans for the utilization of the water, soil, minerals, and forest resources of the country are not assured with certainty of consideration by these super-regional planning agencies, since the latter need cooperate with the States only "insofar as practicable," which means insofar as the planning agency itself deems practicable (sec. 4 (c)).

State utility commissions could not fix the rates on electric energy, since these are to be determined by the Federal Power Commission, upon which great areas of the country would not be represented (sec. 203 (f)).

States could not negotiate interstate compacts without the consent of the President (sec. 7), whereas under the Constitution the States have a right to invoke the consent of the Congress, and in that body have direct representation for their protection.

State courts are ousted of all jurisdiction over the power authorities (sec. 207 (a) (b)).

The powers the States don't give up they still retain.

The bill fails to insure with certainty the opportunity of States to be heard on plans to be submitted to the President

While projects of one kind and another for conservation of water, soil, minerals, and forests are not to be constructed or carried out without future appropriations of money by the Congress, yet the

plans themselves for the projects may be submitted to the President and by him to the Congress without assured requirement that a State affected by the plans would be heard by the planning agency. True the bill directs the agency to "consult and cooperate with the States" * * * "insofar as practicable" (sec. 4 (c)). What is "practicable," however, is apparently left to the agency to decide, whereas every State that is affected by a plan to be presented to the President should be assured with certainty of the right to be heard by the agency before the plan is submitted.

Plans submitted by the agencies will carry prestige—perhaps, too much to counteract on account of the sources from which they come. It is important, therefore, that the State be heard on the plan before the President is expected to submit it to the Congress. Since the bill contemplates that the plans may be extensive enough to call for a coordinated or integrated development (bill, sec. 4 (b)) of the entire region of an agency as a whole, and even regardless of State lines, it is all the more important that the agency should be required with absolute certainty to provide States with an opportunity to be heard before the plan goes to the President. Many of the States have planning commissions and other State officers well qualified to advise and to be helpful to the agency in these matters.

The powers the States don't give up they still retain.

The bill apparently gives no consideration to the reclamation of private lands by irrigation

The planning provisions of the bill authorize the regional planning agencies to prepare and submit to the President plans providing, among other things, for the "reclamation of public lands" (sec. 1, 5 (a), 6 (b)). No mention is made, however, of plans that would include the reclamation of private lands. The right of private land owners to buy water is left in doubt; yet all through the West they, as well as homesteaders on public lands, have been allowed under the Reclamation Act of 1902, as administered by the Bureau of Reclamation, to buy water from the Government project for their privately owned lands. Can it be that this apparent change in policy is intentional?

The point is not of much importance since other objections to the bill are so many and so insurmountable that the one under consideration for failing to provide for the reclamation of private lands, as well as public, would not atone for the other objections. Perhaps the chief value of the particular objection is that it shows that the drafters of the bill had little comprehension of reclamation problems and practices and of the needs of the West.

The bill fails to subordinate its regional power authorities in any respect to the law of the States in making appropriations and uses of water and in operating power plants

The Congress may authorize the Federal construction and control of a dam in a stream within a State as against the will of that State and without regard to its laws, only in promoting navigation for the purpose in turn of promoting interstate and foreign commerce and in aid of national defense.

There are in the Federal Constitution no other grants of power to the Federal Government from which the authority to override or disregard the will of a State in respect to its waters may be deduced.

The evident purpose of the bill, however, is to build and operate power plants rather than to promote interstate commerce through improving navigation, or the national defense. If interstate or foreign commerce or the national defense are in any way invoked to support the power program it is only as a technical camouflage for the real purpose, which is the generation and distribution of power.

Regional power authorities may be created by Executive order under the bill "whenever in his (the President's) judgment the national public interest and the interests of economy and efficiency will be served thereby." Section 201 (a), "Public interest," and the "interests of economy and efficiency," do not chance to be found among the grants made by the Constitution to the Federal Government. What is found, and very properly so, is the promotion of interstate and foreign commerce, also the promotion of national defense. That electrical energy may be generated as a byproduct at a Government dam, built and operated in the streams of a State for either of the two primary constitutional purposes mentioned, is certain, but that it can't be done otherwise is equally certain.

There are a number of instances where the Government, under the Reclamation Act of 1902, has built dams in the streams of a State for the purpose of irrigating the public lands as the primary purpose and where the Government generates power as a byproduct but this use of the waters of a State, there being no question of commerce or national defense involved, is in pursuance of the laws of the State just as it would be if a private person or company were to build the dam and operate the power plant. Indeed, the Reclamation Act itself by section 8 recognizes the superior authority of the State and directs the Government to proceed under the laws of the State.

Of the 48 States, 17 maintain an appropriation or priority system of water law. The fundamental principle of that system is that the appropriators or users of water take their respective supplies according to their relative dates of initiation of use—the oldest user having the prior legal right and the later users to take in order of seniority what is left—and that the water may be taken and used anywhere. Seven of these States contend that their very statehood gives them the authority to promulgate that system regardless of any consent of the Federal Government. Others of them claim that the Congress by the act of July 26, 1866 (the act opening up the mineral portion of the public domain to private purchase) and by the Desert Act, 1877, relinquished to the Western States the general control of the waters within their borders and thereby gave them the authority to establish that system of water law to whatever extent they desired (*California-Oregon Power Co.* v. *Beaver-Portland Cement Co.*, 295 U. S. 142).

The remaining 31 States maintain the riparian system of water law, the fundamental principle of which is, that without conclusive regard to any priority of use in point of time, each land ownership that borders the stream has a right to make a reasonable use of the water. This riparian system is predicated on the inherent authority of the State as a State, and therefore, in legal theory, the States maintaining the system are likewise exempt from Federal interference in the control of the waters except when the Congress exercises its constitutional powers either to promote interstate and foreign commerce or the national defense. These exceptions are, of course, applicable to the priority system also.

In truth, then, under the water law of the country the general control is in the States and the exceptions are in the Federal Government. The bill, however, recognizes no authority, not even by way of exception, in the States.

The powers the States don't give up they still retain.

The bill offers no assurance that in the priority or appropriation States of the West a power authority would not create water priorities in one State at the expense of water interests in another

The appropriation or priority system of water law is found in 17 States of the West. As among appropriators of water he who first puts the water to use has a prior legal right thereto as against later users, to the extent of the necessities of his use, and he who is second in time is second in right, and so on throughout the series of appropriators. Whether there is anything for the latest user in the series depends upon whether there is enough water left in the source of supply after first satisfying uses that are older. This is the law within the boundaries of a priority or appropriation State.

What the law is as between States where the stream is an interstate stream is a question, the answer to which has not yet been made clear by the United States Supreme Court. In other words, the question is whether the rule that would be applied is that of "priority regardless of State lines" as was laid down, with certain modifications, in the case of *Wyoming* v. *Colorado* (259 U. S. 419) or whether it would be "equitable division" which is a rule that would guarantee to each State a fair amount of the water and which would do it without conclusive regard to existing uses, as announced in the case of *Kansas* v. *Colorado* (206 U. S. 46). There have been later cases decided by the United States Supreme Court in respect to interstate streams, but they still leave us in doubt as to the rule that would be applied. These later cases are *Connecticut* v. *Massachusetts* (282 U. S. 660) and *New Jersey* v. *New York* (283 U. S. 336).

In this confusion of the law no State possessed of careful regard for its water interests would want to run the risk of an authority establishing a major Federal project in a different State on the same interstate stream.

A project merely for power generation represents a nonconsumptive use of water and, if not retarding the flow and if in an upper State, would do no harm to a lower State on the same stream. If, however, the project is in a lower State then, although the use be nonconsumptive, yet the harm to the upper State is as great as if the use were consumptive, since under a rule of interstate priority the upper State could not, as against the project priority in the lower State, hold back water for a new and later use in the upper State.

It is unfair to use Federal money which is the money of all of the States to establish a Federal water project in one State at the expense of the water interests of another State on the same stream, unless there is an interstate agreement between the States, assuring to the State which does not receive the project a definite quantity or percentage of the waters of the common stream exempt from any claim of priority in behalf of the project so established.

The powers the States do not give up they still retain.

The bill offers no assurance that in the riparian States of the East a power authority would not establish water projects in one State at the expense of the water interests in another

Thirty-one States, chiefly lying east of the Missouri and the Mississippi Rivers, maintain within their respective boundaries, as among their respective water users, the riparian system of water rights, as distinguished from the priority or appropriation system. The fundamental principle of that system is the equal right of each water user to make a reasonable use of the waters of the stream without conclusive regard to the age of the different uses.

Existing uses are considered as among the factors in determining what a reasonable use would be, but they are not factors entitled to a conclusive regard or effect, as they would be under the appropriation or priority system. As between one riparian State and another upon the same interstate stream the rule is that the water users of each State are entitled, as against the water users of another State on the same stream, to make a reasonable use of the waters, in other words, to an "equitable division." *Conn.* v. *Mass.*, 282 U. S. 660; *New Jersey* v. *New York*, 283 U. S. 336. Since, however, existing uses are factors to be considered, although not conclusive in effect, it follows that in deter-

mining the "equitable division" as between riparian States, an existing use cannot help but have some weight. A State that receives from a power authority a major water project, accordingly obtains thereby, practically speaking, at least an advantage against the water interests of other States upon the same stream.

Then, too, it is to be remembered that where the Government constructs a project in one State it is not likely, until it gets its money back, to invest in another in a different State on the same stream. Reimbursement may require many years and therefore may delay correspondingly development in that other State. The only proper way for the Government to proceed is to exact an interstate compact dividing the interstate stream in terms of quantity or percentage between the States before financing a major water project in one of them to the injury of another. This the Government could do easily, for, holding the money bags, the Government could refuse a State that wants the project unless the State enters into a compact with the other States for a division of water recommended by the Government, and could threaten the other States that the project would be given anyway if the recommended division should be refused by them. A riparian State, therefore, having regard to its own future water development, should not run the risk of allowing major projects to become established in other States on the same stream until there shall have been formulated between them an interstate compact determining the percentage or quantity of water which the State or States not receiving the project are to have. It is not fair to use Federal money to forward one State at the expense of the water interests of another.

The powers the States don't give up they still retain.

The bill arbitrarily prohibits the pollution of streams by mining, milling, and manufacturing industries and by municipalities regardless of effect on interstate commerce

By section 8 of the bill "it shall be unlawful for any person by any sewer pipe outlet or other means, devices, or practices to pollute or make unsightly waters of, or flowing into, navigable streams or other streams over which the Congress has jurisdiction under its authority to regulate commerce of foreign nations and among the several States."

This prohibition purports to be absolute, and it is nearly as broad as it is absolute, for most streams either are navigable or else are tributaries of streams that are navigable. Apparently it makes no difference whether the pollution does any harm to the national defense or to commerce among the States and with foreign nations, the protection of which and the national defense are the only constitutional sources of the authority of the Congress over the waters of the country. Again, there is no provision for consent to the pollution even when interstate and foreign commerce and the national defense are not interfered with. Since the prohibition runs against "any person" it runs against mining, milling, and manufacturing industries, and also municipalities. Industries and municipalities cannot be operated without polluting to some extent the country's streams. Can it be that those industries and those municipalities are now to abstain from even necessary pollution and, therefore, to cease operation? Or shall the Government refrain from interference save when interstate and foreign commerce or the national defense are interfered with? The prohibition of the bill extends not only to navigable streams but to their tributaries as well. Better by far to leave the question of pollution when interstate and foreign commerce and the national defense are not involved, or actually interfered with, where it is now—in the States themselves. They best can determine the extent of pollution that is necessary and suppress the unnecessary. They best can look after the public health of their peoples. If a stream is interstate and if one State pollutes unduly as against another State upon the same stream, the latter has its remedy in the Supreme Court of the United States, which will formulate and apply the proper rule.

The bill in prohibiting all pollution goes as far as to direct the Attorney General to proceed against the polluter and to authorize a temporary injunction without bond. Can it be that the industries are to be closed perhaps unlawfully during the temporary injunction period without reimbursement for damages suffered?

The powers the States do not give up they still retain.

Power projects

The bill authorizes its regional power authorities to construct and operate power plants and transmission lines and to distribute and sell electric energy at wholesale or retail (sec. 203 (a), (b), (c), (d), (e)). The President by Executive order may create as many of these power authorities, and without regard to the boundaries of the seven regions, as he may deem best in the public interest, subject to the limitation that he shall "create or establish no more than one regional power authority for the administration of hydroelectric facilities and appurtenant works which are, or may be, economically interconnected by transmission lines" (sec. 201 (a)).

Unconfined as the President would be to the boundaries of any one of the seven regions which are taken as the units for general planning purposes under the planning portion of the bill, free as he would be to establish as many of these authorities as he may desire save for the limitation mentioned, it is evident that Government plants are no longer to be introduced, as once stated, merely for "yardstick" purposes here and there, but rather that they are gradually to absorb the entire field of market demand as rapidly as possible. A further evidence of this fact is to be found in the provisions to the effect that where the Government sells power at wholesale for redistribution the public agencies such as States and municipalities and cooperatives are to be preferred over private purchasers (sec. 203 (d)).

Opinion on the wisdom of this course depends upon how socialistically inclined the owner of the opinion may be. If he favors governmental competition with privately owned but publicly regulated power projects, he will favor this function of the authorities with all of its completeness; otherwise not. Or, if he favors the generation of energy by the authorities, but on account of the great number of employees needed and the danger of political operation he is opposed to having the Government, through these agencies, engage in the distribution of the energy generated, he will favor the generation but oppose giving the authority more than the right to generate and to wholesale the energy generated, thus leaving the distribution among consumers to some private distributing agencies under public regulation. So, too, if, for much the same reason, he is opposed to discrimination against private purchasers in favor of public, he will be opposed to the bill.

The negotiation of interstate compacts would be undesirably and unconstitutionally interfered with

Where streams are interstate and the question arises as to how the waters are to be divided between the States and their respective peoples, the States either settle the question by interstate agreement negotiated by their official representatives with the consent of the Congress, or else settle it by suit between the States in the Supreme Court of the United States. These are the constitutional methods (Federal Constitution, arts. I, sec. 10 (2), and III, sec. 2 (1)).

Under the bill an interstate agreement must be approved by the President (sec. 7). The President, in nearly all cases, could not by any possibility be coming from the States affected, and he might have other ideas than those of the States concerning the agreement. When, however as now, the Congress is the one to give or withhold consent to an interstate compact, the matter not only goes first to a committee where the States may be heard, but they have in the Congress their Senators and Representatives perfectly capable of representing and protecting their interests, more capable, indeed, than any one else.

Under the bill (sec. 7) as worded, if constitutional, no further legislation would be required to take from the States the power to make interstate compacts free from the consent of the President. The constitutionality of the bill on this point may well be doubted. The power to approve or disapprove interstate agreements is a vital one. The framers of the Constitution put it in the Congress not in the Executive (Constitution, art. III, sec. 2 (1)). Very likely a power so important cannot be delegated lawfully. Certainly wisdom suggests it be left where it is—in the Congress where the States affected can always be heard by committees and receive the protection of their Senators and Representatives.

The powers the States don't give up they still retain.

The administrator and the directors of the power authorities might be unfamiliar with and unfriendly to the regions to which appointed

Under the bill the Presidents are to appoint the Administrator of the Authority with confirmation by the Senate (sec. 201 (d)). They are to appoint the directors also but without necessity of confirmation (sec. 201 (e)). There is no requirement that any of these appointees shall come from the different States constituting the power region to which assigned. Since the directors could be appointed without confirmation by the Senate, they could go into the power regions as political carpetbaggers.

The powers the States don't give up they still retain.

The bill requires the authorities to classify their proposed projects for construction in order of urgency in point of relieving unemployment

Section 6 (d) of the bill provides "Plans shall classify the various construction projects with a view to the construction of projects in the order of their urgency, so as most beneficially to promote the national welfare by stabilizing employment and relieving unemployment."

Undoubtedly there would be some projects of one kind or another which, if constructed in one State, would do no direct or particular harm to other States not receiving them, and as to which projects the urgency of providing employment might well be taken into consideration; for it is to be remembered that the various projects in respect to which the authorities are to plan and which the authorities may operate, concern the conservation of the soil, minerals, waters, and forests of the Nation. When, however, the natural resource is what by nature is a common resource such as an interstate stream, and when we reflect that under the law governing the division of interstate waters between States and their respective peoples there is no certainty that the State receiving the authority's water project would not, thereby, acquire a water priority in the priority or appropriation States, or a water advantage in the riparian States against other States not receiving it, then the folly of constructing in the order of urgency of employment of workers as distinguished from advancing and protecting the real present and future interests of States in respect to their waters, becomes apparent at once. No major project intended to put water to beneficial use should be built upon an interstate stream with Federal money (Federal money is the money of all of the States) unless the Government requires from the State which is to receive the project an interstate agreement

with the other States not receiving it, guaranteeing them a quantity or percentage of interstate water undiminished by any claim in favor of the project. In all such cases the Government by reason of holding the purse, can quite easily extract the agreement, for the Government can inform the State supposed to receive the project, that the project will not be constructed unless an agreement is made with the other States guaranteeing to them a certain percentage or quantity of water, and can inform the other States that if they do not agree to the quantity or percentage suggested by the Government that then the project will be constructed anyway. Thus, through the power of the purse, the Government can exact an interstate agreement if it wants to do so.

Where Government money is not involved in the development of water projects on interstate streams but only the money of States or their subdivisions, or their citizens, the States, of course, are to try without compulsion to reach an interstate agreement, or, failing that, they may take their differences to the United States Supreme Court.

The powers the States do not give up they still retain.

The bill indicates a movement to center the control of the economic life of the country very largely in a succession of Presidents through regional instrumentalities amenable to their will

The following points are to be noticed in the bill:

First. That the director and members of the planning agencies and the directors of the power authorities are to be appointed by the President, and the agencies and authorities are to be controlled by the President (secs. 3 (b) (c), 4 (a), 201 (e)). Through the citations referred to, it appears expressly that the planning agencies are to be thus controlled. As for the power authorities, the control would be similarly held because of the fact that the directors of the power authority, who by vote would control the policies of the Authority, are to be appointed by the President without fixed terms and without confirmation by the Senate (sec. 201 (e)).

Second. That the President may change the boundaries of any of the seven regions without consulting the Congress. Section 2.

Third. That he may create power authorities without regard to the boundaries of the seven regions and in such number and in such places as he may deem best and do it without consulting the Congress and may control them after he creates them. Section 20.

Fourth. That he may without consulting the Congress transfer to the power authorities, and therefore to be similarly controlled by him, the "facilities capable of producing the hydroelectric power (together with appurtenant works) constructed, under construction, or hereafter constructed by or on behalf of the United States," meaning by any other branch of the Government. Section 201 (a). Since power generating "facilities" would include all the physical structures and equipment necessary to power generation, and since if there were any doubt about that point, the doubt is dispelled by the precautionary phrase "appurtenant works," it follows that the President could transfer practically the entirety of any other Government project as far as concerns dam, spillways, outlet gates and valves, powerhouse, and generators to the control of a power authority and, therefore, to the control of the President, if only the generation of power happens to be any one of a number of functions served by the project transferred.

Fifth. Under the planning provisions of the bill, the planning agencies are to plan, under the President's control, for the conservation and development of the soil, forest, mineral, and water resources of the country and for the improvement of navigation and control of floods, and are to do all this by regions (secs. 4 (b), 5 (a). Such provisions imply the probability that, sooner or later, an effort will be made to create corporate regional instrumentalities and to invest in them the duty of carrying out the plans by constructing and operating the necessary projects and activities. In that event these corporate regional instrumentalities would be similarly subject to the control of the President. The bill already contemplates the transfer of certain other projects to its power authorities (sec. 201 (a)). It would be easy to create seven regional corporate authorities and transfer to them all projects within their borders. Indeed, why the planning by the seven regions if there are not to be seven regional authorities to carry out the regional plans and operate the regional projects? The one seems to imply the other. Already there is a pending bill containing similar planning provisions, known as the Norris bill, S. 2555, that contemplates just such regional authorities. Doubtless more such bills would follow if the Mansfield bill were to pass. And if such regional authorities were to come they would bring with them their additional restrictions upon the States, including even the prohibition against putting dams in streams, in other words, against making new uses of water, without the consent of the authorities.

Sixth. Many functions of the States would be taken from them, as already more specifically mentioned.

These considerations support the conclusion that the bill indicates a movement to centralize economic control in great degree in the successive Presidents of the United States. This centralized control, this subjection of the States, this curtailment and usurpation of their functions are, in the present instance, more than unnecessary. They are in their trend a denial of representative democracy. Representative democracy does not consist in popular election alone. It requires fully as much active participation by the elected representatives sitting in legislative assembly in the determination of the policies and objectives and laws under which the people are to live and which it is the function of the Executive to carry out.

The powers the States don't give up they still retain.

HOW TO PRESERVE THE GOOD IN THE BILL

The bill contains some good, and what it does contain ought to be preserved. The bill itself, however, is not necessary to the preservation. In fact, it stands in the way because of its curtailment of the functions of various agencies of the Government and because of its encroachment upon the rights of the States.

The good contained in the bill consists of its idea of comprehensive planning for the development and use of our natural resources. Stream systems, for instance, ought to be developed in such wise as to make sure that each State receives the use of an equitable part of the water as against the claims of other States on the same interstate stream. When, to accomplish this division and protection, interstate compacts are necessary, the compacts should be negotiated under the auspices and recommendation of the Federal Government and then submitted to the States affected and to the Congress for ratification.

The general planning should be done by the Government in cooperation with the States. For this purpose the Government has plenty of existing agencies: The Reclamation Bureau, Corps of Army Engineers, Soil Conservation Service, Forest Service, Federal Power Commission, and the National Resources Committee. Federal regional instrumentalities such as are set up by the bill are unnecessary either to plan or carry out plans. The existing Federal agencies can develop the plans in cooperation with the States. The plans then can be presented to the Congress, be discussed in the committees, receive the consideration of the Senators and Representatives, the Governors, attorneys general, and water officers of the affected States. There is no need of creating the proposed regional instrumentalities, which would impair existing Federal agencies, encroach upon the rights of the States and centralize economic and political control in a succession of Presidents. The course recommended would create no new bureaus or instrumentalities, would cost less, and would be more in the public interest.

Why Change?

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

ARTICLE BY H. J. GRAMLICH, OF THE NEBRASKA AGRICULTURE COLLEGE

Mr. STEFAN. Mr. Speaker, on the eve of adjournment of this special session of Congress I take this opportunity of extending the season's greetings to you and the entire membership of this House. We from the farming sections of Nebraska pray that the Almighty will guide us in the serious tasks we may have before us in the coming regular session.

By leave of the House I submit some philosophy from the pen of my good friend, H. J. Gramlich, of the Nebraska Agriculture College, who has frequently inspired and aided me in my efforts to be of service to the people of my district and my State:

Christmas is here. How fast the year has spun around. Last year I endeavored to fill you with optimism. From the looks of the stock market I overplayed my hand. Two years ago you received a note on snow. Immediately thereafter snow fell in such quantities that highways were drifted and folks were confronted with several months of the age-old occupation of playing "shut-in."

It takes a good deal of nerve to start a word of greeting today and admittedly much effort to find a central theme to build around. Recently a friend, Joseph Spang, Jr., called my attention to a picture. This depicted a yoke of oxen hitched to a two-wheeled cart. The driver, a man well up in years, obviously possessed of but little of this world's goods and no desire to accumulate more, is portrayed sitting on a board atop the two-wheeled cart trundling slowly down a road. The caption under the picture, "Why change?"

This has set me to wondering. Who is the happier, the man speeding down the concrete highway in a modern, streamlined, high-powered car at 80 miles per hour or this veteran in his two-wheeled oxcart creeping slowly over the trail just as his forebears did a century ago? The contrast presents a thought-provoking picture to us.

John Bates, the driver of the oxcart, continues to live as of yore. He is content with that which went before. Not so Mr. and Mrs. Average Citizen. The inventive genius of man has so

completely changed the picture that life today is indeed but a part of a highly complex atmosphere. One hundred years ago we lived in an era of isolation. Today the entire world is one vast neighborhood. In 1840 but few people could read and write. With the coming of the printing press and the development of our educational system most of us are today able to pick up a paper, a magazine, or a Christmas letter and flounder through, possibly getting therefrom at least one thought which the writer hoped to put over.

When we lived in an age of seclusion we scarcely knew there was an outside world. What are some of the changes which have brought us so much closer together? In 1832, when the first railroads were in process of development, Abraham Lincoln made the statement, "No other improvement can equal the railroad in utility." At that time the railroad looked to be about the only improvement possible. By 1860, when Lincoln was elected President, the telegraph had become a reality. The western terminus was at St. Joseph, Mo. The pony express conveyed messages and mail from there to the west coast in 10 days. Upon the occasion of Mr. Lincoln's election the pony express speeded up and conveyed the news to the Sacramento Valley in 7 days and 19 hours. A year ago we elected a President. Within a few moments after the poll was counted the entire world knew the outcome.

In 1892 Mr. Duryea came forth with a three-wheeled contrivance supposedly on a self-propelled basis which proved to be a forerunner of the modern automobile. The descendants of this clumsy, horseless carriage have influenced man's behavior more than any other single factor since Noah went to sea. From crude beginnings this noisy, undependable, homely unit has developed into the modern streamlined machine which is just about foolproof, provided the driver stays on the water wagon.

Change has brought about tremendous improvements. One outstanding illustration may suffice—the self-starter, which was brought forth in 1914. This did more to universalize the gas auto than any other invention. It made it possible for women, old men, and children to drive. Why change? Of course we want change. Who wants to crank a car tomorrow morning when the engine is cold and the oil is stiff? Who among you have suffered broken wrists from the kick-back which so frequently occurred in the good old days when we cranked our autos? I dare say there are many who have never cranked a car just as there are those who have never changed a tire. Only recently my attention was attracted to a cunning cartoon. A picture of four boys in fur coats busily engaged in puffing cigarettes as they stand beside a car with a flat tire, one, apparently the son of the owner, making this observation, "I wish my old man were here. He used to know how to change a tire."

John Bates probably never would permit himself to take a ride in the air. Airplanes are strictly the product of change. They illustrate an application of man's inventive genius to the *n*th degree. Near the close of the fifteenth century, when Leonardo Da Vinci came out with what he called an ornithopter, much laughter was produced. This invetor studied the flight of birds. He invented a contraption which enclosed a man in a bat-shaped outfit with levers so located that the occupant could propel the wings with his arms and legs. This man Da Vinci should be called "the father of aviation," as he marked the starting move toward one of the greatest of recent changes.

By 1903 the airplane had developed to a point where the Wright brothers took a winged shell to Kitty Hawk, and on December 17 "those crazy Wright boys" were responsible for the first successful flight of a heavier-than-air machine. A few greasy mechanics were there to watch that memorable event. No reporters, photographers, or movie stars were in the small group which witnessed the flight. A few morbid natives had assembled to watch the massacre.

By 1911 the airplane had developed to a point where a successful transcontinental flight was experienced. The machine had to make so many landings for repairs and supplies that a period of 2 months was required to make the flight. Within the past year Hughes has flown from California to New Jersey on a nonstop flight in but little over 7 hours. Does that represent change? Has the change been for the better? Most of us would answer in the affirmative, although in thinking of some of the casualties which occur, we wonder if maybe we haven't gone too far with our speed craze. Possibly John Bates on his oxcart is safer than the passenger in the plane. Who knows? At least, John says, "Why change?"

We of the genus homo are vain. We have turned modern during recent years. Sometimes we forget that thousands of years ago, long before man had any conception of the modernistic things of today, the turtle was possessed of a streamlined body, a turret top, a retractable landing gear, and a portable house. But who wants to be a turtle? Furthermore the turtle functions today just as he did centuries ago. It is not so much when you started as whether you kept going. The turtle didn't change; man did.

We live in an age of change. There is nothing so certain as uncertainty. In this era of hectic ups and downs, man's ability to adjust himself to his surroundings and his fellow men is taxed to the limit. He is forced to use good, old-fashioned judgment or he will be swept into the sea of oblivion. There is nothing so uncommon as common sense. This characteristic is needed today in adapting one's self.

The person who applies yesterday's methods to today's living is out of the picture tomorrow. A person of that type is not unlike the man of whom it was said that all the exercise which he took was jumping at conclusions. We do not know what is ahead. We are certain that changes will occur. We know our problem will be that of adapting ourselves to these changes as they come.

Sometimes there has been a continuity which has seemed highly desirable. As I pen this paragraph I visualize the Goddess of Liberty as she stands upon the small island near the mouth of the Hudson River, a few knots off the lower tip of Manhattan Island with its Wall Street, its famous skyscrapers, and its highly concentrated mass of humans. When the French gave us this big lady, a woman of Jewish faith wrote the following inscription to put on the big girl's feet:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free;
The wretched refuse of your teeming shore—
Send these, the homeless, tempest-tost, to me—
I lift my lamp beside the golden door."

Fifty years ago we were a growing nation. New York was a landing port. We could not get human hands fast enough to expand and develop as we desired. There seemed ever to be a shortage of men and women to work in factories, mines, logging camps, and on farms. We did all in our power to encourage people to come. Today we have put up the bars. Obviously the inscription might as well be chiseled from the bunion upon the goddess' concrete toe. Yet with all of this change the big, overgrown sister with the 35-foot waist measurement continues to be the most popular damsel in the United States of America. Thank God, she hasn't gone on a head-lettuce and skim-milk diet.

Of one thing we may be sure, the Christmas season never fails us. Once every 12 months it comes back to remind us that the most important thing in the world is our friends. The season brings to us the beautiful snowfall, the sharp snappy atmosphere, the clang of skates on the frozen pond, the bobsled and the frosted pictures on Christmas cards depicting the days of the stagecoach. It helps revive memories of the old-fashioned home where hospitality and friendship reached out into the darkness of the night to encourage the wanderer to come back and reenact the joys of youth.

May the fat old man with the long beard and red jacket whom we were taught to believe was a reality and whom we later learned was either a myth or Dad in mask and cotton, find you upon Christmas morning. Even though your stocking may have increased in size to a cavernous volume, I trust that it may be filled to overflowing with apples, peanuts, and Christmas joy.

Our International Policy

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

RADIO ADDRESS BY HON. HERMAN P. EBERHARTER, OF PENNSYLVANIA, DECEMBER 19, 1937

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on December 19, 1937:

Now that the wage and hour bill is out of the way, it can safely be said that more attention will be given to the international situation, for the people of America realize that, although there is a vast expanse of water separating us from the scene of the terrible conflicts raging both in Europe and Asia, after all, the threat of war is not as remote a possibility as they would like to have it.

A violation of the sovereign rights of this country by the Japanese has stirred this country out of its seeming lethargy. If the recent sinking of the United States gunboat *Panay* and the killing of Americans were an isolated case it would not have caused so much concern, but it is within the memory of all of us that Japan has in the past shown contempt for the rights of American citizens. It is true that the Japanese Government has accepted full responsibility and has made abject apologies. This, however, will not entirely erase a feeling of resentment, particularly when we recall to mind that it is claimed by the Japanese Foreign Office that they are fighting a defensive war against China and their troops are not on Chinese soil because of territorial ambition.

During the past few years the democracies of the world have watched with increasing concern the utter disregard of established principles of international law by certain powerful and aggressive nations—violations of treaties solemnly and voluntarily entered into, and the open avowal and execution of policies which brazenly invade the sovereign rights of other peaceably inclined nations. Military operations have been carried on by inhumane methods, with little distinction made between combatants and noncombatants. Domestic and other national interests have been subordinated to the building up of powerful military and naval establishments. Therefore, it was not surprising to hear the President

of the United States call upon the peace-loving nations of the world to unite for the purpose of saving those ideals and modes of living which heretofore have constituted enlightened civilization. He said: "The political situation in the world has been growing progressively worse, and is such as to cause grave concern and anxiety to all the peoples and nations who wish to live in peace and amity with their neighbors. Innocent peoples and nations are being cruelly sacrificed to a greed for power and supremacy which is devoid of all sense of justice and humane consideration."

After pointing out the evils which threaten the entire world, he said: "If those things come to pass in other parts of the world, let no one imagine that America will escape, that it may expect mercy, that this Western Hemisphere will not be attacked, and that it will continue tranquilly and peacefully to carry on the ethics and arts of civilization. The peace-loving nations must make a concerted effort in opposition to those violations of treaties and those ignorings of humane instincts which today are creating a state of international anarchy and instability from which there is no escape through mere isolation or neutrality."

The spirit animating aggressor nations will not be curbed by fine phrases and declarations on our part that we desire peace. The people of America have no quarrel with the civilian population of Japan, but the fact remains that the civil government of Japan is not able to control the military branches of the Government. It is not the function of the military branches of the Japanese Government to carry out the policies the civil government decides upon. Instead, the military and naval general staffs of Japan determine for themselves the policies that involve the employment of armed forces. Former Secretary of State Simpson wrote in 1931 that "The theory that the civilian government as the representatives of the entire people should command the loyalty of the Army and the Navy had not been generally accepted by the Japanese Nation. The chiefs of those military services, instead of being subordinate to the Cabinet, had direct and independent access to the Emperor as the head of the state." And so the apologies of the diplomatic civil government of Japan will be accepted at their true value.

The view is held by many that America should withdraw all ships, naval and merchant, from the scene of the Sino-Japanese operations, and that all American citizens in the danger zone should be deprived entirely of the protection of the United States Government. Just as many others hold the view that America cannot run away from the situation or ignore the violation of solemn treaty rights, without giving notice that this great country of ours is not really interested in protecting her rights and has decided to follow the policy of peace at any price. But the peace-at-any-price policy of China has not saved that nation from the horrors of war, and it is the civilian population which is bearing the brunt.

It is now the belief that in 1916, Germany would not have chosen to sink American ships on the high seas were it not for the fact that that nation was convinced that America wanted peace at any price, and that aggressions on their part would not draw us into the conflict. At that time the people of America were determined upon a peaceful policy. None of us will forget that Woodrow Wilson was reelected on the slogan "He kept us out of war." Perhaps the militarists of Japan hold the same views now as Germany did 20 years ago.

There is no doubt but that the foreign policies of governments are largely influenced by public opinion holding sway in other of their nations. It would seem to be a serious mistake for this country to say to the world that we will not protect American citizens, nor expect other nations to respect treaty obligations.

This brings me to a discussion of the so-called Ludlow resolution, which would amend the Constitution of the United States, requiring a national referendum before this country could engage in a foreign war. This would take from the Congress a power which was imposed upon that body by the founders of the Constitution—the power to declare war. This power is a grave and, indeed, an awful responsibility, and one to be exercised only after the most serious, careful, and prayerful consideration. In the exercise of this power may depend the very future of our Nation. No one would dare to find fault with the desire to prevent this Nation from becoming engaged in any war, either foreign or domestic. The purpose of this resolution is most commendable and is actuated by the very highest of motives. Already the State Department has indicated its opposition, Secretary of State Hull, whom no one will accuse of being a saber rattler, saying that as a means of preserving peace and keeping us out of war, he cannot see either the wisdom or the practicability of such an amendment to the Constitution. This proposed amendment will come up for debate in Congress in January, a sufficient number of Congressmen having signed a petition to bring it before the House for debate and action. The very fact that such a proposal has made such headway is having an effect upon the conduct of our State Department and our diplomatic corps. Representations made by the State Department naturally will not carry the same force and effect with foreign diplomats when they consider that the people of the United States are determined upon a policy of peace, and that the people have a referendum and a check upon the President and the Congress. The policies of the administration today are being shaped with that knowledge.

The question seems to be, with respect to the Ludlow resolution, Shall we express it as our belief that aggressor nations will refrain from taking what is rightfully ours because we have convinced them that we want nothing belonging to them and will not resist their efforts to drive American citizens and American business from every land except our very own and even go so far as to destroy American shipping?

The United States exports many millions of dollars' worth of merchandise to other lands. China is one of these lands. Shall we permit Japan to drive out of China all American interests? And if we decide to permit that, shall we then permit them to drive American interests out of Russia? And further, just when should we say stop—or else?

History teaches us that in the past wars have been fought, from the time of savagery to the present time, almost wholly for commercial reasons. Some few have been fought for religious or political reasons, but for the most part they have been fought for the control of hunting grounds, pastures, sources of raw material, markets, or trade lanes. We may sneer at commerce and make light of it all we please, but the fact remains that the commerce of a nation is the commerce of its people. It is the commerce of the rich and the poor; of the man who labors on the farms and in the mills, mines, and factories. The United States is a commercial nation. We are by no means self-sufficient. We depend upon importation of many commodities necessary to our national welfare in time of peace and our national existence in time of war. The interruption of the importation of some of these commodities, for even a few days, would be serious. When an emergency arises, those in charge of our national defense should be left free to act quickly or dire consequences could easily result. Our enemies would like nothing better than to have us shut up within our own borders for a period during which a political campaign would be waged to determine whether or not we would go to war. In the last generation there has arisen a new cause for war, and that cause is purely political. Wars are today being fought to establish the supremacy of different schools of political belief.

The European conflict now raging is to determine whether fascism or communism shall prevail. A political campaign in the United States to determine whether this Nation should go to war against any particular nation would lead to a flood of furious and violent propaganda, from which it would be impossible for even the most intelligent citizen to pick the real truth. I can conceive that a referendum on such a subject might, of itself, bring on a civil war. The Ludlow resolution contains the words "except in the event of an invasion of the United States." Suppose a country would have a vast navy lying in wait just outside the 3-mile limit, ready to pounce upon some unprotected section of our fair land. No move could be made against that enemy until he actually arrived on our shores. He may decide not to invade at all, but rather to destroy our shipping and harass our commerce traveling in and out of our ports. A blockade would shut off essential commodities. Suppose enemy planes are flying all around us but have not actually invaded. Must we then wait until we go through a political campaign before we could take steps to protect ourselves?

My friends, the so-called Ludlow peace resolution, while springing from the highest of motives, is a fanciful and futile proposal. I do not think it will get the necessary two-thirds vote in Congress.

As a veteran of the World War, no one craves peace more earnestly and sincerely than I, but the embracing of such a futile proposal as this will be more harmful than beneficial toward insuring a lasting peace in this country.

Compulsory Vaccination

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

ADDRESS OF WILLIAM HOWARD HAY, M. D., POCONO, PA., ON JUNE 25, 1937, BEFORE THE MEDICAL FREEDOM SOCIETY

Mr. BURDICK. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by William Howard Hay, M. D., of Pocono, Pa., on June 25, 1937, before the Medical Freedom Society on the Lemke bill to abolish compulsory vaccination:

I was glad to hear the Honorable Mr. LEMKE's presentation of the subject matter of his bill. I have thought many times of all the insane things that we have advocated in medicine, that is one of the most insane—to insist on the vaccination of children, or anybody else, for the prevention of smallpox, when, as a matter of fact, we are never able to prove that vaccination saved one man from smallpox. Naturally not. When you have protected anybody, as we denote protection in medicine, you have at the same time destroyed your evidence. If that man doesn't take the disease against which he is supposed to be protected, how can you ever know he

would have taken it if he hadn't been protected? We have destroyed the evidence.

As a matter of fact, perhaps it is safe to say that not more than 10 percent of the people ever would take smallpox if sleeping in the same bed with an infected smallpox victim. We know there is a large immunity to smallpox. Very few people are subject to it, and these usually in the filthiest surroundings. Now, if we carry that natural immunity to smallpox as we do to other diseases, and we have been protected by vaccination and then we are exposed to smallpox and don't take it, don't you see there is no proof there? We may be carrying a natural immunity. If one case that has been successfully vaccinated afterward develops smallpox, that is proof that it isn't protection, now, isn't it?

I know of one epidemic of smallpox comprising nine hundred and some cases in which 95 percent of the infected had been vaccinated, and most of them recently. I have had in my own experience one very small epidemic comprising 33 cases, of which 29 had vaccination histories and a good scar, and some of them vaccinated within the last year. There was no protection there.

Among these was one girl who was not vaccinated, never had been, who had five cases of smallpox in the family, nursed those cases that were ill, a baby among the others, the worst case of smallpox among them, refused vaccination and was never infected at all—a natural immunity.

What is true of smallpox is true of every other disease. We are not all equally subject to all the diseases that occur. We know that without thinking. An epidemic of influenza sweeps over the country. Why doesn't everyone have it? The germ, if it is a germ, and we don't know that it is, is ubiquitous. They are everywhere. You can't hide from them. And yet perhaps but 10 percent of the population of any region will be infected. What protects the 90 percent? Natural immunity.

We may have natural immunity this year and we may not have it next year, but we can't create it artificially by using a so-called immune serum. As I say, when we do use an immune serum we have destroyed every possibility of using that case as evidence, because we have no way of knowing whether it would ever have been infected.

We have always recognized the fact that but 15 percent of children are subject to diphtheria, no matter how thoroughly they are exposed. Statistics of every epidemic of diphtheria in every section of the country, if averaged, will show that average, with 85 percent who are not infected. We have taken diphtheria antitoxin, we have used toxin-antitoxin and toxoid, and if we found a susceptibility or reaction to this, we have immunized that case against diphtheria by a series of three injections of antidiphtheritic serum. We have to admit 15 percent of the children are still unprotected because they take diphtheria. Isn't that the same 15 percent? We have no way of proving it isn't.

A number of years ago when we were just beginning to study diphtheria antitoxin minutely, Cook County, Ill., hospital decided to immunize one-half of the nursing staff and not the other half. Diphtheria broke out soon afterward among the immunized cases, not the others. It invaded both halves, both the immunized and the unimmunized, and the total of cases was much higher among the supposedly immunized cases than among those not immunized. We didn't do much for those nurses.

When we took over the management of the Philippines and all of its destinies, we announced to the bloomin' cockeyed world we were going to clean up smallpox in the Philippines. Well, we waited a few years but we did make a serious effort. In fact, in a population of 10,000,000 people we consummated 30,000,000 vaccinations within a period of 6 years. The Province of Rizal, of which Manila was the center, was the most accessible, of course; the little rascals couldn't get away there; we could catch them, and did, and some of them were vaccinated three and four and five and six times in the 6 years. We were going to make it thorough. In Mindanao and some of the other more outlying provinces, more mountainous, we couldn't catch the little rascals, so there was a smaller percentage of vaccinations in the outlying districts. Rizal had to take it.

Within 6 years of that time the Philippines suffered the worst attack of smallpox, the worst epidemic three times over, that had ever occurred in the history of the islands, and it was almost three times as fatal. The death rate ran as high as 60 percent in certain areas where formerly it had been 10 and 15 percent, and the thing that climaxed the whole point was this: In Rizal we had the highest incidence and the highest mortality of any part of the Archipelago. The Navy reported that vaccination of the sailors went on as regularly as drills, every so often they were vaccinated, but they had their usual percentage of smallpox, and yet they were protected!

Now we are asking in many States to have the privilege of deciding whether we will be vaccinated or not. No one wishes to deny his brother the privilege of being vaccinated if he has any faith in it, but here is the ridiculous thing about it: The ones who are objecting to abolishing the law and who are insisting on vaccination are the ones who are afraid that they will take smallpox if their brothers are not vaccinated. Now if you are vaccinated, you are protected, aren't you? What are you afraid of? Suppose your next-door neighbor does get smallpox because he was not vaccinated; that is his business; he has a right to have smallpox if he wants to; he can't give it to you if you have been vaccinated, so what are you worrying about? Let him do as he pleases. That is all we are asking; we are not asking that they forbid vaccination Let everyone have what he wants, but let us not compel those to have vaccination who know there is nothing in it, who know it is not a protection.

It is now 30 years since I have been confining myself to the treatment of chronic diseases. During those 30 years I have run against so many histories of little children who had never seen a sick day until they were vaccinated and who, in the several years that have followed, have never seen a well day since. I couldn't put my finger on the disease they have. They just weren't strong. Their resistance was gone. They were perfectly well before they were vaccinated. They have never been well since. Now you can't record those as deaths from vaccination because they are still alive; but in England, where statistics are a little more frank than they are with us, where they are kept a little more accurately, a little more aboveboard than in this country, the actual official records show three times as many deaths directly from vaccinations as from smallpox for the last 21 years. If they record three times as many deaths, I will guarantee you that there are three times that many deaths that were not recorded that are directly traceable to vaccination. That doesn't take into account the many, many cases of encephalitis or sleeping sickness, of this or that form of degeneration, that occur as a direct result of vaccination. That case is still alive. It hasn't entered here the mortality records yet, but it is suffering and has suffered ever since vaccination.

And if you had been dealing, as I have, with the derelicts from all over the world for 30 years, you would find an almost fatal relationship between this history of vaccination and some failing that follows this for many years that has kept a person from being as well as he should have been.

It is nonsense to think that you can inject pus—and it is usually from the pustule of the dead smallpox victim; that is the basis of it; we used to think it was from cowpox, but the manufacturers deny that and say the most reliable form originates in the pustule of someone who has died from smallpox—it is unthinkable that you can inject that into a little child and in any way improve its health.

What is true of vaccination is exactly as true of all forms of serum immunization, so called. There is no such thing as immunization, but we sell it under that name—immunization. We jab a needle full of pus germ, we will say the streptococcus, for instance, in attenuated form so it won't pollute too badly, and we increase the dose or potency of that little by little until we build up what we call a resistance to it. You can do the same thing with the rattlesnake venom. You can be bitten just a little by a rattlesnake and not die, and if you are bitten often enough, you can be bitten in a vital part and not die; you have built up a resistance to the venom of the rattlesnake, but have you improved your physique by doing so? If we could by any means build up a natural resistance to disease through these artificial means, I would applaud it to the echo, but we can't do it. The body has its own methods of defense. These depend on the vitality of the body at the time. If it is vital enough it will resist all infections; if it isn't vital enough, it won't, and you can't change the vitality of the body for the better by introducing poison of any kind into it.

The Treasury Advertising Campaign

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

THE OLDEST PUBLISHERS' AND ADVERTISERS' JOURNAL IN AMERICA COMMENTS EDITORIALLY ON TREASURY'S MAGAZINE ADVERTISING ALIBI

Mr. CRAWFORD. Mr. Speaker, some few days ago in discussing freedom of the press, I called the attention of the House to the fact that the Treasury Department was discriminating against newspapers in its advertising campaign intended to promote the sale of baby bonds. Under leave to extend my remarks I insert here an editorial appearing in the December 18 issue of Editor and Publisher, the oldest publishers' and advertisers' journal in America, commenting on Mr. Morgenthau's advertising program:

FALLACY—OR ALIBI

When he noticed the advertising of the Treasury Department for United States savings bonds in several popular magazines, Representative FRED L. CRAWFORD, of Michigan, asked Secretary Morgenthau why newspapers had not been included in the campaign.

The Treasury's reply, signed by Herbert E. Gaston, a former newspaperman who is now Assistant to the Secretary, was that "it

would be most difficult for us to advertise in any newspapers without advertising in all. To do this would call for far greater expenditures than have been made or would be appropriate in the premises."

Mr. Gaston's reply is the usual one. It ignores the obvious fact that the advertisements appear in some, not all, magazines. It assumes and asserts that an advertiser cannot use any newspaper without using all, thereby ignoring the experience of hundreds of advertisers who obtain the coverage they want with a selected list of newspapers.

If advertising of the Treasury Department is regarded by the Treasury as a piece of political patronage, then, to be sure, it must be parceled out without regard to business objectives. If, as it seems, the object is to sell bonds, there is no reason why the United States Treasury, any more than the American Tobacco Co., the Aluminum Co. of America, or John Wanamaker, should use any media it does not choose to use.

If the Secretary of the Treasury decides to overlook the great market for his securities afforded by newspaper readers, we believe that his expenditure of public funds for the purpose should be respectfully challenged. The Treasury should not be allowed to hide behind the fallacy or alibi that a special and an asinine principle applies to Uncle Sam when he has a business proposition to offer his investing family through advertising channels.

The Postal Service

EXTENSION OF REMARKS

OF

HON. ROBERT J. BULKLEY

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, December 21 (legislative day of Tuesday, November 16), 1937

ADDRESS OF HON. JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES, AT THE TWENTIETH NATIONAL CONVENTION OF THE NATIONAL FEDERATION OF POST OFFICE CLERKS, CIVIC AUDITORIUM, TOLEDO, OHIO, SEPTEMBER 7, 1937

Mr. BULKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the Postal Service delivered by Hon. James A. Farley, Postmaster General of the United States, at the Twentieth National Convention of the National Federation of Post Office Clerks at Toledo, Ohio, September 7, 1937.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to be here and I am much indebted to Leo George, Gilbert Hyatt, and their associates in Washington for the cordial and oft-repeated invitation to attend this convention of the National Federation of Post Office Clerks.

I think it is in the public interest and good for you as individuals to hold meetings of this kind. The contacts you make here with officials of the Department and with people from other post offices give you an opportunity for exchange of ideas which should increase your knowledge of the Postal Service.

You men and women who are here as delegates are, I presume, the leaders of your particular groups in your local offices. During the course of the convention you will consider many resolutions and suggestions affecting the general welfare of post-office clerks. Therefore, what you do while at the convention and what you report back home has a definite influence on the morale of a large number of postal employees.

For that reason it would appear to be in the interest of all concerned to discuss with you briefly, but quite frankly, some of our problems of management, with the idea that a common understanding of our relative responsibilities will bring about real cooperation in our mutual effort to give to the public a most efficient service, with proper regard for the personnel, and with proper regard for the taxpayer's pocketbook.

One of the Department's greatest problems is the elimination of complaints caused by carelessness and indifference. If we are to function as we should and fully meet the needs of the people, we must have intelligent personnel, properly trained and eager to serve. It is essential that everyone connected with mail handling be alert, careful, and interested in the work. All mail is important to the sender. Some classes, of course, are more important than others, but all of it must be handled promptly and efficiently.

A single letter or parcel which is missent by a careless clerk often causes delay which results in loss of time and money to both sender and addressee. Likewise, clerks who contact the public and who give information concerning rates of postage, classification, regulations as to packing, dispatch schedules, and the like, must be well informed on such matters, otherwise they will mislead the patron and cause complaints which are most embarassing. Regardless of the assignment an employee occupies, if he applies himself diligently and studies his work thoroughly he will find his task much easier to perform.

After careful observation and investigation I am convinced that the United States Postal Service can be, and should be, maintained from its revenues. From the employees' viewpoint it seems most important that income and expense balance. To illustrate: Several years ago when you were asking for the passage of a shorter workweek law and the bills were presented to Congress, the congressional committees, following their usual practice, asked for my recommendation. When the matter was first presented, notwithstanding the fact that I believed in the shorter workweek and recognized that its passage would provide an opportunity to give jobs to substitutes—thousands of them who had stood by us for several very lean years—I felt it my duty to withhold approval until the income of the Department indicated an upward trend sufficient to provide the money. When the additional money was in sight I was most happy to give my approval, and so indicated to the Congress. You well know what followed.

In this connection I feel I should say to you that we have been pleased over the results obtained. More jobs were created, practically all of our older substitutes were put on the pay roll regularly, efficient service has been maintained, and the increased cost I am sure has been made up from increased business and increased efficiency among the workers. I am very grateful to each and every one of you who have had a part in that accomplishment. In approving the shorter workweek the present administration under that great humanitarian, President Franklin D. Roosevelt, proves that it is giving more than lip service to the workers of America.

Today you occupy an enviable position among the workers of America. Those of you who have completed your period of apprenticeship, and most of you have, are receiving not less than $2,100 a year salary. A considerable number of you receive $2,300 a year. Let us consider the larger group in the $2,100 grade. From this is paid 3½ percent, or $78.50 per annum into the retirement fund, leaving $2,021.50 net. By virtue of existing laws your workweek is limited to 40 hours. You have annual vacation of 15 working days, or 3 full weeks. You are granted when actually ill 10 working days a year sick leave, with pay. You are also granted time off on seven national holidays, or its equivalent. Disregarding the sick leave and the time off for holidays, you are required to render service 49 weeks a year, with a wage of approximately $41.25 a week, of 40 hours, or more than $1 per hour for actual work performed. When you work at night your pay is increased 10 percent, and when you work overtime you are compensated for such time. You are protected against poverty in old age by retirement on annuity, which averages $1,200 per year. You probably know that your contributions do not pay for much of the annuity. Ordinarily the worker pays for about $300 of the amount and the Government provides the balance of $900. Your work is performed under favorable conditions on a fixed schedule, except in emergencies. You have opportunity for advancement to supervisory positions, to the inspection service, and to administrative places in the Department.

Compare this with the earnings, opportunities, and general conditions prevailing in other lines of endeavor and you will find that you are quite well off. This is especially true when you consider the life tenure of your positions during good behavior. The benefits which I have enumerated are proper and just. As time goes on, and to the extent that you merit them, even greater benefits will come to you.

I have no doubt that postal organizations have played an important part in bringing about many of these benefits, and I congratulate you and the other organizations of employees on the success attained.

However, you who operate the Service have no rights of ownership. The Postal Service belongs to the people, and you have been selected as the agents of the people to carry on their work. You must consider your employment as a public trust, and remember that your attitude will govern to a large extent the measure of confidence the public reposes in you.

Since I have been Postmaster General I have been pleased to receive you as individuals or as representatives of organized groups, for the discussion of your welfare and to enable you to present your grievances. My assistants, all postmasters, and the supervisors in the field have been encouraged to do likewise. In saying this I do not mean that in the Department or in the post offices we have permitted or can permit any employee or organization of employees to determine our course of action, nor can we permit any individual or group organized or unorganized, to willfully disobey the regulations or interfere with the proper and orderly conduct of the Service. I shall, however, maintain a broad and fair policy with respect to employees and the representatives of their organizations. I want them to be happy and I want to know their side of the story before reaching a conclusion on any problem which affects their welfare.

On the other hand I feel that all employees should meet the requirements of the Department without complaint and without grumbling. They should cooperate with the postmasters and the supervisors. They should be industrious and honest, and amenable to discipline. They must be courteous to the public, to their supervisors, and to their fellow workers.

I am pleased to tell you that Bill Howes, my good friend and able First Assistant, head of the Bureau under which you serve, will be with you later in the week. Jesse Donaldson, Deputy First Assistant, and one of the efficient career men I had the pleasure

of bringing into the administrative staff of the Department, is also here. You will learn from them many things about departmental policy which I trust will be helpful to you.

In conclusion may I again express to your officers and to you my sincere appreciation for the invitation to be here, and thank you for your patience. I trust that your convention will be both pleasant and profitable for all of you.

Balancing the Budget

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, December 18, 1937

Mr. LUDLOW. Mr. Speaker, President Roosevelt's economy program presents to Congress and to the country a wise and well-considered national policy which, if carried out, will go a long way toward restoring prosperity and normal conditions in industry and employment in America. As a member of the Appropriations Committee and chairman of one of its subcommittees, I pledge my earnest support to the President's program to hold appropriations down to the Budget estimates. Our country greatly needs at this time a certain kind of tonic and restorative to wash out the remnants of the depression and to revitalize business and employment. It needs this certain kind of tonic and restorative to rekindle confidence and to start America humming again with the activities that connote prosperity and happiness. When I use the term "our country" in this connection I speak in the broadest collective sense and refer to all of the 130,000,000 people who comprise the American Nation. The remedial agent which I have in mind to tone up America and to lead us the remainder of the way out of the economic morass would benefit, directly or indirectly, every citizen of the Republic. The certain kind of tonic and restorative to which I refer is a reduction of Federal expenditures. If the reduction is made so real and so far reaching as to accomplish a balancing of the Budget in the fiscal year 1939, which I think is possible, the remedy will be perfect.

When I say that all of the citizens of the Republic would benefit by a reduction of public expenditures and a balancing of the Budget, I am stating what perhaps will appear to many as an inexplicable paradox. Some will say:

"How can I possibly be benefited if the Federal appropriation from which I get my living is cut off? I am now assured of an income that is fixed and certain because it comes from the money of the taxpayers."

Yet when such persons are further questioned they will invariably say that they would rather have a regular job than a synthetic job. As between a leaf-raking job and a regular job in industry, the red-blooded, self-respecting American will prefer the regular job every time.

And this brings us to the crux of the situation. A governmental retrenchment program, having in view an ultimately balanced Budget and an ultimate reduction of taxes, coupled with a removal of some of the unreasonable restrictions now imposed upon business and industry, such as the unwholesome and repressive provisions of the undistributed-profits tax, would revive business and industry, restore employment, and facilitate the transfer of millions from synthetic Government jobs to real jobs.

There is nothing the business and industrial world needs quite so much right now as a governmental economy tonic. Given that tonic, it is ready to forge ahead on the recovery road at a pace which I am sure would be amazing. During the years of depression and gloom factories have run on a hand-to-mouth basis and their output has been away below par. The result is that supplies and stocks in many lines have been depleted almost to the point of exhaustion. Given assurance of a balanced Budget and cooperation between Government and business, factories will soon boom with activity in manufacturing the stocks which the country so vitally needs. This would start a transfer from relief jobs to regular jobs, from make-believe employment to real employment, which is the heart's desire of every self-respecting man and woman. In America, under President Roosevelt's leadership, we do not allow people to starve or freeze or go naked, and we never will. As long as any person is exposed to such hardships, that person must be and will be granted relief. That is a doctrine dictated by the simple humanities which we all recognize. But if we can reduce dependence upon governmental support to the minimum by opening the avenues for employment in private industry, it will be best for everybody concerned.

In this great country of boundless resources every employable person is entitled to a job at a saving wage, and every far-seeing leader in the ranks of labor knows that a person cannot be employed unless there is someone who is capable and willing to employ him. A railroad employee, for instance, does not want to own the railroad he works for. What he does want is steady employment, excellent wages, and the best of working conditions; and it follows that under our capitalistic system anything the Government may reasonably do to encourage and fortify honest employers so that they may furnish work with regular wages and under the very best working conditions will be beneficial to the employees as well as to employers. If Congress will only recognize a truth, which should be as patent as a lighthouse on a rockbound coast, there is no more certain way to correct existing maladjustments and to afford business and industry the encouragement to take employables off the relief rolls than the economy way. If business and industry and our people in general can be assured that vast governmental expenditures are to cease and that appropriations are really to be cut so that the Budget may be balanced, the psychological influence will be great and a movement will be started which, if given a little time, will bring America out of the kinks.

If we adopt this policy now, we need not expect national disaster to result from the heavy depression spending. Whether or not all of that spending has been absolutely necessary is not now the question at issue. That it would lead to disaster if continued is perfectly clear. It has left us with a national debt mounting up well toward $37,000,000,000. A country worth $350,000,000,000, with great recuperative powers, can absorb a debt of $37,000,000,000 without collapse and without running the risk of dangerous inflation. But it would not be wise or prudent to subject the Nation's financial sinews to any heavier strain. Our executive officials and our national lawmakers will pursue the course of wisdom if they will face about and lay down a new national policy of retrenchment, so that as soon as possible we may approach the time when the Nation's tongue and buckle will meet. Whether or not the tongue and buckle of the Nation's financial belt may be made to meet in 1939, thus achieving the cherished goal of a balanced Budget in the next fiscal year, depends upon the will to cut appropriations. I mean this statement exactly in its literal sense. It depends upon not only the will to cut in Congress but also the will to cut in the executive departments.

Members of Congress and the executive branch must pull together with a mutual determination to do the job, however disagreeable it may be. There is no doubt that it can be done if Congress and the executive officials will apply the grim philosophy of the elder statesman who said, concerning the resumption of specie payments, "The way to resume is to resume."

The modern paraphrase of that saying is: "The way to balance the Budget is to balance it." Cuts can be made without crippling any essential governmental activity which in the aggregate will produce enough savings to balance the Budget in the fiscal year 1939 without any help from increased taxes. We already have a very wide tax base, and with expanding revenue due to reviving business and returning prosperity our tax receipts should be adequate to run

the Government and to cover fixed charges such as debt retirement. A balanced Budget at the end of the present fiscal year 1938 is not in the picture.

It is amazing how many times appeals are made to Members of Congress to vote for measures of questionable worth because of the financial benefits that would accrue to their districts. That type of measure is responsible for most of the "hog combines" that have such a devastating effect on the United States Treasury.

If we are to have real retrenchment, Members must steel themselves to vote against such bills, even at the risk of being charged with unfaithfulness to their districts. As a matter of fact, in most instances a vote against such a bill is a vote in the best interest of the districts that are supposed to be sugared as well as the country at large, for there is no congressional Santa Claus except in somebody's imagination, and the people always have to pay. There is not a nickel of tax revenue spent by any governmental unit—Federal, State, or local—that does not come out of the taxpayer.

Any Member of Congress knows places where vast savings can be made by retrenchment without in any way doing injury to governmental operations. The enormous sums that are being poured out on reclamation and irrigation projects seem very much like a travesty when we recall the strenuous efforts the Government is all the time making to curtail crop production. Why not go slow on those projects for a while? In our former years of highest prosperity we spent not over $50,000,000 or $60,000,000 a year on river and harbor improvements. Now, when we are struggling to get out of the worst depression America ever has known, we are spending about $140,000,000 a year on our rivers and harbors. Why not mark time for a while?

And why not put a check on our expenditures for public roads? The Federal appropriations for roads during the last 5 years have been staggering. I am referring now to the cost of original construction, and on top of that every time a million dollars is spent for roads the maintenance cost goes up. The specific appropriations for roads during the 5 years have been in excess of $430,000,000. In addition to this enormous outlay for road building, Harry L. Hopkins spent from relief funds prior to June 30, 1937, $1,300,000,000 for highways, roads, and streets, and he has outstanding commitments amounting to between $200,000,000 and $300,000,000 more for roads. Altogether we have spent more than $2,000,000,000 for roads in 5 years. America today is beribboned from coast to coast and from Canada to Mexico with hard-surfaced highways. We should pause in our road-building activity, at least until the Treasury is in better condition and the danger of inflation and bankruptcy ceases to hover over the land.

Such items as these, rather than personal services, must bear the brunt of the heavy cuts if we are to get the Budget in balance. In the Government service, no less than in the ordinary walks of life, "the laborer is worthy of his hire." The vast army of workers who carry on the operations of the Government, such, for instance, as the postal workers, certainly are not overpaid, and it would be a fatuous undertaking to try to balance the Budget by taking it out of the backs of the Government employees.

If we are to have real economy, the future appropriation, euphemistally called an "authorization", is to be shunned just as surely as actual, unnecessary appropriations must be avoided. When such a measure comes before the House or Senate the persistent advocate will not fail to assure his colleagues that "this is not an appropriation—it is just an authorization." Seasoned legislators are not fooled by such talk. They know that, just as a big oak from a small acorn grows, what appears to be an innocuous authorization in ninety-nine cases out of a hundred develops into an appropriation. So if we are to do a real job in cutting, we must insert the pruning knife in authorizations as well as in appropriations.

In conclusion let me repeat that the Budget can be balanced and, in my judgment, it must be balanced to save America from disaster. It can be balanced in the fiscal year 1939 if we have the courage and determination to do it.

To balance the Budget is not the job of Congress alone or of the executive branch alone, but it is the job of both, and it is the biggest job before them.

The "Panay" Incident and the Ludlow Resolution

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, ON DECEMBER 21, 1937

Mr. FISH. Mr. Speaker, under leave to extend my remarks, I include the following radio speech over the Intercity Broadcasting System, Tuesday evening, December 21, 1937, on the National Council for Prevention of War program:

I propose to speak in a serious vein, free from partisanship of any kind.

The sinking of the *Panay* has raised an issue of paramount importance, affecting the preservation of the peace of our country. I believe it should be openly and freely discussed, and that all the known facts should be presented to the American people who are the ones most concerned.

There seems to be no dispute, according to the press, over the facts in connection with the sinking of the American gunboat *Panay* on the Yangtze River. In an attack in broad daylight the *Panay* was bombed and sunk by Japanese airplanes and the survivors were fired upon by Japanese machine guns.

The issue presented is an American one, far transcending all party lines. Naturally, the American people resent bitterly this uncalled-for attack on our flag and on our gunboat, resulting in the death of several Americans. I wholeheartedly support the demands made by the President and the Secretary of State for full apology, compensation, and permanent guaranties against the repetition of such attacks on our ships and on American citizens. These demands should be supported by united public opinion, by Republicans and Democrats alike.

I have repeatedly in the past urged that our gunboats and our armed forces, except the legation guards, be withdrawn from China, with whom we are at peace. I still believe in this policy. However, I do not believe in withdrawing one single American gunboat or soldier from China while under fire or as a result of threats or coercion. The American flag has never been hauled down on account of intimidation, threats, or fear of violence, and it should not be in China until full and complete guaranties have been obtained and existing incidents settled on a proper, fair, and peaceful basis.

I loathe and abhor war, because I believe it is a form of national suicide. Furthermore, any war with Japan would be criminal folly, as there is nothing to be gained even if we won and a great deal to lose if it lasted for a number of years with no definite result.

I urge the American people, regardless of party affiliations, to refrain from hysterical, provocative, and inflammatory speeches, pending the settlement on a friendly basis of our difficulties with Japan. I also urge them not to enter into boycotts, reprisals, or embargoes of any kind, because all of them tend to inflame the passions of our people, develop hatreds, and, in return, cause bitter enmity in Japan, which will probably eventuate in war.

I have the utmost sympathy with the attitude of the American Federation of Labor, which assumed the lead recently in an Ohio city, where unemployment was largely due to the importation of the low-priced commodities from Japan, where labor is paid 20 cents a day. Their grievance is not against Japan but against the administration for not providing adequate tariff protection to American workmen. On the other hand, we must remember we have sold to Japan within the first 10 months of this year about $254,000,000 worth of goods and bought $175,000,000 worth, which means that Japan is one of our best customers. In the same period we sold to China about $46,000,000 and bought about $92,000,000 from her.

I want to take this occasion to warn the American people that there are groups within our own country of skilled propagandists—Communists, Russians, Chinese, and possibly English—who want to inflame the passions of the American people against Japan, and that from now on we will be subjected to a vast propaganda campaign of hate, trying to force the United States to police China and to make war on Japan.

There is no more sensitive, proud, or warlike nation than the Japanese. If we deliberately become victims of foreign propaganda and of war psychology, it can only mean that we are embarking on the road to war. It is the easiest thing in the world, if we start out with a chip on our shoulder, to enter into a war if we are looking for it.

My message is, and I hope it will be heeded by the American people, that they remain calm, cool, and keep their feet on the ground, free from propaganda and partisanship, and consider the facts on a sound and sane basis, having in mind the best interests and welfare of the American people.

I am convinced that the Japanese Government will comply with every request made by our Government, as to apology, compensation, and guaranties, and pending that we should take the attitude that we are ready to arbitrate every single dispute with any foreign nation that does not involve deliberate attacks on our country, our territories, or our citizens.

Everyone must understand that the American people will go to war in defense of our country and its territories if attacked by foreign powers. The American people do not want any conquered territory, and will not go to war over foreign boundary disputes and ancient blood feuds, or over conflicts about trade, property, and neutral rights, all of which should be settled by arbitration.

I think we should keep out of every foreign war. If other nations want to go stark mad, arm to the teeth, and go to war, it is their war and not ours.

Representative LUDLOW, a distinguished Democratic Member of Congress from Indiana, has introduced a resolution providing for a constitutional amendment giving the people the right to vote, in a referendum, on the question of war. I signed the petition gladly with a majority of the Members of the House of Representatives, and also with an overwhelming majority of the war veterans of the House, both Republicans, and Democrats alike.

I know of no resolution that has ever caused more inspired propaganda from various sources, including the White House and the State Department, and with little or no justification. Statements have appeared in the newspapers and editorials have flourished like a green bay tree filled with false and misleading information concerning the purposes of this resolution.

The proposal simply seeks to give the American people the right to vote on wars of aggression, and in no way affects our national defense. It specifically provides that it shall not go into effect in case of an invasion of our country or territories by a foreign power. It is intended to make it more specific, by amending it to include the words, "or any military or naval expedition against the United States."

I received a letter from one of my constituents asking me how it was possible for me to vote for such a resolution which would not permit us to go to war even if our Navy were destroyed by a foreign power. This is typical of the absurd attacks that have been made upon this proposal, and shows a complete lack of confidence in the patriotism and Americanism of Members of Congress.

If we actually believe in our free institutions and a government by the consent of the governed, neither the President nor the Congress should be allowed to take the Nation into any foreign war to which a majority of the people are opposed.

At the present time the war-making powers are largely in the hands of the President, and the Congress has become merely an instrument to ratify the international moves and commitments of one man. By way of demonstration, with a 4-to-1 Democratic majority at the present time the President might, if he cared to, make commitments that would practically compel a majority of his party to support him in the Congress, but if there is an effective check such as a war referendum which compels the Chief Executive to convince the people that he is right, it would be a deterrent to such action involving us in wars that may not be justifiable.

I want to point out, however, that the Ludlow resolution does not affect the present situation in the Far East, as it would take at least a year to be ratified by three-quarters of the State legislatures.

I doubt, in view of the determined opposition of the President and the State Department, that it will be possible to get the necessary two-thirds vote in Congress for the passage of this resolution, but I am convinced that if it should be passed by Congress it would be overwhelmingly adopted by the people back home and by the different State legislatures.

The people don't want any wars of aggression, or wars as a result of trade disputes, property rights, or neutrality rights, or any wars arising from ancient foreign blood feuds and boundary disputes between other nations, or attempts to quarantine or police other nations. The American people are prepared to spend millions for national defense, but not $1 to send American soldiers to foreign lands to fight other people's battles.

In spite of the tremendous barrage of propaganda against the Ludlow resolution, I urge upon my unseen radio audience that they write to their Members of Congress, Republicans and Democrats alike, in the interest of peace, and ask them to vote for the Ludlow resolution when it comes up in Congress on January 10.

War has only recently become a matter that affects every citizen in the Nation and amounts to mass suicide. Certainly the people who are going to carry the muskets, and the mothers and fathers, have a right to determine whether the facts in each case warrant the sacrifice they will be called upon to make and justify our going into a modern war where everyone loses and no one wins.

I am no pacifist, believing in adequate national defense, but I shall do everything in my power to isolate the American people and the United States from participating in unnecessary foreign wars. The best way to do that is to give the people the final vote to determine this issue themselves.

QUESTIONS

(1) Mr. Congressman, there seems to be a fear that the war referendum would delay effectual action by our Government in time of crisis. Do you believe this?

Answer. Certainly not. There has been more inspired propaganda and false statements made regarding the proposed Ludlow resolution than any other proposal in recent years. It in no way affects our national defense in case of attacks or invasion of our Territories or of our country. Its main purpose is to give the American people the right to vote to keep us out of what they may consider to be unnecessary wars, arising over property rights, neutrality, trade, foreign boundary disputes and attempts to police or quarantine other nations.

(2) Mr. FISH, why would the Ludlow war referendum be opposed to representative government, as a high official has just implied?

Answer. I do not agree with the President's statement that the Ludlow war referendum is opposed to representative government. The fact is that war issues arise generally between elections, and there is no mandate from the people. Furthermore, I believe the American people, who have the most at stake, are as competent to pass on questions of war or peace as the President or Members of Congress. In fact, one of the purposes of the resolution is to prevent international-minded Presidents who want to quarantine and police other nations from getting into wars of aggression. The war referendum would be a check and a deterrent on any militaristic-minded President that we may have in the future.

(3) Congressman FISH, the *Panay* incident is said by some to have resulted from a governmental policy that keeps American armed forces where they have no right to be; namely, in the line of fire of a no man's land where other nations are fighting. Will not the increase of our armed forces in Chinese waters now increase the likelihood of more incidents?

Answer. Although I am opposed to withdrawing American gunboats or hauling down the American flag under fire or under threats or coercion, I see no reason for the gunboats to be there in the first place, and believe they should be withdrawn as soon as guaranties that we asked for are given by Japan. I am not in sympathy with the suggestion of having the American Navy patrol the Chinese coast, together with the Navies of Great Britain and France, as it is bound to create some incident which will eventuate in war. Great Britain has a great stake in China, and I do not believe our Navy should be used to safeguard her commercial interests.

(4) Congressman FISH, does America face a greater danger from outside dictatorships or from domestic tendencies that ignore the will of the Congress and the people in the matters of war and peace?

Answer. Believing, as I do, in our free institutions and popular government, I would much rather put my trust in the will of the people than in any foreign or outside dictatorships, or dictatorship from within, that ignores the will of both the Congress and the American people.

(5) Mr. Congressman, as a war veteran, do you believe the Ludlow war referendum dangerous to our national defense?

Answer. A very large majority of the war veterans in the House of Representatives have signed the Ludlow petition, and they have done so because they know that it will in no way interfere with or endanger our national defense. There is no group of Americans that loathes and abhors war more than the veterans of the World War, but at the same time there is no group that is stronger for adequate national defense. Furthermore, I do not believe there is any group that will go any further to keep us out of foreign entanglements, war commitments, and of actual war than those who fought in our armed forces on foreign battlefields.

The Proposed British Trade Agreement

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. WOODRUFF. Mr. Speaker, the "weazels" in the proposed Anglo-American reciprocal military trade treaty negotiations are beginning to show their heads. With the holes all carefully plugged at the American end by the State Department, much concern is being occasioned Mr. Hull and his "Yankee traders" because, apparently, the British end

of the tunnels, which are being driven under the Johnson Act, are open and the "weazels" insist upon popping out over there and displaying themselves in full view of those abroad and in America who are carefully watching these sinister and secret negotiations.

Several weeks ago I commented upon the fact that the real purpose of the British-American trade treaty, which is now under negotiation, was to tunnel under the Johnson Act, which is to bar to further credit loans by America to our former allies of the World War who have defaulted their honest debts to the people of this country.

While war was still a matter of the somewhat distant future, the Johnson Act and their debts to us were regarded with scorn and a shrug of the shoulders by Britain and France and the other nations who had defaulted. The lone exception to this was the honorable and sturdy little nation of Finland, which has met its debt payments promptly and fully, with the result that its example is the one bright and shining spot in a world situation dark and gloomy with dishonesty and broken pledges.

A few days ago, authentic information from London revealed the fact that Great Britain has asked our State Department to consider the question of future war credits should Great Britain become involved in conflict. Britain is, of course, leading the way for France to follow.

With war threatening, Britain and France have become very much concerned(?) over their defaults in debt payments, and are so contrite that they now earnestly desire to begin "token" payments—provided the debts are again scaled down, and provided that the "token" payments are not too heavy, and provided that the payment of the fraction of the debt remaining after the new reductions is spread over 50 years, and provided that in the meantime the United States will agree that Britain (and, I suppose, France as well) can begin borrowing, for war purposes, more money than they would probably repay us in the reduced debt. Are we to expect, when this has been accomplished, that the process is to be repeated so often as it seems possible to impose upon the American people?

Such a proposal, of course, can be ventured only because of the contempt which the nations of Europe must necessarily feel for American intelligence.

These recent revelations from London state that:

> The possibility of such war credits presupposes a settlement of the present war debts which Great Britain is now anxious to bring about, and the functioning of a trade agreement between the United States and Great Britain and the British Dominions now being negotiated.
>
> These war credits, Washington has been advised, would be used by Great Britain for the purchase of food and materials for primary consumption and industry.
>
> An early study may be made of the way in which such credits could be available, either directly to the British Government or indirectly through American business firms who would be guaranteed repayment by arrangement through the American and British Governments or through official banks.

The most startling "weazel" which popped out in London in this connection is the following statement:

> What the British Government seeks is a secret understanding in principle that should war break out Great Britain could reply upon the United States for a continuous supply of food and materials. Without credit such a supply would be endangered.

Here is the absolute confirmation of the statement I made some weeks ago that under the guise of a reciprocal-trade treaty, which in itself is highly dangerous to American industrial and agricultural interests, Mr. Roosevelt and Mr. Hull are actually negotiating what in reality constitutes a secret military alliance in absolute defiance of the Neutrality Act, and an alliance which inevitably would involve this country on the side of the British Empire in any war in which Britain might become engaged.

Some months ago, in discussing editorially the possibility of a trade agreement between Great Britain and the United States, the London Economist stated:

> It is fully possible * * * that Great Britain has already gained more from the concessions made by the United States in her treaties with other countries than could be obtained by a direct Anglo-American treaty.

Added to this situation, we now find that the British dominions expect to get compensatory markets in the United States in exchange for all the markets they give up in Great Britain or her dominions under the terms of this proposed trade treaty. The imports which would thus flow in upon American producers would be principally competitive agricultural products, to the further detriment and embarrassment, of the American farmer.

No situation more highly loaded with dynamite can be imagined than these negotiations, utterly secret in character, now being carried on between British officials, President Roosevelt, Secretary of State Hull, and roving Ambassador Norman Davis.

Not only are the implications of this trade treaty of sinister import to American industrial and agricultural producers, particularly the latter, but they are of even more sinister import to every American mother who has a son of the proper age for cannon fodder.

It is utterly inexcusable, and it is difficult to find words by which adequately to characterize such action on the part of the President and the State Department in deliberately and secretly carrying on these negotiations for a military alliance under the guise of a trade treaty while concealing that fact from the American people, who in the finality have to do the fighting, the suffering, the dying, and the paying which may become necessary to validate those unauthorized and atrocious treaties.

While Mr. Roosevelt tries to abate the fears of the Nation by heralding his determination to "keep on seeking peace," he is actively engaged in treaty-making negotiations which, if our experience of 20 years ago teaches us anything, will ultimately lead us straight to war.

The Ludlow War Referendum Resolution

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

RADIO ADDRESS OF HON. HERMAN P. KOPPLEMANN, OF CONNECTICUT, AT HARTFORD, CONN., DECEMBER 19, 1937

Mr. KOPPLEMANN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me on the Ludlow war referendum resolution at Hartford, Conn., on December 19, 1937:

> This afternoon I had intended to discuss the special session of Congress, but instead I am going to talk about war.
>
> The other day I telephoned the White House for an appointment with the President. I wanted to see him about legislation and matters of importance to my district. The President's secretary replied impatiently that all appointments were being canceled because the President was too busy with the war in the Far East. To him that was the most important matter. In comparison, everything else was insignificant. The day before an American boat had been bombed and sunk in China. The day after the last of 218 signatures to a petition to bring up the Ludlow war referendum resolution for debate in the House was obtained.
>
> The signing of that petition is mighty significant. The Ludlow resolution seeks an amendment to the Constitution for a referendum to the people of this country to say whether or not the United States will wage a war of aggression. The resolution had been locked up in a committee for more than 2 years.
>
> Understand that this Ludlow resolution does not apply if we are invaded or attacked. It has to do solely with the question of whether we will send our boys and ships to foreign territory to fight a war. That question, according to the constitutional amendment which the Ludlow resolution seeks, must be decided by the people themselves. Congressman LUDLOW himself signed the petition first. My name went on as the second signer.
>
> A telegram from Hartford reached me the other day which advised that the sender was unpleasantly surprised at my support of the ridiculous Ludlow resolution; that it seemed too grotesque for serious consideration; that it was hardly the reasoning of adult minds, and to please note his active opposition. That person should not have been surprised. My advocacy of peace is no secret.

In my three campaigns for Congress I have repeatedly emphasized that I would vote for every proposal which would insure peace for the United States and against every proposal which would lead us into war.

When the Founding Fathers, who wrote our Constitution, decreed that Congress should have the power to declare war, they made a radical departure from the method of declaring war pursued up to that time. In Europe the rulers declared war without questioning the people. Now we reach another point in history wherein many of us feel it is high time that the American people themselves decide whether this Nation should go to war.

With our facilities for communication, whereby an hour or two after an event has transpired thousands of miles away the account can be carried to the public by press and radio, with the public informed every hour as was never dreamed possible when the Constitution was drafted, the people are now in a position to know and decide for themselves what they want to do about war, not hastily but with sufficient time for calm deliberation.

Everybody claims to be for peace, only too often they inject a big "but."

Congress enacted a neutrality law under the terms of which the minute trouble broke out in the Far East Americans should have been warned that if they remain there or travel there they do so at their own risk. Under the terms of our neutrality law American ships should have been immediately withdrawn from the troubled zones.

Since last August we have had repeated warnings of trouble. This is the Japanese-American score in China to date: August 19, 1 sailor killed 17 wounded by shellfire on the U. S. S. *Augusta*. The Japs disclaimed responsibility. October 13, another sailor aboard the *Augusta* wounded. The Japanese apologized. October 24, Americans imperiled by Japs' machine-gun fire at Shanghai. The Japanese expressed regret and apologized. November 1, Jap bluejackets seized a junk from the American protected side of Soochow Creek. The Japanese Navy apologized. November 30, American-owned launch seized by Japanese. The boat was returned, the Japs apologized. December 3, Jap troops encroached upon United States marine-held section in Shanghai, withdrew on the marines' demand. The Japs apologized. December 12, the *Panay* was bombed and sunk. The Japs are apologizing.

With the bombing of the *Panay* we have one of those real incidents which are used as a direct cause for war. The *Panay* was escorting three Standard Oil vessels. Japan has been most profuse in her apologies, but the grim fact remains that Americans are dead, many are wounded and missing, an American gunboat has been sunk, and a war hysteria is being built up and spread in the United States. All of this might have been prevented had we pulled out of China when the rumblings of the volcano were first heard.

The protection of American commercial interests in China is not worth involving this Nation of 130,000,000 souls in a war they will be called upon to fight and pay for.

The situation would be different if the United States were committed to a course of international cooperation to aid China or if we were actually participating in a program to quarantine the aggressor.

The meeting at Brussels last month showed that international cooperation at the present time is impossible. Under these circumstances the only thing we ought to do is to bring our people and our ships home. We have had clear warning of what lies ahead.

In the face of these troubling events, the affixing of these 218 signatures of Members of the House of Representatives to the Ludlow petition 2 days after the bombing and sinking of the *Panay*, itself an act of war, despite the profuse apologies, is significant. It proves that the voice from back home is loud enough to convince my colleagues that the American people do not want a war, not of their own making.

Opposition to the Ludlow resolution says that the delay involved in a referendum would hamstring immediate action which the administration and Congress might consider advisable. That might have been true 150 years ago. It is not true today. If something were to happen tonight which might warrant our going to war, within 10 days voting booths could be set up all over the United States, and the people could register their decision.

It may take years before this amendment is adopted. I hope it will not require another war on foreign soil to emphasize the great need for this constitutional amendment. The gratifying thing is that the germ has been implanted, and what seemed to many an impractical proposal of a dreamer bids fair to become the only practical method of protecting you from a war which you do not want.

It may be that the war in the Orient, and in Europe for that matter, will lead the American people to approve of our entering into the conflict. Well and good, if that be their wish. However, I won't believe that this is the wish of the people of my district unless a vote is taken.

In Australia in 1916 there was a referendum held on conscription. A Mr. W. Morris Hughes, political leader at that time in the House of Representatives in Australia, traveled to England and made quite a hero of himself with his promise that Australia would give the mother country voluntary and enthusiastic cooperation for conscription. Mr. Hughes returned to Australia, and a referendum on conscription was held. It resulted in a decisive defeat. A second referendum followed. Again, more emphatically this time, the Australian people gave an emphatic "no" to conscription. Mr. Hughes lost his political leadership in Australia. Whatever participation Australia had in the World War was voluntary on the part of her people. There was no conscription of men who did not want to go.

I am going to leave with you a few facts to think about. Four hundred and fifty-five Members of Congress voted for war in 1917. I am told that only two of them actually went to war. I grant that many were ineligible for one reason or another, but the fact remains that a Congress which voted for a war did not do the fighting. There was scarcely a family in the United States which did not one way or another fight the World War. Many of you who are listening to me are today paying for that war which was declared when you were too young to know what it was all about.

Here is another fact. Did you know that there was an interlocking connection between the munitions industries in the different countries, and that munitions factories, regardless of where they were located, were selling to both sides? I am told that rarely, if ever, were munitions factories bombed, whereas destruction was meted out freely to hospitals, cathedrals, and homes.

The World War was fought to end wars. Today there is a war.

The World War was fought to save democracy. Today there are 12 dictatorships, all of them established since 1918.

Democracy cannot withstand another war—neither here in the United States nor elsewhere. Should this Nation go to war, that war will be followed by a depression which will make a shadow of the last one. There are at the present time forces in this country waiting for an opportunity to seize and change our form of government. That opportunity will come with the next war, and it will mean the end of democracy in the United States.

Agriculture—Subsidies and Monopoly

EXTENSION OF REMARKS

OF

HON. CHARLES R. ECKERT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. ECKERT. Mr. Speaker, agriculture is in distress. Many farmers are crying for help. In desperation they are appealing to the Federal Government for relief. In that respect the farmers are keeping step with industry, commerce, finance; with wage workers and the unemployed. Hardly a group, whether engaged in business or workers in industry, remains that is not casting eager eyes in the direction of the Federal Government, seeking aid and help. And so the farmers of America are not only keeping up with the custom and practice of the times, but in certain aspects have much to offer in justification. The American farmer has been in distress and suffering the pangs of unrequited toil for many decades. The millions of American citizens whose livelihood is dependent upon tilling the soil are being sorely tried. Their homes and their farms are constantly passing out of their hands, so that the roll of the tenant farmer is growing larger and larger with the years. In consequence there has been an acute American farm problem for more than 50 years.

During those years political parties vied with each other in fulsome platform promises. The declarations of the party platforms always turned out to be empty and elusive. Of course, the game of deception could not continue indefinitely, and so the time arrived when the farmers were no longer contented with empty mouthings and vain promises. The Democratic Party in 1932, by solemn declaration, assured the farmers of America that, if entrusted with power, action in their behalf would be taken. After assuming control of the Federal Government in 1933, the party immediately undertook to honor its plighted word, and steadfastly continued to translate its platform promises into law.

Contrary to common report that the farm legislation is emanating from certain self-seeking individuals high in the councils of the administration, whose sole aim is the establishment of a totalitarian state and the consequent loss of our cherished liberties, the farm program occupied a prominent place on the agenda of the special session of Congress in response to insistent appeals from the farmers themselves. The administration would be quite happy and the Congress relieved of a vexing and perplexing problem if farm legislation could be consigned to the limbo of forgotten things.

But there is no such good luck in store for the Congress and the President. The farmers are demanding legislation on the subject of agriculture. While the farmer has ample

precedent for his present course, might it not be profitable to inquire as to the reasons why such economic distress?

There was a time in the life of the American Republic when the American farmer was the envy of the world. He occupied a place in the national economy that was everywhere recognized as the strength of the Federal Union. His station in life fostered and developed sterling manhood and true citizenship. He was sturdy and strong; vigorous and wholesome; independent and self-reliant. He represented the bold peasantry of which Goldsmith wrote:

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates, and men decay:
> Princes and lords may flourish, or may fade;
> A breath can make them, as a breath has made:
> But a bold peasantry, their country's pride,
> When once destroy'd, can never be supplied.

No longer does he occupy this high estate. In common with his fellow toilers in mill and mine and marts of trade, he is the victim of economic forces and conditions over which he has no control, and so day by day and year by year his place in the national economy is becoming more and more precarious.

Agriculture is our basic industry. It is the most essential of all human endeavor. All other activities are dependent upon the tilling of the soil. Food and clothing are primary necessities. Both are first-hand products of the soil. The place of agriculture in the national economy is vital to national well-being. No people can survive, let alone grow great, without healthy and profitable agriculture. And yet we find this industry, in spite of its importance in our national life, helpless and prostrate. Why?

A little journey to the field of elementary political economy might shed light on the perplexing and baffling problem. Political economy is the science of the production and distribution of wealth. As we stand puzzled and confused before this baffling problem, one thing at least is clear: The farmer —the dirt farmer—does not present any unemployment problem. He always has work to do. And this brings us to the very brink of the problem of production, for all productive effort involves work.

The farmer is a producer of wealth. The products of the farm are brought into existence by the application of labor to land. Wealth of every kind is created in the same way. There is no other method known to man by which wealth can be created. The farmer is the pioneer in the field of production. He is a living example of the process of bringing wealth into existence. In the cultivation of the crops of the field all the factors in production are employed. These in terms of political economy are:

LAND, LABOR, CAPITAL

Land is defined as "the material universe outside of man and his products." The term "land" necessarily includes not merely the surface of the earth as distinguished from the water and the air but the whole material universe outside of man himself. The term "land" embraces, in short, all natural materials, forces, and opportunities.

Labor is defined as "all human exertion directed toward the production of wealth."

Capital is defined as "wealth used in the production of more wealth."

The result obtained from the application of labor with the aid of capital—tools—to land is wealth. Wealth therefore is "all material things produced by human labor having exchange value."

The process of production or the creation of wealth is quite simple. The farmer has many striking examples. In his activities he runs the entire gamut of production. He is a first-hand user of land. The very nature of his labor impels him to contact the soil. He is a user of tools—capital. And so the farmer in action employs all the factors of production—to wit, land, labor, capital—more distinctly than many other producers of wealth. Let not this fact, however, obscure the simple truth, that in all production—no matter how intricate and complex—the three factors of production are employed.

Now, since the process of production has been analyzed, let us examine the problem of distribution. This is important. For it availeth the worker little unless the factors involved in production receive their just share of the product. In the unjust distribution of wealth there lurks the germ of economic and social disintegration. The farmer's troubles cannot be discerned, nor proper remedies proposed, without a clear understanding of the laws of distribution. The farmer's miseries are not due to his inability or unwillingness to produce. He, in conjunction with generous Nature, produces in abundance, but somehow and somewhere in the course of the processes of distribution of the things his labor brings into being there passes out of his possession a major portion without due recompense. It is this fact that is accountable for his troubles.

And so let us examine the laws of distribution. It has already been noted that the factors in production are land, labor, and capital. The sum total of all production is primarily divided among these three factors—the portion allotted to land as rent, the portion allowed to labor as wages, and the portion allotted to capital as interest.

It is clear, therefore, that the amount which the farmer will receive for his labor and capital will depend upon the amount the factor land is able to exact. If land is plentiful and cheap, rent will be low. On the other hand, if land is scarce and dear, land will be high. These phenomena are illustrated in the history of our own country, the former by the settlement of our western frontier and the latter during the World War, when the cry went up over the land that we would win the war with wheat. Homesteads and fairly sizable farms could be had during the settlement of the West for the asking, and consequently the item of rent was absent. But after all free land was homesteaded or monopolized, then arose the item of rent, and henceforth it played a decisive part in the fortunes of the farmer. The experience of the farmers during the World War is a case in point. The prosperity of the farmer depends in large measure upon the terms for which land may be had.

By way of illustrating the laws of distribution, let us suppose that A is the owner of 100 acres of virgin wheatland, worth, in its virgin state, $100 per acre. B, a farmer, rents the land from A for $600 per year. B has no capital and so borrows from C, let us say, $5,000 at 6-percent interest. With the capital thus borrowed B obtains the necessary tools, seed, fertilizer to plant the 100 acres and erect such buildings as are necessary for the protection of himself and family. Thus equipped, B plants the 100 acres of land in wheat. In due course he harvests his crop and finds that his labor was rewarded with 2,500 bushels of wheat. He converts his wheat into cash by selling it at $1 per bushel, so that the total income for his year's labor—assuming that the production of 2,500 bushels of wheat requires the labor of one man 300 days, involving 2,400 man-hours of human labor—is $2,500. Now, the distribution of the $2,500 would, by virtue of the operation of the laws of distribution, appear somewhat in this fashion:

Rent paid to A	$600
Interest paid to C	300
Cost of seed	150
Cost of fertilizer	300
Cost of threshing	125
Cost of transportation	125
Taxes	100
Total	1,700

It will be observed that B has remaining for his year's labor $800 as wages with which to support himself and family and amortize the $5,000 debt within the lifetime of his farm equipment and buildings.

The figures in the illustration, of course, are arbitrary and are not intended to represent an exact picture of wheat husbandry. It does, however, show the operation of the natural laws of distribution. It must be noted that as one or the other factors employed in production exacts a larger or smaller portion of the total product, the others will rise or fall, thus affecting the amount that the farmer will receive as wages. If rent rises, interest and wages will fall; conversely, if rent falls, interest and wages will rise.

Inasmuch as the farmer is never out of employment and since all wealth is the creation of labor applied to land, and as the farmer produces a large portion of the wealth of the Nation, as evidenced by the sum total of all the agricultural products, and again inasmuch as the total production of the farmers represents the farmers' wages, less, of course, the amount paid for the use of capital as interest and the use of land as rent, does it not seem passing strange that his lot should be so hard and his income so low?

It is plain that his troubles are not due to lack of work nor of production. His labors are fully rewarded with the products of the field. Nature responds freely and generously to his toil. Then why his unhappy plight? Since it is not due to his indolence nor the niggardliness of Nature, the explanation must be sought elsewhere.

Since his wages are low and the total sum of the products of his labor are distributed to the three factors in production, to wit, land, labor, capital, it would seem that the demand of either land or capital, or both, are responsible for the low income of the farmer. Capital, however, being the tools used in the productive process, is powerless to exact more than a fair share of the product. Capital is subject to the law of supply and demand. In periods of economic sluggish activity, interest is low; in periods of active activity, interest is normal. Therefore the trouble is not due to excessive interest. And since wages are low and interest not excessive, it follows that the exactions of landholders are responsible for much of the farmer's troubles. That the major woes and worries of the farmers are due to the latter cause becomes clear upon critical analysis of the problem.

The social phenomenon of the increase of land values with advancing civilization must be taken into consideration when seeking the cause of the woes and worries of the farmer. This phenomenon is outstanding in every civilized country. It follows the wake of progress as unerringly as do the colors of the prism in the wake of the shining sun. It is a law of Nature as immutable and changeless as the law of gravity. The greatest and mightiest stand helpless and powerless to stop or impair its march with progress. Therefore the effects of this social phenomenon upon the fortunes of the farmers are of paramount importance in the consideration of the farm problem.

In periods of prosperity land values rise. During the hectic days of the World War, when the cry went out over the land that wheat would win the war and the price of wheat was soaring, wheat land and other lands likewise increased in value.

The rise in agricultural lands kept pace with the demand and price of wheat and other agricultural products. It was not uncommon during those hectic days to see agricultural land sell for as much as $500 per acre. And as the selling price of agricultural land kept pace with the price of wheat and other farm products, the landowner was eagerly anticipating his full share of the high price of farm products. Just as farm prices increased, he demanded higher and higher rent for the use of his land. This is the universal practice of the landowner. It will continue to be his practice as long as he will be permitted to collect the profits arising from land values. This is true no matter whether the farmer happens to be landowner, laborer, and capitalist all in one or as tenant or mortgagor. The ultimate effect on the fortunes of the farming fraternity will be exactly the same. The result is exploitation of the farmer as a worker. In view of the fact that there is no escape from the relentless working of the law of rent, does not the fundamental cause of the farmer's troubles become clear? In view of this stubborn fact, surely prudence would dictate a change in our land policy.

The farmer is weighted down with excessive and burdensome taxes. He pays a tax on his capital investment; he is taxed on everything he buys; he finds himself a victim of a vicious tariff system; and in addition to the endless list of taxes, both direct and indirect, he is the victim of excessive freight rates on the things he ships to market and on the things he has to buy. But this is not all. He finds himself the victim of trusts and combines and patent monopolies in addition to the perpetual exactions of the landowner. What is the trouble with the farmer? He is the victim of monopoly exactions. And while he remains the victim of monopoly, no planning—whether it be crop control, soil conservation, subsidies, or whatnot—will permanently solve the farm problem. As long as the farmer remains the victim of the ruthless and relentless exactions of monopoly his woes and his worries will continue. Obviously the remedy for the farmer's troubles is to abolish the monopoly privileges now in private hands.

We are told farming is a way of life. Yes. But first of all it is the way of 20,000,000 American citizens by which they gain their livelihood. It is all very well to sound the praises of agriculture as a way that leads to noble virtues and high spiritual attainments. But before this noble enterprise can be touted in such strains the exploitation of which the farmer is now a victim must be abolished, to the end that his material wants may be gratified short of utter physical exhaustion and spiritual bankruptcy.

The farmer must be freed from the many monopolistic exactions from which he suffers. First and foremost of these is land monopoly. Land monopoly can be easily abolished by the simple device of collecting for public revenue the economic rent in lieu of the many burdensome and depression-breeding taxes that now rest not only upon the farmers alone but upon industry and business generally. Such a policy would clear the way for the repeal of all taxes upon production. And with production freed and released from present-day monopoly and tax exactions industry would receive a mighty impetus. Production in all lines would expand, and with the expansion of industry there would arise an effective demand for labor. Consequently wages would increase, employment would be steady, and the purchasing power of factory workers would rise. With the purchasing power of the wage earners increased trade and commerce would experience new life and vigor and, in turn, the demand for the products of the farmer would increase.

It is contended by students of the farm problem that if the American people had adequate steady buying power the farm problem would be solved. And in support of this contention they cite the statement of the Department of Agriculture to the effect that if the American people were possessed of adequate purchasing power there would be a market for 40 percent more poultry, 40 percent more dairy cattle, 100 percent more acreage devoted to fruit, almost twice as much devoted to truck crops, 50,000,000 more acres of harvested food crops, and 40,000,000 more acres of feed grains.

This is not an idle dream. Everyone knows that there are millions of American families who are deprived of proper living conditions due to their low purchasing power. With this condition corrected by means of a proper and just system of distribution the farmer's problem would be solved. Then there would be no need for aid or assistance at the hands of the Government other than such help and counsel as are now available through the Agriculture Department State experiment stations and local farm agents. In addition, the farmer can improve his economic status by the establishment of voluntary devices such as cooperative associations, better farm management, and modern business methods, and availing himself of the advantages that science and invention have given to the world.

But first of all he must be freed from the many monopolistic exactions and unjust tax burdens from which he now suffers.

The Second "Do-Nothing" Congress

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. TREADWAY. Mr. Speaker, another "do-nothing" session of Congress has drawn to a close, further emphasizing the collapse of the Democratic leadership and the

inability of the administration to deal effectively and adequately with the pressing problems of the day.

We were called into special session on November 15 in response to the following proclamation by the President of the United States:

By the President of the United States of America

A Proclamation

Whereas public interests require that the Congress of the United States should be convened in extra session at 12 o'clock, noon, on the 15th day of November 1937, to receive such communication as may be made by the Executive;

Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, do hereby proclaim and declare that an extraordinary occasion requires the Congress of the United States to convene in extra session at the Capitol in the city of Washington on the 15th day of November 1937, at 12 o'clock, noon, of which all persons who shall at that time be entitled to act as Members thereof are hereby required to take notice.

NO MAJOR LEGISLATION ENACTED

The so-called public interest which seemed to the President to require this extraordinary session of Congress were outlined by him in his message of November 15. These were: (1) Crop control legislation, (2) regulation of wages and hours, (3) reorganization of the executive departments, and (4) regional planning along the lines of the Tennessee Valley Authority.

Not one of these measures has been enacted into law, and only two have been considered by the Congress. The mountain has labored, but has not even brought forth a mouse. Five minor measures were enacted during the session, but none had any bearing whatever upon the serious problems with which the Congress was confronted.

Here are the results of our labors: (1) The passage of a $12,000 appropriation for paying the salaries of the Senate and House pages, (2) the passage of a $225,000 appropriation to pay the Members' railway mileage in connection with the convening of the special session (incidentally, I was one of the few who voted against this measure), (3) the enactment of a measure providing for the loan of four paintings to the Constitutional Sesquicentennial Commission, (4) the enactment of certain amendments to the Cooperative Credit Union Act, and (5) the passage of a bill to extend the time for building a bridge down in Alabama.

If the Democratic majority are able to derive any satisfaction from this record, it must be that they are very easily pleased. I am sure their feeling is not shared by the country at large. When we consider what the Democratic majority started out to do, and then look at what was accomplished, it becomes apparent that the New Deal's legislative machine, which formerly ran so smoothly, has now completely broken down. It is significant that the President failed for the first time to express his appreciation to the Congress for its labors, but of course it would have been out of place to do so in the present instance.

MAJORITY LEADER GOES FROM SUBLIME TO THE RIDICULOUS

The majority leader [Mr. O'CONNOR] made a valiant effort to paint a glowing picture of the "accomplishments" of the present session, but he had little material to work with. In fact, he was so hard up for subject matter that he was led to make the following ridiculous statement:

The progress made toward tax relief alone would justify the existence of the special session.

The gentleman from New York has been here a great many years and knows as well as anyone else that it was not necessary for Congress to be in session for the tax subcommittee of the Ways and Means Committee to carry on its work. The committee was granted authority at the last session to sit during the recess of Congress, and it would have been able to make still greater progress had the special session not been called. In that event the members of the subcommittee could have devoted the entire day working on tax revision rather than spending each afternoon on the floor of the House taking part in debate and answering roll calls. Thus the gentleman's statement is obviously absurd.

PRESIDENT FAILED TO DEAL WITH MOST PRESSING PROBLEMS

Although at the time the President sent his message to Congress the country was in the midst of another business depression, the message took scant cognizance of the seriousness of the situation and utterly failed to comprehend its cause or suggest an adequate remedy. With business "on the skids," with unemployment increasing by leaps and bounds, with confidence shaken and fear rampant, the President was content to remark that "the present decline has not reached serious proportions." This despite the fact that the downward spiral of the so-called Roosevelt recession has been the most abrupt of any depression in the history of the country.

We do not hear the New Deal spokesmen coming forward now to say, "We planned it that way." The administration is quite willing to take credit for business improvement, even when it is the result of decisions of the Supreme Court invalidating repressive New Deal laws, but when it comes to taking the blame for a depression, that is another story. The President can always find a scrapegoat on whom to shift responsibility for his mistakes.

ROOSEVELT RECESSION DIRECT RESULT OF NEW DEAL POLICIES

If it were possible to have complete frankness on the part of those in charge of the Government—an ideal which I will concede is Utopian—we would be told that the Roosevelt recession is the direct result of New Deal legislation and New Deal policies and lack of policies. When the President suggests in his message that "an immediate task is to try to increase the use of private capital to create employment," he tacitly admits that the cause of the present depression is the disinclination on the part of private investors to assume, in addition to normal risks, restrictive governmental regulation, tax laws which are both oppressive and repressive, and the uncertainty of economic and business stability due to the loose fiscal policy of the administration.

FEAR OF BUSINESS REAL, NOT MANUFACTURED

The gentleman from New York [Mr. O'CONNOR], in his special-session "swan song," repeated the assertion that has been made by other administration leaders, including the President, that much of the present fear on the part of business and industry is "manufactured."

It is natural that the members of the Democratic majority would attempt to make such an excuse, but the fact remains that the fear which now abounds is very real and perfectly justified. Hard-headed businessmen do not go around "seeing ghosts." Their fears are based on the actual effect of present administration policies and the uncertainty which they create as to the future. Business has to take conditions as it finds them.

PRESIDENT'S REQUEST FOR COOPERATION IRONICAL

The President states in his message that "the ultimate answer to the condition of today is a cordial and confident cooperation not only between government and every kind of citizen but also between every kind of citizen and his Government." In the light of his past record, his arraying class against class, and his relegation of business to the "economic doghouse," the President's statement is somewhat ironical. But there is some hope for the country if "at long last" he has come to realize that we must all pull together if we are going to get anywhere.

One difficulty, as I see it, with the President's method of dealing with the problems of the day is that he has kept on administering legislative opiates to build up an artificial recovery—destined eventually to aggravate the disease—rather than trying to get at the cause and correct it. He now suggests that private capital come out of hiding, but he does nothing to allay the fears or remove the impediments which forced it into hiding.

OPPRESSIVE TAXES ONE OF CHIEF FACTORS IN BUSINESS DECLINE

One of the major contributing factors in the present slump has been the baneful effect of the undistributed-profits and capital-gains taxes on business. Together they have operated to put a damper on recovery by discouraging—yes, even preventing—the employment of new capital in productive enterprise. They have not only closed the avenue to increased employment for our workers, but they have actually caused more unemployment.

None are so blind as those who cannot see the wisdom of their own words. It was the President, himself, who said:

Taxes are paid in the sweat of every man who labors, because they are a burden on production and can be paid only by production. If excessive, they are reflected in idle factories, tax-sold farms, and, hence, in hordes of the hungry tramping the streets and seeking jobs in vain.

Our workers may never see a tax bill, but they pay in deductions from wages, in increased cost of what they buy, or (as now) in broad cessation of employment.

There is not an unemployed man—there is not a struggling farmer—whose interest in this subject is not direct and vital.

When these words were uttered on October 19, 1932, we had no undistributed-profits tax which placed a heavy tax penalty on business earnings used for purposes of expansion and the creation of new jobs. We had a tax limit on capital gains of 12½ percent, instead of the present surtax rates running as high as 79 percent. If what the President then said was true, then how much more true is it today, when taxes have not only been vastly increased but at the same time transformed into direct penalties on capital used for putting men to work.

LABOR FEELS EFFECT OF BURDENSOME BUSINESS TAXES

We have always taxed capital gains, and properly so, but never until the New Deal came along did we tax them to the point where the incentive to invest was taken away.

We have always taxed business profits, and properly so, but never until the New Deal came along did we impose a special penalty tax on earnings used for rehabilitation and expansion, the building up of rainy-day reserves, or the payment of debts.

While these taxes are imposed on business and private capital in the first instance, they ultimately rest on labor, or at least their destructive influence is ultimately felt by labor. Just as the President himself has said, they are a burden on production and can only be paid by production, and, when excessive, result in idle factories and hordes of hungry tramping the streets seeking jobs in vain.

REPUBLICAN OPPOSITION TO UNDISTRIBUTED PROFITS TAX

When the undistributed-profits tax was proposed by the President last year, I joined with my Republican colleagues on the Ways and Means Committee in filing a dissenting report severely condemning the measure and predicting that it would have precisely the effect that has resulted during the first year of its operation.

Last spring, when the ill effects of the undistributed-profits tax were beginning to be felt, I made a lengthy speech in the House calling attention to the many iniquitous features of the measure and stressing the need for its repeal.

In the intervening months, the demand for its repeal has grown to be almost universal, yet nothing has as yet been done to remove its strangling influence upon business.

DEMOCRATIC MEMBERS OF TAX SUBCOMMITTEE PROPOSE FACE-SAVING MODIFICATION

On November 4 a special subcommittee of the Ways and Means Committee was called together in advance of the special session to begin work on a general revision of the revenue laws. I have the honor of being a member of that subcommittee. The first subjects to be taken up were the undistributed-profits tax and the capital-gains tax. There was ample time, before the special session began, to prepare a bill repealing the undistributed-profits tax and modifying the capital-gains tax. But the Democratic members of the tax subcommittee, while privately conceding the mistake they had made in enacting the undistributed-profits tax, refused to take action to bring about its outright repeal. For obvious political reasons, they did not want to do the thing which would be tantamount to an outright repudiation of the President's undistributed profits tax plan. So as a face-saving gesture, they agreed upon a new method of corporate taxation, which involves the retention of the undistributed-profits tax in principle, although the so-called "pressure rates" are scaled down almost to the vanishing point.

REPEAL OF UNDISTRIBUTED-PROFITS TAX COULD HAVE BEEN EFFECTED DURING SPECIAL SESSION

By reason of setting up a new method of taxation, time was naturally required to perfect the plan. This was the excuse given by the committee for failure to bring out a bill during the present session. But, if the Democratic members of the committee had not insisted on retaining the undistributed-profits tax in some form, we could have had a repeal bill ready for presentation to Congress on the day it convened. At the same time we could have made provision for modification of the capital-gains tax.

REPUBLICAN REPEAL MEASURE VOTED DOWN BY DEMOCRATS

The Republican members of the tax subcommittee were ready from the first day the committee met to vote for outright repeal of the undistributed-profits tax and the restoration of the old 12½-percent tax on capital gains. However, the chairman of the subcommittee refused to entertain any motion along that line until Friday, December 17, the day before the subcommittee recessed for the holidays. At that time, which was the first opportunity we of the minority had to do so, a motion was offered to substitute for the tentative recommendations of the subcommittee respecting undistributed profits and capital gains the provisions of the bill (H. R. 8629) introduced in the House on December 6.

Under this bill, which I introduced as representing the views of the Republican members of the Ways and Means Committee, the undistributed-profits tax would be repealed outright as of January 1 of this year. In order to make up the loss of revenue, the normal corporate income tax would be increased by 1 percent in each bracket. Then, in lieu of the present confiscatory tax on capital gains, an option would be given of paying a flat tax of 12½ percent on capital gains, segregated from other income.

The Treasury Department, under instructions from the Democratic majority, brought in a ridiculously high estimate of possible loss of revenue under the Republican proposal, which was obviously "cooked up" in an endeavor to discredit the measure. Naturally I was not content to take their partisan figures. Thereafter I obtained an estimate by one of the ablest actuaries in the country, whose judgment is respected by Democrats and Republicans alike and who has had considerable experience in making estimates of tax yield. According to the estimate made by this impartial expert the bill which the minority offered would not cost more than $77,000,000 in revenue without reference to any improvement in business. This $77,000,000 could be made up by increasing the normal corporate rate by 2 percent instead of 1 percent, which I would be quite willing to do and which, I am sure, would be acceptable to business so long as the undistributed-profits tax were repealed.

REPUBLICAN PROPOSAL WOULD STIMULATE BUSINESS AND INCREASE REVENUES

However, there is no question but what the enactment of the Republican proposal would result in a marked stimulus to business and reemployment, with a consequent increase in revenue receipts by the Treasury. If the present law is continued the sources of revenue will be dried up, tax receipts will fall off still further, and unemployment will continue to increase, resulting in the demand for billions of dollars additional relief expenditures. The measure which we of the minority offered would not only save this drain upon the Treasury but bring about the much-hoped-for balancing of the Budget.

RESPONSIBILITY IS ON DEMOCRATS FOR FAILURE TO ACT ON TAX REVISION

The failure to take action at this session rests squarely on the shoulders of the Democratic majority. The undistributed-profits tax is "their baby" to begin with, and they must take full responsibility for its enactment. If they had followed the advice of the Republican minority it would never have been placed on the statute books in the first place, and the administration would not now be embarrassed by having a depression on its hands. The march of recovery would not have been stopped, nor would thousands of men have been thrown out of work.

While the Democratic majority on the tax subcommittee refused to bring in a tax bill during the present session to

give business the relief which necessity demands, it had been stated that a statement would be issued to the country prior to the holidays outlining the measures that would be undertaken at the next session. Today, however, we were informed that no such statement would be issued, the reason being, it was said, that some of the tentative agreements reached by the subcommittee might have to be altered at the next session.

I am not surprised that the Democratic members feel that some alterations ought to be made, because there is certainly great room for improvement. The proposals thus far agreed upon do not go far enough, in my opinion. There is, of course, the further possibility that as a result of the decline in revenue receipts, due to the present business depression, further taxes may be recommended.

In this connection, I note in the press the statement that the September 15 income-tax collections were "up to the estimates," which seems to be regarded as very reassuring. But let me call attention to the fact that these receipts are not on incomes earned in 1937, but on incomes earned in 1936, before we had any Roosevelt recession. The tax liability was fixed and could not be altered by any subsequent change in business conditions.

The reason that income-tax receipts are greater than in prior years is that the rates have been drastically increased, and not altogether because of improved conditions. The question we are concerned about now is, "How much income tax will we collect on 1937 incomes?"

NECESSITY FOR BUDGET BALANCING BECOMING ACUTE

I should now like to turn my attention to a discussion of the budgetary situation. For years, now—in fact, ever since the President began campaigning for office—we have been promised a balanced Budget. Every year the date of accomplishment has been put off a little further, until now we have learned not to pay much attention to such promises. Nevertheless, the necessity for Budget balancing becomes more and more acute.

In his Budget message of last January, the President stated that the 1938 Budget was "in balance." Many, including myself, were skeptical. Sure enough, in April the President came forward with a revised estimate which indicated a deficit for 1938 of $418,000,000. Then last October another revised estimate was made, putting the estimated deficit at $695,000,000.

With only 5½ months of the current fiscal year elapsed, the deficit for 1938 stood at $688,000,000 on December 15. This is approximately the amount estimated by the President for the whole year and, of course, the effect of the business recession on tax receipts has not yet fully been felt.

This means that the President is going to have to revise his figures again, and possibly again and again, as the months elapse and business continues on the down grade. Even without increased expenditures, the deficit for this year will probably exceed a billion dollars or more, and if increased relief expenditures become necessary, as at present indicated, the 1938 Budget will be hopelessly out of balance.

Thus for the eighth straight year we will have been heading, as President Roosevelt put it, "on the road to bankruptcy." During 5 of those years he has himself been at the steering wheel.

PUBLIC DEBT AT ALL-TIME HIGH

As of December 15, 1937, the public debt stood at $37,563,000,000, the most stupendous total in all history, and some eleven and one-half billions in excess of the debt at the end of the World War. When Mr. Roosevelt took office on March 4, 1933, the public debt stood at $20,937,000,000. Thus his administration, in 4¾ years, has added sixteen and one-half billions to the total, or about three and one-half billions each year.

Of course this does not represent the total expenditures of the New Deal administration. The increase in the debt is simply the amount spent in excess of the increased tax burden which has been laid upon the backs of an already overburdened people.

INCREASE IN COST OF GOVERNMENT UNDER NEW DEAL

Under the New Deal, expenditures have increased from $5,143,000,000 in 1933 to $8,105,000,000 in 1937. In the same period revenue collections have increased from $2,080,000,000 to $5,294,000,000. Thus it is apparent that the present revenue receipts would be more than enough to give us a balanced Budget had the President maintained expenditures at the 1933 level. It will be remembered that in the campaign of 1932 he promised to reduce expenditures by 25 percent below that figure.

NEW DEAL HAS ADDED TO PEOPLE'S TAX BURDEN

Taxes under the New Deal have increased from $14.20 per capita in 1933 to approximately $41 per capita this year, an increase of 300 percent. A large part of this increase is represented by so-called hidden taxes, which in 1935 made up 60 percent of the total Federal tax burden.

Early in the session I presented to the House some figures dealing with the amount of hidden taxes paid by the average workingman. I showed that a man with only $80 a month income paid $116 a year in taxes that were hidden in the cost of the things he had to buy. In the case of a man with $150 monthly salary, the yearly burden in hidden taxes was $229.

These figures go to show the vital interest which every citizens has in the total tax burden, no matter how lowly he may be.

Every dollar which the Government spends must be raised from the people in taxes, imposed at one time or another in some form or another.

Hidden taxes are most popular with legislators because the people do not realize they are paying them, and, of course, there is then no reaction at the polls. But the truth is that the average citizen is now paying, and is going to continue to pay, the bulk of the tax burden.

Moreover, any increased taxes will have to come from the masses, rather than those in the higher-income brackets, because the latter are already being taxed as high as 79 cents out of each dollar earned. Hence it is of importance to every wage earner that the present trend of governmental expenditure is reversed. Every dollar of money that is wasted or spent unnecessarily by the Government is just that much out of the pocket of the taxpayer, for which he gets nothing in return. The amount that we are forced to pay in taxes, whether direct or hidden, cannot be spent for other things. In other words, the purchasing power of our wage dollar is reduced in exact proportion to the amount of direct and hidden taxes that we bear.

ALL TAXES EVENTUALLY FALL ON CONSUMERS

It is estimated that the total tax burden this year—Federal, State, and local—will be about $12,000,000,000. Of this total, the Federal Government will collect about half. Many of the Federal taxes are of the hidden variety, but even those which are not ultimately fall on consumers in the form of higher prices for the things they must buy.

The taxes that are paid by business in the first instance are passed on to the consumer the same as other costs of doing business. Every time we pay the landlord our rent one-fourth goes to reimburse him for the money he has laid out in real-estate taxes. Thus there is no way we can escape the tax burden, even though we pay no taxes whatever direct to the Government. The sooner the people realize this, the sooner we will return to a sane spending program within revenues and begin to reduce the appalling national debt.

The people have been taught to believe that the rich were going to pay for the extravagance of the New Deal, but they are beginning to awake to the fact that they have been hoodwinked. They are gradually coming to realize that the New Deal has been spending their own money all the time, and even mortgaging their future income and that of their children and grandchildren.

NEW DEAL CANNOT FOOL ALL THE PEOPLE ALL THE TIME

In conclusion, let me call attention to the fact that we have now had two do nothing sessions of Congress in a row. Due to the dissension in the ranks of the Democratic majority, and the inability of the leaders to unite their forces

and offer a sound, constructive program for meeting present-day problems, there is little hope that the coming session will be any more productive of accomplishments than the past two sessions.

I predict that as a result of the Congressional elections which will occur next fall the Seventy-sixth Congress which will convene in January 1939 will be vastly different in political complexion from the present Congress.

The New Deal can fool some of the people all of the time, and all of the people some of the time, but it cannot fool all of the people all of the time.

Another Crisis—A Real One This Time

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 21, 1937

Mr. WOODRUFF. Mr. Speaker, President Roosevelt has taken a sudden about face in his position of wanting to cooperate with business and industry to halt the depression. For a time during the special session of the Congress he seemed to be willing and ready to make such changes in burdensome and destructive taxes and to relax such hampering regulations as were admitted to have contributed greatly to the depression, if not to have precipitated it.

In a press statement published the day this was written, Mr. Roosevelt contends that "the business recession is largely psychological." He intends to insist on his legislative program, and is quoted as saying that while he would cooperate with legitimate business, there would be "no retreat from present regulations," which, of course, means complete regimentation if he can bring it about.

His statement that "a psychology of fear is being fostered by a large percentage of newspapers and a small minority of public utilities," is typical of the policy constantly followed by Mr. Roosevelt who has never admitted a mistake, but has always sought to cast the responsibility for any unfortunate results of his policies on lack of cooperation by someone else. He now includes the press of the country among those "spreading the psychology of fear."

No one has been more active than Mr. Roosevelt himself in instilling fear of "new emergencies" and "new crises" in the mind of America. He constantly talked about such "new emergencies" and "new crises" during his fight to put through his Court packing program. He declared that such an emergency existed when he called the Congress into extraordinary session. The fact is that almost every time Mr. Roosevelt has asked for new powers, he has claimed some emergency or crisis required the immediate passage of "must" legislation in order to enable him "to cope with it."

If there is any one thing calculated to drive a paralyzing fear into the very vitals of industry, large and small, throughout the United States it is this latest statement by Mr. Roosevelt from which it is clear that he intends to broaden and increase his regulation and regimentation of business, and that there will be no retreat from present regulations, burdensome and crippling as they are to business.

The result of Mr. Roosevelt's pronouncement will be a new and more severe pressure of despair, a deeper sense of futility and hopelessness on the part of the businessmen of this country, a further slowing up of business, and a rapid increase of unemployment.

This fact is very clearly set forth in a letter received by me today from a small manufacturer in my district. He wrote in part as follows:

> What is actually doing more to prolong the present depression is that the average small-business man has been so harassed and hounded by burdensome taxes and labor troubles that in the back of his head he has, without saying anything to anyone, decided that he will get out of business as soon as he can shape his affairs to do so. This in itself would not be so serious but for the fact that his next-door neighbor is planning on the same thing. And when you get an entire community or district or State where 90 percent of the small-business men are getting ready to quit, you have arrived at the place we now are at, and it is going to take very much more than a few promises from the President to make them change their minds as the average businessman is pretty thoroughly licked just at present.

The one real encouragement which has done most to stiffen the determination of American industry, American business, and American citizens to resist the onslaught of depression has been the belief, based upon Mr. Roosevelt's own public statements, that there would be immediate relief from burdensome and inequitable taxation and from the drive which has continued for 5 years to put more and more leg irons and handcuffs on the legitimate business activities of this Nation. There still remains the hope that Congress will resume its constitutional functions of deciding the national policies and the hopes of our people justified.

It is announced that the Chief Executive is to make a "new and aggressive bid for more confidence" in his message to the Congress at the opening of the regular session. He appears to forget or to be unsatisfied with the confidence the country has given him for 5 years; he feels it incumbent to demand an increase of this confidence, regardless of the effects of the New Deal policies, which, after 5 years, have brought the country to a new depression, the responsibility for which certainly cannot this time be laid upon any previous occupant of the White House.

"The American Peace Policy Requires Fullest Freedom of Speech"

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 21, 1937

Mr. FISH. Mr. Speaker, all Americans, regardless of political affiliations, should applaud the able handling of the *Panay* incident by Secretary Hull, in the hope that there will be no further difficulties with Japan.

I am puzzled and alarmed at the inspired statements appearing that the foreign policies of the administration are above criticism. Governor Landon, who knows less than nothing about international issues and amply demonstrated that fact in the last campaign, rushed to the defense of the President slamming Members of Congress without the faintest knowledge of the situation. The fact is that every Republican Member of Congress supported Secretary Hull's firm note to the Japanese Government demanding apologies, compensation, and guaranties.

I do not agree with such ardent internationalists or League of Nations supporters as Mr. Henry Stimson, Colonel House, and Norman Davis, who want to give the administration a free hand to enter into concerted action to quarantine other nations which would involve us in every European and Asiatic war. Ninety percent of the American people desire to be isolated from international blood feuds, boundary disputes, and war. Their attitude is that if the old nations of the world want to go stark, raving mad, arm to the teeth, and go to war, it is their war and not ours.

They know that if we do attempt to police China we would be holding the bag, and would be expected to pay the bills and do all the fighting. It is not our concern what form of government prevails in other nations; whether there is communism in Soviet Russia and China, fascism in Italy, nazism in Germany, or militarism and imperialism in Japan. I am in favor of appropriating millions for defense but not one dollar to send American soldiers to foreign lands to fight other people's battles. It is essential that there should be the fullest freedom of speech and that no attempt be made to

censor or gag any criticism of the administration's foreign policies. The international motives and moves of the President must be analyzed and tested without regard to partisanship, but based on the welfare and interests of our people and the peace of our country.

The preservation of peace with honor is the most important issue confronting the Nation.

The Administration's Old Army Game of Passing the Depression Buck

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. FISH. Mr. Speaker, the administration is now engaged in the old Army game of "passing the buck" as to the responsibility for the Government-made Roosevelt depression. The New Deal spokesmen have apparently been ordered to pull every known political trick and lay down repeated smoke screens to cover up the real cause of the depression—the administration's economic fallacies, attacks on business and the Supreme Court, and destruction of confidence.

A few weeks ago President Roosevelt said the depression was an assumption. It certainly is no myth to the 2,000,000 Americans who have lost their jobs in the last few months and to 2,000,000 more on part time. If the President still thinks it is a myth he should study the drop in steel production from 85 to 30 percent.

Congressman SABATH, the dean of the Democrats in the House, proclaimed without reservation that the recession was solely due to Wall Street, but even Miss Perkins, Secretary of Labor, refused to agree to such political nonsense.

A few days ago the President came back with a brand-new idea, and that was to blame the press for the fear that pervaded the Nation. This angle of attack is amusing, if not ridiculous, if one stops to remember that the New Deal has thrived on propaganda and publicity like a green bay tree and at huge cost to the taxpayers.

Today's newspapers carry a lengthy statement from Robert H. Jackson, Assistant Attorney General, blaming big business for the present recession, as if business was not already burdened with taxes and trying to keep its head above water.

The fact is that President Roosevelt has no effective program for recovery. His nostrums lead only into a blind alley of unemployment. I am reminded of a ditty in Lewis Carroll's Through the Looking Glass, where the White Knight said:

> But I was thinking of a plan to dye one's whiskers green,
> And always use so large a fan that they could not be seen.

The White Knight of Democracy owes it to the American people to let them know without further evasion or alibis if he has any plan to lead us out of the depression and put American wage earners back to work.

The Post Office at Grassy Point, N. Y., Folds Up

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 20, 1937

Mr. LUDLOW. Mr. Speaker, if anyone ever says to Postmaster General Jim Farley "Physician, heal thyself," he will have to confess that he is not a good doctor, as far as his own ailments are concerned. All of us have seen Mr. Farley in action. He has toned up the Democratic Party until the most weak-kneed member thereof would feel rejuvenated and bellicose; he has salvaged the hide of many a suffering politician and he has even built up the political constitution of Presidents, but he was unable by his most diligent ministrations to save the life of a tiny post office in the tiny village where he was born, and as a result the little post office at Grassy Point, N. Y., a local forum where great issues were decided in a pervading odor of prunes and the circumambient warmth of a big base-burner, has flickered and folded up.

The following news release just issued by the Post Office Department tells the sad story:

The story of how Postmaster General James A. Farley, as a result of the intercession and representations of a Washington newspaper correspondent, succeeded in saving a small Indiana post office that was about to be discontinued in the village in which the correspondent's aunt resided while being unable to save the small fourth-class post office in his own home town in Grassy Point, N. Y., was revealed last night in a letter from the Postmaster General to Everett Watkins, Washington correspondent of the Indianapolis Star, which was made public at the Post Office Department.

In June 1935, Watkins appealed to the Postmaster General to save the Lincoln, Ind., post office, pointing out that whatever grave and important problems confronted this country and the world at large, these paled into insignificance when compared with the problem of eliminating a small post office which plays so vital a role in the daily pursuits of those who live within its territory.

As a result of Watkins' appeal, Mr. Farley canceled the order to discontinue the Lincoln post office, and today it continues to act as the very pulse of the small Indiana community in which it is located, while the Grassy Point post office is no longer, having been discontinued by an order of the Postmaster General within the past few days.

The complete text of Mr. Farley's letters to Watkins and the latter's latest letter to the Postmaster General follow:

JUNE 4, 1935.

Mr. EVERETT C. WATKINS,
Press Building, Washington, D. C.

DEAR EVERETT: I have received your very interesting letter of May 7 relative to the post office at Lincoln, Jackson township, Cass County, Ind. I remember your handing me the letter as I was leaving the White House Executive Offices on Friday. Immediately upon my return to the Post Office Department I looked into the situation and took the necessary steps to cancel an order previously issued relative to the closing of the Lincoln post office.

After having read your very interesting letter I definitely came to the conclusion that there was only one course for me to pursue. I, too, was born, as you indicated in your letter, in a small town named Grassy Point, N. Y., and naturally if any move was ever made to close that post office I can well appreciate the reaction of its citizens. I have every reason to believe, after reading your letter, that no greater volume of mail arrived at Grassy Point than reaches Lincoln in the course of a given period. I was touched when I received your letter, because Grassy Point is in exactly the same position as Lincoln. They, too, have no Rotary Club; no Elks Lodge; no courthouse; no city hall; no poolroom; no bowling alleys; no ping-pong parlor; no airport. They did have a barber shop in the old days, although my belief is that there isn't any barber shop located in that community at the present time. In Grassy Point we have our local politics, of course, but I doubt very much whether we have anyone who could match your Aunt Emma, whom you referred to in such a friendly way. The post office in Grassy Point is in a grocery store, the same as our thousands of post offices of a like character in the United States. You know, Everett, I have a friendly regard for small post offices and shall always have that feeling for them. I remember full well as a kid going to the post office every morning exclusively for the purpose of getting the letters which rarely arrived, but really for the purpose of looking at the old New York Herald, which of course carried the baseball scores and stories of the baseball games the preceding day. As a matter of fact, I used to meet the mail carrier as he passed my home and walk to the post office with him to make sure that I would be there upon the arrival of the only copy of the Herald that, in those days, reached the community of Grassy Point. It was delivered to the postmaster, a fine old fellow who ran the grocery store and happened to be a strong Republican although he was a great personal friend of mine. So when I received your communication I want you to know that it fell upon friendly ears. Consequently I was happy to take immediate steps to comply with your request. I am sure that by this time the citizens of Lincoln will be contented with the knowledge that everything is well.

In your letter you indicate that if I fail to comply with your request I will lose the last of the few remaining hairs on my head. Naturally, having complied with your wishes, I feel secure in the fact that I will not lose any more hair. In return for having done what you requested, possibly you might be willing to suggest some way for me to secure a few more hairs on the top of my bald head, bearing in mind the fact that I will never wear a toupe.

I assume that a mass meeting has already been, or will be held, at which time your Aunt Emma will take the necessary steps to "Whereas" and "Resolve" the Post Office Department and the Administration, on the action taken in accordance with your request.

Your reference to my photograph is noted. I am going to send one to the postmaster with the suitable autograph thereon.

Seriously, Everett, I got a great kick out of your letter. It was good to receive it because frankly, as you can imagine, most of the letters that we receive are serious in character, and the people that write are usually complaining or begging, and because your letter was so different, it pleased me immensely. I am always anxious to be of service if I can, and I hope you will never hesitate to call upon me if you think I can help.

With assurance of high personal regards, I am

Sincerely yours,

(Signed) JAMES A. FARLEY,
Postmaster General.

DECEMBER 12, 1937.

Hon. JAMES A. FARLEY,
Postmaster General of the United States, Washington, D. C.

DEAR MISTER POSTERMASTER GENERAL: On behalf of my village birthplace, Lincoln, Ind., whose post office you saved 2 years ago, I voice strong protest against abolishing the post office at your village birthplace, Grassy Point, N. Y.

At Lincoln, the home of my oratorical Aunt Emma, we erected at the post office a billboard sign on which we proudly proclaim: "Lincoln Postoffice. Thanks to Jim Farley." We appreciate our post office. We are a proud people at Lincoln.

In June 1935, you wrote me that you would continue to protect the Lincoln post office from rural route oblivion if I would solemnly pledge my support, if ever needed, to preservation of the Grassy Point post office. I am remembering my promise.

Indeed, you wrote me that "if they ever attempt to do anything to the Grassy Point post office there will be trouble." You pledged my assistance. You have it.

It's time for you to act; it's time for you to start the promised "trouble" for the Grassy Point post office is in jeopardy. I appeal to you to fight. Are you a "man or mouse"?

Surely Grassy Point hasn't lost its pride; surely Jim Farley hasn't lost his fighting qualities.

For Grassy Point to permit its post office to fold up amounts to an admission that "grass grows in its streets," amounts to admission that, after all, Herbert Hoover was right. You surely can't permit such admissions to stand.

How could Grassy Point, without a post office, ever hope to attain the abundant life?

I note the reason for the closing of the Grassy Point post office is that your postmaster, Vincent Hannigan, says he refuses to continue in office because the volume of business is too limited. Imagine a Democrat giving up an office! But surely there is a Republican, be the pay ever so meager, who, with pride in Grassy Point, would jump at the chance to get an office.

Perhaps the sale of stamps is small, but doesn't your postmaster appreciate that a village post office has other important functions. It is at the village post office, serving as a forum for cross-road debaters, that the problems of the day are settled. Perhaps some of your own early education on the affairs of the Nation was obtained while sitting about the stove in the Grassy Point post office.

I appeal to you to take action so that Grassy Point, like Lincoln, can continue to hold its head high and point with pride to its post office.

Defender of Grassy Point,

(Signed) EVERETT C. WATKINS.

DEAR EVERETT: I am in receipt of your interesting letter of the 12th and appreciate keenly the desire on your part to put forth every effort at your command to retain the Grassy Point post office.

It is too late now—nothing can be done because the order has already been issued to close the post office and put Grassy Point on a Rural Free Delivery route. Of course you can imagine my feeling in the matter. Here I have been able to save post offices all over the country, including the one for Aunt Emma at Lincoln, Ind., and I'm not able to do so in my own community which is over 100 years old. The truth of the matter is that there are only two or three stores left and no one wanted to be bothered with the post office. They wanted to close it a year ago, but I succeeded in holding it up until a few days ago and nothing could be done. I think it is an unusual situation and probably unique in the annals of the Post Office Department, that the Postmaster General issued an order closing the post office in the town of his birth, where I resided practically all my life.

I recall very many pleasant instances when I visited the Grassy Point post office as a youngster getting the mail. I remember going down there on March 18, 1897, to get the New York Evening World, which gave an account of the fight between Fitzsimmons and Corbett, and giving it to my father, who was then alive. He felt very much disappointed when the paper gave the story of Corbett's defeat. I used to visit the post office and look over the old New York Morning Herald and read the baseball scores as I sat on a cracker box. In the old days it was quite a busy place. There were many brickyards, a shipyard, and also an iron foundry. The brickyards have long since disappeared and with it went the foundry and shipyard. They still have a fire company up there, however—Grassy Point Engine Company No. 1—and the boys can meet there to settle all questions of state, which in the days that have passed were settled in the post office.

I want you to know that we will still continue to hold our heads high and point with pride to the fact that at one time Grassy Point had a post office.

With every good wish, I am

Sincerely yours,

(Signed) JAMES A. FARLEY,
Postmaster General.

My Activities During My First Year in Congress

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. THOMAS of Texas. Mr. Speaker, by virtue of the permission of the House, I am taking this opportunity to extend New Year's greetings to the citizens of my district, and to give them an accounting of my activities during my first year in Congress. I believe they are entitled to know what I have done as their Representative, so that they will be better able to judge my past actions, and be better able to advise with, and assist me, concerning the future.

The year 1937 has witnessed much activity in the Congress. Congress has authorized the various governmental agencies to engage in many useful undertakings. For instance, the Public Works Administration was authorized to make grants of money for the construction of useful and needed public improvements, such as schoolhouses, other public buildings, and sewer systems. For that purpose, the Public Works Administration made grants of approximately $5,000,000 to Texas. Our district was fortunate enough to receive approximately one-third of that sum. Here's how over $1,500,000 of P. W. A. money will be spent in Harris County:

1. Goose Creek Independent School District (for schoolhouse)	$204,545
2. Pasadena Independent School District (for schoolhouse)	81,813
3. City hall for Houston	818,181
4. Addicks Independent School District (for schoolhouse—grant not used)	45,000
5. Faith Home	72,765
6. Houston sewer system	403,785

The Honorable Harold Ickes, Secretary of the Department of the Interior, and Public Works Administrator, has been more than generous with the district. His many friends in Harris County admire his outstanding ability and appreciate his generosity.

The Bureau of Air Commerce will construct a modern lighted airway from Houston to New Orleans, at a cost of $330,000. Work will begin in the spring of 1938. Equipment will consist of lighted air lane, teletype machines, landing fields at intervals of every 50 miles, and so forth. When constructed, Houston will have a direct air line east and north (day and night flying) to New Orleans, Washington, New York, and Boston. An air line already connects Houston with Mexico City. This new project, which we have needed for several years, will make Houston the airway center of the South. It will be a great aid to passenger transportation, and mill make our air-mail service unexcelled. Hon. Harilee Branch, Second Assistant Postmaster General, Hon. J. M. Johnson, Assistant Secretary of Commerce, and Mr. Fred D. Fagg, Chief of the Bureau of Air Commerce, were most gracious to me in our dealings which made this project possible.

The Works Progress Administration has also been good to our district. Mr. Harry Hopkins, Works Progress Administrator, and his most valuable and hard-working assistant, Mr. Aubrey Williams, allotted to our district $235,000 to be spent before June 30, 1938, for the purpose of taking men off the relief rolls, and to aid county-wide flood control. This project will not only provide needed employment

for our people, but it will also assist in draining thousands of acres of farm land, and will materially protect the port against floods. I am hopeful that the Works Progress Administration will continue to allot funds for this project for several years to come. It is the initial step, I hope, in a well-thought-out work-relief and drainage project.

The Works Progress Administration also granted us $150,000 for work relief on the city airport. Col. F. C. Harrington, chief engineer of the Works Progress Administration, has been most sympathetic and helpful in directing the approval of these W. P. A. projects. The genial and understanding State administrator, Mr. H. P. Drought, has done much for Harris County.

No one can doubt the great value of the port of Houston to Harris County and to Texas. It is the mainspring which furnishes a livelihood to thousands of our local people. The port has needed several major improvements for years, such as a foods laboratory and a new appraisers and customs warehouse. Mr. Walter G. Campbell, Chief of the Food and Drug Administration of the Department of Agriculture, in November 1937 established the foods laboratory. It will serve all of Texas and the Southwest for food-inspection work. Mr. Campbell promises me to improve its service, and to enlarge it so that we shall have one of the best foods laboratories in the entire country.

The lack of a new appraisers and customs warehouse for the port has been a crying need for years. Dingy, unsightly, and inconvenient buildings will be replaced with an up-to-date $260,000 structure.

Our people are deeply indebted to Hon. Smith Purdum, Fourth Assistant Postmaster General, for his work and thorough knowledge of the port of Houston. As a member of the Procurement Division of the Treasury Department Mr. Purdum did wheel-horse work in making the new warehouse a reality. Construction will begin soon.

Again the Army engineers have demonstrated their friendship for Harris County and their faith in "their baby," the port and the ship channel. For years Buffalo Bayou has been a threat to navigation. The flooding of the bayou has silted the turning basin and the channel and has destroyed much property. The damage runs into millions of dollars. Hon. Harry H. Woodring, Secretary of War; Gen. J. L. Schley, Chief of Army Engineers, who was a colonel in charge of the Galveston district when the port was beginning to "bud"; Maj. Gen. Edward M. Markham, recent Chief of Army Engineers; Capt. L. D. Clay; Capt. J. C. Marshall; Col. William A. Snow, Chief of Rivers and Harbors Division; Lt. Col. F. S. Besson, our present district engineer, have worked out a plan to control the bayou. They have shown me every consideration, which I humbly acknowledge, and for which I am grateful. Their plans were sent to Congress on December 13. I am hoping that Congress will appropriate the necessary outlay of funds to put their plans into effect.

The growth of the county in population since the 1930 census is noticeable at every turn. As a result of that growth our Rural Mail Delivery Service needed to be expanded. The Post Office Department was most cooperative in bettering that condition. In August 1937 five new rural routes were created. On some of these routes mail-delivery service was speeded up 24 hours.

Houston is growing so rapidly it was not a difficult task to convince the postal authorities that an immediate investigation should be made of the city's postal needs. An investigation is now being made of those needs for the long pull. Special attention is being given to the necessity for new substations and contract stations.

Public health is an interesting and vital question. Dr. Thomas Parran, Jr., the capable and energetic Surgeon General of the United States Public Health Service, has impressed upon the country the urgent need for an out-in-the-open attitude toward syphilis, and an active campaign against it. Federal funds are available for this endeavor and other public health activities. The United States Public Health Service willingly made a health survey of our county. It is sincerely hoped that the financial and moral help of the Government in regard to the prevention and treatment of syphilis, and child and mother care, can be effectively used as a part of our local public health program. I have every assurance from Dr. Parran that his service will cooperate with our local authorities in this undertaking. This work will control present active syphilitic cases and help keep future generations out of insane asylums and penitentiaries.

A new judgeship for the United States District Court for the southern district of Texas is practically assured us. The House passed a bill creating the additional judgeship. I have assurances that the Senate will agree to it in January.

The veterans of Harris County, East Texas, and South Texas, have been inconvenienced by lack of a nearby veterans' contact unit. They have had to travel many miles for their medical examinations. The Veterans' Administration now realizes this handicap and proposes to establish a contact unit in Houston. Records will be kept there, and medical examinations made. This is a needed convenience, and I rejoice with the veterans over our good luck.

Our able Secretary of Agriculture, the Honorable Henry Wallace, allotted $231,000 for the Sam Houston Farms project at Highlands, Tex. This project is under the supervision of the Farm Security Administration, which is headed by a most capable administrator, Dr. W. W. Alexander. It is an experiment to reduce farm tenancy. There are some 64 units which are nearing completion. Each unit consists of from 40 to 60 acres, a house, barns, well, and so forth. Loans on same are payable over a period of 40 years at 3 percent interest. Rehabilitation loans are also available for purposes of stocking the farm, buying feed, equipment, seed, and other operating necessities. We are indeed fortunate that our district has been chosen for this experiment.

Our district, during the year 1937, has received direct Government benefits in excess of $2,900,000.

I greatly appreciate the wholehearted cooperation that the mayors and councilmen, the county officials, the many splendid civic and business organizations, and the chambers of commerce have given me. Their support and assistance have been invaluable. Our friend and neighbor, the Honorable Jesse Jones, is at all times eager to do something for our district. He is never too busy to help, and he knows how to get the job done. Our resourceful and energetic Senators, MORRIS SHEPPARD and TOM CONNALLY, have, at all times, been willing and eager to cooperate in all matters of interest to the district.

A Congressman's duties are twofold: He should try to procure all available Federal benefits for his district, and he should study and help legislate for the good of the country. Much permanent and forward-looking and far-reaching legislation was passed during 1937. The Railroad Retirement Act blazes a trail in a new field of Federal activity, which proposes to bring old-age security to employees, based upon continuous service to his employer. I heartily endorsed this legislation. The railroad boys deserve much credit for its enactment. They are always leaders in social legislation.

Civil service is not as effective as it should be. Most certainly it should be expanded—and many existing administrative defects should be removed. Promotion should be encouraged. Ability and faithfulness to duty should be rewarded, and politics inside and outside the administration of the Civil Service Act should be eliminated. I am proud of my 100-percent record in favor of civil service.

Child labor, sweatshops, and the chiseler in business should be stamped out. These elements are a curse on humanity. They are a drag upon business. The time is not far distant when they will be behind us. No fair-minded employer wants them.

The slum-clearance bill, which was passed in August 1937, is another piece of forward-looking legislation. The erection of sanitary and safe homes at a rental within reach of the low-wage group will pay national dividends. Insanitary and unsafe homes are not economical, nor are they an asset to any community. It is my sincere hope that our district participates in this program. Mr. Nathan Straus, the Ad-

ministrator of the act, will assist us in every way. The Government will pay approximately 90 percent of the cost of the low-rent housing projects.

The House and Senate have just amended the National Housing Act. The bill is now in conference. Think what a $3,000,000,000 home-building program for the year 1938 will mean. All types of construction employment—carpenters, painters, plumbers, brickmasons, and all others—all types of business—the lumber industry, the hardware business, the butcher, the grocery man, the filling-station operators, as well as insurance concerns and furniture companies—will greatly benefit. And, too, can anyone fail to vision the fine results of increased home ownership? Hundreds of $1,500 to $6,000 homes which families can call their own are more important to the Nation than countless skyscrapers. Home ownership builds morale, and morale builds good citizens. The Government will guarantee the payment of the mortgage on homes built under this program, up to 90 percent of their value. The value is not to exceed $6,000. The interest rate is approximately 5 percent. The mortgages cover a period of 20 years. This is real Americanism.

The problems of our dependent old people, and our helpless cripples, should be given far more attention. There is no good reason why totally and permanently crippled persons, excluding mentally deficient persons, should not be included within the benefits of the Social Security Act.

We have a business recession looking us squarely in the face. Most well-informed authorities agree that the bottom has been reached, and we shall again start on a period of prosperity. Business should be given every opportunity to carry on under its own drive. Doubtless, a modification of the undistributed profits tax law will afford much encouragement to the smaller businessman. The administration is eager to keep Federal expenditures within the limits of the Budget. If spending exceeds those limits, the responsibility belongs to Congress. The country is now ready to avoid overlapping spending.

Un-American Activities

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 21, 1937

Mr. DICKSTEIN. Mr. Speaker, I wish to thank all of the Members of the House who were kind enough to cooperate with me during my speech on the floor on December 21, 1937, and who so generously supported my desire for a congressional investigation on un-American activities.

The gentleman from Missouri [Mr. COCHRAN], the gentleman from Missouri [Mr. SHORT], the gentleman from Pennsylvania [Mr. DUNN], the gentleman from New York [Mr. FISH], and the gentleman from New York [Mr. O'CONNOR] have each in their own manner expressed their satisfaction with my efforts to stamp out un-Americanism and to purge this country from all efforts to bring to these shores intolerance, bigotry, and fascism. I am sure there were others who did not voice their views, but are of the same opinion.

But in true contrast with this cooperative spirit manifested by my other colleagues, the gentleman from Minnesota [Mr. KNUTSON] took a position which is more than objectionable to all true lovers of America. The gentleman from Minnesota, perhaps, in his foolish desire to curry favor with some of his German constituents, saw fit to criticize my efforts and minimize the importance of the action which I am seeking to take in the matter of this growing menace of anti-American propaganda.

Does not the gentleman from Minnesota know by this time, not only from my remarks on the floor of the House but from public utterances and overwhelming documentary proof, that the German Government today is engaged in vicious, malicious, and unscrupulous propaganda not only in this country but throughout the world, seeking to convert this commonwealth of ours into a Fascist dictatorship? Does not the gentleman know that to carry out its nefarious propaganda camps are being established in many parts of the country for the purpose of engaging in military drill, rifle practice, and other activities training the adherents of this foreign philosophy in the use of firearms and military tactics so that they may become the nucleus of a revolutionary band to bring about an upheaval of the Government of this country? Does not the gentleman know or has he not been able to obtain information about the tons of literature which are being imported into this country by every vessel that comes to these shores under the German flag? Does not the gentleman know that inflammatory literature criticizing our Government and institutions and painting a beautiful and roseate picture of institutions in Nazi Germany finds its way into each home and fireside? Does not the gentleman know that particularly on the Pacific coast Nazis have been celebrating real orgies under the stimulant of the Nazi consul, Manfried von Killinger? Does not the gentleman know that the German Government has proclaimed the doctrine that all Germans living abroad are ipso facto National Socialists? Does not the gentleman know that the Government in Germany brands as traitor every German national or person of German extraction who does not subscribe to the tenets of national socialism? Does not the gentleman know that the Nazi Government is committed to work for a pan-Germanic movement to unite all Germans and those of German extraction under the leadership of the Nazi Party in Germany, and that to accomplish this a propaganda network has been flung all around the world?

I do not know with what interest the gentleman pursued the work of the commitee which was appointed by the last Congress under the chairmanship of my colleague from Massachusetts [Mr. MCCORMACK], with myself as vice chairman, and in which we pointed out the many instances of the operation of German secret police in this country and of the work of paid propagandists.

I am sure that the gentleman from Minnesota can profitably utilize the holiday period for the purpose of acquainting himself with all the aspects of this obnoxious un-American propaganda, and I feel certain that if he devotes as much time to the stamping out of this menace of un-Americanism as he did to curry favor with those of his constituents who do not deserve any favor he will emerge from his studies a better American and will be able to fulfill his duties as a Member of Congress with greater efficiency and for the benefit of the country.

"C. C. C. Strength as Army Cited—Fechner Claims 2,300,000 Trainees Can Become Soldiers Overnight"—Pure Unadulterated "Bunk"

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, December 21, 1937

Mr. PLUMLEY. Mr. Speaker, under Miami date line of December 21, an Associated Press dispatch carried the following in the Washington Star:

Robert Fechner, National Civilian Conservation Corps Director, said yesterday the United States has 2,300,000 youths trained in C. C. C. camps who are ready to act as a volunteer army in an emergency.

"While C. C. C. men are not militarized in the ordinary sense of the word," he said, "their training is such that they are about 85 percent prepared for military life."

ARMY ON SHORT NOTICE

"The 300,000 boys now in camp and the 2,000,000 who were trained before them could be turned into first-class fighting men at almost an instant's notice."

Director Fechner said in an interview the military aspect of the C. C. C. was unintentional. "Since its inception by President

Roosevelt in March 1933," he said, "the C. C. C. has partly solved a tremendous unemployment situation, helped prevent crime by giving footloose young men gainful work, and has wrought 'literal miracles' in conservation projects."

"Aside from that, however," he said, "the C. C. C. has provided a gigantic protective body which could back up the Nation's standing military units."

TAUGHT DISCIPLINE

"C. C. C. men," Mr. Fechner said, "have been taught discipline, how to live in large groups harmoniously, to care for themselves, and to maintain rigid sanitation."

"It is such training," he said, "that constitutes the groundwork for any armed force. The manual of arms and drill formations are but a very small part of a soldier's training."

Now, Mr. Speaker, I have been one of the sponsors of the Civilian Conservation Corps, and am gratified at what it really has accomplished toward the salvation and the training of youth, but to assert that this group could be turned into first-class fighting men overnight is pure unadulterated "bunk." To say they are 85 percent prepared for military life is more than 85 percent wrong.

Thanks to the officers of the Army and Navy and Marine Corps, who labored under the tremendous handicap of having no real authority to discipline the men under them other than outright dismissal, the C. C. C. enrollees, nevertheless, "have learned some of the essentials of living harmoniously in groups; how to care for themselves; how to maintain rigid sanitation." To think, however, that these qualifications and such training make even an 85-percent citizen or soldier shows a lack of appreciation of what it costs in time and effort to accomplish such a result.

The statement is palpably a fallacy because a large percentage of the C. C. C.'s as they have left the outfit are not even soldier material, much less soldiers. The statement is analogous to that which the late lamented Secretary of State, William Jennings Bryan, made, when he said: "We could turn out 4,000,000 men as soldiers overnight."

The C. C. C. camps have discharged their obligation insofar as affording a refuge and a haven for the enrollees and a relief to the public is concerned.

In order to publicize and perhaps to lay the foundation for extending the life of the organization, it is now obvious that the general public is being propagandized with the idea that the C. C. C. is a protective unit for the country. To save face as against the ultrapacifist it is suggested that the group has not been militarized, and to gain favor with militarists it is suggested they are 85 percent militarized.

Now the fact is, and the truth is, without respect to the military end of it, if you will have it so, that according to my observation the training of the C. C. C. enrollees has lacked the very thing which inculcates a sense of responsibility, proper respect for lawfully constituted authority, and a comprehension of the duty which devolves upon every young man to make the most of himself—to serve his time as a man, and his country as a good citizen and a patriot.

Discipline, under whatever form or name it shows its head, is the first essential and necessary element in the training of youth to impress upon his mind the absolute necessity for attention to the business in hand; to show him that merit is properly recognized; to teach him that no man is fitted to command who has not first learned to obey; to recognize the fact that he must assume responsibility; to realize the importance of punctuality; to know how absolutely indispensable is accuracy; to realize that while saluting his superiors and commanding his inferiors he is doing nothing else or other than learning the rights and prerogatives of each; namely, what goes with authority and how he may use, but never abuse it.

Discipline makes it possible for him to acquire the knowledge, both theoretical and practical, of what constitutes "proper preparation, the worth of his word, and what honor is."

Discipline, to which he is obliged to respond, and on the basis of which he gives orders, makes it possible for him to estimate his own strength, and his limitations; teaches him a lesson invaluable, and without which no man can fairly expect to accomplish anything; namely, that properly constituted authorities are entitled to be obeyed and that certain responsibilities attach to the rights and duties of citizenship.

Now, all the foregoing is a training for peace, not war. Incidentally, it might make a soldier of him, but actually it increases his employability and makes a good citizen of him.

Until a program is adopted by the C. C. C. based upon the necessity for discipline, which program has not been adopted, it is probably a fallacy to suggest that the discharged enrollees of the C. C. C. are prepared for either the discharge of their duties as citizens in time of peace or as soldiers in time of war. Moreover, a citizen soldiery is essential to the maintenance of free government, and at the cost of blood and treasure we ought to have learned, whether we have or not, that "obedience to law is liberty."

The New Farm Bill—Lip Service With a Strait Jacket

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 17, 1937

Mr. LEMKE. Mr. Speaker, this Nation is still in agony. It is still hungry. Millions are still unemployed and millions are suffering from malnutrition—starving because of unnourishing and insufficient variety of foods. Unthinking people and the Department of Agriculture still persist in calling this overproduction, still continue to talk of surpluses, when intelligent people know that our trouble is underproduction, underconsumption, and maldistribution.

It is rumored that the unemployment census, if and when it is made public, will shock this Nation. It is rumored that hundreds of thousands of people, mistaking the Census Bureau for an employment agency, have written personal letters asking for employment. These state that this is the first time that they have been compelled to ask for help, and that unless they get employment they, too, will have to go on relief. Every courthouse in this land of ours is still a poorhouse. Millions are asking for relief and millions clamoring for more.

The previous administration was defeated because of its do-nothing policy, because of its incompetency, because it failed the people in its sacred duty to put an end to this man-made depression. The present administration came into power because it promised a remedy. Five years have now passed, and we are just becoming acquainted with the depression; its name has now been changed and it is being called a recession, but is the same old depression.

We are aware that we had a little cash-and-carry prosperity among certain classes. We know that a few of the rich have been getting richer at the expense of the poor. We know that this cash-and-carry prosperity was brought about by selling $20,000,000,000 worth of 3-percent interest-bearing, tax-exempt bonds to the coupon clippers. We also know that pay day has arrived—a recession.

Congress has now been wrestling with the depression—or should we say with the recession—for over 5 years, but we are again back at the point of beginning. We have roamed around in and explored all the wildernesses of proven failures. We should now be in a splendid position to go forward to success. Congress should have learned by this time not to blindly follow the ignorant suggestions of the "abundant life by scarcity" given out by the bureaucrats in the Department of Agriculture.

Congress should now assume its constitutional duty and again write the Nation's laws. It should write a farm bill which will give to the farmers cost of production for that part of their commodities consumed in the United States. It should write a labor bill which will give to every laboring man a living annual wage—an American standard of living. The time is at hand when the intelligent people of this

Nation must wake up and assume their responsibility. They must realize that in the future we must live and let live. We have followed ignorance far enough. There is danger ahead.

The farm bill passed by the House and the one passed by the Senate is not the bill that the Congress or the farmers want. It is the bill of the Department of Agriculture. Congress has now been wandering around in the dismal swamps of confusion and failure with the Secretary of Agriculture for 5 years. I used to believe in the law of averages. I thought any person, according to the law of averages, would hit upon the right thing once in a while. I believe that we must now, however, adopt the law of accident as far as the Secretary of Agriculture is concerned, because if he ever hits it right it will be by accident.

The philosophy of the Secretary is the proven failure of destruction and curtailment, the massacre of millions of pigs, sheep, and calves, the restriction and destruction of agricultural commodities. A few years ago, by order of the Secretary, hundreds and thousands of acres of cotton, wheat, oats, and barley were either burned or plowed under. In exchange for this wholesale destruction of property the farmers were promised allotment checks, but these allotment checks were mostly given to landlords, mortgagees, insurance companies, and investment banks.

Allotment checks from $50,000 to $100,000 were paid to foreign corporations for not producing sugar on lands that they owned in the United States. Again, hundreds and thousands of dollars were paid to corporations for not planting sugar in Puerto Rico, Hawaii, and other possessions of the United States. But the average allotment check that the farmer, who paid the processing tax and who actually tilled the soil, received amounted to less than $100.

The money with which these allotment checks were paid came from the farmers, because the processing tax was deducted from the prices of the commodities they produced. This is now an admitted fact. In the meantime our agricultural markets are sold in foreign market places to horse traders—foreign diplomats. We are the poorest horse traders in the world. We generally trade away two or three good colts and get in return one broken-down old nag.

This Nation became great because it always had an abundance of wealth, but now we are suddenly asked to believe in the doctrine of scarcity, in obtaining abundant life by destruction. To destroy property is legally criminal, morally and economically wrong, and religiously sinful. This has been so well established that even the Secretary of Agriculture should know it.

We have destroyed—restricted the production of—agricultural wealth so much so that now we have to import it from foreign countries. We imported from other nations over $1,643,000,000 worth of agricultural products, manufactures, and substitutes during the first 10 months of this year. That is the foreign valuation. The domestic valuation would be over $3,200,000,000. That is what the consumer pays and that is what our own producers should have received in place of the foreigners.

That is not only 2 percent of our agricultural production, but it is almost one-half of our agricultural income. This would have been sufficient to give to every head of our 6,000,000 farm families a check for $500 and would have left $200,000,000 with which to organize the farmers in order to protect themselves.

In 1935 the Department of Agriculture used the money of the taxpayers of the United States to buy imported cattle from Canada at South St. Paul in order to keep up the price for the American farmer, while at the same time the Secretary of State increased the importation of Canadian cattle by special trade agreements. It is just simply a crazy quilt.

Among these importations we find 437,941 head of cattle, 157,000 head of hogs, 151,629,644 pounds of meat and meat substitutes, 262,053,075 pounds of fish, 253,738,171 pounds of hides and skins, 84,828,124 bushels of corn, and $98,449,437 worth of grain and grain preparations. Not satisfied with that, we invaded the poultry market of our farmers' wives and imported $3,899,046 worth of poultry products.

In addition to that we imported 124,114,965 pounds of unmanufactured cotton and over $44,000,000 worth of semimanufactured and manufactured cotton, together with 136,000,000 square yards of cotton cloth, and yet we talk of overproduction of cotton. All this within the first 10 months of 1937. All of these commodities should have and could have been produced by our own farmers.

You and I know that our export surpluses reduce the domestic price to the foreign price. We also know that foreign imports to the same extent reduce the domestic price to our farmers. We now ask that $65,000,000 be loaned to the corn farmers. Yet we imported over $55,000,000 worth of foreign corn. If we had excluded these importations it would have meant not only $55,000,000 more to our corn farmers, but they would have received at least $500,000,000 more in higher prices for their entire crop and we would not have to provide for loans.

Charity begins at home. The time has come for Congress to work for the American people and not for some foreign interests. I am not opposed to foreigners, but I do not believe in bringing our own people down to the standards of living that exist in some foreign nations. We should rather bring their standards up to the American standard by setting an example for them to follow, by giving to our laboring people a living annual wage and giving cost of production to our farmers.

The farmer is not responsible for the high cost of living. He gets less than 20 percent of what you pay to live on. The high cost of living is not caused by the price the farmer receives. The cause is that we have restricted our own production until we give to foreign nations about one-half of the money we pay for the agricultural products we consume. The time has come when this madness must be stopped. In place of forcing our farmers to permit their land to lie idle and pay taxes on it, so that we can import these products from foreign nations, who already owe us $26,000,000,000 and refuse to pay, we should increase our agricultural acreage by at least 100,000,000 acres.

The farm bill forced through the House contains 93 pages, consisting mostly of a conglomeration of words, contradictions, and meaningless phrases. No two people in the United States could read this bill and agree upon its meaning. This bill does not give to the farmer parity of prices or income with manufactured commodities. It does not contain a single word about crop insurance. It does not give the farmer cost of production. It does continue the soil conservation, but that is already a law, and this monstrosity really takes from that law rather than adding anything to it.

This bill is of doubtful constitutionality. It will reduce the farmers to the status of Government wards; it will keep them permanently on the dole and regimented as serfs. It is indefinite, complicated, incapable of being understood by Congress, by proposed administrators, and by farmers, and it is unworkable. It would freeze the farm income under a limitation of price and a limitation of production at less than the farmers' cost of production. It will cost the Treasury of this Nation from seven hundred million to one billion dollars without benefit to anyone. It will add to the unemployed and increase "the ill-fed, ill-clad, and ill-housed" of our population. It would do this by restricting production and thereby decreasing farm employment.

This bill does not provide for an ever-normal granary. These are simply catchwords. The object is to continue to import one-fifth of all the agricultural products and substitutes that we consume. It will take the American farmer out of the foreign market and put the foreign farmer into the American market. The bill as now amended is the result of sectional logrolling. No one can successfully defend its honor or its integrity. If it becomes a law it will continue to divide the people along sectional lines. It will lead not only to hatred and sectionalism but may end in disaster.

The bill contains over five and a half pages of criminal law and penalties. If passed in its present form, it will make peons, slaves, and cowards out of our farmers. On page 46 it contains this gem:

In any action brought to enforce the collection of penalties provided for in this section the farmer shall have the burden of proving that he did not market field corn in excess of his farm-marketing quota.

In other words, it puts the burden of proof upon the accused person and not upon the accuser.

Congress knows what the farmer wants. He wants cost of production for that part of his crop that is consumed in the United States. No honest man or woman can ask him to sell for less than it costs him to produce. Then he wants the Frazier-Lemke refinance bill. That is all and that is just.

Do you know that during the last 5 years one farmer out of every six lost his farm by mortgage foreclosure, tax sale, or forced sale? Do you know that the price of agricultural commodities were very near the level they reached in 1932? In my own State we were selling potatoes for 12 cents a bushel. That was 1 cent lower than they were in 1932. We were selling oats for 16 cents a bushel and corn for 30 cents a bushel.

I have not yet discovered a single Member of Congress who honestly is for the bill and who does not secretly wish its defeat. Not a single farm organization now defends this bill. Even Ed O'Neil, of the Farm Bureau, whom we once suspected of being the bill's daddy, now disowns this monstrosity. The truth is that both the Senate and the House Agricultural Committees have Wallace's bear by the tail and do not know how to let go.

Why I Am a Democrat—Wage and Hour Legislation

EXTENSION OF REMARKS

OF

HON. JOHN J. McGRATH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 21, 1937

Mr. McGRATH. Mr. Speaker, when a person establishes and maintains membership in an organized political party he can quite frequently claim no better reason than that his ancestors were members of that party or that he lives in a particular section of our country. I can claim neither of these reasons as a basis for my membership in the Democratic Party.

As a young man, I had charge of a gang of workmen employed by one of our largest American corporations. In the depression of the 1890's these men were working for wages barely above the starvation level, and I knew that at that time the corporation was making a profit. The men threatened to strike, but I persuaded them to wait until I could present their cases to the executives of the company. I told the superintendent of the plant what I knew concerning the distress caused by the low wages. I pleaded with him for an additional 25 cents per day in order that the families might have bread, at least, upon their tables. I was informed that a raise in pay was contrary to the policy of the company and that if the men were not satisfied with their wages plenty of other men could be secured to replace them.

Almost immediately after this I was called to the office and advised that, as a part of my duties, I should see that all of the employees working under me understood that it was the policy of the company to support the Republican ticket and to vote for the candidates of that party. I was also advised that successful political manipulation of these men was a requisite for holding my own job.

I searched for the party which would offer a political antidote, and I became convinced that the Democratic Party presented the most effective channel for service in the interests of the common man. I do not regret that decision.

I was delighted when the Democratic platform of 1936 contained a definite pledge for wage and hour legislation. In the campaign I made the party pledge my own personal pledge and I received the overwhelming support of the people of my district. I was returned to the Seventy-fifth Congress to carry out that pledge, and I expect to continue my efforts until a proper and real protection is thrown around those who are compelled to work brutally long hours for wages which make it impossible for the workers to maintain a decent standard of living for themselves and for their families.

I have by no means regarded the measure pending in the House of Representatives as thoroughly satisfactory, but I did regard the measure as a step in the right direction. I was deeply disappointed by the emasculating amendments which were tied on the bill by those who were opposed to any regulation of wages and hours.

As far as I am concerned, I do not regard the recommittal of this bill to the Committee on Labor as a deathblow. I refuse to accept such a verdict. At the regular session I intend aggressively to support that wage and hour legislation which, in my judgment, will most effectively protect the honest employer from his chiseling competitors and which will enable labor—whether organized or unorganized—to live in accordance with American standards of decency and self-respect.

National Mediation Board

EXTENSION OF REMARKS

OF

HON. EDWARD A. KENNEY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 14, 1937

Mr. KENNEY. Mr. Speaker, as a member of the Committee on Interstate and Foreign Commerce of the House of Representatives I have followed with much interest the activities of the National Mediation Board under the Railway Labor Act. Because it has functioned so smoothly, few fully recognize the efficient service of this Board under that act and the predecessor boards under the predecessor acts. The very fact that in the largest industry in the country there has been freedom from serious interruption due to labor troubles since the year 1922, speaks volumes for the success of the fundamental theory underlying that legislation, but it is by no means attributable wholly to the legislation. Had it not been implemented by a personnel understanding, sympathetic, and capable of the discharge of the functions of the Board created by that act, it would nevertheless have failed to produce favorable results.

With the passing of the late James W. Carmalt, its Chairman, the Board, the industry, and the country have suffered a great loss. It is imperative that Mr. Carmalt's successor be one highly qualified to discharge the functions of that office. It requires first, at least, acquaintanceship with the parties to the disputes likely to come before the Board. But this is not enough. It requires also confidence of the parties in the impartiality of the Board members.

Mr. George A. Cook, long secretary of the Board and its predecessor boards, is undisputably the most qualified man that could be selected. Those intimately familiar with the functioning of the Board know that Mr. Cook often becomes and constitutes the Board when the members are in various parts of the country settling controversies imminently threatening the interruption of commerce. Even in the absence of its members the Board functions; and it functions solely by and due wholly to Mr. Cook's extraordinary ability to handle the parties having problems; his gift of contacting and presenting to the individual Board members the fundamentals of the problems, and a high degree of good judgment in solving or staying situations until the Board can act.

I know of no one who would make a more worthy successor to Mr. Carmalt, who gave so much, possibly to the hastening of his own end, toward the accomplishment of an ideal which perhaps few others than those who have come into intimate contact with interstate commerce can understand.

INDEX

NAMES AND POST-OFFICE ADDRESSES

OF MEMBERS OF THE

UNITED STATES SENATE

IN THE

SECOND SESSION OF THE SEVENTY-FIFTH CONGRESS

JOHN N. GARNER, Vice President, Uvalde, Tex.

KEY PITTMAN, President pro tempore, Tonopah, Nev.

Name	Home post office
Adams, Alva B	Pueblo, Colo.
Andrews, Charles O	Orlando, Fla.
Ashurst, Henry F	Prescott, Ariz.
